Mr. Natcher: Are less severely handicapped persons, who could probably be successfully rehabilitated and placed, being excluded from services in order to respond to the needs of the law?

Dr. Davila: Approximately 65 percent of the individuals served in the VR program are considered to be severely handicapped. The Rehabilitation Act requires that an "order of selection" rule be implemented when States are unable to serve all eligible individuals due to limited financial resources. Under the order of selection provision, individuals with the most severe handicaps are given priority for services. The most recent information indicates that only 19 agencies (23 percent) are currently operating under the order of selection rule, including 16 general and 3 blind agencies. In addition, several agencies operating under the order of selection rule have indicated that they are continuing to serve non-severely handicapped individuals, though perhaps on a limited basis, by providing non-purchased services and by utilizing comparable benefits to cover the costs of purchased services.

CLIENTS WHO ARE NOT REHABILITATED

Mr. Natcher: What happens to the clients that are not rehabilitated and placed?

Dr. Davila: In 1988, approximately 37 percent of the cases closed were not rehabilitated. About one-quarter of VR cases are unsuccessfully closed because the client has moved or can not otherwise be located. Other major reasons for non-rehabilitation include client refusal of services or further services and failure to cooperate. The frequency at which the severity of the handicapping condition is cited as the reason for an unsuccessful closure has been decreasing, representing about 9 percent of the cases.

The Supported Employment program now offers an alternative service strategy for many clients who, in the past, may not have been rehabilitated, placed in employment, or even accepted for services due to the severity of their disability. Severely disabled clients in need of independent living skills are referred to the Independent Living Services program in order to enable them to function more effectively in the home and the community. In addition, clients are referred to other public and private agencies in the community as appropriate.

Mr. Natcher: Do they drop out of the system after a specific period of time?

Dr. Davila: There are no statutory or regulatory time limits on how long a client may continue to receive services in the VR program. Many clients with multiple handicaps receive services over a period of many years. According to a 1989 Department-funded study, VR cases closed in 1985 spent an average of 19 months in the program. Although approximately 23 percent of the clients completed the process within six months, 26 percent of the clients took up to two years to complete the program and another 26 percent were in the process for over two years. The encouraging news is that a recent Department-funded study found that there is a strong relationship between the length of time in VR services and client gains in real earnings. In fact, people who received some services but did not complete the program successfully still showed gains in real earnings.

HOW NIDRR INCORPORATES THE NEEDS OF THE REHABILITATION COMMUNITY

Mr. Natcher: Another concern we hear from the rehabilitation community is that research should be more responsive to the consumer, specifically in areas like the quality of life. How does your research agenda incorporate the opinions and needs of the rehabilitation community it serves?

Dr. Davila: The National Institute on Disability and Rehabilitation Research (NIDRR) is cognizant of the need to keep disability research responsive not only to the concerns of the consumer -- primarily individuals with disabilities, but also their family members, rehabilitation clinicians and practitioners, and administrators and policymakers.

NIDRR conducts intensive planning efforts in the development of new priorities, especially priorities for Rehabilitation Research and Training Centers and Rehabilitation Engineering Centers that represent substantial long-term investments. Planning meetings or state-of-the-art conferences are held in connection with every new priority for a Center. These meetings involve researchers, individuals with disabilities, service providers, and experts on training and knowledge dissemination.

In addition, NIDRR routinely surveys professional associations such as the Council of State Administrators of Vocational Rehabilitation (CSAVR) and the Association for the Advancement of Rehabilitation Engineering (RESNA), consumer representatives such as the National Council on Disabilities, and Federal agencies represented on the Interagency Committee on Disability Research to obtain their suggestions for new research priorities.

All of the NIDRR-funded Centers are required to have individuals with disabilities represented in all aspects of the planning, conduct, and evaluation of Center activities. Some of the individual projects have mechanisms for consumer input as well. Wherever feasible, NIDRR priorities are written to require the respondent and eventual grantee to provide meaningful roles for the constituency in shaping the direction of the research. We believe that many of our grantees have developed innovative ways to involve individuals with disabilities and other consumers in their activities.

CLIENT RECIDIVISM

Mr. Natcher: Is there a revolving door syndrome, where clients complete the program, work for a time, lose their jobs, then reenter the rehabilitation process? Is there a limit to the number of times a client can receive services?

Dr. Davila: Individuals who were previously successfully rehabilitated and are in need of further services may re-enter the rehabilitation process as a new case. Other clients who do not require a high degree of intervention to help them maintain or regain employment may receive post-employment services. In fiscal year 1989, VR agencies provided one or more post-employment services to 17,655 persons. Eighty-one percent of these individuals were able to maintain or regain their current employment. There is no limit to the number of times a client can receive services.

The RSA/SSA Data Link Study found that 92.2 percent of rehabilitants retained their job in the first year after the closure of the case. The decrease in labor force participation was 3.8 percent in each succeeding year. Clients who had Social Security-reported earnings for that year were considered to have participated in the labor force. The study estimated the repeater rate of rehabilitants to be 5.4 percent. Repeaters are defined as successfully closed clients who return for services within three years following closure. Of the individuals rehabilitated in fiscal year 1988, 5.8 percent had been previously rehabilitated within three years of the most recent date of application. The cases of another 2.4 percent had been previously closed as not rehabilitated within the same time span. The data indicate that the percent of individuals with a previous closure is higher for the severely disabled both for those individuals who were previously closed as rehabilitated and not rehabilitated.

REHABILITATION RESEARCH AND TRAINING CENTER ON THE NEEDS OF LOW-FUNCTIONING DEAF INDIVIDUALS

Mr. Natcher: The Conference Report directed the NIDRR to establish a research and training center dealing with the needs of low-functioning deaf individuals. What is the status of this project and how long will it be before we can expect recommendations?

Dr. Davila: The National Institute on Disability and Rehabilitation Research (NIDRR) developed a statement of a proposed priority for such a Center, involving the constituency in the formation of the priority through a conference sponsored by the Research and Training Center at the University of West Virginia. The Department of Education forwarded the proposed priority to the Office of Management and Budget on February 21. We anticipate that the priority will be published in March. This will enable us to issue a closing data notice in April and make the award for the new Center in September.

The award will be for a five-year period. NIDRR does not expect that there will be recommendations based on the research of the Center for several years.

COMPREHENSIVE HEAD INJURY CENTERS

Mr. Stokes: In FY 1990, Congress appropriated $15 million for one-time start-up grants to establish a system of regional comprehensive head injury prevention and rehabilitation centers. What is the status of this initiative?

Dr. Davila: The Department published a notice in the Federal Register on December 27, 1989, inviting applications for new awards under the program of Special Projects and Demonstrations for providing vocational rehabilitation services to individuals with severe handicaps. In accordance with the language earmarking the funds for these awards, the notice specifies that all applications must be for projects designed to establish regional comprehensive head injury rehabilitation and prevention centers. The closing date for the submittal of applications in response to the notice is March 12, 1990.

We expect to make four awards between $3,375,000 and $4,125,000. Awards will be made by September 30, 1990. Projects may be funded for a period of up to 48 months.

NIDRR AWARDS

Mr. Stokes: You propose to level fund the National Institute on Disability and Rehabilitation Research (NIDRR). You have not included an increase for inflation. Your statement indicates that the 1991 request would enable NIDRR to fund continuation grants and make approximately 70 new awards. How many new awards do you expect to make in FY 1990? For the record, please provide a chart showing dollars and the number of awards you expect to make in FY 1990 and FY 1991 in each category (Centers, Research Projects, etc.). Please break out competing and noncompeting awards.

Dr. Davila: NIDRR expects to make about 74 new awards and 125 continuation grants in fiscal year 1990.

NIDRR ESTIMATED AWARDS FOR FY 1990 AND FY 1991 1/
($s in millions)

	FY 1990				FY 1991

1/ All new awards are competitive. Continuations are not competitive.
2/ NIDRR also expects to fund at least 25 Small Business Innovative Contracts under this program.
3/ Includes field readers, contracts, printing, and miscellaneous

Mr. Stokes: How many field initiated research grant applications did you receive in FY 1989? How many were you able to fund? Please compare this to your expectation for FY 1990 and FY 1991.

Dr. Davila: NIDRR received 232 applications for Field-Initiated Research (FIR) grants in fiscal year 1989. NIDRR made 21 new FIR awards in fiscal year 1989. NIDRR expects to make 25 new FIR awards in both fiscal years 1990 and 1991.

Mr. Stokes: What kinds of innovative projects have been funded by NIDRR's Small Business Innovative Research Contracts program? Have there been projects that are particularly noteworthy?

Dr. Davila: NIDRR is funding a number of innovative projects related to technology and disability under the Small Business Innovation Grants program. For example, there are two companies looking at methods to use court reporting systems to provide captioning that would enable deaf individuals to serve as jurors, attorneys, and courtroom assistants, as well as to facilitate their roles as witnesses, defendants, or plaintiffs in litigation. One company has developed a new form of communications loop that can provide enhanced sound for individuals with hearing impairment in classrooms, meeting rooms, and other public places. This should enhance the ability of individuals with hearing impairment to participate in education, work, and recreational activities.

RECREATIONAL PROGRAMS

Mr. Stokes: You propose eliminating funding for recreational programs. What kinds of activities are currently supported by this program?

Dr. Davila: Recreation projects support a wide range of activities such as aquatics, camping, fine arts, and fitness programs adapted to disabled persons living in urban and rural areas throughout the country. All projects are intended to provide integrated recreational opportunities for persons with disabilities and provide them with opportunities to gain self confidence, interact with nondisabled persons, and develop a more independent life style in the community.

REHABILITATION RESEARCH AND TRAINING CENTER FOR LOW-FUNCTIONING DEAF INDIVIDUALS

Mr. Stokes: The FY 1990 Conference Report directed NIDRR to establish a research and training center dealing with the needs of low-functioning deaf individuals. At what level will this center be funded in FY 1990? How much is requested for the center in FY 1991?

Dr. Davila: NIDRR expects to award $600,000 for the Center in FY 1990. NIDRR expects to fund the continuation at $600,000 in 1991.

PROJECTS WITH INDUSTRY

Mr. Stokes: $18.8 million is requested for projects with industry. This is the same as the FY 1990 appropraition. Tell us about the kinds of projects that are currently funded and the number of individuals that are being served by this program.

Dr. Davila: The primary goal of this discretionary grant program is to expand job opportunities for people with disabilities in the competitive labor market. Jobs obtained under the program range from service positions to highly technical or managerial positions. Examples of successful projects include: (1) training of severely disabled people for jobs in data processing and computer technology by IBM; (2) training for high demand positions in Computer Aided Drafting (CAD) by Chicagoland PWI, Inc.; (3) coordination of placements in the electronics industry by the Electronic Industries Foundation; and (4) training individuals for jobs in companies with union contracts by the Human Resources Institute of the AFL/CIO and the International Association of Machinists.

During fiscal year 1987 and 1988 over 45,000 people with disabilities were served and more than 27,000 were placed into competitive employment. Average weekly earnings were $204.

Mr. Stokes: Has there been a recent evaluation of this program? If so, was it found to be effective?

Dr. Davila: The most recent evaluation of the PWI program was conducted in 1985 and the report was completed in 1986. The evaluation covered the program year 1983-1984. Generally, the report concluded that PWI projects are experiencing success in their efforts to assist persons with disabilities in obtaining competitive employment. The relatively low cost per placement, especially for older projects, suggests that PWI projects are accomplishing their goals in an efficient manner. Another measure of the program's success is the high level of employer satisfaction with the program. Nearly 5,000 business persons and rehabilitation professionals donate their time to PWI projects by serving on project advisory committees.

Beginning with grants awarded in this fiscal year, applicants for continuation funding must include data for the most recent project year in order to determine if the grantee has met the program compliance indicators. Indicators will measure performance in the following areas: persons with severe disabilities served, unemployed served, cost per placement, projected cost per placement, placement rate, projected placement rate, change in earnings, percent placed who have severe disabilities, and the percent unemployed placed.

TRAUMATIC HEAD INJURY

Mr. Conte: One of the evaluation studies you indicate is planned for 1990 is a "best practice" study of services for individuals with traumatic head injury. What is the intent of this study and what do you hope to accomplish?

Dr. Davila: The primary objectives of the traumatic brain injury best practice study are: to review and analyze current practices in the VR State program for individuals who have had a traumatic brain injury; to describe effective practices; and to develop recommendations concerning replication of such practices. The study will identify the vocational rehabilitation related services that are needed by this population and describe the response of the VR system to those needs. The study should also assist RSA in targeting possible future initiatives to expand or improve services to this population.

Mr. Conte: One of the complaints that folks who advocate for the head injured have had is that, for most purposes, services are not categorized in a way that makes apparent how much disability results from traumatic head injury. They argue that as a result, much less attention is paid to prevention, research and treatment than is warranted. I know RSA has been looking at this issue over the years. What changes have been made or should be made in how disability resulting from head injury is categorized? Should it be recognized as a separate category under all programs providing services?

Dr. Davila: There is a specific category in the individual case service report system (RSA-911) for identifying persons receiving VR services who have had a traumatic brain injury. Primary and secondary disabling conditions as a result of the injury such as orthopedic, visual, aural, neurological, perceptual/ cognitive, or mental/emotional handicaps are also documented. Individuals who have had a traumatic brain injury are also categorically identified in the delivery of Independent Living services. The information which is being collected will be of assistance in researching the multiple service needs of this population.

INDEPENDENT LIVING SERVICE NEEDS

Mr. Conte: What percent of individuals in need of independent living services are now receiving them?

Dr. Davila: It is not possible to project an accurate percentage of individuals in need of independent living services who are or are not receiving them. The federally funded Centers for Independent Living served approximately 50,000 individuals in fiscal year 1990 through 196 center locations. In addition, an estimated 32,000 persons received comprehensive independent living rehabilitation services through State vocational rehabilitation agencies. Because of the limited number of years the Independent Living Services for Older Blind program has been operating, data is not available on the number of persons served through this program.

Currently, there is at least one Federal center in every State, the District of Columbia, Puerto Rico, the Virgin Islands, and American Samoa. States and private sources have funded many more centers. The 1986 amendments to the Rehabilitation Act added a provision requiring the Secretary to award grants to new centers for independent living in unserved geographic areas. In response to this requirement, the Department looks for information in new applications that shows a need for these services relative to existing programs and facilities. Data is not available on whether there are persons who are not being served by these various projects.

There is some data which provides information on the potential service population. For example:

- The Federal independent living programs are intended to provide services for persons whose disabilities are so severe that they do not presently have the potential for employment, but may benefit from services which may enable them to live and function independently. The number of noninstitutionalized persons with a work disability is estimated by the Census Bureau to be 13.3 million, or 8.6 percent of the working age population (16 to 64 years old). Of this number, approximately 4,468,800 or 33.6 percent are in the labor force. A subset of 697,000 of these persons are unemployed.

o The Harris Poll conducted a national survey of 1,000 noninstitutionalized disabled persons aged 16 and over which indicated that 60 percent of individuals with severe disabilities were unemployed.

In addition, the number of persons who are 65 and over and experiencing a disability which results in a significant functional disability is increasing. These figures indicate that there is a potentially large pool of persons who might benefit from independent living services. However, it cannot be inferred from this data what percentage of these individuals may in fact be in need of or desire independent living services.

SEVERELY HANDICAPPED

Mr. Conte: The 1986 amendments to the Rehabilitation Act required States to undertake needs assessments of persons with severe handicaps. How effective have State agencies been in identifying persons with severe handicaps and assessing their needs?

Dr. Davila: Based on the data we have received, State vocational rehabilitation agencies have been reasonably effective in identifying and assessing the needs of severely handicapped individuals. The needs of these individuals are identified through vehicles such as statewide meetings of agencies serving this population, statewide forums and public hearings, and through involvement with business and industry advisory councils.

State VR agencies recognize the importance of cooperation among service providers in facilitating the continuity of services and insuring the long term success of severely handicapped individuals. State VR agencies are initiating more cooperative agreements with State and local public and private agencies such as the Governor's Committee on Employment of the Handicapped, Employment Advisory Councils, and State Developmental Disability Agencies. In addition, RSA plans to undertake a study of "best practice" in conducting a needs assessment. The results of this study will be shared nationwide.

Target populations identified as being in the most need of improved or expanded services include individuals with traumatic brain injury, learning disabilities, chronic mental illness, and severe mobility impairments. Native Americans and persons with severe disabilities who are transitioning from special education programs have also been identified. Services identified as needing improvement and expansion include accessible public transportation, attendant care, home employment, housing, technology development, and service delivery in rural areas.

REHABILITATION ENGINEERING

Mr. Conte: Rehabilitation engineering services were authorized as a vocational rehabilitation service by the 1986 amendments. Have these services been made available to vocational rehabilitation clients, and have they been effective in furthering vocational objectives?

Dr. Davila: Rehabilitation engineering services are now available in each State and Territory as required by the Rehabilitation Act of 1973, as amended. States must submit an attachment to the State Plan specifying the extent of service availability. Currently, there is no objective measure at the Federal level to determine the effectiveness of these services. RSA has developed instruments to be used in monitoring and in providing technical assistance to State VR programs. RSA will be reviewing the policies and procedures used by State agencies to meet the requirements established by the 1986 amendments and service delivery. RSA intends to collect data on engineering services in the future.

REHABILITATION SERVICES AND HANDICAPPED RESEARCH

For carrying out, to the extent not otherwise provided, the Rehabilitation Act of 1973, [title I of] Public Law 100-407, 1/ and the Helen Keller National Center Act, as amended, [$1,804,870,000] $1,839,073,000, of which [$32,674,000] $17,455,000 shall be for special demonstration programs under sections 311(a), (b), and (c) [including $15,000,000 for one-time start-up grants to establish a system of regional comprehensive head injury prevention and rehabilitation centers]. 2/ (Department of Education Appropriations Act, 1990.)

Explanantion of Language Changes

1/ Language limiting the use of funds to activities authorized under Title I of P.L. 100-407 has been deleted so that funds can be used for activities authorized under both Titles I and II.

2/ This language is deleted since its purpose has been accomplished.

Rehabilitation Services and Handicapped Research

Language Analysis

Language Provision	Explanation
...[$32,674,000] $17,455,000 shall be for special demonstration programs under sections 311(a), (b), and (c)...	This language earmarks $17,455,000 for Special Demonstration programs thus overriding the 5 percent statuatory set-aside for the Migratory Workers program.
...[including $15,000,000 for one-time start-up grants to establish a system of regional comprehensive head injury prevention and rehabilitation centers].	This language earmarks funds to establish head injury centers in 1990.

2/ The House deferred consideration of appropriations for rehabilitation services programs pending the enactment of authorizing legislation.

3/ The House deferred consideration of appropriations for all rehabilitation programs except for vocational rehabilitation State grants and the Helen Keller National Center pending the enactment of reauthorizing legislation.

Rehabilitation Services and Handicapped Research

Significant Items in Congressional Appropriation Reports

Item	Action taken or to be taken
1990 House Report	
Research on Prosthetic and Orthotic Devices	
The Committee expects that a portion of the increase in the Technology Assistance program will be used for research into state-of-the-art prosthetic and orthotic devices.	The Conferees directed that a portion of the increase for NIDRR, not for the Technology Assistance program, be used for this purpose.
1990 Senate Report	
Technology Assistance	
The Committee directed that at least $500,000 be made available for model projects, at least $250,000 be made available for a financing study of assistive technology devices and services, and that $750,000 be made available for a study of the feasibility of setting up an information and referral network.	The Department expects to provide $1,000,000 for the 3 types of model projects authorized under Title II, including at least $500,000 for demonstration projects. The Department is now preparing regulations and expects that awards for the model projects will be made in the fourth quarter of 1990. In 1990, the Department will also transfer $250,000 to the National Council on Disability for the financing study and will award a contract for the feasibility study.
1990 Conference Report	
Research on Low-functioning Deaf Individuals	
The Conferees directed NIDRR to establish a research and training center dealing with the needs of low-functioning deaf individuals.	NIDRR will establish this new research and training center in 1990.

Rehabilitation Services and Handicapped Research

Significant Items in Congressional Appropriation Reports

Item	Action taken or to be taken
1990 Conference Report	
Research on Prosthetic and Orthotic Devices	
The Conferees directed NIDRR to spend a portion of its increased appropriation to develop improved prosthetic and orthotic devices using new technologies.	In 1990, NIDRR plans to fund a Research Engineering Center on technology for children who are orthopedically impaired. The Center will conduct research into and develop state-of-the art prosthetic and orthotic devices.

Rehabilitation Services and Handicapped Research

Account Summary — Continued

The Rehabilitation Services and Handicapped Research account funds formula grants to States for vocational rehabilitation services, and a variety of smaller research, demonstration, and service programs, including the Technology Assistance program authorized by P.L. 100-407. The purpose of the programs in this account is to develop and implement, through research, training, and direct services, comprehensive and coordinated programs of vocational rehabilitation and independent living for individuals with disabilities. Rehabilitation programs funded through the Department of Education help to maximize the employability, independence, and integration into the workplace and the community of eligible disabled persons. During 1990 and 1991, the Rehabilitation Services Administration will continue to place priority on serving the most severely handicapped. From 1974 to 1989, the proportion of severely disabled persons among those rehabilitated by State vocational rehabilitation agencies has risen from 32 percent to 65 percent.

The President's budget request for 1991 maintains the Department's priority on programs which provide opportunities for the handicapped. An increase of $58,861,000 over the 1990 level is requested for this account. This includes an increase of 4.5 percent over the 1990 level for the Vocational Rehabilitation State Grant program and Grants for Indians, as well as a 4.2 percent increase for Client Assistance, Supported Employment, and Comprehensive Services for Independent Living. These additional funds will be available to States to expand services or to meet rising costs associated with the provision of services to disabled persons. The request also includes a $5,186,000 increase over the 1990 level for the Technology Assistance program. The additional funds would enable the Department to provide continued support for the State grants made in 1989 and 1990, to make new grant awards, to continue the model projects first funded in 1990, and to complete the national evaluation of the State grant program.

The Department continues to believe that recreational services should not be funded by the Federal Government but should be supported by private charities and local governments.

In 1990, approximately $311,000 appropriated for the Rehabilitation Services Administration and National Institute on Disability and Rehabilitation Research was used to help fund the cost of using field readers to review discretionary grant applications. In 1991, $405,000 is estimated to be used for this purpose.

Rehabilitation Services and Handicapped Research

1. State grant programs: a. Vocational rehabilitation State grants (Rehabilitation Act of 1973, Title I, Sections 100 and 130)

1991 Authorization: $1,597,280,000 1/

Budget Authority:

	1990 Appropriation	1991 Request	Increase or Decrease
State grants.....	$1,524,677,000	$1,593,287,000	+$68,610,000
Indian set-aside.	3,821,000	3,933,000	+172,000
Total.....	1,528,498,000	1,597,280,000	+68,782,000

1/ The authorizing legislation mandates funding at least at the level of $1,597,280,000, which is the 1990 appropriation, adjusted by the twelve month change in the Consumer Price Index for all Urban Consumers (CPIU) published this past October. The legislation authorizes additional sums to be appropriated but limits the appropriation to an amount not to exceed $1,875,512,100. The Rehabilitation Act Amendments of 1986 require that 0.25 of 1 percent up to 1 percent of the appropriation for Vocational rehabilitation State grants be set aside for Grants for Indians.

Purpose and Method of Operation

This program supports vocational rehabilitation (VR) services through assistance to the States. The State program provides a wide range of services designed to help physically and mentally disabled persons prepare for and engage in gainful employment to the extent of their capabilities. Persons with disabilities that constitute a substantial handicap to employment and who can benefit from rehabilitation services are eligible for assistance. Services are tailored to the specific needs of the disabled individual and an individualized written rehabilitation program is developed jointly by a rehabilitation counselor and the disabled individual. The program may include a variety of services, such as vocational evaluation, counseling, mental and physical restoration, education, vocational training, work adjustment, job placement, and postemployment services. Priority is given to serving severely disabled persons.

This is a current-funded formula grant program that provides financial assistance to cover the cost of direct services and program administration. Funding is mandatory in that the authorizing legislation requires increases in funding equal to the percentage change in the Consumer Price Index for Urban Consumers (CPIU) over the past year. Funds become available for

---

Purpose and Method of Operation -- Continued

obligation on October 1 of the fiscal year for which they are appropriated and remain available for 12 months. Grant funds are administered by vocational rehabilitation agencies designated by each State. An allotment formula that takes into account population and per capita income is used to distribute funds among the States. States are required to provide 20 percent matching. The State share for payments made in future years over and beyond the 1988 allotments increases by 1 percent each year up to 25 percent in fiscal year 1993. For fiscal year 1991, the State share will be 20 percent of the 1988 base and 23 percent for any increase above that base.

Under the Rehabilitation Amendments of 1986, 0.25 of 1 percent to 1 percent of the funds appropriated for the State Grant Program are set aside for grants to Indians, beginning in 1987. This program previously had been funded under the special demonstration program authority. Service grants are awarded to Indian tribes on a competitive basis to help tribes develop the capacity to provide vocational rehabilitation services to handicapped American Indians living on reservations.

Accomplishments

The number of persons vocationally rehabilitated in fiscal year 1988 was 218,183, a decline of 0.7 percent from the previous fiscal year. This was the only major caseload indicator to have fallen below the previous year's level. There has been a general decline in the number of persons rehabilitated for approixmately the past 13 years. However, the Rehabilitation Services Administration (RSA) projects a 1 percent increase in persons rehabilitated in 1989 as compared to 1988. In 1988, the number of persons served increased for the first time in 13 years (0.2 percent more than in fiscal year 1987). Increases were also noted in the number of new cases entering State Agency caseloads, applicants, and acceptances. Severely disabled persons accounted for 65.5 percent of all persons served by State agencies in fiscal year 1988, the highest proportion yet attained.

The percentage of cases closed in fiscal year 1988 which were rehabilitated, 62.5 percent, decreased for the second year since 1986 (a decline of 0.4 percent from fiscal year 1987). However, severely disabled persons accounted for 64.6 percent of all persons rehabilitated, the highest proportion ever attained. These national numbers from the 1988 Annual Report reflect the average of individual State data. The results from a 1988 Department report, Analysis of State Agency Data Submissions to the Rehabilitation Services Administration, suggest extensive year to year fluctuations and considerable variation among individual States in the data collected on these measures over the past several years. These conclusions severely limit the use of reporting system information for policy making and caseload projections until further research is conducted.

Accomplishments -- Continued

The Department is currently in the process of analyzing data collected from State VR Agencies for fiscal year 1986, the most recently completed data base. These data indicate that 81 percent of clients rehabilitated were placed into the competitive labor market compared to 16 percent so situated at the time of referral to VR. This represents the first time in approximately 30 years that this figure has risen above 80 percent. The largest disability groupings among clients rehabilitated were orthopedic impairments (21 percent), mental illness (17 percent), and mental retardation (13 percent). Both the orthopedic impairments and mental illness groups, however, have been declining proportionally in recent years. Offsetting increases have been observed for substance abusers (9 percent), the hearing impaired (8 percent), and the learning disabled (4 percent). The percentage of clients rehabilitated having a secondary disabling condition which contributed to a work limitation continued to increase (35 percent in fiscal year 1986). The largest occupational groupings into which rehabilitated clients were placed were industry (28 percent, primarily jobs in manufacturing) and the service sector (22 percent). The percentage of placements in industry declined, while the percentage of placements in the service sector increased, from previous years.

A Department-funded study completed in 1989, A Benefit-Cost Analysis of the FY 1985 Federal-State Vocational Rehabilitation Program, Including a Model for Ongoing Program Use, found $5.55 ($6.73 for clients with non-severe disabilities and $4.55 for clients with severe disabilities) in lifetime benefits for each dollar in cost for the overall program. These findings demonstrate that the Vocational Rehabilitation program has been successful when examined from the perspective of social benefits and costs.

The estimates from the model used in this study are much lower than those produced by RSA for previous years using a different analytical model. RSA's most recent analysis found $9.30 in benefits for each dollar of cost. In this study, the researchers modified the program data inputs to reflect annual earning changes realized by rehabilitants, as revealed by the RSA/Social Security Data Link. The study estimated an earnings increase of 9.8 percent one year following closure of the case. In comparison, for the years 1975 to 1983 in constant dollars, non-disabled workers averaged an annual earnings loss of 3.9 percent during this period. The study also found that 7.8 percent of rehabilitants lost their jobs in the first year after closure of the case.

Fourteen grants were awarded during 1989 from the funds set-aside for grants to Indians, including eight new projects and six continuation projects. The eight new projects were awarded to programs operating in the States of Montana, New Mexico, Washington, Idaho, Colorado, and Arizona. The Navajo Tribe project, based in Arizona, accounted for approximately 30 percent of the funds used for new grants. The Navajo project, which received a new

---

Accomplishments -- Continued

three-year award in 1989, has been operational for 16 years providing services to the Navajo Nation, the largest tribe. In 1990, funds will be used to award 4 new projects and 10 continuations from 1988 and 1989 grants.

1991 Budget Proposal

The 1991 budget request for Vocational Rehabilitation State Grants is $1,593,287,000, an increase of $68,610,000 or 4.5 percent over the 1990 level. The requested increase satisfies the statutory requirement to increase funding for the program by at least the percentage change in the CPIU for the twelve-month period completed in October 1989.

Under the set-aside provision, the Indian Program would be funded at $3,993,000, $172,000 more than the 1990 level. This level will allow for the funding of about 15 projects (12 continuations and 3 new projects).

Impact Data

The Department anticipates at least the same number of persons will be provided vocational rehabilitation services in 1991 as predicted for 1990. Our projections are based on actual data from 1988 and six months of data from 1989. We do not anticipate any major changes in the number of applicants, acceptances, and successful closures during 1991 resulting from changes in program operations or client demographics.

	1988	1989 1/	1990 2/
Vocational rehabilitation State grants:			
Total active cases.....	918,876	927,000	931,000

1/ Estimates for 1989 based on six months of data.

2/ Predictions for 1990 are based on 1988 actual data and 1989 estimated data.

1. State grants: b. Supported employment
(Rehabilitation Act of 1973, Title VI, Part C)

1991 Authorization: $30,949,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$27,630,000	$28,790,000	+$1,160,000

Purpose and Method of Operation

The Rehabilitation Act Amendments of 1986 established a new authority to assist States to develop collaborative programs with appropriate public and private nonprofit organizations for training and traditionally time-limited post-employment activities leading to supported employment of severely disabled persons. The purpose of the Supported Employment program is to help severely disabled persons who may have been thought to be too disabled to benefit from vocational rehabilitation (VR) services achieve vocational outcomes. Supported employment placements are achieved by augmenting short term VR services with extended services provided by State, private non-profit, or other resources. To be eligible for this program, States submitted a supplement to their Title I Vocational Rehabilitation State Grant program plan. The supplement covered a three-year period and provided for services leading to supported employment. The State plan must include evidence of collaboration with other agencies, results of a needs assessment within the State, and assurance that an individual written rehabilitation plan will be developed for each individual served.

This is a current-funded formula grant program for which funds are available from October 1 to September 30 in the year for which they are appropriated. The level of funding is dependent upon the availability of appropriations. Funds are distributed on the basis of population, except that no State will receive less than $250,000, or 0.33 of 1 percent of the sums made available, whichever is greater.

Accomplishments

In 1987, States were allowed 18 month planning grants for activities that facilitated the State's development of services leading to supported employment. Only 2 States and 5 Territories chose to receive planning grants; the remaining 48 States and Territories used their formula funds to provide services. All States were awarded direct service grants under this program in fiscal years 1988 and 1989.

The Department submitted the Annual Report to Congress on the Supported Employment Program in November 1989. The report provides an analysis of the impact of the Title VI, Part C, State grant program as well as the demonstration

---

Accomplishments (continued)

systems change grants funded under Section 311(a) and (d). It includes a description of technical assistance activities and a summary of problems, progress, and results. Specific information was gathered by the Rehabilitation Services Administration (RSA) through its regional offices in order to review efforts in the planning, organization, and implementation of supported employment programs under the authority of Title VI, Part C.

RSA selected eleven state vocational rehabilitation agencies (one State from regions I - IX and two States from region X). The States selected were: New Hampshire, New York, Virginia, Florida, Wisconsin, Texas, Missouri, Colorado, Hawaii, Alaska, and Washington. These States were selected because extensive information had been accumulated by RSA over the past few years on their supported employment activities.

In the eleven States selected, there were an estimated 386 supported employment programs funded with Title VI, Part C funds. Approximately 4,264 individuals received supported employment services from these eleven State vocational rehabilitation agencies in 1988. The average per client cost of providing supported employment ranged from $1,914 in Missouri to $6,000 in New York. Individuals with mental retardation represented the largest disability group served in supported employment programs followed by individuals with chronic mental illnesses. Generally, supported employment referrals came from vocational rehabilitation agencies, day activity and sheltered employment programs, local mental health centers, and significant others.

Reports from the eleven State agencies outlined start-up issues relevant to supported employment. Specifically, the fiscal issues involve the setting of realistic rates for the purchase of supported employment services by State agencies; the conversion of funding by other State agencies away from segregated rehabilitation to supported employment; the costs of serving individuals with the most severe disabilities. Issues relating to recruiting, training, and maintaining job-coach staff due to low salaries were also reported.

Many programmatic issues were also identified. Examples include the difficulty in balancing the mandate to work with people with severe disabilities and the regulatory requirement that clients work an average of 20 hours per week; confusion about the differences between transitional employment and other models of supported employment; the lack of incentives for long-term support systems to move in the direction of supported employment; and the need to develop quality assurance standards and data collection mechanisms to assess its national impact.

The Department plans to publish a notice of intent to regulate in January 1990 to clarify certain program requirements and make other changes that are needed

---

Accomplishments (continued)

to increase program effectiveness and flexibility in supported employment. The first data collection instrument for supported employment was developed and approved during 1988. Data was collected for the first time during 1989 on the number of persons receiving supported employment services, and the placement outcomes associated with those services. Partial information on cases closed in fiscal year 1989 should be available by summer 1990. In addition, the Rehabilitation Services Administration plans to release an annual caseload report on supported employment, with the first report on partial caseload data scheduled to be released early in 1992.

1991 Budget Proposal

The 1991 proposed budget request for the Supported Employment State Grant program is $28,790,000, $1,160,000 more than the 1990 appropriated level. This amount includes an increase of 4.2 percent to help meet increased costs. The Department continues to place a priority on services for the severely disabled and believes that supported employment offers a promising approach.

Impact Data 1/

State Grants:	1989	1990	1991

2. State grant programs: c. Client assistance
(Rehabilitation Act of 1973, Title I, Section 112)

1991 Authorization: $8,796,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$7,901,000	$8,233,000	+$332,000

Purpose and Method of Operation

This program supports, through grants to the States, ombudsmen activities to assist clients and client applicants of the Vocational Rehabilitation (VR) State Grant program and other programs, projects, and facilities funded under the Rehabilitation Act of 1973. Services are provided to help clients or client applicants understand the rehabilitation services available under the Act, to advise them of benefits available under the Act, and of their rights and responsibilities in connection with those benefits. Assistance may also be provided to help clients or client applicants in their relationships with those providing services under the Act, including assistance in pursuing legal and administrative remedies to ensure the protection of their rights.

This is a current-funded formula grant program for which funds are available from October 1 to September 30 in the fiscal year for which they are appropriated. The level of funding is dependent upon the availability of appropriations. Funds are distributed among the States according to population except that each State is guaranteed a minimum grant of $50,000. The Rehabilitation Act Amendments of 1986 allow the Rehabilitation Services Administration (RSA) Commissioner to increase the minimum allotment to States in any year in which the sums appropriated exceed the sums appropriated in the prior year by more than the percentage increase in the Consumer Price Index (CPI). The Amendments require the Commissioner to increase the minimum allotments for States and Territories to $75,000 and $45,000 respectively in any year in which the appropriation exceeds $7,500,000. Grants are administered by agencies designated by the Governors. Generally, these agencies must be independent of any agency that provides rehabilitation services under the Act. Also, under the 1986 Amendments, a Governor cannot change the designated Client Assistance Program (CAP) agency without good cause. States must operate CAPs in order to receive Vocational Rehabilitation State Grant funds.

Accomplishments

In 1989, each of the 58 States and eligible Territories had a CAP in operation; 37 States and Territories operate their programs in agencies independent of any

---

Accomplishments (continued)

agency that provides rehabilitation services under the Act. The remaining 21 programs are administered by VR agencies. Grants are now paid directly to the designated agency except where prohibited by State law. Starting in fiscal year 1988, the State assurances for CAP and the State Plan for Vocational Rehabilitation Services under Title I were on the same three-year cycle. RSA is in the process of establishing a uniform monitoring system for monitoring grantees and will be testing the instruments in fiscal year 1990.

Fiscal year 1988 was the first year that all CAP agencies reported specific problems experienced by clients and client applicants. Half of the individuals reported problems related to the quantity, quality and/or expediency of services received. Twenty-five percent of the concerns expressed were related to the client application process, eligibility determinations, and other issues pertaining to the individual written rehabilitation plan (IWRP). The third most common problem area involved conflicts between the client/applicant and a program staff member.

Consultation or advisory services to client applicants accounted for 62 percent of the services provided by CAP agencies in fiscal year 1988. Information or referral services were provided to 60 percent and mediation services were received by 42 percent of CAP clients. Mediation or non-legal intervention are encouraged to be provided in lieu of legal services. As a result, legal services were reported to have been provided to approximately 2 percent of the individuals served during fiscal year 1988.

The 1986 Amendments to the Rehabilitation Act, allowing CAP agencies to provide information on rehabilitation programs to any individual with disabilities in the State, have significantly increased the number of informational inquiries handled by CAPs. The number of informational inquiries handled during fiscal year 1988 increased by 35.6 percent over the previous year and more than twice the number of requests handled in the initial reporting period, fiscal year 1985. A smaller percentage increase (9.8 percent) is estimated for fiscal year 1989. Although CAP agencies are responding to more routine requests for information, the number of cases handled by these agencies in fiscal year 1988 decreased by 6.6 percent from the previous year. One explanation for the decline in the actual number of cases handled is that CAPs are beginning to use their experience to identify issues that can be resolved through systematic change rather than on a case-by-case basis. A slight increase (0.9 percent) has been estimated in cases handled for 1989. Currently, only formula grant programs are required under law or regulations to notify clients and client applicants of CAPs. Ninety-six percent of the individuals served in fiscal year 1988 were clients or client applicants of the vocational rehabilitation program.

2. State grant programs: c. Client assistance

1991 Budget Proposal

The 1991 request for Client Assistance is $8,233,000, $332,000 more than the 1990 appropriation. An increase of 4.2 percent is proposed for this program to help meet increased costs.

The number of clients served is increasing, but at a decreasing rate. We project a 8 percent increase in the number of clients served for 1989 based on 1988 data and estimated 1989 data. We also anticipate an 8 percent increase in number of persons served in 1990 and in 1991. CAPs will be increasing their outreach efforts in order to reach individuals who may need assistance in receiving services under rehabilitation discretionary programs.

2. Special purpose funds: a. Service and demonstration projects:
   (1) Special demonstration programs
   (Rehabilitation Act of 1973, Title III, Section 311)

1991 Authorization: $19,675,000 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$32,269,000	$17,455,000	-$14,814,000

1/ Of the amount appropriated for Special Demonstration programs, 5 percent must be set aside for Migratory Workers.

Purpose and Method of Operation

Special Demonstration Programs for the Severely Disabled develop innovative methods and comprehensive service programs to help severely disabled persons achieve satisfactory vocational adjustments.

The program awards discretionary grants on a competitive basis to public and private organizations to pay all or part of the costs of demonstrations, direct services, and related activities. The program also provides $5,000,000 to support 13 regional multi-disciplinary systems to serve persons with spinal cord injuries and to demonstrate the benefits of such an integrated approach to the care and rehabilitation of persons with spinal cord injuries. The spinal cord injury centers are administered by the National Institute on Disability and Rehabilitation Research (NIDRR).

Special Demonstration programs support demonstration projects for severely disabled persons with a wide array of disabilities. This is a current-funded program in which funds become available for obligation on October 1 of the fiscal year for which they are appropriated and remain available for 12 months. The level of funding is dependent upon the availability of appropriations.

Accomplishments

During 1990, $5,000,000 will be used to fund 13 spinal cord injury centers, $3,717,000 will be used to continue 31 grants established in previous years, and $8,738,000 will be used to fund 1990 priorities. These priorities will reflect emerging needs, including projects that complement the newly authorized Technology Assistance program, an invitational priority to respond

Rehabilitation Services and Handicapped Research

2. Special purpose funds: a. Service and demonstration projects
(1) Special demonstration programs

Accomplishments -- continued

to the need for service delivery to individuals with AIDS who are considered disabled, and innovative strategies to promote vocational and independent living outcomes.

Congress appropriated $14,814,000 in 1990 to finance the one-time start-up costs of a system of regional comprehensive head injury rehabilitation and prevention centers. The model centers will demonstrate improved systems of prevention, acute care, and rehabilitation directed at reducing the human and economic consequences of traumatic head/brain injury, with special emphasis on vocational rehabilitation, retraining, and placement. Grants will to be made on a multi-year basis not to exceed four years. The 1990 House appropriations committee report stated that no additional appropriation would be required beyond fiscal year 1990.

1991 Budget Proposal

The 1991 budget request for Special Demonstration programs is $17,455,000, $14,814,000 less than the 1990 appropriation. The decrease in the 1991 request reflects the 1990 funds appropriated for the regional comprehensive head injury centers which were intended to cover one-time, start-up costs.

Of this amount, $5,000,000 will continue to be used for the spinal cord injury center projects to be recompeted in 1990. Additionally, $3,200,000 will be used to continue grants for priorities established in previous years including $8,200,000 for priorities established for 1990, and $1,055,000 will be used to fund new projects for priorities established for 1991. Funding for these new priorities will be provided from funds made available from the expiration of eight grants initiated in 1988.

Rehabilitation Services and Handicapped Research

2. Special purpose funds: a. Service and demonstration projects:
   (2) Supported employment projects
   (Rehabilitation Act of 1973, Title III, Part B, Section 311)

1991 Authorization: $11,128,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$9,876,000	$9,876,000	---

Purpose and Method of Operation

The Rehabilitation Act Amendments of 1986 added an authority to provide support for discretionary Supported Employment projects at the national, State, and local level. Supported employment is paid work in a variety of settings, at regular work sites, especially designed for severely disabled persons for whom competitive employment would have been unlikely. These individuals, because of their disabilities, need intensive ongoing support in order to perform in a work setting. These discretionary awards are made on a competitive basis to public and nonprofit rehabilitation facilities, designated State units, and public or private organizations. This is a current-funded program in which funds become available on October 1 of the fiscal year for which they are appropriated and remain available for 12 months. The level of funding is dependent upon the availability of appropriations.

Supported Employment Demonstration Grants provide funding for statewide demonstration, community based, and technical assistance projects. The purpose of statewide systems change demonstration projects is to stimulate the development and provision of supported employment services on a statewide basis. These projects cannot use their Federal funding for the direct provision of client services. The purposes of community based projects are to stimulate the development of innovative approaches for improving and expanding the provision of supported employment services as well as to enhance local capacity to provide these services. These projects can use their Federal funding for the direct provision of client services. The purpose of technical assistance projects is to help States to implement the State Supported Employment Services Program authorized by Title VI. In addition, grants are awarded to at least two projects of national scope.

Rehabilitation Services and Handicapped Research

2. Special purpose funds: a. Service and demonstration projects: (2) Supported employment projects

---

Accomplishments

In 1989, the Department funded 31 projects under this program. This included 17 statewide systems change projects, 12 community based projects, and 2 national research projects. An additional 10 statewide projects were funded under the Special Demonstration authority, for a total of 27 statewide systems change grants. In 1990, the Department will fund 31 projects under this program. This includes 17 statewide projects, 12 community based projects, and 2 national scope technical assistance projects.

The Rehabilitation Services Administration provided an analysis of the statewide systems change grants in their annual report to Congress on the Supported Employment program transmitted in November 1989. The analysis was based on the findings from the Virginia Commonwealth University research study entitled Emerging Trends in the National Supported Employment Initiative: A Preliminary Analysis of 27 States, funded by NIDRR. There were, however, some problems with data collection which limit the extent to which the results can be generalized. The following information relates to the findings from the 27 States studied. The number of individuals in supported employment in the 27 States studied rose dramatically from less than 10,000 in fiscal year 1986 to almost 25,000 in fiscal year 1988. Approximately 1,400 new supported employment programs have been established since fiscal year 1986. Two-thirds of the program providers were classified as rehabilitation facilities.

The majority of individuals (71.6 percent) participating in supported employment programs in the 27 States were persons diagnosed as mentally retarded. Individuals with long-term mental illnesses constitute 14.6 percent of the persons reported. Persons with cerebral palsy, hearing impairment, traumatic brain injury, visual impairment, and autism combined accounted for only 5.2 percent of persons served, while other diagnoses accounted for an additional 8.6 percent. The largest concentration of individuals in supported employment were those with mild (54.5 percent) and moderate (31.3 percent) mental retardation. Individuals categorized with severe or profound retardation accounted for 11.0 percent and individuals with boderline retardation accounted for 3.2 percent of those served. Under the Title I Basic State Grant program, individuals with moderate or severe retardation are automatically classified as severely handicapped.

In 1988, individuals participated in various supported employment placement models. The most popular of these models was the "individual placement" model. A total of 64 percent of all persons reported were placed in this model and 20 percent were placed in the enclave model. Persons placed in the work crew, small business, and other models comprised 16 percent of those reported. More than a third of the persons in supported employment were placed in the cleaning and custodial areas, and 22 percent were placed in food services.

Rehabilitation Services and Handicapped Research

2. Special purpose funds: a. Service and demonstration projects: (2) Supported employment projects

---

Accomplishments -- continued

The Study also reported the number of hours worked, although only 16 States responded to this question. Forty-one percent of the individuals worked between 20 - 30 hours per week, 28 percent worked 30 - 40 hours per week, and 4 percent worked more than 40 hours per week. However, 27 percent of the participants worked fewer than 20 hours per week.

During the three years studied, there was an increase in number of supported employment clients who entered the Vocational Rehabilitation program from 844 in fiscal year 1986, with 15 States reporting, to over 7,000 new clients in fiscal year 1988, with 23 States reporting. State vocational rehabilitation agencies provide for time-limited (18 months) initial placement and training costs authorized under Title VI, Part C of the Rehabilitation Act, as amended. Many of these individuals previously would have been considered ineligible for services. The NIDRR-funded study found the greatest obstacle to full implementation of supported employment is long-term State and local funding for extended support services. It is clear that the cumulative costs of providing extended support will increase as more consumers enter the program. Extended support is generally not available for individuals with disabilities other than mental retardation or long-term mental illness. Agencies are reluctant to make long-term funding commitments to extended support services primarily because of their uncertainty regarding the long-range costs.

Other concerns include the need for quality technical assistance and staff development, enhanced coordination, available transportation, and ensuring that the program serves persons with severe disabilities as it was intended.

1991 Budget Proposal

The 1991 budget request for Supported Employment projects is $9,876,000, the same as the 1990 appropriation. The requested level will permit the continuation of the 12 community based and 2 technical assistance grants. The phase out of the original statewide demonstration projects at the end of 1990 will provide funding for new demonstration projects in the remaining States.

2. Special purpose funds: a. Service and demonstration projects:
(3) Recreational Programs
(Rehabilitation Act of 1973, Title III, Part B, Section 316)

1991 Authorization: $2,894,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$2,588,000	---	-$2,588,000

Purpose and Method of Operation

Recreational programs provide disabled persons with recreation and related activities to aid in their mobility, independence, socialization, and community integration. Programs are designed to promote the development of social skills that are necessary in achieving integrated vocational and community placements. This is a current-funded program in which funds become available on October 1 of the fiscal year for which they are appropriated and remain available for 12 months. The level of funding is dependent on the availability of appropriations. This program awards discretionary grants on a competitive basis to States, public agencies, and nonprofit private organizations, including institutions of higher education. The Rehabilitation Act Amendments of 1986 require that awards be made for funding periods of at least three years.

Accomplishments

Fiscal year 1990 is the tenth year in which Congress has appropriated funds for this program. Activities carried out under this program include a broad range of recreational and social activities. Examples of the types of projects supported in 1989 include follow-up recreation services for persons leaving rehabilitation centers, increasing recreational opportunities for inner-city disabled youth and adults, and development of recreation and transportation services for disabled rural citizens. These projects are conducted at the local and community level primarily by local governments, nonprofit organizations, and colleges and universities. The 31 projects funded in 1989 operate in 23 States and the District of Columbia and serve approximately 17,000 disabled persons.

Rehabilitation Services and Handicapped Research

2. Special purpose funds: a. Service and demonstration projects:
   (3) Recreational Programs

1991 Budget Proposal

No funds are requested for this program in 1991. The Department considers recreation programs a low priority for Federal support with continued funding more appropriately financed by private charities, local organizations, and corporations.

2. Special purpose funds: a. Service and demonstration projects:
(4) Migratory Workers
(Rehabilitation Act of 1973, Title III, Part B, Section 312)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$1,086,000	$1,086,000	---

1/ Of the amount appropriated for Special Demonstration programs, 5 percent must be set aside for Migratory Workers. There is further authorized such additional amount as may be necessary to equal, when added to the amount made available by the 5 percent from Special Demonstration programs, an amount of $5,000,000.

Purpose and Method of Operation

The Migratory Workers program makes comprehensive vocational rehabilitation services available to disabled migrant or seasonal farmworkers. Projects also develop innovative methods for reaching and serving this population. Some State vocational rehabilitation agencies have incorporated these projects into their ongoing operations. Emphasis is given in these projects to outreach, specialized bilingual rehabilitation counseling, and coordination of vocational rehabilitation services with services from other sources.

Discretionary grants are awarded to State vocational rehabilitation agencies to provide rehabilitation services to migratory workers and to members of their families when such services will contribute to the rehabilitation of the disabled worker. Grants are limited to 90 percent of the costs of the projects providing these services. This is a current-funded program in which funds become available for obligation on October 1 of the fiscal year for which they are appropriated and remain available for 12 months. The level of funding is dependent upon the availability of appropriations.

Accomplishments

There is an estimated population of 280,000 handicapped migrant and seasonal farm workers in the Nation's labor force. There is a high degree of disability within the migrant worker population which affects employability. As a group, migrant workers frequently work in situations associated with a

---

Accomplishments -- continued

high risk of ill health and disability. The characteristics of this group, such as their mobility, cultural differences, and limited English proficiency, require special attention with respect to vocational rehabilitation. Traditional State vocational rehabilitation techniques often fail to adequately serve this population. It has been demonstrated that agency contacts must originate in surroundings familiar to the client, and that the client must be approached with cultural sensitivity by a worker fluent in the client's language.

An evaluation of this program was completed in September 1987. The final report focused on the ability of State agencies to adapt traditional vocational rehabilitation approaches to the special needs of handicapped migrants and seasonal farmworkers. Although the report was generally positive about the effectiveness of the Migratory Worker grants, it did point out the need to further examine the level and type of support for vocational rehabilitation services to migratory and seasonal farm workers provided by State VR agencies. RSA regional specialists are incorporating many of the standards recommended by the report, especially those related to quality of service, in monitoring of the Migratory workers program. RSA regional staff and State VR personnel responsible for these projects are discussing the implementation of feasible report recommendations. In 1990, RSA will collaborate with NIDRR on a research project to address the special problems faced by handicapped migratory workers identified in the 1987 study.

The Department will fund 11 projects for 1990, including 5 continuations and 6 new projects. It is estimated that 3,000 handicapped migratory, agricultural and seasonal farmworkers will be served by all 11 programs. Program goals include both the acquisition of new work skills which might qualify migrant workers with handicaps to obtain employment in other areas and leave the migrant stream, and the provision of services necessary to assist clients with handicaps in continuing as migratory or seasonal farmworkers.

1991 Budget Proposal

The 1991 budget request for Migratory Workers is $1,086,000, the same as the 1990 appropriation. At this level, a total of 11 projects will be funded, including 9 continuations and 2 new projects.

Impact Data

2. Special purpose funds: a. Service and demonstration projects
(5) Projects with Industry
(Rehabilitation Act of 1973, Title VI, Part B, Section 621)

1991 Authorization: $19,925,000

Budget Authority:

1990 Appropriation 1/	1991 Request	Increase or Decrease
$18,765,000	$18,765,000	---

Purpose and Method of Operation

Projects with Industry (PWI) program is the primary Federal vehicle for promoting greater participation of business and industry in the rehabilitation process. This program provides disabled persons with training and experience in realistic work settings to prepare them for employment in the competitive labor market. Post-employment services are also provided to clients. Business Advisory Councils provide the mechanism for members of the private sector to participate in policymaking and give advice on available jobs and training requirements.

Projects with Industry grants are made to a variety of agencies and organizations, including business and industrial corporations, rehabilitation facilities, labor organizations, trade associations, and foundations. Grants are limited to 80 percent of the costs of projects. This is a current-funded program in which funds become available for obligation on October 1 of the fiscal year for which they are appropriated and remain available for 12 months. The level of funding is dependent upon the availability of appropriations.

The 1986 Amendments to the Rehabilitation Act require that: the Commissioner publish indicators of minimum compliance with the evaluation standards approved by the National Council on the Handicapped; that PWI project grantees, beginning with fiscal year 1989, report to the Commissioner at the end of each project year the extent to which the grantee is in compliance with the standards; and, in order to receive continuation funding, grantees must be in compliance with the provisions of their approved grant application and the evaluation standards.

Accomplishments

As mandated, proposed indicators were developed based on the PWI evaluation standards, the results of the national PWI program evaluation, and input from

Accomplishments — continued

a panel of experts from the PWI community. Following the development of the proposed compliance indicators, a Notice of Information Collection Request was published in the Federal Register in July 1988. The purpose of the notice was to collect data from the PWI grantees that would enable RSA to develop proposed minimum performance levels for each compliance indicator. Data, varying in completeness, were received from all 108 grantees awarded funding in 1987.

Proposed performance levels were developed for each compliance indicator based upon an analysis of the grantee data, consideration of the data collected in the program evaluation in 1985, and program priorities. The Department published a Notice of Proposed Rule Making (NPRM) containing the proposed performance levels for the indicators in February 1989. The major issue raised in the comments to the NPRM was the objection to an "all or nothing" scoring approach to measuring performance and awarding points. Resolution of this issue resulted in changes to a number of sections in the regulations. The final regulations were published in the Federal Register in August 1989. Indicators will measure performance in the following areas: persons with severe disabilities served, unemployed served, cost per placement, projected cost per placement, placement rate, projected placement rate, change in earnings, percent placed who have severe disabilities, and percent unemployed placed.

Beginning with fiscal year 1990, the Department will be assessing three factors in making new competitive awards: success in meeting established selection criteria, geographic priority, and past performance where relevant. Each application for continuation funding for the third or any subsequent year of a PWI grant must include data for the most recent project year in order to determine if the grantee has met the program compliance indicators. Grantees must adhere to the provisions of its approved application and receive a minimum composite score of 70 points on the program compliance indicators.

Fiscal year 1988 funds supported 108 continuations and 7 new projects affiliated with more than 3,500 private corporations. Of these projects, 114 were continued in fiscal year 1989. In fiscal year 1988, 80 of the 108 continuation projects reported a total of 13,000 placements. Data from all 114 projects for program years 1988 and part of 1989 will be collected by the Department and used to make determinations on continuation funding for 1990.

Jobs obtained under the program generally range from service type positions to those that are highly technical or managerial. Examples of successful projects include: (1) training individuals for jobs in data processing and computer technology at IBM; (2) placement of individuals in the electronics

Accomplishments -- continued

industry at the Electronic Industry Foundation; and (3) training individuals for jobs in union-related firms by the Human Resources Institute of the AFL/CIO.

Six on-site compliance reviews were conducted in fiscal year 1989. RSA is in the process of finalizing a draft standard on-site review survey instrument which is being field tested at one project site in each of the RSA regions.

1991 Budget Proposal

The 1991 budget proposal is $18,765,000 for Projects with Industry, the same as the 1990 appropriation. In 1991, we expect to receive up to 12 applications for continuation funding. These projects will have been funded as new awards in 1990 and will be continued automatically for the second year. The remaining funds would be used to fund approximately 114 new awards, resulting in a total of 126 grants.

Impact Data

	1989	1990	1991
Continuations........	114	114 1/	12
New Projects.........	---	12	114
Total..........	114	126	126

1/ The number of continuation projects funded in 1990 will be depend upon the extent to which grantees are in compliance with the performance indicators and the provisions of their approved grant application. If continuation projects do not meet these criteria, additional funds would be available for new projects.

Rehabilitation Services and Handicapped Research

2. Special purpose funds: b. Helen Keller National Center
(Helen Keller National Center Act)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,938,000	$5,198,000	+$260,000

Purpose and Method of Operation

The Helen Keller National Center (HKNC) for Deaf-Blind Youths and Adults provides services on a national basis to deaf-blind persons, their families, and service providers through three major components: a national headquarters center with a residential training and rehabilitation facility where deaf-blind persons receive intensive specialized services; a network of 10 regional field offices which provide referral and counseling assistance to additional deaf-blind persons; and an affiliated agency network system of 28 public and private agencies that serve persons with deaf-blindness.

The Center is located in Sands Point, New York, and provides multidisciplinary evaluations, comprehensive training, and individualized rehabilitation services for severely disabled deaf-blind youths and adults, trains personnel to work with deaf-blind persons, and conducts relevant research and development activities. Services provided at this center are divided into the following eighteen major service areas: audiology, behavior management, communication, community education, community work experience, creative arts, daily living skills, home management, horticulture, industrial arts, leisure time programming, low vision training, medical services, orientation and mobility, physical therapy, psychology, public relations, and case management. The objectives of the training and rehabilitation services received by clients are to provide meaningful contact with the environment, effective means of communication, constructive participation in the home and community, initial or enhanced employability, and other development pertinent to the rehabilitation of these individuals. To assist in reaching these objectives, the Center conducts community education designed to sensitize the professional and general communities to the special needs and abilities of persons who are deaf-blind. HKNC also maintains a registry of youths and adults with deaf-blindness and encourages and assists public and private agencies to develop services for persons who are deaf-blind in their local communities.

Regional representative services may include staff training, technical assistance, and specific planning of direct services for deaf-blind clients in conjunction with state vocational rehabilitation counselors, mental health workers, and special education programs. HKNC provides seed money to affiliate agencies as an incentive for these agencies to create programs for persons who are deaf-blind. These funds are offered on a gradually declining

---

Purpose and Method of Operation -- Continued

basis over a five year period. After this period, these programs are eligible to receive technical assistance or training from HKNC, but receive 100 percent of their operating funds through their own agencies.

The Helen Keller National Center is a current-funded program in which funds are awarded on a noncompetitive basis. The Center was created by Congress in 1969, and operates under the auspices of Helen Keller Services for the Blind. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, the Helen Keller National Center served 85 clients at the Center, helped 1,084 persons to obtain appropriate services through assistance from HKNC's regional representatives, and provided seed money to 12 agencies and technical assistance to an additional 16 agencies affiliated with HKNC. Services provided by the regional representatives included counseling, information, and referral for 425 parents. They also contacted a total of 513 public and private agencies. In 1989, the affiliate agencies served 1,844 persons who are deaf-blind.

Client outcomes are expressed in terms of present employment and community living status. During the year ending June 30, 1989, 25 persons successfully completed the program at the Center's headquarters. Of the 25 successful completions, 2 were placed in competitive employment, 5 in supported employment, 10 in sheltered workshops, 3 in vocational on-the-job training, 1 into training at other facilities, 1 is awaiting employment, and 2 became homemakers. Three of the group are living semi-independently, 12 with spouse or family, 9 in small community group homes, 1 in a group home facility, 2 in Intensive Care Facilities for the Mentally Retarded, 1 in a nursing home, and 2 in institutions.

In order to effectively streamline services to clients at the Center, a new Case Management Department was established in 1989. The Department combined the former Rehabilitation Counseling and Social Work Departments. The result has been to eliminate duplicative services and administration and to give clients, parents, and State vocational rehabilitation counselors a single point of contact and liaison during the client's involvement with HKNC. A second placement specialist was added in 1989 to assist with vocational placements and living arrangements. Also during 1989, the IBM corporation loaned a senior manager to HKNC to help evaluate and improve the Center's program for marketing the abilities of its clients. This individual helped to develop a computer training curriculum which is in the process of being implemented.

In 1989, HKNC also established a new project aimed at providing training and support services to parents and family members of persons with deaf-blindness. The project, which is funded through a private grant, was organized to bring parents together by creating a network among State and

---

Accomplishments -- Continued

local parent organizations. Such organizations currently exist in 21 States. The project has created a national newsletter and training materials. A parent advisory committee has been established for the project composed of 11 parents from 11 States.

The Department gave the Center permission to initiate a new international internship program for professionals in the field of deaf-blindness in 1989. The purpose of this program is to assist other countries in developing or expanding services for persons who are deaf-blind by providing training to their staff. Participants are professionals from a wide array of countries. Thus far, the Center has accepted individuals from Israel, Norway, and Japan. Referrals and letters of interest also have been received from countries such as Spain, India, England, and Germany. Participants are financially supported by their sponsoring agencies and are expected to initiate and complete at least one project while at HKNC. HKNC plans to conduct three training sessions of thirteen weeks for up to four interns per session.

HKNC offers training and consultation in all areas related to services for deaf-blind persons through a national training team. Training is provided on-site throughout the Nation on a request basis with the requesting agency covering the travel costs for the team. Ten one-week seminars at Center headquarters are also available during the year. Participants in these seminars are nominated and sponsored by their agencies. During 1989, Helen Keller conducted 43 seminars throughout the United States attended by 2,180 persons. A highlight of this program was a special project to train staff in Oklahoma, Rhode Island, and Florida. Each of these States is under court order to close institutions housing persons with deaf-blindness. The focus of the training has been in teaching these programs how to shift clients to community-based services. In addition to these efforts, HKNC hosted 240 domestic and 72 international visitors and provided short-term training sessions to 280 persons.

An evaluation of HKNC was begun in 1986 and completed in 1988. The report contained many recommendations, including that HKNC focus on developing a system for determining a client's level of functioning both before and after the client receives services and follow up on clients for a longer period of time after they return to their communities. The report noted that 33 percent of the clients that entered the Center left before completing the program, and that higher functioning clients who had developed mobility and daily living skills prior to entering the Center were more successful in completing the Center's training program than clients who were more severely disabled. In 1989, HKNC improved the documentation of client independent living skills at the beginning and end of their program as a result of these recommendations. In 1990, HKNC plans to assess the long-term effects of participation in the Center's programs through a quality assurance review of clients trained over the last five years at the headquarter's facility. This study will examine the extent to which clients who received training at HKNC are employed and have maintained or increased their skills in areas such as communication, mobility, and daily living since leaving the Center.

1991 Budget Proposal

The Department requests $5,198,000 for the Helen Keller National Center for Deaf-Blind Youth and Adults for fiscal year 1991, an increase of $260,000, or 5.3 percent, above the 1990 appropriation. These funds are requested to maintain program operations and expand the Community Work Experience Program.

The request includes $196,000 to offset the effect of inflation and compensate for salary and benefit increases. HKNC is renegotiating a two-year agreement with the union representing 65 percent of its employees and anticipates an increase in salaries and benefits of between 4 and 5 percent for 1991. The request includes sufficient funds to cover these increased costs. At the proposed level, the Center would serve about 91 persons with deaf-blindness at its headquarters facility and assist approximately 1,300 persons through its regional representatives. In addition, approximately nine affiliate projects would receive funding.

Sixty-four thousand dollars is also requested to add two employment training specialist positions to the community work experience program. In 1987, HKNC expanded its in-house training program to begin to provide community-based employment services for persons with deaf-blindness. Through this program, rather than using on-campus simulated worksites, clients have been placed with 10 different off-campus work experience sites, including local hospitals, libraries, public schools, and private businesses. In 1988, two staff were hired for this program. As a result, in 1989, almost half of the clients participating in the community work experience program had off-campus work experiences. In 1990, HKNC plans to augment the community work experience program by initiating an optional employment training track for clients served at the headquarters facility. Clients who are capable of supported or other types of employment would participate in intensive community based employment training while at the Center and receive fewer services in other areas so that more time could be devoted to employment training. Presently, clients enrolled in the Center's Community Work Experience Program only receive 5 to 8 hours of employment training per week. The augmentation of the Community Work Experience program in 1990 will increase HKNC's ability to provide experiences on an individual basis based on the abilities of the participants. However, Helen Keller's ability to expand services in this area and establish new employment sites is still limited because of staff constraints. The additional staff requested for 1991 would work directly with HKNC clients on the job site and allow HKNC to double the number of job training sites in the community and the number of clients served.

The 1988 evaluation of HKNC recommended that the Center work to improve employment opportunities for clients. The data indicated that HKNC only placed 40 percent of the clients who completed the headquarter's training program in jobs. In the past year, HKNC made progress in placing clients in employment settings and retained more clients until they complete the program. However, more is needed. The 1991 increase in funds requested for the community work experience program would address the need to develop additional employment opportunities.

Purpose and Method of Operation

The Rehabilitation Act authorizes three independent living service programs. The Comprehensive Services for Independent Living program supports grants to the States to assist them in providing services designed to meet the current and future needs of persons whose disabilities are so severe that they do not presently have the potential for employment, but may benefit from vocational rehabilitation services which will enable them to live and function independently. These grants are supplementary to grants for vocational rehabilitation services under Title I, though they may include vocational rehabilitation services in addition to services which enhance an individual's ability to live independently. The designated State unit identifies the services it plans to provide to persons with severe disabilities in its State plan. These services include job placement services, transportation, attendant care, physical and mental rehabilitation and therapeutic treatment, prostheses and other devices, housing, health maintenance, recreation therapy, services for preschool age children, and appropriate preventive services to decrease the need of individuals assisted under this program for similar services in the future. In addition to the services listed above, training and support services for family members necessary to the rehabilitation or adjustment of individuals with severe disabilities are also provided. Decisions regarding the specific services to be provided to persons served by the program are based on an individualized written rehabilitation plan. States are required to use a minimum of 20 percent of funds received to make grants to local public agencies and private nonprofit organizations to provide independent living services. Priority for service is given to persons not served by other programs under the Rehabilitation Act. The Rehabilitation Act also requires each State to have an independent living council. These councils must develop five-year plans addressing the long-term goals and needs for independent living services and programs within their State.

Purpose and Method of Operation -- Continued

This is a current-funded formula grant program. Funds are available for obligation in the fiscal year for which they are appropriated. The level of funding is dependent upon the availability of appropriations. Funds are allotted to the States according to population, except that a $200,000 minimum allotment is provided to each State. If funds are insufficient to meet this requirement, the minimum allotment is reduced on a pro rata basis. Each State is required to provide 10 percent of the total expenditures incurred by the State for the program. Funds are administered by the designated State vocational rehabilitation agencies according to the approved State plans.

The Centers for Independent Living program supports a network of nonresidential, community-based centers which provide a wide range of services designed to help persons with severe disabilities live more independently in family and community settings. Services may also be provided to help persons with severe disabilities secure and maintain appropriate employment. Although most persons who receive services have disabilities so severe that they do not presently have the potential for employment, there are persons who, with the assistance of independent living services, may become employable or who can benefit from rehabilitation services that will enable them to live more independently. Centers are established and operated in local communities, and most centers serve persons with a variety of severe disabilities. People with disabilities participate in directing and managing the centers and are employed in center programs. Center services include counseling, assistance regarding legal and economic rights and benefits, training in personal care and independent living skills, attendant care and training of persons to provide such care, referral and assistance with housing and transportation, peer counseling, and other services to support independent living. In addition to these services, training services for the family and community are provided.

This is a current-funded program in which new discretionary grants are awarded on a competitive basis to designated State vocational rehabilitation agencies, or, in cases where the designated State units do not apply within a period of three months, other public agencies or private nonprofit organizations in those States. Since 1982, Congress has required that once a center is funded, that it continue to be funded noncompetitively. The Rehabilitation Act specifies that competitive funding of all awards under this program is to resume in fiscal year 1991. Funds become available for obligation on October 1 of the fiscal year for which they are appropriated and remain available for 12 months. The level of funding is dependent upon the availability of appropriations.

The program of Independent Living Services for Older Blind Individuals supports services to assist individuals aged fifty-five or older whose severe visual impairment makes gainful employment extremely difficult to obtain, but for whom independent living goals are feasible. Services are designed to help these individuals adjust to their blindness by increasing their ability

---

Purpose and Method of Operations — Continued

to care for their individual needs. Services may include help in correcting blindness, the provision of eyeglasses and other visual aids, instruction in the use of equipment to assist the person in becoming more mobile, mobility training, Braille instruction, provision of or assistance in obtaining guides, readers, and transportation, and other appropriate services.

This is a current-funded program in which discretionary grants are awarded through competition to designated State vocational rehabilitation agencies. Grantees are State agencies for the blind and visually impaired or State general vocational rehabilitation agencies if there is no separate agency for the blind. These agencies may make grants to public or private nonprofit organizations to conduct activities or provide services. Funds are awarded and must be obligated in the year for which they are appropriated. Funds were made available for this program for the first time in fiscal year 1986. In the first and second years of this program, grants were awarded for 12 month periods. In fiscal year 1988, grants were awarded for a 36 month project period. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The Comprehensive Services for Independent Living is a relatively new program, receiving funding for the first time in 1985. States are providing most of the services authorized by the Act and are moving toward making them available on a statewide basis. The Rehabilitation Services Administration is developing a case review system for this program based on the system currently in use for the vocational rehabilitation program under Title I of the Act. RSA is also developing a State program review guide for the purpose of monitoring State agency performance and compliance with applicable law and regulations.

In fiscal year 1989, funds under this program were distributed to 79 State agencies. Our most recent data indicates that the total number of active cases for persons served under this program was 15,413 for fiscal year 1988. The major disability categories of persons served were orthopedic impairments, including spinal cord injuries and amputations (42 percent), visual impairments (32 percent), and hearing impairments (7 percent). Designated State agencies used a combination of State service providers and local and private nonprofit agencies, organizations, and facilities, including Part B Independent Living Centers, as appropriate, to provide independent living services. Services are arranged through cooperative agreements or direct grants for specific services such as training activities in daily living skills, help for the homebound, hiring and use of attendants, attendant care, housing, physical and mental restoration services, transition from school to work programs, and advocacy and community awareness activities. Examples of needs served through State programs include special pre-vocationally oriented programs for the chronically mentally ill and elderly populations, and the development of independent living programs for

Accomplishments — Continued

Native Americans residing on reservations and severely deaf-blind persons. States also have been applying creative needs-based approaches toward the provision of independent living services in rural and urban poverty areas and assisting with the deinstitutionalization of persons with severe physical disabilities and integration of these persons into the community.

The Rehabilitation Act Amendments of 1986 required each State to establish a State independent living council composed of a majority of individuals with disabilities. The Department has provided technical assistance to States in meeting the requirement. All States have submitted assurances that they have complied with this provision.

The Centers for Independent Living program began in 1979 with only 10 centers. It has grown into a national program which, in 1989, funded 141 grants which supported projects in 196 locations. Centers provide direct services to disabled persons and referrals to other agencies. They also work to promote local community awareness and sensitivity to the special needs of the disabled population such as curb cuts and accessible housing and transportation. Five new awards were made in 1988 through a competition which gave a competitive preference to applications for projects which would serve geographic areas which were unserved or underserved by existing independent living centers. The competition invited applicants to propose projects to provide services to assist individuals with severe handicaps to make the transition from school or institution to work and community living and the need to serve a broad range of disability groups. The Rehabilitation Act Amendments of 1986 require the Department to reserve an amount in fiscal year 1990 that is 90 percent of the amount appropriated for fiscal year 1989. This amount shall be available only for grantees receiving assistance in fiscal year 1989. Funds received in excess of this amount may be used for new awards or for existing centers.

The Rehabilitation Services Administration estimates that over 75,000 persons have been served since this program was created, approximately 75 percent of whom are severely disabled. Data submitted by the centers indicate that they devote a significant amount of their resources to advocacy, peer counseling, and training to develop independent living skills. Centers are providing innovative services in response to needs of disabled consumers within the community. Examples include provision of services to individuals with severe disabilities who are homeless, teaching medical and nursing students about the independent living movement to help eradicate attitudinal barriers in the medical profession and enhance the quality of medical care, developing cooperative home ownership opportunities among persons with disabilities, and serving as plaintiffs in litigation to gain accessible transportation and housing.

The Rehabilitation Act Amendments of 1984 mandated that the Department develop evaluation standards for use by the centers. The Rehabilitation Act Amendments of 1986 require that the Rehabilitation Services Administration

---

Accomplishments -- Continued

develop indicators of what constitutes minimum compliance with the standards for the purpose of evaluating the centers. A notice of proposed rulemaking covering the evaluation standards and compliance indicators is scheduled to be published in the second quarter of fiscal year 1990. Also beginning in 1990, site visits will be conducted using the standards, continuation grant applications, and proposed compliance indicators to evaluate the performance of Part B centers for independent living.

Many existing projects focus on serving one specific disability or set of disabilities. For example, 22 centers emphasize services to blind and visually impaired persons, 5 emphasize services to the deaf-blind, 10 are sponsored by organizations for the mentally retarded, and 3 are sponsored by agencies focusing on cerebral palsy. However, consistent with the evaluation standards developed for this program, all new competitions have been emphasizing the need for projects to serve multiple disability groups. Other changes in program administration were made as a result of the Rehabilitation Act Amendments of 1986. These include a requirement that every center have a board which is composed of a majority of individuals with disabilities. The Department interpreted the requirement to refer to the principal governing body of the organization and has required Centers to meet that standard.

The Independent Living Services for Older Blind Individuals program was funded for the first time in 1986. Twenty-four projects received one-year grant awards in 1986 and 26 in 1987. Final regulations for this program were published in 1988 and included selection criteria on the extent to which the plan of operation and management includes involvement of older blind individuals in planning for and conducting program activities. Following publication of the regulations, three year grants were were competitively awarded in 1988 to 28 State agencies. These 28 awards are in continuation status in 1989 and 1990. The average award amount is about $200,000. This is a new program, and there are no data regarding its accomplishments at this time.

1991 Budget Proposal

The 1991 budget request for Independent Living would maintain funding for Part B, Centers for Independent Living and Part C, Independent Living Services for Older Blind Individuals at the 1990 appropriation level. This reflects the Department's sustained effort to maintain services for severely disabled persons. The Department is requesting $13,481,000, a 4.2 percent increase in the Part A Comprehensive Services for Independent Living program. The increase is proposed in order to emphasize the importance of statewide services and statewide coordination of services. In the past, the Department has noted that the three independent living programs are overlapping and duplicative in many ways. The Department is continuing to evaluate alternatives for improving the effectiveness and efficiency of the independent living program. The authorization for this program expires after fiscal year 1991.

Rehabilitation Services and Handicapped Research

2. Special purpose funds: c. Independent living

1991 Budget Proposal — Continued

At Congress's direction, since 1982, all grantees have been continued noncompetitively in the Part B Independent Living Centers program once they receive funding. Some new awards were made in 1985 to expand the capacity of existing centers to serve disability groups not served in the past. In 1987, 13 new centers were funded and, in 1988, 5 new centers were funded. The Rehabilitation Act Amendments of 1986 mandate that the Department noncompetitively continue all centers through 1990, provided that centers are in compliance with the evaluation standards for this program and the terms of their grant awards. For fiscal year 1991, all awards would be made on a competitive basis and shall include consideration of past performance, where appropriate. Grants under the Part C program were awarded for a three year grant cycle in 1988. All of these grants would continue to receive continuation funding in 1991.

Number of grantees..	28	28	28

1/ In total, 79 State agencies are eligible to participate in this program including the outlying areas and both general and blind State vocational rehabilitation agencies. The reduction in the number of agencies in 1990 and 1991 is due to an anticipated consolidation of a blind agency and general vocational rehabilitation agency.

2/ Funds are distributed on the basis of population with a minimum allotment of $200,000 going to each of the 50 States, District of Columbia, and Puerto Rico, and 1/8 of 1 percent of the total available to each of the Outlying Areas. This figure represents the average State award, including both general and blind agency awards.

3/ Grantees may receive more than one grant award to expand services offered by existing centers.

2. Special purpose funds: d. Training
(Rehabilitation Act of 1973, Title III, Section 304)

1991 Authorization: $38,517,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$31,110,000	$31,110,000	---

Purpose and Method of Operation

The purpose of this program is to ensure that skilled personnel are available to serve the rehabilitation needs of disabled persons. The program supports training and related activities designed to increase the numbers of qualified personnel trained in providing rehabilitation services. Grants are awarded to and contracts made with States and public or nonprofit agencies and organizations, including institutions of higher education, to pay all or part of the cost of conducting training programs.

The rehabilitation training program serves the rehabilitation field in many ways. Long-term training funds are used to support the training of rehabilitation professionals in a broad range of 23 rehabilitation disciplines and areas of professional practice. Projects funded in the area of experimental and innovative training prepare new types of rehabilitation professionals or develop innovative training methodologies. Training funds are also used for continuing education programs to upgrade the skills of rehabilitation workers employed by State vocational rehabilitation agencies and public and private agencies which cooperate with these State agencies, to provide inservice training for staff of State vocational rehabilitation agencies, and to train interpreters for deaf individuals.

Programs vary considerably throughout the country in terms of content, methodology, and type of trainee. For example, long-term training primarily funds preservice academic training. Grants for continuing education programs provide training on a multi-state basis for personnel already employed by both public and private rehabilitation agencies and facilities. Grants for State agency inservice training are awarded to each State to support the training of personnel and related administrative costs within the State vocational rehabilitation agency. Inservice training is directed toward helping staff meet State agency operational responsibilities and procedural requirements.

Rehabilitation training is a current-funded program. Awards provide both institutional and scholarship support for various rehabilitation disciplines and areas of professional practice. Funds become available for obligation on October 1 of the fiscal year for which they are appropriated and remain available for 12 months. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, a total of 343 awards were made. This included awards in 19 long-term training categories, experimental and innovative training, rehabilitation continuing education, in-service training, and interpreter training for the deaf.

The Rehabilitation Act Amendments of 1984 required the Department to develop a system for allocating training funds according to identified personnel shortages. In the past, the Department focused on covering all training fields rather than on identifying and targeting shortage areas. In 1987, the Department completed the first National Assessment of Vocational Rehabilitation Personnel Shortages and Training Needs. This study was used in making allocations of training funds in 1987 and 1988 among the numerous areas authorized by the Rehabilitation Act. The Department completed a second survey in the spring of 1989. The survey covered all State vocational rehabilitation agencies, a sample of State-approved vocational rehabilitation facilities, and a sample of grantees in selected vocational rehabilitation discretionary grant programs. The results were used to validate information collected by the original survey and to provide current data on personnel shortages and training needs.

In examining personnel shortages, the 1989 study focused on identifying those professions in which personnel shortages stemmed from a shortage of trained professionals rather than other factors such as competition with private providers, hiring freezes, or management difficulties. The survey form was modified to include seven specialties within the general area of rehabilitation counseling, add client assistance and independent living administration as new specializations, and gather information concerning minimum educational requirements for each profession. Changes were also made to increase accuracy, reduce respondent burden, and refine the sampling plan to obtain better data on the needs of outside service providers.

Survey results indicated that the fields of blindness, deafness, mental illness, job development, vocational evaluation, rehabilitation engineering, and supported employment warrant increased attention and resources. The need for general rehabilitation counselors and interpreters for the deaf remained strong. The data also revealed that many States with vacancies, that also indicate an inadequate pool of applicants, set minimum educational requirements at the bachelor degree level. In 1989, the Rehabilitation Services Administration (RSA) also collected data from the field on priorities through the use of four regional forums. These data and data from the updated National Assessment of Personnel Shortages and Training Needs were used to develop the Department's 1989 training allocation plan.

The Department intends to use the results of the National Assessment update as a basis for the allocation of funds for the 1990 competitions. The Senate committee raised concerns that neither rehabilitation nursing or psychology were identified as shortage areas in this study. The Department believes that the survey was objective and comprehensive and responded to the statutory

Accomplishments -- Continued

requirement that training funds be allocated in accordnace with identified training needs. The Commissioner of the Rehabilitation Services Administration has established a workgroup to evaluate the process for determining allocations and is soliciting input from rehabilitation service delivery groups.

The level of funding, number of trainees, and average cost per trainee by type of training are shown for 1989 in the following table:

Type of Training	Estimated Number of Trainees	Total Grant Awards	Average Federal Cost per Trainee
Long-term............	3,180	$21,326,000	$7,000
Experimental and innovative.........	175	1,319,000	7,540
Continuing education.	2,810	3,651,000	1,300
Inservice............	8,120	3,254,000	400
Interpreter training.	808 1/	900,000	1,114
Total............	15,093	30,450,000 2/	1,937

1/ These projects focus on both direct training and continuing education. Of the 808 enrollees in the academic program, 219 completed their training as employment-ready interpreters in 1989. Grantees also conducted 319 continuing education workshops for persons already trained as interpreters.

2/ Excludes $50,000 used for field readers to conduct peer reviews of grant applications.

Two biennial priorities were published for 1989 and 1990. The first was for projects which train rehabilitation counselors to assess the functional capacities of, plan effective vocational and independent living rehabilitation programs for, develop jobs for, and place individuals with severe disabilities. This training must involve trainees in the provision of rehabilitation services and independent living rehabilitation services to individuals with severe disabilities. A total of $1,557,410 was awarded in 1989 under this priority. Between $500,000 and $1,500,000 is available for new awards under this priority for 1990. Under a second priority for the Experimental and Innovative Training program, $265,741 was provided in 1989 for the training of direct service personnel for supported employment service delivery. Between $400,000 and $600,000 is available for new awards under this priority for 1990.

The Secretary published two additional single year priorities in 1989 and 1990. The regulations for the Rehabilitation Training program require that a set of any training materials developed under the program be submitted to an

Accomplishments — Continued

information clearinghouse designated by the Secretary. In 1989, a grant for $200,000 was awarded for the information clearinghouse. For 1990, an invitational priority was published for the training of interpreters for deaf individuals for two national projects focused on training interpreters to serve in educational and rehabilitation settings.

1991 Budget Proposal

The Department of Education is requesting $31,110,000 for Rehabilitation Training for fiscal year 1991. This would maintain the program at the 1990 appropriation level. At the 1991 level, support will continue to be provided for new and continuation awards in the long-term training program, experimental and innovative training, regional continuing education, inservice training, and interpreter training. We estimate that $19,224,000 would be available for continuation grants and $11,886,000, or 38 percent, for new awards. In 1990, only 25 percent of total funds are available for new awards. Funding priorities for 1991 have not yet been established.

2. Special purpose funds: e. National Institute on Disability and Rehabilitation Research
(Rehabilitation Act of 1973, Title II)

1991 Authorization: $60,378,500

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$54,318,000	$54,318,000	----

Purpose and Method of Operation

The National Institute on Disability and Rehabilitation Research (NIDRR), which was authorized by the 1978 Rehabilitation Act Amendments, was established in 1980 to support research to improve the lives of persons of all ages with physical and mental disabilities, and particularly the lives of those who are severely disabled.

NIDRR supports rehabilitation research, demonstration projects, and related activities including the training of persons who provide rehabilitation services or who conduct rehabilitation research. In addition, the Institute supports projects to disseminate and promote the use of information concerning developments in rehabilitation procedures, methods, and devices. Information is provided to both rehabilitation professionals and disabled persons.

To accomplish its purpose, NIDRR awards discretionary grants to: (1) identify the causes and consequences of disability; (2) find ways to maximize the health, physical, and emotional status, functional ability, self-sufficiency, self-development, and personal autonomy of persons with disabilities; (3) find ways to prevent or minimize personal and family problems that result from disability, including physical, mental, social, educational, vocational, and the economic effects of disability; and (4) find ways to reduce or eliminate physical, social, educational, vocational, and environmental barriers so as to permit persons with disabilities access to services and assistance.

NIDRR's operating programs include:

o Rehabilitation Research and Training Centers (RRTC) -- Each center has a major program of research, such as musculoskeletal disorders, mental illness, mental retardation, vocational rehabilitation, deafness and hearing impairments, blindness and visual impairments, brain trauma, aging, supported

---

Purpose and Method of Operation -- Continued

employment, families with disabilities, and independent living. The centers are affiliated with universities, which provide access to major professional and research resources, and which provide a long-term integrated research and training program of programmatic research in priority areas.

o Rehabilitation Engineering Centers (REC) -- These centers support a research and training program designed to expand the development of technological systems for persons with disabilities; to stimulate the production and distribution of equipment in the private sector; to conduct clinical evaluation of equipment; and to train professionals in rehabilitation engineering concepts. Each center has a programmatic research area in which a major issue is addressed in a clinical environment, where clinicians and technologists can work together to develop solutions to the problems encountered by individuals with disabilities. Programmatic areas of research include functional electrical stimulation, transportation, wheelchairs, mobility disorders, sensory aids, vocational rehabilitation, and technology transfer.

o Research and Demonstration Projects -- These projects are designed to be responsive to direct, short-term research problems which bear directly on the development of methods, procedures, and devices to assist in the provision of rehabilitation services, particularly to severely disabled individuals. Such projects are supported in a wide array of public and private organizations and are directed to investigate areas of high priority where immediate acquisition of new knowledge is important.

o Utilization and Dissemination Projects -- These projects support information utilization and dissemination, including state-of-the-art assessments and diffusion centers, to ensure that knowledge generated from research is available and can be fully used to improve services for disabled persons.

o Field-Initiated Research -- This program supports research and demonstration projects that address important activities that were not included in NIDRR's announced priorities, thereby allowing NIDRR to expand the breadth of its research.

o Innovation Grants -- The innovation grant program was initiated in 1985 to enable NIDRR to benefit from small field-initiated research projects. These one-year grants, not to exceed $50,000 per grant award, permit the testing of new concepts and ideas, the purchase of devices for evaluation, and the development of unique rehabilitation training curricula.

Purpose and Method of Operation -- Continued

o Research Training -- In response to a congressional mandate, this program was initiated in 1986 to increase the number of highly-qualified researchers in the rehabilitation field. It supports grants to institutions providing advanced training to physicians, nurses, and engineers.

o Fellowships -- The Mary E. Switzer Fellowship program supports fellowships to enable highly qualified individuals to carry out discrete research activities that are related to NIDRR's research priorities or to pursue studies in areas of importance to the rehabilitation community.

o Other Activities -- As appropriate, NIDRR also funds activities such as interagency agreements, international activities, and publications.

This is a current-funded program in which funds become available on October 1 of the fiscal year for which they are appropriated and remain available for 12 months. The level of funding is dependent upon the availability of appropriations. Projects funded under the program range from one to five years in duration.

Accomplishments

In 1989, NIDRR's achievements included the funding of 39 RRTCs and 16 RECs, as well as continued activities in all other program areas.

Rehabilitation Research and Training Centers (RRTC) -- Thirty-nine RRTCs were funded at a total cost of $21,900,000. Two new Centers were funded in 1989, one dealing with issues related to children with chronic disabilities, and another dealing with accessible housing for disabled persons of all ages. The remaining 37 Centers were continued from 1988. These Centers focused on a wide variety of areas, such as enhancing employability, the rehabilitation of the economically disadvantaged, improving the rehabilitation of Native Americans, and the mental health rehabilitation of individuals with deafness. Each Center taught four to six short-term continuing education courses for about 8,500 professionals nationwide.

Rehabilitation Research Engineering Centers (REC) -- Sixteen RECs were continued in 1989 at a total cost of $9,600,000. Each Center conducted approximately ten individual projects that applied rehabilitation engineering knowledge. Centers focused on a wide variety of areas, including prosthetics and orthotics, modifications to worksites and educational settings, and evaluation of rehabilitation technology.

Accomplishments -- Continued

Research and Demonstration Projects -- Forty-one research and demonstration projects were funded at a total cost of $6,100,000. These projects addressed the specific needs of handicapped persons and vocational rehabilitation. New projects included rural job development, issues related to private rehabilitation practices, and issues related to adventitious hearing impairment. Projects continued from 1988 included studies on the therapeutic effects of functional electrical stimulation on paralyzed persons, the role of zinc on the cognitive rehabilitation of severely brain-injured persons, and psychological and social adjustment after stroke. In addition, 17 one-year Small Business Innovative Research contracts were funded at a total cost of $600,000.

Utilization and Dissemination Projects -- Twenty utilization and dissemination projects were funded at a total cost of $4,200,000. Highlights of this program included continuation of a public education program on traumatic brain injury, a newly-funded project to support the Independent Living Center resource exchange network, a project to disseminate models for educating deaf students in the least restrictive environment, and a project to develop projections on demographic data and employment statistics for the disabled. NIDRR continued its diffusion activities through contracts such as those with the National Rehabilitation Information Center (NARIC) for the publication of Rehab Briefs. In addition, NIDRR provided funds to assist the National Center for Health Statistics in meeting the costs of preparing the 1990 survey on the use of assistive devices.

Field-Initiated Research -- Seventy-five field-initiated projects were funded at a total cost of $6,995,000. Projects funded in 1989 included the development of a visual telephone for the deaf, the development and validation of teaching routines for enhancing the performance of adolescents with a learning disability, and an evaluation of the the impact of physical fitness training on persons with psychiatric disabilities.

Innovation Grants -- Forty-one innovation grants were funded for one year at a total cost of $2,000,000. These grants support small projects designed to develop devices and training curricula as well as to test new ideas that will contribute to the rehabilitation of persons with disabilities. Projects supported in 1989 included establishing performance benchmarks for hourly-rated workers with disabilities, a study of the supported work status and the quality of life for individuals with long-term mental illness, a national consensus conference on catastrophic illness and injury, and a feasibility study of the usefulness of a novel hand prosthesis design.

Accomplishments — Continued

Fellowships -- Nine fellowships were awarded at a total cost of $290,000. Studies pursued in 1989 by Distinguished Fellows included the adoption of children with disabilities, the development of a reaching trajectory after stroke, and post-school tranistion barriers from school to competitive employment. Studies pursued in 1989 by Merit Fellows included the personal assistance needs of disabled individuals, the needs of disabled Mexican-Americans, and returning employees with cancer back to work.

Research Training -- Eleven Research Training awards were made at a total cost of $1,515,000. In response to congressional directives, NIDRR created a program of training in rehabilitation research in 1986. Thus far, grants have been awarded to 12 institutions providing advanced research training to physicians, nurses, engineers, and physical therapists.

Spinal Cord Injury -- NIDRR spent approximately $5,000,000 for a program of 13 model projects that provide comprehensive services, research, and data collection on rehabilitation and spinal cord injury. These funds are appropriated under the Special Demonstration program authority and are transferred to NIDRR to administer. Each project contributes to a national spinal cord injury data base of 10,300 patients as research subjects.

1991 Budget Proposal

The 1991 budget request for the National Institute on Disability and Rehabilitation Research (NIDRR) is $54,318,000, the same as the 1990 appropriation. Of the total requested, about 82 percent would be needed to continue on-going projects. About 17 percent would be used to fund new activities. Remaining funds would be used for costs associated with field readers, conferences, printing, and consultants.

In 1991, NIDRR plans to recompete two RRTCs and to fund one new REC dealing with technology for elderly disabled persons. Since it plans to undertake a study in the near future that will result in an updated long-range plan, NIDRR does not plan to announce any other new priorities for RRTCs and RECs in 1991.

The following activities would be supported in 1991:

o Rehabilitation Research and Training Centers — NIDRR expects to support 40 Centers in 1991. NIDRR will recompete two Centers, one dealing with issues related to blindness and the other dealing with issues related to deafness.

1991 Budget Proposal -- Continued

o Rehabilitation Engineering Centers -- NIDRR expects to support 19 centers under this program in 1991. NIDRR plans to continue funding for the 16 centers that were funded in 1989 and for the 2 centers on orthopedic aids and devices for children and transportation that are expected to be newly funded in 1990. A new Center dealing with technology for elderly persons is expected to be funded in 1991.

o Research and Demonstration Projects -- NIDRR expects to support 22 projects under this program in 1991, 16 of which will be continuation projects and 6 of which will be newly funded. In addition, NIDRR expects to fund at least 25 one-year Small Business Innovative Research Grants. New projects expected to be funded in 1991 include research on employee benefits for individuals with disabilities and research on interpreters for individuals who are deaf.

o Utilization and Dissemination Projects -- NIDRR expects to support 6 new projects and 10 continuation projects under this program in 1991. Projects that may be supported in 1991 include projects dealing with information diffusion to disabled individuals in rural areas and to elderly disabled individuals which focus on the use of generic service programs in disseminating information, particularly information about assistive technology. Funding would continue to support publications such as Rehab Briefs.

o Field-Initiated Research -- NIDRR expects to support 25 new projects and 53 continuation projects under this program in 1991. The program has grown substantially during the past few years. Because of the interest in the field generated by this program and the high quality of the applications received and the research proposed, NIDRR anticipates that it will support approximately 16 more projects than it expects to support in 1990.

o Innovation Grants -- NIDRR expects to support 20 new grants, for up to $50,000 each, under this program in 1991, the same number it expects to support in 1990. No continuation projects would be funded since the program only supports one-year pojects. Although it continues to find these grants are useful mechanisms for testing new ideas, devices, and training curricula, NIDRR believes that more resources should be devoted to other programs and, therefore, it expects to decrease the number of grants supported under this program in 1990 and 1991 from the number supported in 1989.

o Fellowships -- NIDRR expects to support 10 new one-year postdoctoral and predoctoral fellows in 1991, the same number supported in 1989 and 1990.

Rehabilitation Services and Handicapped Research

2. Special purpose funds: e. National Institute on Disability and Rehabilitation Research

1991 Budget Proposal -- Continued

o Research Training Grants -- NIDRR expects to support 7 continuation awards, one more than is expected to be supported in 1990, and to make 3 new awards under this program in 1991. The Department believes that 3 new awards per year is appropriate considering the small number of applications received for this program in the past and the level of need for qualified rehabilitation researchers.

Impact Data

Number of projects: 1/ (Estimates)	1989	1990	1991
Research and training centers	39	40	40
Rehabilitation engineering centers	16	18	19
Research and demonstration projects 2/	41	28	22
Utilization and dissemination projects	20	12	16
Field-initiated research projects	75	62	78
Innovation grants	41	20	20
Fellowships	9	10	10
Research training grants	11	9	10

1/ Each program includes other activities such as contracts, interagency agreements, and international activities.

2/ In 1989, the program also supported 17 one-year Small Business Innovative Research contracts (SBIR contracts). NIDRR expects to support at least 25 one-year SBIR contracts in 1990 and 1991.

---

2. Special purpose funds: f. Technology assistance
(Technology-Related Assistance for Individuals with Disabilities Act of 1988, P.L. 100-407)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$14,814,000	$20,000,000	+$5,186,000

Purpose and Method of Operation

Title I of the statute authorizes discretionary grants to States to assist them in developing and implementing statewide programs that facilitate the provision of assistive devices and services to disabled persons of all ages. Funds may be used to identify the technology-related needs of individuals with disabilities, coordinate resources for delivering technology-related services, provide technology-related training and technical assistance to consumers and service providers, disseminate information on technological devices, and provide assistive devices and services.

Under the statute, the Secretary could award up to 10 grants in 1989 and up to 20 grants in 1990. In 1991 and thereafter, the Secretary can award any number of grants. The Secretary is required to make 3-year development grant awards and is authorized to award a 2-year extension grant to any State that has made significant progress in developing a statewide program. Development grants must be made on a competitive basis. State development grants must be in the $500,000 - $1,000,000 range for the first 2 years; in the third year, grants must be in the $500,000 - $1,500,000 range. Extension grants for States must also be in the $500,000 - $1,500,000 range. Territories can receive up to $150,000 per year for development and extension grants.

The statute requires the Secretary to reserve 1 percent of the funds appropriated, or $500,000, whichever is greater, to provide technical assistance to the States. The Secretary is also required to conduct a national evaluation of the program. A report on the national evaluation is due to the Congress on October 1, 1992.

Title II of the statute mandates three studies: a study on the financing of assistive technology devices and services, to be performed by the National Council on Disability; a study on the feasibility and desirability

Purpose and Method of Operation -- Continued

of creating a national information and program referral network to assist States to develop and implement their statewide programs; and a study concerning the feasibility of operating a direct loan program of general applicability beginning after September 30, 1993. Parts C and D of Title II authorize training and public awareness projects and demonstration and innovation projects.

The program is administered by the National Institute on Disability and Rehabilitation Research.

This is a current-funded program in which funds become available on October 1 of the fiscal year for which they are appropriated and remain available for 12 months. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, funds were appropriated only for the State grant program authorized under Title I. Final regulations for this program were published in 1989. The Department received 49 applications from States and one application from a Territory. Nine States received first-year development grants. Award amounts ranged from a low of $500,000 to a high of $540,140; the average amount available was $517,000.

1991 Budget Proposal

For 1991, $20,000,000 is proposed, an increase of $5,186,000, or 35 percent, over the 1990 appropriation. As this proposal indicates, the Department continues to place a high priority on the development and implementation of comprehensive statewide programs of technology assistance. The Department recognizes that the efficient provision of technology-related devices and services can make a major contribution to improving the quality of life, increasing the opportunities for education and employment, and reducing communication barriers for disabled persons of all ages. The State grant program provides the impetus for States to develop and implement coordinated and effective programs that can meet the technology assistance needs of disabled persons. For this reason, the Department believes that funds should primarily be used to assist States in developing and implementing their statewide programs of technology assistance.

The budget proposal would provide funds to continue the 9 development grants made in 1989 for a third year, to continue the 13 grants expected to

---

1991 Budget Proposal -- Continued

be made in 1990 for a second year, and to make 12 new grant awards in 1991. The amount of first-year grants would be increased slightly. To assist States as they develop their statewide systems, the budget proposal would provide increases in award amounts over the previous year for second and third-year grants. Of the amount proposed, $300,000 would be used to complete the national evaluation of the State grant program, approximately $1,000,000 would be used for continuations of the 10 model projects funded in 1990, and $500,000 would be used for technical assistance.

Impact Data (Estimate)	1989	1990	1991

2. Special purpose funds: g. Evaluation
(Rehabilitation Act of 1973, Section 14)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$988,000	$988,000	---

Purpose and Method of Operation

Funds are used for studies to evaluate the impact and effectiveness of programs authorized by the Rehabilitation Act of 1973, including their general effectiveness in relation to their cost, their impact on related programs, and their structure and mechanisms for delivery of services. Studies are designed to provide information for policy decisions related to program management and effectiveness.

This is a current-funded program. The level of funding is dependent upon the availability of appropriations. Contracts are awarded on an annual basis for studies to be conducted by persons not immediately involved in the administration of the programs authorized by the Act. Some evaluations require multi-year studies.

Accomplishments

Three studies funded in 1988 were continued in 1989. These studies included the Evaluation of Vocational Rehabilitation Activities in Drug and Alcohol Rehabilitation, the Evaluation of the Impact of the State Vocational Rehabilitation Agency Management Control Project, and an update of the Training Survey first conducted in 1987 in order to identify shortage areas in 1989.

In 1989, three new studies were also funded. An evaluation of vocational assessment procedures and individualized written rehabilitation programs (IWRP) will examine, analyze, and evaluate the client assessment policies and processes used by the State Vocational Rehabilitation Agencies throughout the rehabilitation process. A policy review of evaluation studies in vocational rehabilitation will provide a critical review of 20 evaluation studies that have been conducted in vocational rehabilitation. The third study will develop a list of proposed indicators of effectiveness for the State/Federal vocational rehabilitation program.

Accomplishments -- continued

Three major studies will be funded in fiscal year 1990. These include an evaluation of quality assurance systems in State VR agencies, a "best practice" study of services for individuals with traumatic head injury in State VR agencies, and a recruitment and retention study of qualified rehabilitation personnel in the State-Federal rehabilitation program.

The quality assurance systems study will be a two-year study to be funded in 1990 and 1991. The objectives of this study are: to determine what quality assurance systems are in place or being developed in State VR agencies, to assess the quality and identify the most effective systems, and to develop and recommend standards to be used by RSA for Federal monitoring. Federal monitoring of State quality assurance systems can be utilized as a method for RSA to assure that clients receive effective services and that the agencies operate efficiently. The Department considers this study of the highest priority for 1990 as it is in keeping with the President's Accountability Initiative.

The recruitment and retention study will also be a two-year study to be funded in 1990 and 1991 and will build on the 1989 rehabilitation personnel training survey. It will examine the flow of vocational rehabilitation personnel into and out of the rehabilitation service delivery system. This study will include tracking recent graduates of Federally-supported pre-service programs and collecting information on departing VR personnel by means of exit interviews.

The traumatic brain injury study will be an evaluation of best practices in State VR agencies. It will provide an overall assessment of State VR agency programming and service delivery for individuals with traumatic brain injury. The study will focus on effective practices, model programs, and coordination with other agencies and organizations in the delivery of comprehensive services.

1991 Budget Proposal

For 1991, $988,000 is requested for Evaluation, the same as the 1990 appropriation. This amount of funding should be sufficient to continue the two major studies from 1990 and finance approximately two new studies in 1991. Approximately $550,000 of 1991 funds would be used for continuations. Possible areas of study for 1991 include: integrating program cost information and case reporting data, Social Security Administration data link, impact of VR funding on purchased services, dissemination of research and evaluation information on vocational rehabilitation, and the coordination of Federal programs for the disabled.

Undistributed	---	1,218,437	1,273,509

1/ Distributed on the basis of per capita income published by the Department of Commerce and total population published by the Bureau of Census. Initial distributions are subject to reallocation at the end of the budget year.

2/ Based on Per Capita Income for calendar years 1985, 1986, and 1987, published, by the Department of Commerce, Survey of Current Business, August 1988 Issue, Volume 68, No. 8. Population, as of July 1988, published by the Bureau of Census New Release CB 88-205, dated December 30, 1988. New income estimates will be available shortly and will be used to revise these numbers in January 1990. New population estimates will be available by the end of February 1990, at which time these numbers will be subject to further revision.

IMPACT AID

WITNESSES

DANIEL F. BONNER, ACTING ASSISTANT SECRETARY FOR ELEMENTARY AND SECONDARY EDUCATION

CHARLES E. HANSEN, ACTING DIRECTOR, IMPACT AID PROGRAM, OFFICE OF ELEMENTARY AND SECONDARY EDUCATION

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

THOMAS M. CORWIN, DIRECTOR, DIVISION OF ELEMENTARY, SECONDARY, AND VOCATIONAL ANALYSIS, OFFICE OF PLANNING, BUDGET AND EVALUATION

INTRODUCTION OF WITNESSES

Mr. NATCHER. At this time, we take up the Impact Aid request for fiscal year 1991.

We have before the committee Mr. Daniel Bonner. It's a pleasure to have you back before the committee.

And before you give us your statement, tell us who you have with you there at the table.

Mr. BONNER. Thank you, Mr. Chairman.

On my right, Tom Corwin of the Office of Planning, Budget and Evaluation; and Sally Christensen, Office of Planning, Budget and Evaluation.

On my left, Dr. Charles Hansen is the Director of the Impact Aid program.

FISCAL YEAR 1991 BUDGET REQUEST

Mr. NATCHER. We are delighted to have all of you before the committee, and Mr. Bonner, we will be pleased to hear from you at this time.

Mr. BONNER. Mr. Chairman, I will provide summary remarks and submit the written statement for the record.

We appreciate this opportunity to appear before you to discuss the President's 1991 budget request of $660.9 million for Impact Aid program activities under Public Law 81-874 and Public Law 81-815.

This request maintains the Federal Government's commitment to compensate school districts for the cost of educating children when enrollments and the availability of revenue from local sources have been adversely affected by Federal activities; $618.9 million for Maintenance and Operations activities under Sections 2 and 3, $15,000,000 for Disaster Assistance, and $27,000,000 for Construction projects.

The 1991 request is 9.8 percent less than the 1990 appropriated level. This decrease reflects the decision to propose the elimination of most payments for "b" children who reside on or whose parents work on Federal property.

With the exception of children who reside on or whose parents are employed on federally subsidized low-rent housing property, for whom we are requesting $25 million, the presence of these "b" children creates no major financial burden for local school districts.

Payments would continue to be made on behalf of "a" students who live on and whose parents work on Federal property, or who live on Indian lands and thus do not generate local property tax revenue.

Payments for "a" students would continue to be focused on those school districts that are the most heavily burdened by the effects of Federal activity.

Mr. Chairman, my colleagues and I would be glad to respond to your questions.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

Daniel F. Bonner

Assistant Secretary for
Elementary and Secondary Education

on

Impact Aid

Mr. Chairman and Members of the Committee:

We appreciate this opportunity to appear before you to discuss the President's 1991 budget request of $660.9 million for Impact Aid program activities under Public Law 81-874 and Public Law 81-815. This request maintains the Federal Government's commitment to compensate school districts for the cost of educating children when enrollments and the availability of revenue from local sources have been adversely affected by Federal activities.

The President's budget includes $618.9 million for Maintenance and Operations activities under Sections 2 and 3, $15 million for Disaster Assistance, and $27 million for Construction projects. The 1991 request is 9.8 percent less than the 1990 appropriated level. This decrease reflects the decision to propose the elimination of most payments for "b" children, who reside on or whose parents work on Federal property. With the exception of children who reside on or whose parents are employed on federally subsidized, low-rent housing property, for whom we are requesting $25 million, the presence of these "b" children creates no major financial burden for local school districts. Payments would continue to be made on behalf of "a" students, who live on and whose parents work on Federal property, or who live on Indian lands, and thus do not generate local property tax revenue. Consistent with recent changes to the funding formula, payments for "a" students would continue to be focused on those school districts that are the most heavily burdened by the effects of Federal activity.

Maintenance and Operations

Of the $618.9 million requested for Maintenance and Operations, the President's budget includes $578.5 million for Section 3(a), the same as the 1990 appropriated amount. These funds are used for making payments for children who reside on and whose parents live on Federal property or who reside on Indian lands. For section 3(b), the President's budget includes $25 million for eligible districts enrolling children who live in federally subsidized, low-rent housing. We believe that, unlike other categories of "b" students, children who reside in low-rent housing typically bring with them special educational needs for which school districts should receive some financial assistance.

The formula for payments under Sections 3(a) and (b) would continue to provide higher rates of payment for districts with higher proportions of federally connected children.

The statute earmarks a maximum of $20 million of Section 3 funds for additional payments to districts eligible under Section 3(d)(2)(B). These are districts that are particularly heavily burdened by the presence of federally connected children, that do not have sufficient funds to provide a level of education equivalent to that of comparable districts in their States, and that meet additional criteria in the program statute. In addition to Section 3(a) students, Section 3(b) children from federally subsidized, low-rent housing would be counted for eligibility and payments under Section 3(d)(2)(B) in 1991. The statutory maximum for payments under this provision is an amount that should be sufficient to cover these payments for eligible districts in 1991.

The $15.4 million included for Section 2, which is the same as the 1990 appropriation, will provide approximately 62 percent of full entitlement for 260 applicants currently eligible for the program.

Disaster Assistance

For fiscal year 1991, the budget includes $15 million for Disaster Assistance. This request is expected to be sufficient for all claims for disaster assistance in 1991.

Construction

The President's budget requests $27 million for awards under Sections 5, 10, and 14 of the Construction program, the full amount authorized in the statute.

The budget includes $10 million for projects under sections 14(a) and (b), an increase of $2.5 million over the 1990 appropriation. Sections 14(a) and (b) authorize construction grants to school districts that are comprised mainly of Indian lands or that serve children residing on Indian lands. Many of these districts report a compelling need for new or additional facilities, yet they appear to have the least funds available from other sources.

Section 5 authorizes assistance for school construction in areas experiencing an increase in Federal activity, and Section 14(c) authorizes construction assistance to school districts that are comprised mainly of Federal lands and that have a substantial number of inadequately housed pupils.

Grants under these sections are generally for only a small proportion of the total cost of the projects. The amount of $7 million is requested for these sections; no funds were appropriated for this purpose in 1990.

For Section 10, which authorizes the repair and construction of facilities to serve children residing on Federal property, the 1991 request includes $10 million, an increase of $2.5 million over the 1990 appropriation. In addition to making emergency repairs to buildings owned by the Department of Education, these funds would be used in conjunction with the Department of Defense to continue implementation of the recommendations in the Departments' joint report to the Congress on school facilities on military installations.

My colleagues and I will be happy to respond to any questions you may have.

DEPARTMENT OF EDUCATION

Office of Elementary and Secondary Education

Biographical Sketch

NAME : Daniel F. Bonner

POSITION : Acting Assistant Secretary for Elementary and Secondary Education

BIRTHPLACE AND DATE : Bronx, New York, August 10, 1937

EDUCATION : Fordham University, B.A.
New York University, M.A.

EXPERIENCE

Present : Acting Assistant Secretary for Elementary and Secondary Education, Department of Education
1988 - 1989 : Acting Deputy Assistant Secretary for Elementary and Secondary Education
1988 : Acting Director, State and Local Educational Programs, Office of Elementary and Secondary Education
1983 - 1988 : Associate Director, Domestic Anti-Poverty Operations, ACTION Agency
1983 : Director, Volunteers in Service to America (VISTA), ACTION
1982 : Special Assistant, Office of Volunteer Liaison, ACTION Agency; Director, ACTION/White House Regional Conferences on Voluntarism
1981 : Associate, Ethics and Public Policy Center, Washington, D.C.
1981 : Associate, Law and Economic Center, Emory University, Atlanta, Ga.
1973 - 1980 : Philanthropic Activities Associate, Education and Health Programs, Chase Manhattan Bank, New York, N.Y.
1970 - 1973 : Management Development Programs, Chase Manhattan Bank, New York, N.Y.

PRESIDENT'S DISASTER RELIEF FUNDS

Mr. NATCHER. Mr. Bonner, how much of the $250,000,000 appropriated to the President last fall for disaster relief was transferred to the Impact Aid account for school repairs?

Can you give us that figure?

Mr. BONNER. I believe that number was $62.8 million.

Mr. HANSEN. That is correct.

Mr. NATCHER. Is this $62.8 million restricted to certain disasters under the law, or is it co-mingled with your other disaster assistance funds?

Mr. BONNER. The President must declare a disaster for there to be availability for these funds. The Department makes an evaluation based on a field review to determine exactly what the extent of damage to school property has been.

Mr. NATCHER. Where do you stand at this time in terms of getting these disaster funds out to school districts?

Mr. BONNER. I will ask Dr. Hansen to reply to that.

Mr. NATCHER. All right. Go ahead, Dr. Hansen.

Mr. HANSEN. We have presently made awards to the Virgin Islands and to Puerto Rico. We are in the process of receiving financial information from South Carolina and the State of California.

North Carolina was also involved in Hurricane Hugo. We have made actual payments to only two of the five States and territories involved in the major disasters that faced us in October.

We expect to begin making payments to California within the next four weeks, as soon as we have received additional information.

ADEQUATE STAFF TO HANDLE DISASTER CLAIMS

Mr. NATCHER. Is the Department properly staffed and otherwise prepared to handle the increases in activity which occurs when there are major disasters like the one we had last fall?

Mr. BONNER. As of now, the Department has discharged its responsibilities to go out in a timely way and to make the evaluations as necessary.

Mr. NATCHER. Are you able to tell the committee how much of these funds will go to each State?

Mr. BONNER. We have a list that can be supplied for the record, sir.

Mr. NATCHER. All right.

[The information follows:]

DISTRIBUTION OF DISASTER ASSISTANCE FUNDS

The following are current estimates of FY 1990 Disaster Assistance payments to States from carryover funds and the $62.8 million transferred to the Department from the President's disaster fund. These figures are based on the information currently available and, of course, do not include States that may become eligible for assistance later in the fiscal year.

State	*Amount*
California	$10,800,000
North Carolina	1,700,000
South Carolina	24,000,000
Puerto Rico	6,500,000
Virgin Islands	36,000,000

[1] Total estimated Federal payments after State and local contributions.

DISASTER ASSISTANCE CARRYOVER

Mr. NATCHER. In previous years, your office had disaster funds left over at the end of the year. What is the current balance in your regular disaster aid program at this time?

Mr. BONNER. If memory serves, I believe it's $12,000,000.

Mr. CORWIN. That is right. We began the year with $18.5 million in the account. At this point, there is $12.5 million left.

REPORT TO SENATE ON EFFECT OF BASE CLOSINGS

Mr. NATCHER. Last year's Senate report required you to prepare a formal report on the possible effect of the base closing law on Impact Aid funds. Will this document be submitted by March 1 of this year?

Mr. BONNER. Tom, do you——

Mr. CORWIN. Yes, we anticipate that it will. Somewhat similar to what we told you last year, we find that information from the Defense Department indicates that the base closings are moving along on a fairly slow pace.

At this point, they are telling us that one base is likely to be closed during fiscal year 1991, and there will be a couple other transfers that result in very minor shifts of children.

But we expect to get that report up to you this week.

EFFECT OF TROOP REDEPLOYMENT FROM EUROPE

Mr. NATCHER. Are there likely to be any similar special needs created as a result of the decision to bring a large number of troops back from Europe?

Mr. BONNER. We would have to review the impact of a major troop deployment, but when there is an increase in the number of federally connected children, the school district can claim the children in its impact aid application.

ELIMINATION OF ALL BUT LOW-RENT HOUSING "b's"

Mr. NATCHER. Now, if you will, explain to the committee your proposal to eliminate category "b" payments, except for public housing students, and Mr. Bonner, if you will, tell us why we have had this request in a similar nature now for 14, 15, or 16 years.

Mr. BONNER. Mr. Chairman, the submission that we make this year represents a departure from previous policies in that we are seeking $25,000,000 for children connected with low-rent housing.

The position is the same, however, when it comes to other Section 3(b) students for whom we feel the need is not as urgent as it is for the low-rent housing children.

Mr. NATCHER. Would elimination of these "b's" also reduce funding for certain "a" and 3(d)2(b) districts because they would drop below a certain enrollment minimum?

Would they also lose?

Mr. BONNER. I would let Dr. Hansen elaborate on this, but because of the formula, there is a possibility that other payments will be affected.

Mr. HANSEN. Yes, sir, we do anticipate that some districts would lose their eligibility for just that reason, both for Section "a" payments and 3(d)2(b) payments.

Mr. NATCHER. Well, when you get the transcript back, give us a full statement in the record, if you will, please.

Mr. HANSEN. Yes, sir.

[The information follows:]

EFFECTS OF PROPOSED "b" POLICY

Under the statute, both Section 3(a) and 3(b) children are counted for determining eligibility for all Section 3 payments. Since payments under Section 3(b) are proposed for 1991 only for children connected with federally subsidized, low-rent housing, the children counted for determining eligibility for the basic program and for Section 3(d)(2)(B) would be limited to 3(a) children and 3(b) children connected with low-rent housing. As a result, approximately 400 "a" districts would lose eligibility for Imapct Aid in 1991.

Of the four districts that were eligible for Section 3(d)(2)(B) in 1988 (the most recent year for which data are available), three would be ineligible under the FY 1991 budget proposal because they would not meet the threshold requirement that 50 percent of a district's children be federally connected.

SECTION 3(b) CHILDREN IN IMPACT AID STATUTE

Mr. NATCHER. How long has the Federal Government been making payments on behalf of students who qualify under Section 3(b)? How long has this been going on?

Mr. BONNER. A good question that we will have to—unless——

Mr. CORWIN. Category "(b)" has been in the law since it was enacted back in the early 1950s. I guess, as you know, the categories have expanded somewhat since that time.

The low-rent housing children were not in the statute in the beginning, especially——

Mr. NATCHER. Probably back about 1951.

Mr. BONNER. That is right.

Mr. NATCHER. How much would the typical district lose if your proposal for "b's" were approved?

Mr. HANSEN. We anticipate that the average Super "b" district would lose about $230,000, which translates into about $170 per child.

The average regular "a" district would lose about $26,000, or about $50 per student. These are based on straight line extrapolations from fiscal year 1990 appropriation levels.

ELIMINATION OF "b" PAYMENTS

Mr. NATCHER. Mr. Bonner, either you or Mr. Hansen tell us why you delete "b" children almost every year, and it's been going on for years and years and years. What is the reason? Why do you drop it out when you know the House is going to put part or all of it back?

What is your reasoning for deleting it? The same one that we have had down through the years, or have you added something to it, Mr. Bonner. What would you say?

Mr. BONNER. We certainly have not changed our policy, except as we mentioned earlier on with respect to the low-rent housing children. But we just feel that "b" children, whose parents work on or live on Federal property do not represent a significant burden on school districts.

Ms. **Christensen**. Mr. Chairman, I would just add a couple of points.

In 1981, the Administration proposed the elimination of payments for "b" children, and Congress went along with this to a great extent in the reconciliation and agreed to phase out payments for "b" children.

When the second or third year after that came along, Congress decided not to eliminate "b" children, but payments for "b" children have been very, very small since then, even though they have kept "b" children in the law.

In fact, the average payment on behalf of these children represents less than one-half of 1 percent of the total current expenditures to the average school district that gets payments for "b" children. All of this is part of the rationale for eliminating payments for "b" children.

And I would also make the point that both Democratic and Republican administrations over the past 20 years have proposed to eliminate "b" payments.

Mr. **Natcher**. Going back to your proposal as to "b's", are there a few districts who would lose large amounts?

Mr. **Hansen**. Yes, sir.

Mr. **Natcher**. What about that, Mr. Hansen?

Mr. **Hansen**. The school districts that heavily impacted with military "b's" and civilian "b's" would lose large amounts of money. But there are school districts—principally large urban school districts that have large numbers of low-rent housing students—who would fare rather well under this proposal.

Mr. **Natcher**. All right.

Mr. Conte, I yield to you.

HAWKINS-STAFFORD SIMPLIFICATION OF IMPACT AID

Mr. **Conte**. Thank you, Mr. Chairman.

Mr. Bonner, it's good to have you back again. In reviewing the budget request for the Impact Aid program with all the jargon about "b" amounts and "b" students, it reminds one of the saying: "Education is what you get from reading the small print. Experience is what you get for not reading it."

Thank you for joining us.

The Impact Aid program still seems to be overly complicated and cumbersome. In addition, the payments and student count regulations don't coincide with the natural ebb and flow of the resources of students in the schools.

Since Hawkins-Stafford's 1988 attempt to simplify the Impact Aid process, what new ideas have been suggested to make this process better? How aggressively will you seek ways to improve the program?

Mr. **Bonner**. On the first level, the formulas that have been worked out for payments of various categories of students have been greatly simplified.

Nevertheless, there are complications regarding the various categories of districts and the percentage of students that have to be reached in each category for districts to qualify.

Since Hawkins-Stafford, much has been improved. We are also trying internally to improve the payment system, the financial management system by which payments are made, to improve the computer system that stores information about districts and so forth and that allows us to get timely reports out.

Dr. Hansen has other things to add to that. Please do.

Mr. HANSEN. Yes, sir. When we met with you last year, we were bumping into some problems associated with the new payment formula. A subsequent set of amendments to that payment formula has made things a little easier on the recipients and on ourselves.

We are getting those payments out. There are still some problems that are being identified, and as time goes on, I am sure they will continue to be identified in anticipation of the 1993 reauthorization period.

Mr. CORWIN. There is still quite a lot of complexity in the program, with the "hold harmless" requirements and the payment waves and all the innumerable categories.

We have done some computer simulations to see what would happen if you simplified the program and, of course, some districts would win and some districts would lose, and you are never sure if it's fair to do one thing or another.

We will probably begin reauthorization planning about a year from now, and we will look at all different kinds of options for this program.

ADVERSE EFFECT OF HOLD HARMLESS PROVISIONS

Mr. CONTE. Mr. Bonner, last year I raised concerns about two unique Impact Aid cases in Massachusetts, specifically in confusion about the payments at the North Adams Schools for children in low-rent housing in a case up there in Cape Cod, where an increase in average daily attendance resulted in a reduction in aid.

This was an adverse effect from the hold harmless provision. There was a similar case in Texas.

Is everything okay with these cases now?

Mr. BONNER. Dr. Hansen.

Mr. HANSEN. With specific reference to the problem that was cited last year, yes. One of the technical amendments I described earlier removed the cap, which maintained payment levels at fiscal year 1987 levels for "a" districts, and we are now able to pay districts for all of their "a" children multiplied by their 1987 payment rate.

However, we are now finding in Killeen, Texas, where they have experienced a growth in their "b" children of some 1,200 children since 1987, that the cap still applies, and those children generated no payments.

Mr. CONTE. So there are some other cases out there now?

Mr. HANSEN. That is correct, sir.

EFFECT OF SEQUESTER ON IMPACT AID

Mr. **Conte**. How did sequestration affect the Impact Aid program last year?

Mr. **Corwin**. Mr. Conte, there was no effect because Impact Aid was one of those programs that hadn't received a big enough increase in the regular appropriation to be affected by the sequester order.

Mr. **Conte**. What if it had been fully funded? What would you have lost?

Mr. **Corwin**. I think that full funding is $800,000,000 and something. We would have to do the calculation and put it in the record.

Mr. **Conte**. All right. Put that in the record, and we may use that for a later debate.

[The information follows:]

EFFECT OF SEQUESTER ON FULL FUNDING

The authorized appropriation ceiling for FY 1990 for P.L. 81-874 (the maintenance and operations statute) was $785 million. For P.L. 81-815 (the construction statute), the FY 1990 ceiling was $26 million. If these amounts had been appropriated, the Impact Air Program would have been subject to the sequester. The post-sequester amounts would have been $774 million for P.L. 81-874 and $25.6 million for P.L. 81-815.

ECONOMIC STATUS OF MILITARY "B" CHILDREN

Mr. **Conte**. This is the first time in 10 years that you have acknowledged the "b" student in your budget request. The Department will only fund 3(b) students who reside in federally subsidized low-rent housing projects, because they are economically deprived. To what extent did the Department check to see if other "b" students such as military children living off base might also fit in that same economically deprived category?

For example, did you check to see how many "b" students qualify for a free or reduced lunch?

Mr. **Bonner**. Well, as a general matter to answer your question, Mr. Conte, military "b's" do not represent a significant burden on school districts. Military parents of "b's" who live off base pay taxes for housing and so forth, and are generally above the poverty line, while the families and children in low-rent housing are generally less well-off.

We think that across the board, this is true, although there may be exceptions.

Mr. **Corwin**. We have had a lot of conversations over the years with Defense Department people about the economic status of the military families, and haven't, in general, gotten a lot of good data from them to answer our questions.

I don't recall that we have specifically asked for data on the school lunch program. We can try and see if we can get anything from them.

Mr. **Conte**. You didn't make a study on that. It might be a good idea to study that.

COOPERATION WITH DOD ON BASE CLOSINGS

Recent events throughout the world have caused many people to speculate about the so-called peace dividend. In addition, a few military studies recommend that for efficiency reasons, many bases should be closed.

Section 3(e) provides funds for military base closings. To what extent are you working with the Defense Department to stay up with this, and what has the Department done to factor these things into the budget?

Mr. BONNER. We have been working with the Defense Department since base closings became an issue, and I would like Dr. Hansen to discuss in detail what these meetings have consisted of.

Mr. HANSEN. We have worked with the Defense Department. We have worked with individual school districts in an attempt to answer their questions and explain to them how the program works.

Our main concern is that in order to trigger 3(e), there has to be a rather significant departure of students from a school district.

So far for fiscal year 1991, we have only been able to identify one base that is going to have any kind of an effect at all, and it will be largely on a single school district.

So we still don't have the large number of students departing that we need in order to justify any appropriation for Section 3(e).

Mr. CONTE. If everything goes according to what the President has proposed and many bases are closed there are going to be some big savings.

Does this mean we're going to lose a lot of "a" students?

Mr. CORWIN. Yes, and then there will be other districts that are receiving students. So far we haven't gotten data on them, either.

INCREASE IN PAYMENTS FOR SOME STATES

Mr. CONTE. You recommended that Category "a" payments stay at the fiscal year 1990 level. However, in the fiscal year 1991, State by State break-out, some States such as Massachusetts, North and South Dakota, appear to get increases, while other States like Colorado, New York get decreases.

Can you tell us what is going on there?

Mr. BONNER. It's a——

Mr. CONTE. I like it. Go ahead.

Mr. BONNER. Mr. Conte, payments are triggered by the number of students eligible.

Mr. HANSEN. What happens is, on the assumption that "b" payments are greatly reduced except for the low-rent housing category, some districts fall out of eligibility.

We drop those districts out of the program, redistribute the remaining funds, and you get various increases and decreases as you see in the State-by-State table.

So in those districts that have principally "b" students, the loss of which would make them ineligible, they are out of the program; and the "a" funds associated with those students would then be redistributed, as you see in the table.

This is all based on estimates and forecast planning, so there is a certain margin of error in there. But we think the trend line is essentially correct.

3(d)(2)(B) REASONABLE TAX REPORT

Mr. CONTE. Put this for the record. The Hawkins-Stafford amendment alters the way that 3(d)(2)(B) districts may demonstrate a reasonable tax effort. How are things going with this change, and have more districts qualified?

[The information follows:]

TAX EFFORT REQUIREMENT FOR SECTION 3(d)(2)(B) APPLICANTS

The Hawkins-Stafford Amendments inserted a specific tax effort requirement in the statute that applicants for funds under Section 3(d)(2)(B) must meet. Previously, the statute simply said that applicants must make a "reasonable tax effort." The Department had interpreted this to mean that they must be making a tax effort at least equal to the average of comparable districts in their States. The Hawkins-Stafford Amendments initially provided that applicants must have a tax effort of at least 80 percent of their comparables' average. This was subsequently changed to 95 percent by P.L. 101-26, which made technical changes to some Hawkins-Stafford provisions.

This change in the statute was effective with fiscal year 1989. Applications under Section 3(d)(2)(B) for fiscal year 1989 funds are now being processed as final revenue and expenditure data are submitted by the applicants. We will not know what precise effect the change in the statute has had on the number and size of awards until this processing is completed.

SECTION 2 FULL ENTITLEMENT

Mr. CONTE. You propose to keep Section 2 payments at their fiscal year 1990 level, or about 62 percent of the entitlement. My understanding is that the last time the districts received their full entitlement was in fiscal year 1987.

How do you explain this? Doesn't this create budget planning problems with many districts?

[The information follows:]

REQUEST FOR SECTION 2

Under the Impact Aid program, the Department gives the highest priority to Section 3(a) payments, because the families of 3(a) children generally contribute little to a district's tax base for school expenditures. A request for level funding for Section 2 should not create budget planning problems for most districts eligible for these funds. For the most part, Section 2 payments represent a small portion of the districts' budgets.

DISASTER ASSISTANCE CLAIMS

Mr. CONTE. You are requesting $15,000,000 for disaster assistance. No funds were appropriated last year because there was a large carryover.

How do the funds you are requesting fit together with the $18.5 million in carryover funds currently on hand, and the Impact Aid portion, the $62,800,000 of funds appropriated to the President for special disaster assistance, and how much of the $62,800,000 do you expect to spend?

Have surveys been done of the effect of the hurricane on Impact Aid eligible schools? Put that for the record.

Mr. HANSEN. Yes, sir.

[The information follows:]

BASIS FOR DISASTER ASSISTANCE REQUEST

Of the $18.5 million in carryover funds available for disaster assistance at the beginning of FY 1990, $12.5 million has been obligated. The remaining $6 million and the $62.8 million the Department has been allocated from the appropriation to the President for unanticipated disaster needs will be used to cover claims for damage caused by Hurricane Hugo in the Virgin Islands, Puerto Rico, South Carolina, and North Carolina; the Loma Prieta earthquake in California; and other disasters in late 1989 and 1990. Additionally, there are remaining costs associated with the 1987 California earthquake. Based on our current estimates of the Federal share of damage costs, we expect to spend all of the funds available in FY 1990. Therefore, we are requesting an appropriation of new budget authority for FY 1991.

INCREASE FOR CONSTRUCTION PROGRAM

Mr. CONTE. The Department has requested $27 million for construction, that is a $12 million increase. Why this sudden increase in activities, and please submit for the record a list of the construction projects.

Thank you, Mr. Chairman

[The information follows:]

REQUEST FOR CONSTRUCTION FUNDS

The FY 1990 appropriation for construction activities is $14,998,000, $9.7 million less than the fiscal year 1989 appropriation of $24.7 million. the FY 1990 appropriation included no funds for Sections 5 and 14(c), which provide grants to school districts that do not have adequate facilities for the children they are serving. For fiscal year 1991, the Department is requesting construction funding at the authorized level of $27 million, which will provide for the restoration of funds for Sections 5 and 14(c) and moderate increases for repair and renovation of school facilities that serve children residing on Federal property (Section 10) and for grants to districts that serve children residing on Indian lands (Sections 14(a) and 14(b). The current priority lists for Sections 5 and 14 follow-

IMPACT AID COMPUTER PAYMENT SYSTEM

Mr. **Natcher**. Mr. Early, I yield to you.

Mr. **Early**. Thank you, Mr. Chairman.

Dr. Bonner, has the Education Department reviewed and evaluated the final recommendations of the Impact Aid study?

Mr. **Bonner**. Have we reviewed it?

Mr. **Early**. Yes, and evaluated it?

Mr. **Bonner**. We have reviewed it, yes.

Mr. **Hansen**. The Department requested the study of the computerized payment system to identify changes and improvements that need to be made.

We have subsequently let a contract to implement some of the recommendations from the study. We let that contract in January. The contractor who will design the new system is reviewing those recommendations and moving forward with an overall design plan, which we should be reviewing within the next few months.

Mr. **Early**. What were the key recommendations, Mr. Hansen?

Mr. **Hansen**. The key recommendations were, to a large extent, what we already knew, that the system was designed principally——

Mr. **Early**. So we didn't have to do the study?

Mr. **Hansen**. I say "knew" from an operating standpoint, but didn't know how to get around the constraints and the problems. We were able to come up with some suggestions on how we could do that and what the new system could do for us.

Mr. **Corwin**. We had a computer system in Impact Aid that had been put together about two decades ago and then patched and added to until it had become almost useless. We really had to get some computer system analysts to come in and tell us how to enter the modern age in computers so we could get the payments out.

Mr. **Early**. We don't really need the study to tell us that, do we?

Mr. **Corwin**. We thought we did.

Mr. **Bonner**. Mr. Early, the one component of the study was to determine how to simplify matters. It is one thing for us to know precisely what the complexities were, because we dealt with those every day, but we really had a prime objective of simplifying——

Mr. **Early**. We had such an outdated system, you know. We knew we had to make changes. And the Department is going to agree with most of the recommendations?

Mr. **Corwin**. Yes.

Mr. **Hansen**. We agree with the findings of the study and we are moving forward to implement them.

Mr. **Early**. How long do you think it will take?

Mr. **Hansen**. We suspect it will be a couple of years before we actually use the system in its full array. It depends to a large extent on the plan that is being developed by the contractor and the components of that plan which we should have within the next four weeks or so.

Mr. **Early**. Do you have adequate money to implement this system?

Mr. **Hansen**. Yes, sir, we do and we have commitments for the out-years.

COST TO IMPLEMENT COMPUTER CHANGES

Mr. EARLY. What would the cost be to the department to implement the necessary changes?

Ms. CHRISTENSEN. Mr. Early, the amount in our budget for 1990 is $398,000. For 1991, we have $483,000. So to fully implement it in 1991, we are requesting an increase of $85,000.

Mr. EARLY. Mr. Corwin, how do we get all these computer people, with only $85,000?

Ms. CHRISTENSEN. That is the increase. We have a total of $483,000 in the budget for that year. I would like to clarify, Mr. Early, what we were calling a study is not what you think of usually in terms of a study.

We knew the inadequacies of the system; we weren't able to pull out the data and do different kinds of analyses for Congress or anybody else trying to make decisions on the program. We knew that.

The study was really to look at the technicalities in the ADP, to see how we could simplify the process to get the information we need.

Mr. EARLY. So, it really wasn't a study?

Ms. CHRISTENSEN. Not in the typical way that you think of a study.

Mr. EARLY. Do we know how much money we will need to implement the changes in 1991?

Mr. HANSEN. In 1991, we have $483,000 in our ADP budget plan.

Mr. EARLY. That is only an $85,000 increase. But the department is convinced that this increase is adequate to do what needs to be done. I am a firm believer that if we don't computerize, we are not improving anything, other than just stopping.

Ms. CHRISTENSEN. This is in our salaries and expenditures budget.

CONSTRUCTION APPLICATIONS

Mr. EARLY. Okay. How many applications were received for the 1989 construction funds?

Mr. HANSEN. We have on hand applications that total somewhere in the neighborhood of $247,000,000. We get additional applications every year, but they are added to the ones that we already have on hand.

Mr. EARLY. $247,000,000; do you know, for the record, how many applications that is?

Mr. HANSEN. One hundred and something. We are going to submit that full list.

Mr. EARLY. Will you also submit for the record what they are for—for this year?

Mr. HANSEN. Yes, sir.

[The information follows:]

FY 1989 CONSTRUCTION APPLICATIONS

In FY 1989, the Department received applications for FY 1990 funds from 117 LEAs for $65 million under Sections 5 and 14(c) and from 75 LEAs for $182 million under Sections 14(a) and 14(b). An additional 17 applications have not yet been processed because the Department has not received information requested from the school districts that submitted these applications. The priority lists for Sections 5 and 14 for fiscal year 1990 were provided above.

LOW-RENT HOUSING CHILDREN ELIGIBLE FOR CHAPTER 1

Mr. **Early**. For category B children, you requested $25,000,000. These funds are to be used for the districts who have children connected with federally subsidized low-rent housing.

What percentage of these children are covered by Chapter 1 programs?

Mr. **Corwin**. Well, depending on their educational deprivation, we would imagine a good percentage are. We aren't going to have the data on what percent of them are actually served by Chapter 1.

As you know, 45 to 62 percent of children who are thought of as eligible for Chapter 1 are actually served.

Mr. **Early**. But are the other category B students more or less of a tax liability on the local school district than the children who are represented under this budget?

Mr. **Corwin**. We feel that they are less of a burden to the school districts.

Mr. **Early**. You really do?

Mr. **Corwin**. Yes, because——

Mr. **Early**. For the record, would you expand on why you think they are less of a burden? Because I don't have that impression.

Mr. **Corwin**. Okay.

[The information follows:]

EXPLANATION OF "b" PROPOSAL

The Department is requesting funds under Section 3(b) only on behalf of children who reside in certain federally subsidized, low-rent housing because these children live under conditions that contribute to problems in school, including unstable family units, drugs, crime, poor self-image, low family income, low levels of parental education, and lack of emphasis on the value of education. Such problems increase the costs of providing educational services to these children. Additionally, the parents of children living in public housing generally have incomes near or below the poverty level and generate little revenue for local school districts.

Other "b" children, including military "b" children whose parents live in the community, do not represent a significant burden to their districts. Their parents contribute to State and local tax bases from which educational expenses are funded at almost the same rate as parents of non-Federal children. They pay property taxes, sales taxes, and frequently income taxes. Also, the economic benefits from military installations generally accrue to the community at a much higher rate than school expenditures increase because of the presence of military dependents.

REQUEST FOR DISASTER ASSISTANCE

Mr. **Early**. Now, under the $15,000,000 for disaster assistance, I have heard your remarks to Mr. Natcher and Mr. Conte. We spoke about Hurricane Hugo, but do these funds include San Francisco?

Mr. **Bonner**. Yes.

Mr. **Corwin**. There have also been some smaller disasters that we are having to pick up, such as Hurricane Jerry in Kentucky.

Mr. **Early**. Never mind Kentucky.

Mr. **Corwin**. There was a monsoon recently in Samoa. We have various other ones.

Mr. **Early**. Did Georgia get hurt?

Mr. **Hansen**. No.

Mr. **Corwin**. But anyway, the big costs that we are looking at for this fiscal year are Hurricane Hugo and the California earthquake.

Mr. **Early**. And they are certainly going to well exceed the $15,000,000; aren't they?

Mr. Corwin. Yes.

Ms. Christensen. We have $62,800,000 in addition to $6 million in carryover available in disaster funds. I just wanted to make clear that it wasn't just the $15,000,000.

Mr. Early. Why would funds still be available? Didn't South Carolina and North Carolina get their request in quickly enough, or——

Mr. Hansen. In the case of South Carolina, we anticipate that many of the school districts will have adequate insurance money. We have been told that insurance, local insurance will cover most of these costs, so we are waiting until we see what the insurance proceeds are.

North Carolina claims are a very small amount of money and we will be getting those funds out.

DAMAGE COVERED BY INSURANCE

Mr. Early. I don't say it facetiously, but I really do hope we take advantage of the insurance companies paying what they should pay. If anyone has any money, it is the insurance companies.

Mr. Corwin. That is how the program is run. We come in after the insurance company makes its payments, and then in most cases, there is also a cost sharing on the part of the local educational agencies.

Mr. Early. Are we satisfied that we have enough auditors to make sure that the insurance companies are giving us a fair shake as far as covering what they are supposed to cover?

Mr. Hansen. Before we close out a project, we send a person out who does an on-site review of matching receipts against anticipated costs and specific items to be repaired, and when they are satisfied, we close out the project.

Mr. Early. Are we sure that the insurance companies cover what they are supposed to cover without them saying that that doesn't come under our jurisdiction?

Mr. Hansen. It varies with the insurance companies. Some have specific pieces——

Mr. Early. They are all bad, some are just worse than others.

Mr. Hansen. We don't make our payments until we are reasonably satisfied that full insurance payments have been made.

Mr. Early. Are you satisfied that we've got enough of a check on that one?

Mr. Hansen. Yes. We have a copy of the policy and we follow it closely.

Ms. Christensen. It is not just insurance companies. It is also what is available at the State and local levels for those same kinds of purposes, and after all those sources of revenue are taken into account, then what is left over is what we pay.

We also send out architectural engineers that we use under contract from the Department of HHS and the Corps of Engineers to look constructively at those facilities to be sure that the estimates are correct, in addition to——

Mr. Early. Maybe that is the type of cooperation we need, especially with the San Francisco earthquake. I would expect that there has to be a lot of confirmation.

Ms. **Christensen**. Under Chuck Hansen, the director of the program, there is a lot of double checking.

Mr. **Early**. That is great.

Thank you, Mr. Chairman.

TRANSFERRING CONSTRUCTION FUNDS TO SECTION 3

Mr. **Natcher**. Last year, Mr. Bonner, as you know, a proposal was made and accepted at our conference to transfer funds from construction to maintenance payments. I expect that proposal will be made again.

What is your view as to a policy like this, Mr. Bonner, either you or Mr. Hansen, either of you.

Mr. **Bonner**. Chuck, please.

Mr. **Natcher**. Go ahead, Mr. Hansen.

Mr. **Hansen**. We agree that Maintenance and Operations, particularly for section 3(a), is the highest priority of the program.

On the other hand, the transfer of funds away from the school construction program adversely affected some of the very same districts, that is districts which have high concentrations of military dependents and inadequate schools for them.

So it is a Hobson's choice, I guess that is the proper term. I don't know where the correct decision lies. We have requested the full authorized level for the construction program of $27,000,000 so that we can make some progress on these school construction needs.

DOLE REPORT ACTIVITIES

Mr. **Natcher**. What can you tell us about the recent studies, including the Dole report, through which you attempted to determine the need for Federal construction assistance to impact aid schools?

Mr. **Bonner**. So far, as a result of the Dole Report, the Department has made an award of $5.24 million to be dispersed over a three-year period to the Geary County Schools which has agreed to accept ownership of the schools on Ft. Riley.

AMOUNT REQUIRED TO FUND CONSTRUCTION PROJECTS

Mr. **Natcher**. How much money would be required to pay for projects which are currently approved, but have not been funded?

Mr. **Hansen**. Under the construction program?

Mr. **Natcher**. Yes.

Mr. **Hansen**. In the neighborhood of $247,000,000.

PRIORITIES FOR CONSTRUCTION FUNDS

Mr. **Natcher**. The budget document proposes to specify the suballocations for construction in bill language.

We understand the issue here is not a statutory problem, but rather an issue of regulations. Why can't this be handled in the report?

Mr. **Hansen**. The regulations are a reflection of congressional intent. The Impact Aid construction statute specifies that funds available for section 10 be given a priority at least equal to that given by payments under sections 14(a) and (b), which is principally for school construction on Indian lands.

Our regulations further specify that priority be given to Section 14 (a) and (b) and Section 10.

Mr. **Corwin**. My understanding is that the underlying statute provides that projects under sections 10 and 14 (a) and (b), which are basically the military projects and the Indian projects, be fully funded before we put anything into sections 5 and 14(c).

That was what we were left with last year when we didn't have the special appropriations language, so the projects for the inadequately housed children could not be funded in 1990.

MODEL FOR IMPLEMENTATION OF DOLE REPORT

Mr. **Natcher**. According to the justifications, you selected Fort Riley, Kansas, as a model for implementation of the Dole report. How much will be allocated to Fort Riley, and how was this project selected?

Mr. **Bonner**. $5,200,000 will be allocated to Fort Riley in payments over several years, and it was selected because we felt that the opportunity was at hand to help out a particularly needy school district.

Mr. **Hansen**. And they were very willing and eager to accept ownership, transfer of titles to the schools; that was a compelling factor.

UPGRADING COMPUTERIZED PAYMENT SYSTEM

Mr. **Natcher**. What is the status of your effort to upgrade or replace the computerized payment system used to process Impact Aid funds?

Mr. **Hansen**. We have a contract that we let in late January, which will result in major modifications to the system.

Mr. **Natcher**. What will this computer upgrade cost, and how much of this cost is expected to be funded in 1990 and in 1991?

Mr. **Hansen**. For fiscal year 1990 we have reserved $348,000 for this specific purpose. That will increase in fiscal year 1991 to $483,000.

SHAM COTERMINOUS DISRICTS

Mr. **Natcher**. Last year this committee was told that some districts were manipulating their boundaries, artificially to increase their Impact Aid payment. This applies to districts classified as coterminous.

Has this practice been restricted?

Mr. **Bonner**. There have been efforts to establish coterminous districts to receive increased payments from the Impact Aid program.

Mr. **Corwin**. In S–695, which is the President's initiative bill that has passed in the Senate, there is language that would prohibit making payments to districts whose boundaries have been manipulated solely to capture Impact Aid payments rather than for educational purposes.

Mr. **Natcher**. Mr. Conte?

Mr. **Conte**. I have no further questions.

Mr. **Natcher**. Thank you very much, gentlemen and ladies. It has been a good hearing.

We take up next Bilingual and Immigrant Education.

[The following Impact Aid questions were submitted to be answered for the record:]

3 "b" PAYMENTS -- FISCAL YEARS 1989-91

Mr. Natcher: Insert in the record at this point a State table showing category "b" payment estimates for fiscal years 1989, 1990, and 1991.

Mr. Bonner: The table below shows "b" payments for 1989 compared to estimated "b" payments under the 1990 appropriation and the 1991 request.

Comparison of Estimated "b" Payments

	1989 Appropriation	1990 Appropriation	1991 Request
Appropriation	$135,345,000	$123,500,000	$25,000,000
Alabama	4,382,541	4,360,895	897,321
Alaska	1,230,482	925,271	117,502
Arizona	1,188,518	1,058,818	14,358
Arkansas	388,929	187,454	51,464
California	8,034,013	8,356,627	1,204,865
Colorado	2,843,719	2,284,405	75,247
Connecticut	1,927,710	1,623,670	1,152,905
Delaware	93,131	52,464	15,146
District of Columbia	814,643	2,446,761	882,737
Florida	5,498,912	4,679,828	381,690
Georgia	4,575,208	4,542,672	699,008
Hawaii	905,626	1,195,573	83,182
Idaho	1,186,060	1,102,290	16,110
Illinois	2,587,852	1,818,914	764,781
Indiana	623,034	307,557	80,743
Iowa	98,524	44,103	0
Kansas	1,188,692	1,043,553	22,555
Kentucky	1,471,665	1,151,412	190,719
Louisiana	3,141,673	2,803,684	2,464,446
Maine	361,609	273,164	28,666

U.S. Total	127,071,836 1/	113,500,000 2/	25,000,000

1/ $8,284,164 undistributed.

2/ $10,000,000 is set aside for Section 3(d)(2)(B) payments.

CAP ON 3(d)(2)(b) PAYMENTS

Mr. Natcher: Last year, Congress capped payments for the 3(d)(2)(B) districts at $20 million. Will this be sufficient to meet the requirements for these heavily impacted districts in 1990 and 1991 assuming the basic "b" program is retained?

Mr. Bonner: Our current estimate for Section 3(d)(2)(B) payments for fiscal year 1989 is approximately $15.5 million. Based on this estimate, we expect payments to remain within the $20 million limitation in both fiscal years 1990 and 1991.

EFFECT OF LIMITING "b" PAYMENTS TO LOW-RENT HOUSING CHILDREN

Mr. Dwyer: This year, the Administration proposes to limit payments under Section 3(b) to children connected with federally subsidized, low-rent housing. Are any school districts, which currently receive Impact Aid for Section 3(b) students, expected to lose funding entirely?

Mr. Bonner: Under our budget proposal, the child count for determining eligibility would be limited to 3(a) children and 3(b) children connected with federally subsidized, low-rent housing. Approximately 400 "a" districts and 1,700 "b" districts would lose eligibility under this proposal.

Mr. Dwyer: The Administration also proposes to eliminate 3(b) children who do not reside on or have parents who are employed on property described in section 403(1)(C) of the statute from all section 3 eligibility and payment calculations. How many 3(b) children are expected to lose eligibility if this language change is approved?

Mr. Bonner: Approximately 990,000 "b" children would lose eligibility for Impact Aid payments under the budget proposal.

EFFECT OF LOW-RENT HOUSING PROPOSAL ON HANDICAPPED CHILDREN

Mr. Dwyer: How many handicapped children are currently served by the Impact Aid program?

Mr. Bonner: Approximately 47,000 handicapped children are served by the Impact Aid program.

Mr. Dwyer: How many of these children are in danger of losing their eligibility under Impact Aid if the Administration's language changes are approved?

Mr. Bonner: Approximately 19,000 "b" children who qualified for supplemental payments for special education in fiscal year 1990 would lose their eligibility under our proposal.

COMPUTER PAYMENT SYSTEM

Mr. Dwyer: As the result of a study conducted by the Department of Education in 1988, Impact Aid's computerized payment system was not sufficiently automated, integrated, nor "user friendly." The study recommended the total replacement of the computer system. What specifically has the Department done to implement the report's recommendations?

Mr. Bonner: In December 1989, a contract was awarded to Pinkerton Computer Consultants, Inc., to develop a new computer system for the Impact Aid program. Currently, Pinkerton is devising a management plan that will outline the direction and specific time-lines for the project. The contractor will then develop and present to the Department alternatives for implementing changes to the existing system.

The Department plans to upgrade or replace all parts of the existing system, as well as add new functions, over three years. Funds were made available for the first year to redesign the "front end" of the system, changing the data entry functions of the system from the use of key-punched paper forms to on-line data entry. The redesign of the data entry functions is expected to reduce significantly the time required to generate an award once complete data for an application are available to the Department. In the following years, we will refine or replace both the central processing functions and the system output.

Mr. Dwyer: When is the Department expected to complete the improvement program called for in the report?

Mr. Bonner: This project is expected to be completed in fiscal year 1993.

AUTHORIZED LEVEL FOR "a" PAYMENTS

Mr. Porter: Section 3(a) of Public Law 81-874 provides payments for children who live on and whose parents work on Federal property or are in the uniformed services. Section 3(b) provides payments for any child who lives on Federal property, or whose parents work on Federal property or are in the uniformed services.

I have never understood why the Department every year shirks its responsibility with regard to "a" students by requesting inadequate funding for "a" payments. I understand why you want to cut payments for "b" students. I don't agree with it. But I understand it. Why aren't you requesting the full authorized level for "a" students?

Mr. Bonner: The Department is not requesting the full authorized level for "a" children because of the need to curtail expenditures in order to reduce the Federal deficit. We have chosen to request increases for programs that reflect the Administration's highest priorities in education: those that target resources on the disadvantaged and handicapped, and those that promote educational excellence and reform.

REQUEST TO OMB FOR IMPACT AID

Mr. Porter: How much did the Department request of OMB for Impact Aid?

Mr. Bonner: The Department's request to OMB for Impact Aid for fiscal year 1991 was $759,249,000. The initial request was presented on September 1, prior to when the Department knew the amount of the final appropriation for 1990 and was based on a predicted 1990 appropriation of $739,260,000. In October, after Congress had passed a 1990 appropriations bill, the Department submitted a revised request of $764,640,000. In addition, pursuant to instructions to OMB, the Department submitted alternative request levels that would have provided: (1) level funding and (2) a 5 percent reduction.

SECTION 3(e) PAYMENTS

Mr. Porter: Based on your best current information, do you expect to request appropriations for Section 3(e) transition payments in future years?

Mr. Bonner: Without more detailed information on when personnel will be transferred, when bases will close, and when the units will be transferred, the Department cannot determine whether an appropriation for Section 3(e) will be warranted in future years.

SECTION 3 PAYMENT PROCESS

Mr. Porter: Last year I asked you about delays in Impact Aid payments, specifically with regard to the North Chicago and Highwood/Highland Park school systems in my district. What actions have you taken to eliminate delays in Impact Aid payments?

Mr. Bonner: The Department has taken a number of actions to reduce delays in payments. Payments are now being made by electronic transfer to school districts' banks. This saves time over previous payment procedures that required issuing checks through the Treasury Department. Also, the Department has begun a three-year project to upgrade or replace all parts of the existing computer payment system. The new system will significantly reduce the time required to generate payments.

Mr. Porter: How quickly are payments now issued?

Mr. Bonner: The great majority of Section 3 payments are distributed during the year of appropriation, and many districts receive their final Section 3 payments during that year. Payments are generally made in several steps during the fiscal year. Districts may request preliminary payments, which are usually processed by December each year. The next payment is based on data contained in applications, which are due by January 31. These payments are usually processed starting in March and for many districts are their final payments. Additional payments for some districts may be made in the summer. Payments under some parts of the program, such as section 2 and Section 3(d)(2)(B), require revenue and expenditure data from applicants and thus are not usually made until the following year.

ESTIMATED "a" PAYMENTS UNDER ALTERNATIVE BUDGETS

Mr. Porter: How much would super "a", sub-super "a," and regular "a" school districts receive per pupil under the Administration's budget request, assuming an $18 million outlay for Section 3(d)(2)(B)? Include FY 88, FY 89 and FY 90 data for comparison.

Mr. Bonner: The table below shows estimated per pupil payments for the three categories of districts under the fiscal year 1991 budget request, assuming an $18,000,000 set-aside for section 3(d)(2)(B), compared to the per-pupil payments for fiscal years 1988-1990.

Per Pupil "a" Payments by District Category

	1988 Actual Payments	1989 Actual Payments	1990 Appropriation 1/	1991 Request 1/
Super "a"	$2,265	$2,125	$2,300	$2,290
Subsuper "a"	1,370	1,230	1,385	1,370
Regular "a"	645	870	935	920

1/ $18,000,000 set aside for Section 3(d)(2)(B)

Mr. Porter: Using the same format, how much would the school districts receive, assuming a $50 million outlay for Section 3(d)(2)(B) in FY 1991?

Mr. Bonner: Assuming a $50 million set-aside for Section 3(d)(2)(B) under the fiscal year 1991 budget request, the estimated per pupil payments would be:

Super "a"	$2,170
Subsuper "a"	1,295
Regular "a"	870

Mr. Porter: How much would they receive assuming $18 million for Section 3(d)(2)(B) and level funding for "a" and "b" students.

Mr. Bonner: Under a level funding proposal for "a" and "b" payments for fiscal year 1991 and an $18 million set-aside for Section 3(d)(2)(B), the estimated per pupil payments would be:

Super "a"	$2,300
Subsuper "a"	1,385
Regular "a"	935

Mr. Porter: How much would they receive if this subcommittee appropriated the full authorized level for Impact Aid?

Mr. Bonner: Under an appropriation at the full authorized level of $835,000,000 for fiscal year 1991, with $25,000,000 reserved for Section 2 and $15,000,000 for disaster assistance, and a $20 million set-aside for Section 3(d)(2)(B), the estimated per pupil payments would be:

Super "a"	$2,590
Subsuper "a"	1,540
Regular "a"	960

WORK WITH DOD ON BASE CLOSINGS

Mr. Porter: What is the status of your effort to coordinate with the Department of Defense on military base closures?

Mr. Bonner: The Department is working closely with the Department of Defense to coordinate activities related to the base closure process. Staff of the two departments are in frequent contact to keep each other informed of the latest developments in this area.

Mr. Porter: Last year I asked about the impact of base closures on the Impact Aid program. The Department responded that it was waiting for detailed schedules from DoD. Please submit the most current schedules you have for military base closures.

Mr. Bonner: The most recent schedule of base closures and realignments is shown on the following page.

BASE CLOSURES & REALIGNMENTS
(Planning Dates as of 10/89 -- Subject to Change)

Closures

State		Closure Date	Property Disposal
Alabama AAP	AL	n/a	1994
Coosa River Storage Depot	AL	Jul 90	Oct 91
Navaho Depot	AZ	Jan 94	n/a

Cannon AFB	NM	Apr 91

IMPACT OF BASE CLOSURES

Mr. Porter: Do you expect any base closures to affect Impact Aid in FY 91?

Mr. Bonner: Based on information the Department has received from the Department of Defense, the effects of military base closing on the Impact Aid program in fiscal year 1991 will be minimal. According to a preliminary schedule from DoD, only one base involving the transfer of children--Pease Air Force Base in Portsmouth, New Hampshire--is currently scheduled to close during fiscal year 1991.

Mr. Porter: What do your preliminary reviews show regarding how much the base closures will affect the overall Impact Aid budget in the coming years?

Mr. Bonner: No estimates of the effects on school districts for fiscal year 1992 and beyond are available at this time. The military departments are continuing to refine schedules for closures and realignments. Implementation of those schedules will depend upon the appropriation available to the Department of Defense for base closure activities each year and other related activities, such as completion of environmental impact studies. The Department will continue to work closely with DoD during the base closure process.

SECTION 3(e) AUTHORITY

Mr. Porter: Section 3(e) of P.L. 81-874, as amended, authorizes transition assistance to schools that experience a substantial decrease in federally connected students, and could help to ease the burden on communities affected by military base closures. I understand that we have not funded Section 3(e) primarily because base closure schedules were not available, and because closing are not expected in fiscal year 1990.

However, it is essential that school districts affected by base closures have this funding during transition. One school in my district could lose over 50 percent of its students. Teachers will have to be laid off, and budgets will have to be cut back. This is an extremely serious situation. What do your preliminary estimates show regarding the future need for Section 3(e) payments?

Mr. Bonner: At this time the Department has no estimates on the need for Section 3(e) payments for fiscal years beyond 1991. When we receive more detailed information from the Department of Defense on base closure schedules we will be able to estimate the effect on the Impact Aid program and to determine if there is a need for Section 3(e) funding.

PAYMENT PROCESSING

Mr. Porter: Who handles Impact Aid payments -- the Department or an outside contractor? If the latter, please provide information on the contract.

Mr. Bonner: Impact Aid payments are handled by several parties, including Departmental employees and contractors. Contractors are retained to operate computer equipment, to program software, to analyze the existing system and to make recommendations regarding proposed changes. Decisions regarding the system are the responsibility of Departmental employees.

The payment system is housed on a computer owned by Boeing Computer Services, Inc., a company with which the Department contracts for operation of various Departmental systems. This contract is managed by the Department's Office of Information Resources Management (OIRM). Boeing employees maintain the programs and files that comprise the Impact Aid system. They also perform routine, day-to-day operational procedures at the request of program staff. Examples of work performed by Boeing are key-punching computer input forms that have been submitted by the program staff and running the computer programs for batches of payments at the request of Impact Aid staff.

A second contractor, Pinkerton Computer Consultants, Inc., is utilized for programming and analysis of the system. This contract also is managed by OIRM. Pinkerton employees make programming changes and additions to the system as specified by Impact Aid and OIRM staff. For example, Pinkerton staff changed the system in response to the Hawkins-Stafford Amendments. This law made changes to the payment formula, which required significant changes to the system. Program staff identified the changes to be made to the system, and Pinkerton was given the task of designing and programming these changes and presenting the changes to program and OIRM staff for approval prior to implementation. Pinkerton has also been retained for the redesign of the payment system.

STUDY OF COMPUTER PAYMENT SYSTEM

Mr. Porter: In March, 1989, the Department completed a study of the Impact Aid payment system. Aside from changes to the computer system what recommendations did the report make to improve the payment system?

Mr. Bonner: The report only addressed the computer system. It recommended the complete replacement of the current system. Implementation of the recommended changes should greatly improve the overall payment system.

Mr. Porter: Have these recommendations been implemented? If not, why not?

Mr. Bonner: It is a large and expensive project to replace the entire computer payment system. The Department is planning to complete this over a three-year period.

Mr. Porter: Describe the changes you intend to make to the Impact Aid computer payment system. Please expand on your description in the budget justification.

Mr. Bonner: Under this project, we will upgrade or replace all parts of the existing system, as well as add new functions. Funds were made available for the first year to redesign the "front end" of the system, changing the data entry functions of the system from the use of key-punched paper forms to on-line data entry. In the following years, we will redevelop both the central processing functions and the system output. The redesign of the data entry functions is expected to reduce significantly the time required to generate an award once complete data for an applicant are available to the Department.

Mr. Porter: What is your timetable for completing these changes?

Mr. Bonner: In December 1989, a contract was awarded to Pinkerton Computer Consultants, Inc., to work on this project. Currently, Pinkerton is devising a management plan that will outline the direction of the project, specific time-lines for the first year of the project, and general time-lines for the second and third years of the project. The contractor will then develop and present to the Department alternatives for implementing changes to the existing system. After the Department decides on the changes to be implemented, the contractor will design and implement the first-year changes. Second and third years activities are dependent on continued funding.

WAVE 1 PAYMENT

Mr. Porter: What appropriation would you require to fully fund Wave 1 payments?

Mr. Bonner: An appropriation of approximately $732.1 million would be required to fully fund Wave 1 payments for fiscal year 1991.

WAVE 2 PAYMENTS

Mr. Porter: In order for super "a" or heavily impacted districts to receive 100 percent of the authorized 3(a) Impact

Aid entitlement, the Department must complete a full Wave 2 payment cycle. What appropriation would guarantee a full Wave 2 payment?

Mr. Bonner: The Department estimates that an additional $242.4 million would be needed to make payments through Wave 2 in fiscal year 1991.

IMPACT AID

For carrying out title I of the Act of September 30, 1950, as amended (20 U.S.C. ch. 13), [$717,354,000] $633,854,000, of which $15,000,000, to remain available until expended, shall be for payments under section 7 of said Act, $578,500,000 shall be for payments under section 3(a), [$123,500,000] $25,000,000 shall be for payments under section 3(b) on behalf of children who reside on or whose parents are employed on property described in section 403(1)(C) of said Act,[1/] and $15,354,000 shall be for payments under section 2 of said Act: Provided, That only children described in section 3(a), and section 3(b) children who reside on or whose parents are employed on property described in section 403(1)(C), shall be counted for determining eligibility and payments under any and all provisions of section 3 of said Act:[2/] Provided further, That payment under section 5(b)(2) of said Act to any local educational agency described in section 3(d)(1)(A) of said Act shall not exceed 75 percent of that agency's payment under sections 2 and 3(a) and under section 3(b) on behalf of children who reside on or whose parents are employed on property described in section 403(1)(C), for the prior fiscal year: Provided further, That payment under section 5(b)(2) to any other local educational agency shall not exceed 50 percent of that agency's payment, under sections 2 and 3(a) and under section 3(b) on behalf of children who reside on or whose parents are employed on property described in section 403(1)(C), for the prior fiscal year.[3/]

For carrying out the Act of September 23, 1950, as amended (20 U.S.C. ch. 19), [$14,998,000] $27,000,000, which shall remain available until expended, shall be for construction and renovation of school facilities as authorized by said Act, of which $10,000,000 shall be for awards under section 10 of said Act, $10,000,000 shall be for awards under sections 14(a) and 14(b) of said Act, and $7,000,000 shall be for awards under sections 5 and 14(c) of said Act.[4/] (Department of Education Appropriations Act, 1990.)

Explanation of Language Changes

1/ This language is added because Section 3(b) funds are requested for payments only on behalf of children connected with federally subsidized, low-rent housing.

2/ Since payments under Section 3(b) are proposed for 1991 only for children who reside on or whose parents are employed on property described in section 403(1)(C) of the program statute, the child count for purposes of any and all provisions of Section 3 eligibility would be limited to 3(a) children and these specific "b" children.

3/ The statute provides for preliminary payments under Section 5(b)(2) at a rate of 75 percent of the previous year's Section 3 payment for districts with at least 20 percent 3(a) children and 50 percent of the previous year's Sections 2 and 3 payments for all other districts. Because the Department proposes to provide payments only for Section 3(b) children who reside on or whose parents are employed on property described in Section 403(1)(C) in 1991, this language is added to eliminate, from the base used to calculate 1991 preliminary payments, payments received under Section 3(b) in 1990 for other "b" children in 1990.

4/ This language is added to specify a distribution of funds among the sections of P.L. 81-815 that differs from that in the program statute.

Impact Aid

Language Analysis

Language Provision	Explanation
$15,000,000, to remain available until expended, shall be for payments under section 7 of said Act,...	The general provisions of the annual appropriation law routinely prohibit the availability of funds beyond the fiscal year of appropriation. This language overrides that prohibition to permit Disaster Assistance funds, which generally support construction-related activities, to remain available until expended.
$25,000,000 shall be for payments under section 3(b) on behalf of children who reside on or whose parents are employed on property described in section 403(1)(C) of said Act,...	The basic law authorizes payments for all Section 3(b) children. This language would limit payments under Section 3(b) to children connected with federally subsidized, low-rent housing.
Provided, That only children described in section 3(a), and section 3(b) children who reside on or whose parents are employed on property described in section 403(1)(C), shall be counted for determining eligibility and payments under any and all provisions of section 3 of said Act:	Both Section 3(a) and 3(b) children are counted for determining eligibility for all Section 3 payments under the current statute. This language eliminates 3(b) children who do not reside on or have parents who are employed on property described in section 403(1)(C) of the statute from all Section 3 eligibility and payment calculations.

Impact Aid

Language Analysis -- Continued

Language Provision	Explanation
Provided further, That payment under section 5(b)(2) of said Act to any local educational agency described in section 3(d)(1)(A) of said Act shall not exceed 75 percent of that agency's payment under sections 2 and 3(a) and under section 3(b) on behalf of children who reside on or whose parents are employed on property described in section 403(1)(C), for the prior fiscal year: Provided further, That payment under section 5(b)(2) to any other local educational agency shall not exceed 50 percent of that agency's payment, under sections 2 and 3(a) and under section 3(b) on behalf of children who reside on or whose parents are employed on property described in section 403(1)(C), for the prior fiscal year.	The preliminary payment provisions in Section 5(b)(2), as revised by the Hawkins-Stafford Amendments, provide for preliminary payments at a rate of 75 percent of the previous year's Section 2 and 3 payments for districts with at least 20 percent 3(a) children and 50 percent of the previous year's Section 2 and 3 payments for all other districts. Because the Department proposes to provide payments in 1991 only for Section 3(b) children who reside on or whose parents are employed on property described in Section 403(1)(C), payments received for other children under Section 3(b) in 1990 are eliminated from the base used to calculate 1991 preliminary payments.
For carrying out the Act of September 23, 1950, as amended (20 U.S.C. ch.19), [$14,998,000] $27,000,000 which shall remain available until expended, shall be for construction and renovation of school facilities as authorized by said Act, of which $10,000,000 shall be for awards under section 10 of said Act, $10,000,000 shall be for awards under sections 14(a) and 14(b) of said Act, and $7,000,000 shall be for awards under sections 5 and 14(c) of said Act.	This language provides that funds appropriated for construction activities remain available beyond the fiscal year of appropriation and specifies a distribution of funds among the sections of P.L. 81-815 that differs from that in the program statute.

1/ Reflects enacted supplementals, rescissions, and reappropriations in amounts appropriated prior to fiscal year 1985.

2/ The House deferred action on funding for this program because an amendment to the authorizing statute was pending at the time.

NOTE.--This table excludes funds for Section 6, which authorizes payments for children for whom local agencies are unable to provide education, for which appropriations have been made to the Department of Defense since fiscal year 1982.

Impact Aid

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report	
Maintenance and Operations -- Designation of Coterminous Districts	
The Committee directs the Secretary to take appropriate action to prevent school district boundaries from being drawn to be coterminous with military installations solely to maximize Impact Aid payments and not for any educational reason.	S.695, which passed the Senate Labor and Human Resources Committee on July 20, 1989, would make such districts ineligible to receive payments under P.L. 81-874. If this provision is enacted, the Department will determine whether it is sufficient to resolve the problem of school district boundary manipulation or whether additional measures are needed.
1990 Senate Report	
Effect of Base Closures under P.L. 100-526	
"The Committee directs the Secretary, in conjunction with the Secretary of Defense, to submit, no later than March 1, 1990, a detailed report on the potential impact of the Base Closure and Realignment Act (P.L. 100-526) on Impact Aid payments."	The Department is working closely with the Department of Defense to assess the impact of the base closures on the Impact Aid program and intends to comply with this directive.

To compensate school districts for the cost of educating children when enrollments and the availability of revenues from local sources have been adversely affected by Federal activities, Public Laws 81-874 and 81-815, as amended, provide funds for current operating expenses and construction assistance. Payments under Section 3 of Public Law 81-874 constitute the major part of this program. These payments are made to school districts for the cost of educating children who reside on and/or whose parents work on Federal property or are in the uniformed services, as well as children who reside on certain Indian lands or in federally subsidized, low-rent housing. These same districts may be eligible for construction assistance because of their federally connected children.

To assist school districts that have suffered damage to their facilities from disasters, major disaster assistance also is authorized under both laws.

When both laws were enacted in 1950, a Federal policy was established for assisting school districts that are financially burdened as a result of existing, new, or expanded Federal activities. The primary focus of the program at that time was to respond to the impact of increased populations in centers of defense production and near military installations. Since that time, the provisions of the program statute have been expanded to include additional compensation to districts for all children residing on certain Indian lands and some handicapped children (those who reside on Indian lands or who have a parent in the uniformed services), to include in

Impact Aid

Account Summary — Continued

the definition of Federal property certain low-rent housing properties as well as tax-exempt properties owned by foreign governments, and to make districts with certain refugee children eligible for payment.

Subsequent amendments to the basic Impact Aid statutes have made changes in the authorizing legislation: the Department of Defense was authorized to make funds appropriated to it available for Section 6 activities (funding for educational services for children residing on Federal property when local school districts are unable to provide such services); entitlements for Section 3(b) were reduced and, in fact, were originally scheduled for elimination; and specific authorization ceilings were set. Since 1983, a few amendments, generally of a technical nature and affecting a limited number of districts, have been enacted almost every year. The Augustus F. Hawkins-Robert T. Stafford Education Amendments of 1988 reauthorized both P.L. 81-874 and P.L. 81-815 through 1993.

Under the budget proposal, payments would be made on behalf of 3(a) children and only those 3(b) children who reside on or whose parents are employed on property described in Section 403(1)(C) of the statute. Funds are requested for low-rent housing "b" children because they live under conditions that contribute to learning problems in school, which in turn increase the costs of providing them educational services, and because the parents of children living in public housing, who generally have incomes near or below the poverty level, generate little tax revenue for local school districts. Payments will be made at a higher rate to districts where these 3(a) and 3(b) children account for higher proportions of the total average daily attendance.

New budget authority is requested for disaster assistance for 1991. In addition, Construction funds are requested for full or partial support of school facilities construction for districts that: 1) have experienced significant increases in federally connected children; 2) are unable to provide facilities for federally connected children; or 3) serve large numbers of Indian children or contain large areas of Indian lands.

1. **Maintenance and operations**
   (Public Law 81-874, as amended, Sections 2 and 3)

1991 Authorization: $835,000,000 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$717,354,000	$618,854,000	-$98,500,000

1/ A total of $835,000,000 is authorized for all P.L. 81-874 activities for fiscal year 1991.

Purpose and Method of Operation

To help compensate school districts for the cost of educating children when enrollment and the availability of revenues from local sources have been adversely affected by Federal activities, Public Law 81-874, as amended, provides maintenance and operations funds. The various sections of this program provide payments for current operating expenses and are described below.

- Section 2 authorizes assistance to school districts having a partial loss of tax base (10 percent or more of assessed value) as a result of the acquisition (since 1938) of real property by the United States Government. Section 2 payments are to be ratably reduced from full entitlement when sufficient funds are not appropriated for payments at full entitlement. The full tax rates of the applicant school districts are used for computing Section 2 entitlements.

- Section 3(a) authorizes payments for children who reside on and whose parents work on Federal property or are in the uniformed services.

- Section 3(b) authorizes payments for children who reside on or whose parents work on Federal property or are in the uniformed services.

- Sections 5(c) and 5(e) establish the portions of entitlements that will be allocated and paid when an appropriation for a fiscal year is not enough to fund full entitlements under Section 3. The statutory formula includes a hold-harmless provision for all Section 3(a) districts and for Section 3(b) districts with at least 20 percent 3(b) children. The portion of a Section 3 payment that must be used for handicapped students is paid in full before any other payments are made.

Impact Aid

1. Maintenance and operations

Purpose and Method of Operation -- Continued

- Section 3(d)(2)(B) authorizes increased rates of payment for certain districts under specified circumstances to the extent necessary to enable a school district to provide a level of education equivalent to that provided by comparable school districts in the same State. Amendments to this section in 1988 provide that: (1) the reasonable tax effort for a Section (3)(d)(2)(B) applicant must be at least 80 percent of the average tax rate of its generally comparable districts; (2) section 3(d)(2)(B) applicants may use as few as three generally comparable districts for determining eligibility and payments; and (3) a carryover amount of up to 30 percent of the applicant's total current expenditures is not considered part of a district's available resources for determining the amount of Section 3(d)(2)(B) funds needed. Although these amendments have the effect of increasing the total, national Section 3(d)(2)(B) entitlement, a 1989 amendment caps 3(d)(2)(B) payments at $20 million annually.

- Section 3(e) authorizes phase-out entitlements under specified conditions to school districts that lose a substantial number of children due to a decrease or cessation of Federal activities in the State in which the school district is located.

- Section 4 authorizes assistance for sudden and substantial increases in federally connected attendance resulting from activities carried on by the Federal Government either directly or through a contractor.

- The Reconciliation Act of 1981 authorized the Department of Defense to make payments under Section 6 and precluded the Department of Education from using its Impact Aid appropriation for that purpose. Section 6 authorizes payments to Federal agencies or local educational agencies to educate children who reside on Federal property when the State or local educational agency is unable, because of legal or other reasons, to provide a suitable free public education. School districts receiving funds under Section 3 may also receive funds under Section 6.

Payments under Sections 2 and 3 are made directly to school districts for the current fiscal year where they are usually commingled with State, local, and other funds that are used for general operating expenses and that benefit all students enrolled in the district. The supplementary payments on behalf of handicapped students must, however, be used specifically for special education programs designed to meet the needs of those students.

This is a current funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Impact Aid

1. Maintenance and operations

Accomplishments

Section 3(d)(2)(B) Regulations

Final regulations implementing eligibility and entitlement standards for payments under Section 3(d)(2)(B) were published in the Federal Register on September 7, 1989. These are the first complete, detailed regulations published for this portion of the program. In addition, these regulations revise the provisions governing the use of payments under Section 3 on behalf of handicapped children and amend the general definitions and a number of other regulatory provisions relating to applications under Sections 2, 3, and 4. These regulations are based upon the requirements in the Impact Aid statute as revised by P.L. 100-297, the Hawkins-Stafford Amendments, and P.L. 101-26, additional amendments enacted in 1989. They are effective starting with FY 1990 payments.

Drug-Free Workplace

The Drug-Free Workplace Act of 1988 requires that recipients of Federal funds certify, prior to an award, that they will maintain a drug-free workplace. The regulations, published in the Federal Register on January 31, 1989, require the grantee to publish a statement notifying employees of its drug-free policy and establish a drug-free awareness program to inform employees that, as a condition of employment under the Federal grant, the employee must abide by the drug-free policy and notify the employer of any criminal drug statute conviction for a violation occurring in the workplace. False certification or violation of the certification are grounds for suspension of payments or termination of grants. The Impact Aid program implemented the Drug-Free Workplace Act starting with FY 1989 applicants.

Program Administration

In 1988, the Department began a study of the Impact Aid program's computerized payment system to identify changes and improvements that need to be made. This was the first step in the process of updating this system. The final report, completed in March 1989, found that the system is not automated enough, is not integrated, and is not accessible to many staff who regularly require access to the data but have little computer knowledge. The study report recommended total replacement of the computer system with a mainframe-based data base management system. The Department has begun to upgrade the system in phases. The first step will be to replace the data entry function which will improve and expedite data entry into the system. The Department will let a contract to design this phase of the project in early 1990.

Impact Aid

1. Maintenance and operations

1991 Budget Proposal

A total of $618.8 million is requested for Maintenance and Operations activities in 1991, $98.5 million less than the 1990 appropriation. An amount of $578.5 million is requested for Section 3(a), the same amount as the 1990 appropriation. For Section 3(b), $25 million is requested for payments on behalf of children connected with federally subsidized, low-rent housing. The 1991 request for Section 3(b) is $98.5 million less than the 1990 appropriation. The Section 2 request of $15.4 million is the same amount as the 1990 appropriation.

Payments under Section 3

For 1991, the formula for payments under Section 3(a) would continue to provide higher rates of payment for districts with higher proportions of federally connected children. The formula would maintain the three types of "a" districts that were established in the Hawkins-Stafford Amendments in 1988 and in appropriation laws since FY 1987.

Estimated Percentages of Entitlement to be Paid

Percent of "a" Children in District	1989	1990	1991 Request
20 -100%	80 -100%	80 -100%	85 -100%
15 - 19	55 - 60	55 - 60	60 - 70
less than 15	35 - 45 1/	35 - 45 1/	35 - 45 1/

1/ These payment percentages are ratably reduced from 100 percent of entitlement to the level allowed by the remaining funds.

For 1991, funds are requested for payments under Section 3(b) only on behalf of children who reside on or whose parents are employed on property described in Section 403(1)(C) of the statute. Funds are requested under Section 3(b) for these low-rent housing children because they live under conditions that contribute to problems in school, and thus increase educational costs, and because the parents of children who live in public

1991 Budget Proposal -- Continued

housing, who are generally living in poverty, generate little revenue for local school districts. Since other "b" children will not be considered for payments in 1992, they also will not be counted in determining whether a district meets the threshold eligibility criteria for payment under Section 3. Thus, in 1991, a district will have to have "a" children and "b" children connected with federally subsidized, low-rent housing equal to the lesser of three percent of total enrollment or 400 in order to be eligible for payments.

Payments under Section 3(d)(2)(B)

In 1991, the Department proposes to count for purposes of Section 3(d)(2)(B) eligibility and payments only 3(a) children and those 3(b) children who reside on or whose parents are employed on property described in Section 403(1)(C). Currently, all federally connected children counted under Sections 3(a) and 3(b) must equal at least 50 percent of total average daily attendance in order for a district to meet the threshold eligibility requirement for 3(d)(2)(B). Since the Department is requesting funds for regular Section 3(b) payments only for children who reside on or whose parents are employed on property described in Section 403(1)(C), it would be inconsistent to count all "b" children for eligibility or payment under Section 3(d)(2)(B). Therefore, the Department proposes appropriation language that would require a district to have 3(a) and 3(b) children connected with federally subsidized, low-rent housing amounting to at least 50 percent of total average daily attendance in order to be eligible for consideration for 3(d)(2)(B) funds in 1991, and 3(d)(2)(B) funds would be paid only on behalf of these children.

Payments under Section 2

The budget request of $15.4 million (level funding) for Section 2 is expected to be approximately 62 percent of full entitlement, based on new regulations affecting Section 2 eligibility and payment amounts, projections of estimated assessed valuations of Federal property and property tax rates, and recent changes in the statute.

Preliminary Payments

The statute provides for preliminary payments at a rate of 75 percent of the previous year's Sections 2 and 3 payments for heavily impacted ("Super a") districts and 50 percent of the previous year's Sections 2 and 3 payments

Impact Aid

1. Maintenance and operations

1991 Budget Proposal -- Continued

for all other districts. Because the Department proposes to provide payments under Section 3(b) only for children who reside on or whose parents are employed on property described in Section 403(1)(C) in 1991, payments received under Section 3(b) in 1990 for other "b" children are proposed to be eliminated from the base used to calculate 1991 preliminary payments. This change would minimize the risk of overpayments in 1991.

2. Disaster assistance
(Public Law 81-874, as amended, Section 7; and Public Law 81-815, as amended, Section 16)

1991 Authorization: $862,000,000 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
---	$15,000,000	+$15,000,000

1/ A total of $835,000,000 is authorized for all P.L. 81-874 activities for fiscal year 1991. A total of $27,000,000 is authorized for P.L. 81-815 activities for fiscal year 1991.

Purpose and Method of Operation

Section 7 of Public Law 81-874 authorizes assistance to local educational agencies (LEAs) affected by major disasters. Section 7 grants enable LEAs to make minor repairs, provide temporary facilities, pay increased operating expenses, and replace instructional materials and equipment. Funds appropriated under Section 7 remain available until expended.

Section 16 of Public Law 81-815 authorizes grants to local educational agencies for major repairs or replacement of school facilities damaged or destroyed by major disasters. Funds have never been appropriated specifically for Section 16. The statute provides that funds available for Section 7 of P.L. 81-874 shall also be available for Section 16.

An LEA must be located in a Presidentially declared disaster area in order to be eligible to apply for disaster assistance funds. Prior to 1986, the Federal Emergency Management Agency (FEMA) did not include damage to school facilities in the information it considered when determining whether or not to recommend to the President that a major disaster be declared. This meant that where damage was primarily, or only, to school buildings, major disasters were not declared and school districts were not eligible for funding. In 1986, FEMA reversed its policy, which resulted in disaster declarations covering three school districts that had not previously been eligible. This change in policy is expected to make one or two additional districts eligible for disaster assistance funds each year.

The Hawkins-Stafford Amendments increased eligibility thresholds for disaster assistance to $10,000 or 5 percent of the district's current operating expenditures during the fiscal year preceding the one in which the disaster occurred, whichever is less. The higher threshold had been

Purpose and Method of Operation -- Continued

incorporated in annual appropriations language beginning in 1981 for fiscal years in which disaster assistance funds were appropriated.

Disaster assistance funding is dependent upon the availability of appropriations and remains available until expended.

Accomplishments

Grants totalling $4.8 million were awarded under Sections 7 and 16 to 27 local educational agencies in 15 States in 1989. These funds enabled school districts to repair damage to school facilities caused by severe storms and flooding, heavy rains, a typhoon, and a hurricane. Some of these grants were made to districts that had received funding in previous years but needed additional amounts to continue or complete their repair or reconstruction projects. One district in West Virginia received funds for repairs under Section 16. The remainder of the districts received funds under Section 7.

No new budget authority was provided for this activity for 1989 or 1990 because a large carryover balance ($18.5 million) was expected to be sufficient to fund all eligible applications. However, several severe disasters occurred late in fiscal year 1989 and early in fiscal year 1990. Of the $18.5 million in carryover funds currently available, $2.5 million will be needed to cover the remaining costs associated with the 1987 California earthquake. The remaining $16 million and $62.8 million the Department has been allocated from the appropriation to the President for unanticipated disaster needs will be used to cover claims for damage caused by Hurricane Hugo in the Virgin Islands, Puerto Rico, South Carolina, and North Carolina; damage from the Loma Prieta earthquake in California; damage caused by Hurricane Jerry in Kentucky; and damage caused by the November tornado in Alabama.

1991 Budget Proposal

For fiscal year 1991, budget authority of $15 million is requested for Disaster Assistance. This is expected to be sufficient to fund applications submitted in 1991.

3. Construction
(Public Law 81-815, as amended)

1991 Authorization: $27,000,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$14,998,000	$27,000,000	+$12,002,000

Purpose and Method of Operation

To help compensate school districts for the cost of educating children when enrollment and the availability of revenues from local sources have been adversely affected by Federal activities, Public Law 81-815, as amended, authorizes direct grants for the construction and repair of urgently needed minimum school facilities. Specifically:

- Section 5 authorizes assistance for school construction in areas experiencing an increase in Federal activity either directly or through a contractor. Eligibility is determined by the increase in the number of children residing on Federal property and/or with a parent employed on Federal property.

- Section 8 authorizes the use of a portion of the program's appropriation as supplementary funding to a district that cannot finance the non-Federal portion of the project or to a district whose grant under this program has been affected by a natural disaster.

- Section 9 authorizes construction assistance to school districts experiencing a temporary Federal impact, either directly or through a contractor.

- Section 10 directs the Secretary to make arrangements for constructing or otherwise providing school facilities for children who reside on Federal property where legal or other reasons prevent the local educational agency from spending State or local funds on the education of federally connected children.

- Sections 14(a) and 14(b) authorize grants to school districts that are comprised mainly of Indian lands or that provide a free public education to children who reside on Indian lands.

- Section 14(c) authorizes construction assistance to school districts that are comprised mainly of Federal lands and that have a substantial number of inadequately housed pupils.

Purpose and Method of Operation -- Continued

- Section 16 authorizes assistance to local educational agencies in areas suffering major disasters. (See preceding Disaster Assistance activity narrative.)

Until 1967, appropriations were sufficient to meet all demands under Public Law 81-815. In recent years, Sections 10, 14(a) and 14(b), and 5 and 14(c) have been funded at levels specified by the Administration and the Congress. If the funds appropriated are not earmarked for specific activities and appropriations are insufficient to fund all eligible projects, the basic law establishes the following funding order: disaster assistance under Section 16 is provided first; then funds are provided for Sections 9, 10, 14(a), and 14(b) in proportion to the total estimated requirements in each section; and then Sections 5, 8, and 14(c) are funded.

Within each section, priority rankings intended to reflect relative urgency of need have been established to ensure a systematic distribution of funds among applicants when appropriations are insufficient to fund all applications. Highest-priority applicants are funded first and priority rankings are reordered periodically as new applications are filed. Thus, a particular project's ranking may change several times before it is funded.

Construction funding is dependent upon the availability of appropriations and remains available until expended.

Accomplishments

A total of $1.8 billion has been appropriated by the Congress for constructing school facilities under Public Law 81-815 from the time of its enactment in 1950 through September 1989, excluding funds transferred to the Department of Education from U.S. Army and Navy construction programs, the Atomic Energy Commission, the Army Safeguard program, and the Economic Development Administration for construction in special areas. In addition, since 1984, the Department of Defense has provided school construction funds under Section 10.

From 1951 through 1989, Federal assistance has been provided to local educational agencies and to other Federal agencies for the construction of approximately 7,000 projects.

In 1987, the Department of Education (ED) and the Department of Defense (DoD) completed a joint study to identify the construction needs of schools located on military installations in the United States and develop a policy to address those needs. This study was mandated by the Military Construction Authorization Act of 1987, and a final report (the so-called "Dole" report) was submitted to the Congress in November 1987.

Accomplishments — Continued

DoD and ED recommended that the construction work needed for these schools be supported with Federal funds to the extent that State and local funds are not available. DoD agreed to fund all construction requirements at Section 6 sites, while ED accepted responsibility for the other schools. Department of Education funding is contingent on the acceptance by LEAs of title to buildings currently owned by ED.

Following the recommendations of this report, DoD now conducts, before any construction work at a specific site is initiated, a fiscal impact analysis to identify the financial benefits that accrue to States or localities because of the presence of a military installation and the financial resources that are available to an LEA to fund needed construction work. Department of Education staff also visit the installation, accompanied by Department of Health and Human Services (HHS) engineers who are under contract with ED, to determine the specific work needed and to estimate the cost of that work. When these two processes are completed, the share of funding to be provided by the Federal, State, and local governments is determined and the work undertaken.

The fiscal analysis and the ED review have been completed for Fort Riley, Kansas, which is serving as a model for implementation of the Dole Report. The Department estimated a cost of $5.83 million to renovate six schools located on Fort Riley. The Geary County Unified School District, which operates the schools on the base, has agreed to accept ownership of the schools and to contribute 10 percent of the cost of renovation. The agreement has been formally signed, and title to the schools has been transferred to the district. The Department has made an award of $5.24 million, to be disbursed over a three-year period to the district. The school district has recently obtained a use permit for the land from the Army and will soon begin the work.

Data collection has been completed for the facilities on military installations in Alaska, California, Texas, Virginia, and Washington. DoD has just begun to gather information for Whiteman AFB in Missouri. Department of Education staff and HHS engineers have visited and completed cost estimates for installations in Alaska, California, Virginia, and for Whiteman AFB. As soon as DoD has completed the fiscal analyses for these installations, the Department will begin negotiations with the relevant State and local governments to establish their contributions toward the projects. Because school districts in Alaska and Virginia have not yet agreed to accept ownership of the relevant school buildings in their districts, funding for those sites is on hold.

Impact Aid

3. Construction

1991 Budget Proposal

Construction funds of $27 million are requested for 1991 for awards under Sections 5, 10, and 14. The request consists of $7 million for grants under Sections 5 and 14(c), an increase of $7 million over the 1990 appropriation; and $10 million each for Section 10 projects and for Sections 14(a) and 14(b) grants, which is $2.5 million more than the 1990 appropriation for each of these activities.

Since 1984, funds for school construction under Section 10 have been made available through DoD as well as through the Department of Education. DoD has used these funds for construction activities at Section 6 sites, while the Department of Education has used Section 10 funds for non-Section 6 sites. In 1991, these funds will be used by both agencies to meet the construction needs identified in the Dole report. Section 10 funds will also be used for asbestos abatement in Section 10 buildings owned by ED as required by the Asbestos Hazard Emergency Resources Act, as well as for emergency repairs to maintain safe conditions in Section 10 buildings and prevent further deterioration of those facilities.

---

[1] Funds are distributed to LEAs based on numbers and percentages of federally connected children and national and State average per pupil expenditure data from two years preceding. Funds are distributed based on the formula in the authorizing statute.

The appropriations for 1989 and 1990 include payments for both "a" and "b" children. The 1991 request is for payments for "a" children and payments for "b" children connected with low-rent housing.

All figures are estimates based on projections of prior year data.

MONDAY, FEBRUARY 26, 1990.

BILINGUAL AND IMMIGRANT EDUCATION

WITNESSES

RITA ESQUIVEL, DIRECTOR, OFFICE OF BILINGUAL EDUCATION AND MINORITY LANGUAGES AFFAIRS

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

THOMAS M. CORWIN, DIRECTOR, DIVISION OF ELEMENTARY, SECONDARY, AND VOCATIONAL ANALYSIS, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET, AND EVAULATION

Mr. NATCHER. We have before the committee Ms. Esquivel, before you give us your statement, tell us who you have with you there at the table.

Ms. ESQUIVEL. Well, I have with me Tom Corwin and Sally Christensen from the Office of Planning, Budget, and Evaluation, in the Department of Education, Mr. Chairman.

Mr. NATCHER. Thank you very much, and now we will be pleased to hear from you concerning your request.

BUDGET REQUEST

Ms. ESQUIVEL. Thank you, Mr. Chairman, and members of the committee.

I am pleased to appear before the committee today to testify on the fiscal year 1991 budget for Bilingual and Immigrant Education. The budget request for the programs in this account is $205.5 million; $16.9 million more than the 1990 appropriation.

The increase reflects the Department's emphasis on programs serving a population that is generally disadvantaged and in the absence of special programs, may drop out of school, depriving this country of their many potential contributions.

FORUM

Last month the Office of Bilingual Education and Minority Languages Affairs hosted a forum on personnel needs for districts with changing demographics. In this forum, eight school superintendents, eight assistant superintendents for personnel, and eight deans of schools of education provided the Department with extremely useful advice for the improvement of our programs to serve limited English proficient students.

The Department has begun to act on this advice in the conduct of the 1990 funding competitions. This advice is also reflected in the 1991 budget, and will have an even greater impact on next year's budget request.

For bilingual education, $175.4 million is requested, an increase of $16.9 million or 11 percent over the 1990 level. All of the increase is requested for Part A, Bilingual Programs, since these projects provide both direct services to limited English proficient students and in-service staff development for teachers.

BILINGUAL PROGRAMS

For Part A, bilingual programs, $132.6 million is requested; almost $17 million more than the 1990 appropriation. Of this increase, $12 million will be used for a special competition limited to school districts experiencing a major, recent influx of limited English proficient students. And these districts often need special assistance in coping with short-term difficulties, which this special competition will help them overcome.

SUPPORT SERVICES

Under Part B, Bilingual Support Services, $10.8 million is requested. All of Part B activities would continue at their 1990 appropriation levels.

TRAINING GRANTS

Under Part C, bilingual training grants, $31.9 million is requested, the same as the 1990 appropriation. Enactment of the request would require the Congress, again, to override the 25 percent set-aside for Part C.

IMMIGRANT EDUCATION

For the Immigrant Education program, $30.1 million is requested, the same level as in 1990.

My colleagues and I will be happy to respond to any questions you have regarding the 1990 budget request for bilingual and immigrant education programs.

[The information follows:]

Bilingual and Immigrant Education

Mr. Chairman and Members of the Committee:

I am pleased to appear before the Committee today to testify on the fiscal year 1991 budget for Bilingual and Immigrant Education. The budget request for the programs in this account is $205.5 million, $16.9 million more than the 1990 appropriation. The increase reflects the Department's emphasis on programs serving a population that is generally disadvantaged and, in the absence of special programs, may drop out of school, depriving this country of their many potential contributions.

Last month the Office of Bilingual Education and Minority Languages Affairs hosted a forum on personnel needs for districts with changing demographics. In this forum eight school superintendents, eight assistant superintendents for personnel, and eight deans of schools of education provided the Department with extremely useful advice for the improvement of our programs to serve limited English proficient students. The Department has begun to act on this advice in the conduct of 1990 funding competitions. This advice is also reflected in the 1991 budget request and will have an even greater impact on next year's budget request.

Bilingual Education

For Bilingual Education, $175.4 million is requested, an increase of $16.9 million, or 11 percent, over the 1990 level. All of the increase is requested for Part A, Bilingual Programs since these projects provide both direct services to limited English proficient students and in-service staff development for teachers.

Bilingual Programs

For Part A, Bilingual Programs, $132.6 million is requested, $16.9 million more than the 1990 appropriation. This increase will fund some 152 additional school district projects serving an estimated 41,000 more limited English proficient students. Of this increase, $12 million will be used for a special competition limited to school districts experiencing a major, recent influx of limited English proficient students. These districts often need special assistance in coping with short-term difficulties which this special competition will thelp them overcome.

The Hawkins-Stafford Elementary and Secondary School Improvement Amendments of 1988 provided a significant increase in the flexibility of local education agencies to select the most appropriate instructional method. The Department began implementing this new flexibility in the 1989 awards process. In 1991, a large share of Part A funds will be allocated to transitional bilingual education, special alternative instructional programs, and developmental bilingual education, the three activities that are most directly focused on assisting limited English proficient children learn English and meet grade promotion and graduation requirements. The Department intends to continue its policy of making, to the maximum extent possible under the law, awards for activities on the basis of quality rather than instructional approach. In recognition of congressional desire for increased funding for developmental bilingual education, the Department will initiate approximately 17 new grants in 1990. In fiscal year 1991, we request funding adequate to continue these projects. We are closely monitoring these projects and will base future budget requests for this activity on the relative success of these fiscal year 1990 awards.

Bilingual Support Services

Under Part B, Bilingual Support Services, $10.8 million is requested. All Part B activities would continue at 1990 appropriation levels. These activities include State educational agency grants for data collection and for a variety of technical assistance activities, and contracts for research and evaluation studies, two evaluation assistance centers, and a clearinghouse.

Bilingual Training Grants

Under Part C, Bilingual Training Grants, $31.9 million is requested, the same as the 1990 appropriation. Enactment of the request would require the Congress again to override the 25 percent set-aside for Part C. Over a 21-year period, the Department has invested $500 million in training activities. These activities have assisted some 250 institutions of higher education to operate teacher training programs, helped local school districts in their teacher staff development efforts, and funded Multifunctional Resource Centers to assist local school districts in training staff. In response to fiscal year 1990 appropriations language, the Department will make 200 bilingual fellowship awards. The funds requested in the 1991 budget will continue those awards and support an additional 100 new fellows.

Immigrant Education

Under the Immigrant Education program, $30.1 million is requested, the same level as in 1990. Last year the Department proposed legislation for Immigrant Education that would require that grants be used only to provide supplementary education programs for immigrant students. The Department continues to support this proposal.

My colleagues and I would be happy to respond to any questions you have regarding the 1991 budget request for the Bilingual and Immigrant Education programs.

DEPARTMENT OF EDUCATION

OFFICE OF BILINGUAL EDUCATION

AND

MINORITY LANGUAGES AFFAIRS

Biographical Sketch

NAME : Rita Esquivel

POSITION : Director of the Office of Bilingual Education and Minority Languages Affairs (OBEMLA)
United States Department of Education

BIRTHPLACE AND DATE : Our Lady of the Lake University, B.A.
San Antonio, Texas, 1960

EXPERIENCE

1989 - Present : Director of the Office of Bilingual Education and Minority Languages Affairs (OBEMLA)
United States Department of Education

1987 - 1989 : Assistant to the Superintendent
Santa Monica-Malibu Unified School District
Santa Monica, California

1981 - 1987 : Assistant Superintendent - Education
Santa Monica-Malibu Unified School District
Santa Monica, California

1976 - 1981 : Supervisor, of State and federal projects
Santa Monica-Malibu Unified School District

1973 - 1976 : Coordinator of Community Relations and Chapter I, Santa Monica-Malibu Unified School District

1971 - 1973 : Curriculum Assistant to Assistant Superintendent, Santa Monica-Malibu Unified School District

1970 - 1973 : Instructor, English as a Second Language
Santa Monica College, Santa Monica
California

1965 - 1971 : Secondary Spanish Teacher and School Counselor, Lincoln Junior High School
Santa Monica-Malibu Unified School District
Santa Monica, California

1963 - 1965 : Elementary Classroom Teacher
John Muir Elementary School, Santa Monica-
Malibu Unified School District

1955 - 1963 : Elementary Classroom Teacher
San Antonio Independent School District
San Antonio, Texas

1953 - 1955 : Elementary Classroom Teacher
Edgewood Independent School District
San Antonio, Texas

HONORS AND AWARDS : Outstanding Alumnus of the Year, Our Lady of the Lake University, San Antonio, Texas (1983)

: Woman of the Year, YWCA, Santa Monica, California (1988)

: Elected to Pi Gamma Mu, Our Lady of Lake University, (1951)

: Who's Who in American Colleges and Universities (1953)

: Translated 10 children's books from English to Spanish, Children's Press

: Has lectured extensively throughout the country on bilingual education

NUMBER OF STUDENTS

Mr. **Natcher**. Thank you.

How many school aged children do you believe need bilingual education services, and how has this changed over the last decade?

Ms. **Esquivel**. I would say approximately 3,000,000, Mr. Chairman. It has grown over the past years, and it continues to grow.

SCHOOL RESPONSE

Mr. **Natcher**. In your opinion, how well have local school systems responded to the needs of these students?

Ms. **Esquivel**. Well, it depends on the school district. Right before I came here, I was the assistant superintendent for the Santa Monica-Malibu school district, and, of course, I am happy to say that that school district was doing very well. I think most of the school districts in New York, in Florida, in Texas, in California, in Massachusetts, are doing very well, but there are some school districts that need our help, and we need to encourage them and to serve as a guiding light for them.

SPECIAL COMPETITION

Mr. **Natcher**. As you know the 1991 budget request sets aside $12,000,000 for a new program to assist communities with large numbers of new limited English students. Who would qualify for these grants?

Ms. **Esquivel**. Any school district that has had a major recent influx of limited English proficient students would qualify.

Mr. **Natcher**. Would communities which are already receiving immigrant assistance under the 4(d) program also qualify for these new grants?

Ms. **Esquivel**. Under Part A?

Mr. **Natcher**. No, 4(d), immigrant assistance.

Ms. **Esquivel**. They certainly would, Mr. Chairman. They would continue to qualify.

Mr. **Natcher**. Is this initiative intended as a replacement for the old refugee education program, which ended in 1989?

Ms. **Esquivel**. No. This is a new competition to help out districts that are recently impacted.

Mr. **Natcher**. Why do you use special bill language for this new program? Why couldn't it be done under your regular Title VII authorization?

Mr. **Corwin**. Mr. Chairman, we included special appropriation language in our budget proposal in order to highlight a new initiative that we felt was important, that we really would like to carry out.

However, as a technical budget matter, the special language really isn't needed. In fact, we conducted a similar competition without special language in 1989.

FORUM ON TRAINING NEEDS

Mr. **Natcher**. Last year you indicated that you had awarded a contract for a study of the bilingual fellowship program.

Your statement indicates that you have also held a forum with local officials on training. What is the result of these efforts, and, if you will, tell us what changes are you planning to make in 1991?

Ms. ESQUIVEL. First of all, the forum was a huge success. We brought in superintendents from the major areas where non-English-speaking children live. That would be Los Angeles, Dade County, Chicago. We had people from Massachusetts, Arizona, New Mexico, Texas. We found that they are in desperate need of teachers.

We also found out that the institutions of higher education, our colleges and universities, were not talking to superintendents. So we got them together and we said they needed to articulate. You know, universities cannot just go ahead and set up programs without consulting with local education agencies. We think we opened the channels of communication between the two groups.

TRAINING REQUEST

Mr. NATCHER. The President's budget proposes bill language overriding the requirement that 25 percent of bilingual funding go for training. Why is this change necessary?

Ms. ESQUIVEL. We have put most of the increases, Mr. Chairman, in direct services to children. The proposals under Part A that are sent to the Department also allocate between 10 and 20 percent of their monies for staff development. So we feel that that covers staff development at this time.

Mr. NATCHER. How would the distribution of bilingual funds change if we approved your total request but distributed the full 25 percent to training?

Ms. ESQUIVEL. We would lose about $10 million out of Part A for direct services to children.

Mr. NATCHER. Mr. Conte.

Mr. CONTE. Thank you, Mr. Chairman. First of all, I want to welcome you, Rita. We are very pleased to have you here today.

Ms. ESQUIVEL. Thank you.

Mr. CONTE. I imagine on cold days like this you wish you were back in California.

Ms. ESQUIVEL. You are right. There are some board members here, my former bosses, and they are giving me the you know what.

FLEXIBILITY

Mr. CONTE. Last year we talked about how the Hawkins-Stafford Act would give greater flexibility to districts to determine the methods of bilingual instruction. I asked for feedback about those changes and was told it was too early to tell if they were helpful. Can you tell me this year if those changes are working?

Ms. ESQUIVEL. Yes, they are working because different programs are best suited to children's individual needs. Again, if I may indulge you with a local story, in Santa Monica we had both transitional bilingual education and special alternative programs. We had transitional programs in schools where the children spoke one language other than English and special programs in two schools where the children spoke 28 different languages. It gives the school district the ability to be flexible and tailor their program according to student needs. We had all three in Santa Monica.

That shows you in a little district, you can have all three depending on what it is that particular schools need for their particular youngsters and remembering also that the primary purpose of bilingual education, regardless of which program it is, is to teach children English.

EFFECT OF SEQUESTER

Mr. **Conte**. Did the sequester impact the bilingual program?

Mr. **Corwin**. This was another budget account that was not affected.

GREATEST NEED

Mr. **Conte**. What are the greatest educational needs of language minority students and what is the Department doing to address those needs?

Ms. **Esquivel**. Their greatest need is to have programs that allow them to learn English.

What are we doing? We are putting our 11 percent increase into direct services to children.

METHOD OF INSTRUCTION

Mr. **Conte**. There always seems to be disagreement among the minority language groups over what method of instruction is best. What method do you think is best, and how do you propose to handle this never ending debate?

Ms. **Esquivel**. The district I came from had all three. I will continue to say that it is a local decision. The program should be tailor-made according to the needs of the children that attend that particular school. I have been there, I have done all three, and all three work with a certain group of children.

Mr. **Conte**. So there is no method that is the best?

Ms. **Esquivel**. I have been in bilingual education since 1970. I came straight out of kindergarten.

DEVELOPMENTAL PROGRAMS

Mr. **Conte**. The Department is requesting $3 million for development programs in the form of grants ranging from $75,000 to $275,000. What are the merits of the developmental program? What types of programs do you want to sponsor?

Ms. **Esquivel**. That is such an exciting program. We have been looking forward to this and we are very excited about being able to fund programs in developmental bilingual education. Having been the administrator of one, I know how well they work. It brings to the program English-speaking models for the children. So you have a classroom where the children are seated side by side and the English-speaking children are models for the children who speak another language.

It also affords the children who are English speaking the opportunity to learn a second language. Yesterday, the Governors met and one of their objectives was that more children should learn a second language. We feel we are on the cutting edge for everybody.

TEACHER SHORTAGE

Mr. CONTE. The Department recently conducted a study of the preparation and supply of teachers for bilingual programs. Is there a teacher shortage for bilingual programs, and what did the study find? Is it a nationwide shortage or a spot shortage?

Ms. ESQUIVEL. I know what the superintendents told us. I do not know about the study, but we will give you the answer for the record.

Mr. CONTE. Give us State-by-State supply and demand for bilingual teachers.

[The information follows:]

DATA ON SHORTAGES OF BILINGUAL TEACHERS

The Department's National Center for Education Statistics recently completed two major surveys that collected data relevant to the supply of bilingual and ESL teachers and the demand for their services. These surveys are the "Recent College Graduates" survey and the "Schools and Staffing Survey." Analysis of data from the first survey should provide information on what happens to college graduates who are certified as bilingual or ESL teachers. The degree to which they find employment in the field for which they were trained will serve as one measure of demand. Another measure of demand will be available for the "Schools and Staffing Survey." This study collected data from schools, school districts, and from teachers. Data were collected on the number of unfilled vacancies for bilingual and ESL teachers. The survey will produce estimates of shortages at both the national level and regionally. Data may also be available for some larger States. Unfortunately, the data collected by these surveys are still being analyzed and we are not yet able to report their findings. The Department expects to hae completed the initial analysis of relevant data from these two studies by fall 1990. These findings will be included in the fiscal year 1992 Congressional Justification.

DROPOUT RATE

Mr. CONTE. What is the dropout rate for language minority students and what is the Department doing to address the problem of language minority student dropouts?

Mr. CORWIN. I am not sure we have good statistics on that. We will have to go back and check with the National Center for Education Statistics, which is studying dropout rates.

[The information follows:]

DROPOUT RATES FOR LANGUAGE MINORITY STUDENTS

The Department's National Center for Education Statistics recently published *Dropout Rates in the United States: 1988* (NCES 89-609). This report includes data collected by the Bureau of the Census in a 1988 Current Population Survey and from the NCES study, "High School and Beyond." Statistics are reported in several ways, including "cohort" dropout rates and "event" dropout rates. Cohort rates measure what happens to a single group of students over a period of time. Event dropout rates measure the proportion of students who drop out in a single year without completing high school. Relevant numbers from this report are listed below:

Cohort dropout rates vary by home language background. Students who come from homes where a language other than English is spoken exclusively are significantly more likely to drop out than students from homes where English is spoken exclusively. The dropout rates for these groups are 20.1 percent and 14.5 percent, respectively.

Cohort dropout rates for whites, blacks, and Hispanics differ significantly. The rate for white students is 15 percent, for blacks 22 percent, and for Hispanics 28 percent.

The average event dropout rate for Hispanic students, grades 10 to 12 was 9.27 percent, more than twice as high as for white students (4.2 percent).

Mr. CORWIN. I think the programs under bilingual education addresse this problem as do the dropout prevention demonstration activities that we are proposing to begin again in 1991.

Ms. ESQUIVEL. We have the innovative approaches research project. It includes a dropout prevention component and one on instruction of exceptional students. This will be completed in September of 1990.

HOLYOKE SCHOOLS

Mr. CONTE. When we first met, we discussed the middle school project in the Holyoke schools. If the bilingual grant they applied for doesn't come through, will you personally meet with me and my staff and the people at Holyoke to explore other options?

Ms. ESQUIVEL. We certainly will.

CAPACITY BUILDING

Mr. CONTE. How many of the bilingual education basic grant programs have been able to fund their own programs after three years? What are the common features of those successful programs?

Ms. ESQUIVEL. Do you mean how many after our funding is over, how many continue? We hope 100 percent because that is the condition on which we give them the money. After the United States Government money runs out, the local district should continue the program.

Mr. CONTE. But how many of them can do it after three years?

Ms. ESQUIVEL. Most get a two-year extension, so most of them are five-year projects.

Mr. CORWIN. If they can show they are making good progress they can get the two-year extension.

LONGITUDINAL STUDY

Mr. CONTE. What is the status of the longitudinal study on immersion? Does your budget reflect the findings of that study?

Ms. ESQUIVEL. There are two studies, the longitudinal study and the immersion study. The report from the longitudinal study has just been given to us by the contractor. We expect to have the results published in the very, very near future.

The immersion study will be ready approximately at the end of May or beginning of June. The contractor has asked for an extension of four months.

Mr. CONTE. Will you put a summary in the record?

Ms. ESQUIVEL. Yes.

[The information follows:]

LONGITUDINAL STUDIES

The "National Longitudinal Evaluation of the Effectiveness of Services for Language Minority, Limited English Proficient Students" began in 1983. The purpose of the study is to assess the longitudinal impact of services on student achievement. The contractor submitted the final report in December 1989, and we expect to release the study finding in early 1990. Because of the likely impact of the findings of this study, and because we are concerned about alternative interpretations of the data, the Department is in the process of arranging for the National Academy of Sciences to conduct an independent, expert examination of the methods, analyses, and findings of this study. We plan to wait for the results of the Academy's review

before considering the findings in terms of future Federal policies for bilingual education.

The Immersion Study has also been delayed. The contractor encountered some technical problems in completing the analyses called for in the contract. Consequently, the Department has directed the contractor to correct these problems and to ensure that the findings are based on solid empirical evidence. We expect the additional analyses to be completed in May or June 1990. The Department also plans to submit the data from this study to the National Academy of Sciences for them to conduct an independent, expert examination of its methods, analyses, and findings.

COORDINATION WITH CHAPTER 1

Mr. CONTE. How much coordination is there between Chapter 1 and the programs within the Department that provide to all the money for limited English proficiency students? Which is the most effective?

Ms. ESQUIVEL. Not all children that are in bilingual programs are in Chapter 1, because Chapter 1 is given to a school based on poverty factors like AFDC. So you may have many schools with language minority children that are not Chapter 1 schools. For those students, the only money available is the bilingual money.

I think there is a misconception that bilingual children are also getting Chapter 1. That is grossly in error. Many, many children who are language minority children do not benefit from one penny of Chapter 1 money.

Mr. CONTE. That is very interesting. How are the two programs coordinated?

Ms. ESQUIVEL. At a school or the Federal level or what level?

Mr. CONTE. At the school level.

Ms. ESQUIVEL. Since I supervised both, I will take that district. If you have bilingual monies and Chapter 1 monies at a school, you will coordinate the programs. In my experience the chapter 1 schools did not have bilingual monies. Our bilingual monies went to other schools. Just because you don't speak English doesn't mean you are necessarily poor. Therefore, you have a lot of children coming in from Asian countries and other places that are not AFDC recipients, which is the way Chapter 1 monies are allocated in California.

If you have both programs at the school there will be a great deal of cooperation between them, but if you only have bilingual monies, those are the ones you use. We want people to understand that bilingual education is not a compensatory program. We want LEP children to have access to the core curriculum. One of the things I say as I travel through this Nation is that it is not a compensatory program. We have gifted children.

Mr. CONTE. I realize that. If you did not have a well coordinated program, there might have some double dipping. Please get something for the record on this.

Ms. ESQUIVEL. All right. Do you mean that they would be participating in both programs?

Mr. CONTE. Yes, someone could use both chapter 1 and bilingual.

Ms. CHRISTENSEN. Mr. Conte, I would say that the programs are complementary in that once the children have gone through the Title VII bilingual program and learned English, if they are still educationally disadvantaged and if they are in a high concentration school, they would then receive further assistance and sometimes receive it simultaneously with biligual education. We will expound on that.

[The information follows:]

Coordination of Bilingual Programs With Chapter 1

The Department has very limited information on how bilingual education and Chapter 1 services are coordinated by local educational agencies that receive funding under both programs. Coordination is complicated by the "supplement not supplant" language in Chapter 1 that prohibits funds from being used to provide services otherwise required by law. Since the 1974 *Lau v. Nichols* Supreme Court decision, it has been clear that school districts are legally required to provide some kind of special instructional service to limited English proficient students. Consequently, some school districts only serve limited English proficient students under programs other than Chapter 1. Nationally, however, large numbers of limited English proficient students are served by Chapter 1. The district-level survey data collected as part of the National Assessment of Chapter 1 showed that some 530,000 language minority, limited English proficient students received Chapter 1 ESL services during academic year 1986–87.

1989 LAPSE

Mr. Conte. Your justifications shows $1.1 million lapsing in FY 89. What was the reason for this?

Ms. Esquivel. Most of the money that lapsed was from the MRCs, the multifunctional resource centers. That will not happen during my watch. I will spend all the money.

Mr. Conte. I believe you. Thank you.

Mr. Natcher. Mr. Roybal, I yield to you.

Mr. Roybal. Ms. Esquivel, I wish to welcome you this afternoon and tell you how pleased I am that you were appointed. For once I can actually say the right person was appointed to the right job.

Ms. Esquivel. Thank you, sir.

FUNDING FOR BILINGUAL PROGRAMS

Mr. Roybal. I have some general questions I would like to ask. I think most have already been asked.

For FY 1990, the Congress directed the department to use the increase of $5 million in bilingual programs for developmental biligual education. It is my understanding that only $3 million was allocated for this purpose. What happened to the other $2 million?

Ms. Esquivel. It went to the transitional bilingual education.

Mr. Roybal. All right.

Your budget increases alternative programs at the expense of transitional and development programs. What is the rationale for this request?

Ms. Esquivel. I can give you a programmatic point of view. You know when we advertise, Congressman, we have a certain number of applications that come through. We just felt that the number of applications received for special alternative and for transitional bilingual education programs did not reflect relative distributions. We are not going just by numbers, we are going by the quality of the program.

There are many school districts—a lot of them in California as well you know—that have a multitude of languages and that need special alternative programs. Also, those programs are being used a lot in middle schools. That is a real good place to use a special alternative program where the children can speak some English but they need language expansion.

Mr. ROYBAL. In other words, we are saying that alternative programs is another way of saying English only?

Ms. ESQUIVEL. No. It is a way of using sheltered English. If you have a program where you have 28 different languages and you have a group of children and ten are seated by your desk and there are six different languages, sometimes sheltered English is the only program you can use.

Mr. ROYBAL. Five million dollars was appropriated and $3 million were used. Three million dollars went to alternative programs.

Mr. CORWIN. Not necessarily.

Mr. ROYBAL. What happened to the $2 million?

Mr. CORWIN. The numbers you see in the budget justification are estimates of where the money would end up. As you know, in the current law we have a ceiling of up to 25 percent for the special alternative programs. The way we have been running that, because we are committed to the concept of local flexibility, we take the best projects from both competitions from the top down subject to the ceiling of 25 percent.

We don't know yet how 1990 is going to turn out. The $2 million will go into either transitional bilingual education or special alternatives, or most likely, a combination of the two.

Mr. ROYBAL. But the truth of the matter is that only $3 million is actually being used of the $5 million appropriated?

Mr. CORWIN. Only $3 million is set aside for developmental. All $5 million will be used.

DEVELOPMENTAL BILINGUAL PROGRAMS

Mr. ROYBAL. Only $3 million was now, the rest of the money is going where?

Mr. CORWIN. Transitional and special alternatives.

Mr. ROYBAL. But then in your budget request, you increased alternative programs at the expense of transitional and developmental programs.

Mr. CORWIN. We have not increased developmental. We have increased transitional. These are just estimates subject to how the competitions turn out.

Mr. ROYBAL. Are you taking these away from monies already intended to be used for bilingual education?

Mr. CORWIN. No.

Ms. ESQUIVEL. Special alternatives is bilingual.

Mr. ROYBAL. I understand that, but the Congress set aside $5 million for a special purpose and it was not being used.

Ms. ESQUIVEL. You are correct.

Mr. ROYBAL. Why not?

Ms. ESQUIVEL. We felt we should use $3 million to see what kind of programs came in, to do some research on it and come back to you next year. I would like to say that there is no one in the world who believes more in bilingual education than I and I think Mr. Roybal our people from California know that about me. There are special alternative instructional programs that have a place.

There is nothing wrong with having special alternative programs. They have a place in communities where there is not a concentration of students who speak only one language and we need to address those too.

Mr. **Roybal**. I agree, and I think we should have appropriated the $2 million for that purpose and that was the intent.

Ms. **Esquivel**. You mean the $5 million for developmental.

Mr. **Roybal**. I am talking about the $5 million, yes. But it is already done. Let's hope we are able to find enough money so we can fund the programs that are important. I am not pitting one against the other by saying that. I hope we don't have to take from a program to give to another program at any time.

HEAD START

One other thing kind of puzzles me a little bit. That is Head Start. Head Start is in HHS, not in the Department of Education.

Ms. **Esquivel**. Right.

Mr. **Roybal**. What is the relationship between your office and the Head Start program? Should there be a relationship?

Mr. **Corwin**. Well, over the years we have run some projects in the preschool area, but it has been in the neighborhood of a few million dollars a year in a budget of $100 some million. So it has been a fairly minor activity. Ms. Esquivel has been developing a better relationship with the special education area. We have not gotten to Head Start yet.

Mr. **Roybal**. You realize, as I do, that Head Start is a very important program. Somewhere down the line I think it should be coordinated with the Department of Education.

Ms. **Esquivel**. We certainly will do that.

Mr. **Roybal**. I am glad to hear that.

Ms. **Esquivel**. I was very surprised to find out it was in HHS. I thought it was in Education.

Mr. **Corwin**. In 1979 the Carter Administration proposed to place Head Start in our Department, but the Head Start constituency didn't want to go over with us. They are still separate.

Mr. **Roybal**. Thank you.

Thank you, Mr. Chairman.

IMMIGRANT EDUCATION FORMULA

Mr. **Natcher**. What formula do you use to distribute funding under the immigrant assistance program?

Ms. **Esquivel**. We receive the number of immigrants from the states. They are charged with data collection and then it is strictly across the board per capita.

Mr. **Natcher**. Last year you submitted a proposal to the Authorizing Committee to clarify that immigrant funds should be used to supplement rather than supplant local funds. How serious is this problem?

Mr. **Corwin**. Well, we are concerned that the immigrant education money be used to meet the special educational needs of those immigrant children rather than the general operating expenses of the school district. We feel the program is much more justifiable if it is run on that sort of basis and that it is an important issue.

Mr. NATCHER. Can funding provided for immigration assistance grants be used for repair or replacement of facilities.

Ms. ESQUIVEL. Yes.

Mr. NATCHER. Mr. Conte.

Mr. CONTE. I have no further questions.

Mr. NATCHER. Mr. Roybal.

DROPOUT RATES

Mr. ROYBAL. Just one thing. With regard to statistics of the dropout rate, I think you indicated that you would go back and get last up to the minute statistics and make it available for the record, correct?

Mr. CORWIN. Yes sir.

Mr. ROYBAL. What you were saying, it seems to me, is that you had doubts as to the existence of such statistics?

Mr. CORWIN. I cannot recall seeing a statistic on limited English proficient students. The National Center for Education Statistics just this fall completed their first major study on the dropout rates. The problem in the past was that every state compiled statistics differently. Some states counted kids in alternative schools as having dropped out, and others counted those who dropped out, but were pursing the GED, as still in. The study did various breaks by different ethnic groups.

I cannot recall seeing a LEP rate, but I would like to go back and check with them.

Mr. ROYBAL. So you suspect there may be such a statistic?

Mr. CORWIN. There may be. I cannot remember.

Mr. ROYBAL. I would like to also see that study. When it is made available, put it in the record. I would appreciate it if you would also send it to my office.

Mr. CORWIN. We will be glad to.

Mr. ROYBAL. Thank you very much.

[The information follows]

DATA ON DROPOUT RATES FOR LIMITED ENGLISH PROFICIENT STUDENTS

The Department currently has no statistics on dropout rates for limited English proficient students. However, such estimates may be possible in the future using data collected in follow-up to the 1988 National Education Longitudinal Study. Related statistics on dropout rates for language minority students and other groups are provided in response to the earlier question from Mr. Conte.

Mr. NATCHER. Ms. Esquivel, we want to thank you for your appearance before our committee at this time on behalf of your budget request for fiscal year 1991. This has been a good hearing.

Ms. ESQUIVEL. Thank you, Mr. Chairman. And thank you to the members also.

Mr. NATCHER. The committee will now adjourn until 10 o'clock tomorrow morning.

[The following questions were submitted to be answered for the record:]

DEVELOPMENTAL BILINGUAL EDUCATION

Mr. Natcher: Last year, Congress directed the Department to expand its efforts in the area of "developmental" bilingual education. How much will you spend in this area in 1990 and in 1991?

Ms. Esquivel: The Department has allotted $3 million for developmental bilingual education programs in fiscal year 1990 and plans to use the same amount for these projects in fiscal year 1991.

Mr. Natcher: Your statement includes a strongly worded sentence on funding of projects based on "quality rather than instructional approach." Would you explain in more detail what this means, particularly as it relates to the developmental program?

Ms. Esquivel: The Department's basic position is that applications for bilingual education projects, of whatever type, should be judged on the basis of quality rather than the type of approach. Adherence to this philosophy ensures that the most worthy local projects are funded. Therefore, we have resisted congressional earmarks for specific funding categories. In the case of developmental bilingual education, we believe that these projects are less central to the primary purpose of the Bilingual Education Act, which is teaching English to limited English proficient students, than are transitional bilingual education or special alternative instruction. The developmental bilingual education projects to be funded in fiscal year 1990 will be closely monitored to determine their effectiveness in serving limited English proficient students. If solid evidence emerges that these projects are as effective as other projects in serving limited English proficient students, the Department may consider making funds available for all three activities on an equal basis.

BILINGUAL FELLOWSHIPS

Mr. Natcher: The bill language also specifies the number and value of fellowships -- 300 fellowships at a cost of $3 million. Would report language be sufficient in this area?

Ms. Esquivel: Section 7043 of the Bilingual Education Act requires the Department to make 500 fellowship awards annually. Absent specific appropriation language, the Department would be forced to make 500 fellowship awards in 1991 at an approximate cost of $5 million.

IMMIGRANT LEGISLATION

Mr. Natcher: Last year, you submitted a proposal to the authorizing Committee to clarify that Federal immigrant funds should be used to "supplement rather than supplant" local funds. How serious is this problem?

Ms. Esquivel: The Department recently funded an evaluation of the refugee and immigrant education programs. This study should provide information on how these grants are spent. At present, the Department has only scattered, anecdotal data indicating that some LEAs use these grants as general aid rather than for supplementary education programs for eligible students. The final report from this study is due to the Department in September 1991.

NUMBER OF STUDENTS

Mr. Natcher: Would you provide us with some additional background on the various estimates for the number of school age children who need bilingual education services?

Ms. Esquivel: The Department estimates that as of January 1986 there were between 1.2 million and 1.7 million limited English proficient children, aged 5-17 in the United States. This estimate is based on data collected by the Bureau of the Census pursuant to the joint Education Department/Bureau of the Census English Language Proficiency Survey (ELPS). The estimate includes all children who make significant use of a non-English language and who score at or below the 20th percentile on a measure of English language proficiency. Based on actual growth between 1978 and 1982, it seems likely that this population has grown steadily since 1986. The Department intends to update this estimate as soon as possible after 1990 Census data become available.

Subsequent to the ELPS study, the Department has become aware of estimates from other sources that build confidence in the ELPS estimate. These other sources are:

- Based on data from a nationally representative sample of school districts, the "Descriptive Phase" report of the "National Longitudinal Survey of the Effectiveness of Services for Language Minority, Limited English Proficient Students" estimated the number of limited English proficient students during the 1983-84 school year to be between 1.3 million and 1.4 million.
- In reporting to the Office of Bilingual Education and Minority Languages Affairs (OBEMLA), State Educational Agency estimates of this population totalled 1.7 million for the 1988-89 school year.
- In response to a request from the Chairman of the Senate Committee on Labor and Human Resources, GAO polled SEAs and came up with a similar number (1.5 million) for school year 1985-86.

- The National Assessment of Chapter 1 also produced an estimate consistent with the Department's. The study found that during the 1985-86 school year the number of limited English proficient students in the country was 1.4 million.

While some groups have concluded that the number of limited English proficient students is 3 million or more, these estimates are generally based on a much higher level of English language proficiency and sometimes include students who make no use of a non-English language or are outside the normal school-age population. The ELPS study produced evidence that a 1978 estimate of 3.6 million included children between the ages of 0 and 18 and also included children who spoke only English but lived in households where someone spoke a non-English language. The 1978 estimate also used the 43rd percentile on the measure of English language proficiency. By this standard, 43 percent of the Nation's English speaking children would be classified as limited English proficient.

DEMAND FOR NEW BILINGUAL EDUCATION TEACHERS

Mr. Natcher: Your statement talks about the need for training programs. Is this a simple supply/demand issue or are there other critical issues affecting the ability of schools to fill vacancies which exist?

Ms. Esquivel: Several participants in the recent OBEMLA-sponsored forum on personnel needs for districts with changing demographics indicated that even though large numbers of trained bilingual education teachers were needed in the district, actual vacancies existed for a much smaller number. Some districts represented at the conference theoretically "need" more bilingual teachers but are, in actuality, fully staffed with tenured teachers and could not hire additional bilingual education candidates even if more were trained and available for positions. For certain big-city districts, it appeared that their own (and/or their States') teacher certification policies were more to blame, than an unavailability of trained candidates, for perceived shortages; participants from schools of education complained that their graduates were often unable to navigate the "byzantine" personnel systems of cities like Chicago and New York.

Interestingly, a participant from a school district with one of the largest (and fastest-growing) limited English proficient student populations, Dade County, Florida, reported that, because of his district's excellent compensation package and aggressive recruitment policies, they are able to hire all the bilingual education candidates needed. His comments suggest that districts that adopt certain policies may be able to solve their bilingual teacher recruitment problems without increased Federal subsidization of the training system.

The results of this conference suggest that we need to review in-service training programs as well as the operation of programs to train new bilingual teachers in order to better address the personnel needs of many school districts. The

Department plans to further analyze large data bases produced by two National Center for Education Statistics studies, the "Recent College Graduates" survey and the "Schools and Staffing Survey" to find out more about this problem on a national scale. Additional data will be available from the bilingual education educational personnel training evaluation to be completed in May 1991.

NUMBER OF TRAINING GRANTS

Mr. Roybal: School districts across the Nation report a critical shortage of bilingual education teachers. In Los Angeles alone there is a current shortage of more than 2,000 bilingual teachers. I also understand that the New York City Board of Education has opened a permanent office in Puerto Rico to recruit bilingual teachers. Yet your request for training grants for FY 91 is the same as FY 90. How many training grants will be awarded during FY 90? How many in FY 91?

Ms. Esquivel: The fiscal year 1990 appropriation will provide for an estimated 128 educational personnel training grants, 200 bilingual fellowships, 12 training development and improvement grants, 20 short-term training institutes, and 16 multifunctional resource center contracts. The fiscal year 1991 request would provide for 120 educational personnel training grants, 300 bilingual fellowships, 12 training development and improvement grants, 20 short-term training institutes, and 16 multifunctional resource center contracts. In addition to these activities under Part C, local school districts that receive Part A grants also use a significant percentage of their grants for in-service staff training. Successful 1989 Part A applicants estimated that 10 percent of their grants would be allocated for this purpose.

NEW BILINGUAL TEACHERS

Mr. Roybal: Are these grants going primarily to training new teachers?

Ms. Esquivel: Educational personnel training grants frequently train a mix of new bilingual teachers and individuals currently employed as teachers or teacher aides and needing additional coursework for bilingual certification. The 1981 RMC evaluation of this activity, found that the majority of participants were individuals currently in the teaching profession; however, the Department has no data on the characteristics of current participants. A new evaluation of the program, funded in 1989, should produce more current data by May 1991.

Mr. Roybal: What is your office doing to attract new teachers into bilingual education?

Ms. Esquivel: I believe that OBEMLA has made a significant contribution to attracting teachers into the field of bilingual education. This has been done through the educational personnel training program, which typically provides stipends to students while they are enrolled in the program, the short-term training program which has provided in-service training to educational personnel and parents, the multifunctional resource centers which provide a variety of training and technical assistance services, primarily to LEAs, and the information and dissemination services of the National Clearinghouse for Bilingual Education.

BILINGUAL FELLOWSHIP PROGRAM

Mr. Roybal: The interim report on the Bilingual Fellowship Program included data indicating that a significant number of past fellows did not secure employment directly related to the goals of the Bilingual Education Act. Is the experience with the bilingual fellowship program significantly different from other similar fellowship programs in degree completion and in the retention of the graduates in the field of study? For the record, please provide a comparison between the graduation and retention levels among similar fellowship programs.

Ms. Esquivel: Other fellowship programs funded by the Department have been reviewed to identify those that are to some extent similar to the bilingual fellowship program. Several have been found to share certain characteristics, but none are really similar. Unfortunately, in the case of those most similar, data are not available to make the comparison you suggest. However, an evaluation of the Indian Education Fellowship program is currently underway, with a final report scheduled for late this year. This study is expected to produce information that would make possible such a comparison based on degree completion rates.

Mr. Roybal: At what level are the fellowship students trained?

Ms. Esquivel: Individuals may participate in the fellowship program at different graduate levels. Fellowships are awarded for doctoral degrees, masters degrees, education specialist degrees, and the professional diploma.

POST-FELLOWSHIP EMPLOYMENT

Mr. Roybal: What types of positions are available for graduates of the bilingual fellowship program?

Ms. Esquivel: Graduates of the bilingual fellowship program may be employed by institutions of higher education in training classroom teachers, by LEAs as resource teachers, by SEAs, by organizations such as the OBEMLA- funded multifunctional resource centers, the National Clearinghouse for Bilingual Education, and the evaluation assistance centers, and by various other organizations.

Mr. Roybal: How successful are fellowship graduates in obtaining these positions?

Ms. Esquivel: Based on data available at the time of last year's report, it appears that many participants in the bilingual fellowship program had not completed their degrees and many were employed in fields unrelated to the purposes of the Bilingual Education Act. The bilingual fellows supply and demand study, funded late in fiscal year 1988, should provide more current information on outcomes for participants in the bilingual fellowship program.

Mr. Roybal: Do you know how many fellows have remained within bilingual education?

Ms. Esquivel: At the present time we have no information on how long bilingual fellows stay in the field once they fulfill their work requirements. The ongoing evaluation of the bilingual fellowship program may provide some information on this subject.

Mr. Roybal: Of those that did not obtain a position in bilingual education, how many remained in the field of education?

Ms. Esquivel: Judging by the information available at the time of the report, 11 percent of past participants appeared to be employed in an education-related field that was not directly related to bilingual education.

UNDERGRADUATE FELLOWSHIPS

Mr. Roybal: Should fellowships be made available to undergraduate students? If yes, do you need special authorization to expand the program?

Ms. Esquivel: Stipends to assist students in covering living expenses while participating in programs funded under the educational personnel training program are already authorized. Consequently, I believe that it is unnecessary to include undergraduate students within the bilingual fellowship program.

FELLOWSHIP STUDY

Mr. Roybal: When will the supply and demand study funded in FY 88 be completed?

Ms. Esquivel: The bilingual fellows supply and demand study was originally scheduled for completion in June of 1990. However, the questionnaires to be used in this study are now being redesigned, and the study will not be completed on schedule. A revised study schedule is currently being negotiated.

UNSERVED STUDENTS

Mr. Hoyer: The justification indicates that 94 percent of language minority students in the U.S. who were identified as limited English proficient were receiving specifically designed instruction to meet their needs in 1983. How many students are falling through the cracks today?

Ms. Esquivel: The information in the Congressional Justification comes from the "Descriptive Phase" report of the "National Longitudinal Evaluation of the Effectiveness of Services for Language Minority, Limited English Proficient Children." The report concluded that 94 percent of students enrolled in public schools in grades K-6, identified as limited English proficient by school districts, were receiving some kind of special instruction designed to address their lack of English language proficiency. Unfortunately we have no more recent data on the percentage of these students who are being served.

PRINCE GEORGE'S COUNTY PLAN

Mr. Hoyer: The authorities in Prince George's County School System are reviewing the possibility of creating a single campus where there will be an intense yearlong to 18 month effort to provide non-English speaking students with the skills to more effectively use English language skills and benefit from classroom instruction -- to provide more than the usual half hour per day of bilingual instruction. Although the idea is not fully fleshed out, could you comment on the idea, whether other school districts are exploring this kind of approach, and the Department's interest?

Ms. Esquivel: I appreciate your sharing this information on the plans of the Prince George's County School system. However, without more specific information, I can't comment on the plans you describe. Potentially such a program might provide considerable benefit to limited English proficient students, but it would also have to be designed to be consistent with the requirements of Title VI of the Civil Rights Act of 1964.

GRADUATION RATES

Mr Hoyer: The Justification indicates that approximately 20 percent of students in bilingual programs graduate to regular classrooms within one year. What happens to the other 80 percent?

Ms. Esquivel: The data to which you refer come from the "Descriptive Phase" report mentioned above. Data collected in the study indicated that, between the fall 1982 and fall 1983, about 20 percent of the limited English proficient students enrolled in special instructional classrooms were mainstreamed into all-English classrooms. Some of the mainstreamed students may have been in the specially designed instructional program for a year; others may have been in the program for two or more years. The study also found that the average duration of services for limited English proficient students was between 2.5 and 3.5 years.

ETHNIC DIFFERENCES

Mr. Hoyer: Ethnic background seems to greatly influence a parent's attitude towards the use of native languages. What impact do parent attitudes and preferences have on the rates at which limited English proficient students graduate to the regular classroom?

Ms. Esquivel: While the parent attitude study found some difference in the attitudes of different ethnic groups toward the use of native language instruction, it also found that language minority parents uniformly want their children to learn English. Unfortunately, we have no data on the duration of services by ethnic group.

NEED FOR TEACHERS

Mr. Dwyer: The Administration's budget justification indicates that approximately 120 different languages are currently served in bilingual education programs. Are local education agencies able to recruit a sufficient number of teachers who are proficient in these languages?

Ms. Esquivel: The Department is aware that many schools have encountered difficulties in finding staff for bilingual programs, particularly for some of the smaller language groups. While the majority of our training programs are designed to train educational personnel in Spanish, a large number of our projects also train staff in Asian and Native American languages. Successful 1989 applicants for educational personnel training grants planned to train personnel for at least 50 different language groups.

Mr. Dwyer: Do you believe that the amounts requested for support services and training grants will be adequate to ensure that we have enough teachers to serve these children?

Ms. Esquivel: OBEMLA is currently reviewing all training programs to determine how they can be more effective in training personnel who will be employed in classrooms providing instruction to limited English proficient students. With this in mind, we sponsored a national forum on personnel needs for districts with changing demographics. Eight superintendents from key school districts, along with several deans of schools of education and LEA personnel directors attended this forum and provided us with extremely valuable information. I am happy to say that we have already begun to implement policies suggested by forum participants that will bring schools of education and local school districts closer together. These policies should ensure a closer match between participants in our training programs and the needs of school districts that provide services to limited English proficient students.

In regard to the level of funding for Parts B and C, I believe that the amounts requested will be sufficient, in combination with the policy changes we are implementing under

Part C, for meeting the Federal responsibility to assist in training teachers for bilingual classrooms.

FLEXIBILITY

Mr. Dwyer: The budget justification states that new awards for transitional bilingual education and special alternative instruction be based on quality rather than on instructional approach. What percentage of grants are made to transitional bilingual education versus special alternative instruction?

Ms. Esquivel: In 1989, 125 grants (61 percent) were made for new transitional bilingual education projects and 80 (39 percent) were made for new special alternative instructional programs.

Mr. Dwyer: Is this percentage expected to change in coming years?

Ms. Esquivel: We have no information on which to base an estimate of how these percentages will look in 1990 and 1991. Estimates in the Congressional Justification assume that approximately half the funds available for new awards for these two activities will be used for each activity.

MAIN GOAL OF BILINGUAL EDUCATION

Mr. Porter: What is the main goal of bilingual education?

Ms. Esquivel: The primary goal of programs funded under the Bilingual Education Act is to teach English to limited English proficient students and to assist them in meeting grade promotion and graduation standards.

LANGUAGE MAINTENANCE

Mr. Porter: How much emphasis is placed on maintenance of native language and culture?

Ms. Esquivel: In federally funded transitional bilingual education programs, the native language is used only to the extent necessary to teach English and to assist students in meeting grade promotion and graduation standards. In special alternative instructional programs, English may be the only language used. Developmental bilingual education programs also seek to strengthen native language skills of limited English proficient participants and to teach the native language to English proficient students who normally constitute half the students in the class.

NATIVE LANGUAGE-BASED PROGRAMS

Mr. Porter: What information does the Department have regarding the efficacy of federally funded native language based programs?

Ms. Esquivel: The Department has only funded one impact evaluation of federally funded bilingual programs. This study (AIR Study) examined Spanish language projects operating in 1975-1976. The study found that these projects were not particularly effective in teaching English and mathematics. However, this study examined projects funded by the Federal Government during the first few years of Federal funding for bilingual education. Since local school districts have now had up to 20 years to experiment with such programs and design more effective ones, it is likely that a new study would have different findings.

ENGLISH-BASED EDUCATION

Mr. Porter: How do native language based programs compare to English based education? I am specifically interested in English as a second language, structured immersion and sheltered English.

Ms. Esquivel: Since the AIR study, the Department has attempted to review all evaluation data on different instructional methods for serving limited English proficient students. There are data showing that each of the methods you mention can be effective in teaching English and in preparing students to enter all-English classrooms. However, we are aware of no data demonstrating that one method is superior to any other.

CAP ON ALTERNATIVE FUNDING

Mr. Porter: What is the Department's position regarding 75 percent to 25 percent funding of transitional education and alternative methods? How do you justify this position?

Ms. Esquivel: The Department originally proposed legislation to allow local school districts complete freedom to choose the instructional method that is most appropriate under local circumstances. The Congress eventually compromised and adopted the current spending limits for special alternative instructional projects. Demand for special alternative funding has not yet exceeded the amount available under this cap. Consequently the Department has no current plans to propose new legislation to change the law in regard to funding for special alternative instructional programs.

LONGITUDINAL STUDIES

Mr. Porter: I understand that at least two longitudinal studies on bilingual education have been completed in the last year -- contracts 300-87-0156 and T2-88-016-001. When will these be available to the committee?

Ms. Esquivel: The reports to which you refer, "The National Longitudinal Evaluation of the Effectiveness of Services for Language Minority, Limited English Proficient

Children" and the "Longitudinal Study of Immersion, Early-Exit and Late-Exit Transitional Bilingual Education Programs for Language-Minority Children," have not yet been released. In the case of the former, the contractor submitted the final report in December 1989, and we expect to release the study findings this year. Because of the likely impact of the findings of this study, the Department is in the process of arranging for an independent, expert examination of the methods, analyses, and findings. The Immersion Study has also been delayed. The contractor encountered some technical problems in completing the analyses called for in the contract. Consequently, the Department has directed the contractor to correct these problems and to ensure that the findings are based on solid empirical evidence. We expect the additional analyses to be completed in May or June 1990. The Department also plans to submit the data from this study for an independent, expert examination of its methods, analyses, and findings.

IDENTIFICATION OF STUDENTS

Mr. Porter: What criteria are used to identify limited English proficient (LEP) students? What types of tests are used to identify LEP students?

Ms. Esquivel: In 1984 the Department funded a study titled "Selection Procedures for Identifying Students in Need of Special Language Services." The final report concludes that most selection/reclassification approaches currently in use involve several criteria, including: identification of students from homes where a native language is spoken, and assessment of the child's English language skills. Once the child is enrolled in the program, assessment of the child's English language skills continues in order to determine the appropriate time for exit from the special language program. At this stage, English language proficiency is frequently determined both by tests and by teacher judgement. Some of the most commonly used tests are: Language Assessment Battery, Language Assessment Scales, and the Comprehensive Test of Basic Skills.

CRITERION-BASED TEST

Mr. Porter: Does the Department have a criterion-based test that can determine the actual level of English proficiency and achievement of LEP students?

Ms. Esquivel: The Department normally does not develop, market, or endorse specific testing instruments. In regard to limited English proficient students, the Department developed a measure of English language proficiency that was used as a survey instrument by the "Children's English Services Study" (1978) and subsequently by the Bureau of the Census in the "English Language Proficiency Study" (1982). However, this test was developed as a survey instrument rather than a criterion-referenced test.

DURATION OF SERVICES

Mr. Porter: How long should LEP students remain in bilingual education programs?

Ms. Esquivel: The Department has no standard for how long limited English proficient students should remain in bilingual programs. This decision is best left to teachers and other educational personnel who are in a far better position to make such judgments than is the Federal Government. However, the Bilingual Education Act requires local school districts to conduct an individual evaluation of any student they believe should participate in Title VII-funded programs for more than three years. The statute also prohibits projects from retaining children in bilingual programs after the fifth year.

HIGH SCHOOL GRADUATES

Mr. Porter: How many LEP students graduate from high school with impaired English proficiency?

Ms. Esquivel: The Department has never conducted a research study specifically designed to estimate the number of limited English proficient students who graduate from high school with impaired English proficiency. All projects funded under the Bilingual Education Act are specifically designed to teach English and prevent this from happening. A 1979 research study titled "A Descriptive Study of the Classroom Instruction Component of the ESEA Title VII Bilingual Education Program" found that 97 percent of all projects included "increasing their students' English language skills" among their annual objectives.

HIGHER EDUCATION FOR LIMITED ENGLISH PROFICIENT STUDENTS

Mr. Porter: Are there any public institutions of higher education that accept and/or graduate LEP students?

Ms. Esquivel: I am not aware of any institution of higher education in the United States with a program designed for limited English proficient students. However, many universities have remedial English programs designed for foreign students.

INAPPROPRIATE PLACEMENT

Mr. Porter: Are you aware of instances where English proficient students have been inappropriately placed in native language based classes?

Ms. Esquivel: I am not aware of any recent evidence of English proficient students being inappropriately assigned to federally funded bilingual education classes. As you likely know, the Bilingual Education Act expressly provides for the inclusion of English proficient students in transitional bilingual education classes "in order to prevent the segregation of children on the basis of national origin." Furthermore, developmental bilingual education programs, as defined by the Act, are intended to enroll equal numbers of English proficient and limited English proficient students. Both languages are then taught in the classroom and each group learns both languages.

PARENTAL CONSENT

Mr. Porter: What is the Department's policy regarding parental consent when both native language and English language programs are available? Should parents of monolingual English students have the right to require that their children remain in a mainstream English classroom?

Ms. Esquivel: In the case of limited English proficient participants in these programs, the Department enforces section 7021(d)(1)(D) of the Bilingual Education Act that requires parents of students "identified for enrollment in bilingual education programs shall be informed of the reasons for the selection of their child as in need of bilingual education, and the alternative educational programs that are available. [...] Parents shall also be informed that they have the option of declining enrollment of their children in such programs." All projects funded under Part A of the Bilingual Education Act must comply with the requirements of this section.

The parents of those students not identified as in need of the bilingual education program should be notified by the local and State educational agencies of their rights concerning the placement of their children.

DUAL IMMERSION PROGRAMS

Mr. Porter: Are dual immersion programs consistent with the authorizing language of the Bilingual Education Act?

Ms. Esquivel: The statutory definition of developmental bilingual education programs states that such programs shall be designed to "help children achieve competence in English and a second language." I believe this definition is broad enough to cover dual immersion programs.

BILINGUAL[,] AND IMMIGRANT[, AND REFUGEE] EDUCATION

For carrying out, to the extent not otherwise provided, title VII and part D of title IV of the Elementary and Secondary Education Act, [$188,674,000,] $205,537,000, of which $31,913,000 shall be for part C of title VII including not more than [$2,000,000] $3,000,000 for the support of not to exceed [200] 300 fellowships under section 7043: Provided, That of the funds available for title VII, $12,000,000 shall be reserved for school districts experiencing a major recent influx of limited English proficient children, as defined by the Secretary.[1/] (Department of Education Appropriations Act, 1990.)

Explanation of Language Changes

1/ This language reserves funds for a special competition limited to school districts that have recently experienced a major influx of limited English proficient students. Many such school districts have significant concentrations of immigrant and refugee students and have a severe need for special assistance from the Federal Government.

Bilingual and Immigrant Education

Language Analysis

Language Provision	Explanation
...of which $31,913,000 shall be for part C of title VII...	This language overrides the statutory requirement that 25 percent of the total appropriation for the Bilingual Education Act, less the amount for Grants to State educational agencies, be used for part C, Training and Technical Assistance.
...including not more than [$2,000,000] $3,000,000 for the support of not to exceed [200] 300 fellowships under section 7043:	This language overrides the statutory requirement that 500 fellowship awards be made annually.
...Provided, That of the funds available for title VII, $12,000,000 shall be reserved for school districts experiencing a major recent influx of limited English proficient children, as defined by the Secretary.	This language reserves $12,000,000 for a special competition limited to school districts with large numbers of recently arrived limited English proficient students.

Bilingual and Immigrant Education

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report	
The Committee provided a $5,000,000 increase over the request level for Part A, indicating that it should be used for developmental bilingual projects. Similarly, the Conferees indicated that $5,018,000 should be used for developmental bilingual projects.	The Department's policy is to emphasize transitional bilingual education and special alternative instruction. These programs are more central than are developmental programs to the primary purpose of the Bilingual Education Act -- to teach English to limited English proficient students. Therefore, the Department requested no funds for developmental bilingual education in 1990. However, in response to congressional interest, $3,000,000 is being allocated to developmental bilingual education programs in 1990.
1990 Senate Report	
The Committee indicated that Part A funds should continue to be used for projects exclusively designed to teach English to limited English proficient students and to assist them in meeting grade promotion and graduation standards.	The Senate report language, which would have permitted no funds to be used for developmental programs, was superceded by the Conference report language which indicated that $5,018,000 should be used for developmental bilingual education.

Bilingual and Immigrant Education

Total.........................	197,394,000	188,674,000	205,537,000

Bilingual and Immigrant Education programs are an integral part of the Department's campaign to confront the Nation's educational deficit. These programs address the educational problems of limited English proficient students. Such students currently drop out of school at alarming rates, thus depriving the country of the significant human potential of these children. When bilingual programs are successful in assisting students to make the transition to regular classrooms, they help those students stay in school and complete their education, and thus help to reduce the Nation's educational deficit. This important objective was recently endorsed at the Education Summit in Charlottesville, Virginia, when the President and the Nation's Governors committed themselves to establishing goals related to "the reduction of the dropout rate and the improvement of academic performance, especially among at-risk students."

As a component of the Administration's commitment to serving at-risk students, the fiscal year 1991 request for this account is $16.9 million more than the 1990 appropriation, a 9 percent increase. The additional funds will be allocated to Part A of the Bilingual Education Act, which provides direct educational services to at-risk students. (Funding for Parts B and C, and for Immigrant Education would be held at the 1990 levels.) Of this increase, $12 million will be used for a special competition limited to school districts experiencing a major, recent influx of limited English proficient students. These districts often need special assistance in coping with short-term difficulties which this special competition will help them overcome.

Bilingual and Immigrant Education

Account Summary--Continued

In 1991, the Department intends to continue its policy of making, to the extent possible under the law, new awards for transitional bilingual education and special alternative instruction on the basis of quality rather than instructional approach. This policy is consistent with the Hawkins-Stafford Elementary and Secondary School Improvement Amendments of 1988 which provided additional flexibility to local educational agencies to select the most appropriate instructional method. The Department began implementation of this new flexibility with the 1989 awards process.

The Bilingual Education Act authorizes three distinct kinds of activities. Under Bilingual Programs (Part A), educational services are provided to students. These awards, primarily to school districts, are designed to assist limited English proficient students in learning English and in meeting grade promotion and graduation standards. Under Support Services (Part B), awards are made to a variety of recipients for data collection and technical assistance, research, and the dissemination of information on educational services for limited English proficient students. Under Training Grants (Part C), awards are made for in-service and pre-service training of educational personnel. In all three activities, the goal is to provide Federal assistance for a limited time so that local schools, States, and institutions of higher education can build their capacity to operate programs on a continuing basis when Federal assistance is reduced or no longer available. Since the program began in 1969, almost $2.4 billion has been appropriated to meet the goals of the Act.

The English Language Proficiency Survey, conducted for the Department by the Bureau of the Census during the period 1981 to 1984, collected data on the English language proficiency of a nationally representative sample of language minority children. Based on an extensive analysis of these data, the Department of Education estimates that as of January 1986, between 1.2 million and 1.7 million children, aged 5-17, lived in language minority households, made substantial use of a language other than English, and were limited English proficient. These are the children most likely to benefit from services under the Bilingual Education Act. This estimate is consistent with estimates provided by State educational agencies in 1987 and the 1988 National Chapter 1 Study.

In 1990, approximately $233,000 appropriated for Part A and Part C will be used to help fund the cost of using field readers to review discretionary grant applications. In 1991, an estimated $276,000 will be used.

The Immigrant Education program provides assistance to LEAs for educational services to eligible immigrant students, most of whom are limited English proficient. Last year, the Department proposed legislation to add "supplement not supplant" language so that this program would be more effective at meeting the special needs of recent immigrant students. The Department continues to support this proposal.

Bilingual and Immigrant Education

---

1. Bilingual education: a. Bilingual programs
(Elementary and Secondary Education Act, Title VII, Part A)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$115,779,000	$132,642,000	+$16,863,000

1/ ESEA Section 7002(b)(4) reserves at least 60 percent of the total Bilingual Education appropriation (minus funds for State educational agency grants) for Part A.

Purpose and Method of Operation

Under Bilingual Programs (Part A), Federal grants build local capacity to provide appropriate educational services to limited English proficient children. Programs are designed to teach English and to help these children enter all-English educational programs as quickly as possible. Projects also assist students in meeting grade promotion and graduation requirements. Although most awards are made to school districts, institutions of higher education and private non-profit organizations also participate.

Under Part A, six separate activities are authorized.

- Transitional bilingual education projects must make provision for native language instruction to the extent necessary to allow participants to achieve competence in English and to meet grade promotion and graduation requirements.

- Developmental bilingual projects teach English but also strengthen or develop native language skills. Half the students in developmental projects are intended to be native speakers of English learning the non-English language of the classroom.

- In special alternative instructional projects, classwork is presented in English but is specifically designed for limited English proficient children.

- Academic excellence projects facilitate the dissemination of effective bilingual education practices.

Purpose and Method of Operation -- Continued

- Family English literacy projects are designed to teach English to limited English proficient adults (primarily parents of children in bilingual projects) and out-of-school-youth.

- Under the special populations activity, bilingual preschool, special education, and gifted and talented projects are funded.

During most of the life of the program, the Department promoted instructional methods that relied heavily on use of the native language as the medium of instruction. These programs, generally referred to as transitional bilingual education, typically provide most coursework initially in the native language but, over time, English becomes the language of instruction. While research and evaluation efforts have shown that transitional bilingual education programs can have a positive effect on student achievement, research findings do not demonstrate that these programs are any more effective than alternative programs such as immersion or English-as-a-second language.

In 1987, the Department proposed legislation to provide additional flexibility to LEAs to select the instructional method most appropriate to local circumstances. A significant increase in flexibility was provided by the Hawkins-Stafford Elementary and Secondary Education Improvement Amendments of 1988. Up to 25 percent of the Part A appropriation may now be spent for special alternative instructional programs that need not use the native language. This new flexibility was implemented in the 1989 grants process.

This is a current-funded program for which funds are available from October 1 to September 30. Funds appropriated and awarded in one fiscal year are generally used for activities carried out in the following fiscal year. Grants are awarded on the basis of national competition.

Accomplishments

In 1989, the Department made 749 awards for projects serving an estimated 249,000 students. Approximately 120 different languages were served. Of all students, 62 percent were Spanish speaking, 22 percent spoke Asian languages, 9 percent spoke Native American Languages, and 5 percent spoke other European languages. Awards ranged from $16,500 to $488,000, and the average award was approximately $148,000. Transitional bilingual education continued to be the primary activity, receiving 75 percent of Part A resources. Special alternative instructional programs received 13 percent of Part A funds with the remaining 12 percent shared by four other authorized activities.

Since the beginning of the Federal Bilingual Education program in 1969, educational services for limited English proficient students have grown dramatically. While such services were rare in the 1960's, a Department of

---

Accomplishments -- Continued

Education funded study found that, in 1983, 94 percent of the language minority students in the U.S. who were identified by school districts as limited English proficient, were receiving instruction specifically designed to meet their needs. This instruction might be transitional bilingual education, English-as-a-second- language, or some other method. This study, the "National Longitudinal Evaluation of the Effectiveness of Services for Language Minority, Limited English Proficient Students," collected data on teachers, schools, and students over a five-year period. The study also found that some 44,300 teachers, of whom 60 percent had received relevant college or inservice training, were serving these limited English proficient students. On average, 20 percent of students in bilingual programs graduated to regular classrooms each year. However, this percentage varied among schools; students attending schools with high concentrations of these children graduated at a slower rate.

The study also found differences in instructional method by students' ethnic group. Programs for Hispanic students spent, on average, almost five more hours per week on native language reading, oral language development, and ethnic studies than did programs for other limited English proficient children. Significantly less time was spent on English and math instruction for Hispanics than for other ethnic groups. The final report for this study is expected in early 1990.

Ethnic differences were also found in the recently completed Parent Preference Study. This survey, conducted for the Department by the Educational Testing Service, collected information on the views of a representative sample of Mexican-American and Asian-American language minority parents. The study found that Mexican-American parents were more enthusiastic than Asian parents about using the native language in educational programs serving language minority children. More specifically:

- While 43 percent of Mexican-American parents thought that teaching in the non-English language interferes with learning English, 60 percent of Asian parents believed this is true.
- While 47 percent of Mexican-American parents thought mathematics and science instruction should be in the non-English language if that would help students learn those subjects better, only 24 percent of Asian parents agreed.
- While 28 percent of Mexican-American parents thought children should be taught to read only in English, 67 percent of Asian parents favored this approach.
- The study also found that virtually all language minority parents felt that it is very important for their children to speak English well.

Bilingual and Immigrant Education

1. Bilingual education: a. Bilingual programs

1991 Budget Proposal

For Bilingual Programs (Part A), $132,642,000 is requested, $16,863,000 more than the 1990 appropriation. The increase will provide funding to an estimated additional 152 projects serving 41,350 students. Of this increase, $12,000,000 will be used for a special competition limited to school districts experiencing a major recent influx of limited English proficient children. These districts often need special assistance in coping with short-term difficulties which this special competition will help them overcome. The special competition would be in addition to the regular transitional bilingual education and special alternative instructional program competitions which together would absorb most of the remaining increase.

The Department will continue to administer Part A programs in accordance with the flexibility authorized by the Hawkins-Stafford Elementary and Secondary School Improvement Amendments. The primary activities within Part A will continue to be transitional bilingual education and special alternative instruction.

To the maximum degree permissible under the law, awards for new transitional bilingual education and special alternative instructional projects will be made on the basis of the quality of the application rather than the instructional approach to be used.

While developmental projects are not as consistent with the primary purpose of the Bilingual Education Act as transitional bilingual education and special alternative instruction, the Department believes they can be effective in serving limited English proficient students. The Department requested no 1990 funding for developmental bilingual education, but in response to Congressional interest in these programs, $3,000,000 has been allocated in 1990 and is requested in 1991. The estimated 17 projects will be closely monitored to learn more about their effectiveness in assisting limited English proficient students.

The 1991 request for family English literacy is $5,500,000, which is $561,000 more than in 1990. The primary goal of these projects is to assist parents in learning English and participating in the education of their children.

Other Part A activities will be continued at their 1990 levels.

Impact Data ($ in thousands)	1989	1990	1991
Special Competition	---	---	$12,000
Number of projects	---	---	95

Number of students	7,655	7,970	7,970
Total — BA	$110,761	$115,779	$132,642
Total — Projects	749	792	944
Total — Students	249,006	254,170	295,520

1/ These estimates assume that of all funds available for new grants under transitional bilingual education and special alternative instruction, approximately half will go to each activity. Actual experience in 1990 and 1991 may differ significantly from these estimates.

Bilingual and Immigrant Education

1. Bilingual education: b. Support services
(Elementary and Secondary Education Act, Title VII, Part B)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$10,838,000	$10,838,000	---

Purpose and Method of Operation

Part B of the Bilingual Education Act authorizes grants to State educational agencies (SEAs); awards for evaluation assistance centers; contracts for research and evaluation; and a contract for a national clearinghouse to collect, analyze, and disseminate information about programs for limited English proficient students.

Grants to SEAs are primarily for data collection and reporting, but other activities related to improving educational services for limited English proficient children are also authorized. Under current law, the minimum SEA award is $75,000, and no award can exceed 5 percent of the sum provided for all local projects within the State in the previous year.

Evaluation assistance centers provide technical assistance to local school districts in evaluating local projects and in identifying the educational needs and competencies of limited English proficient students. Two centers are currently in operation. One center serves the eastern half of the country, the other the western half.

The studies and evaluations activity provides funds for studies designed to provide a basis for policy decisions and provide information for program administration.

The clearinghouse provides reference and referral services, and bibliographic search services principally to practitioners, such as teachers and other educational personnel. The clearinghouse maintains a data base of information on educational services for limited English proficient students and participates in an information dissemination network with the multifunctional centers (which are described in the Part C activity request). The clearinghouse also publishes a newsletter.

This is a current-funded program for which funds are available from October 1 to September 30. For the most part, funds appropriated and awarded in the one fiscal year are used for activities carried out in the following fiscal year.

Bilingual and Immigrant Education

1. Bilingual education: b. Support services

Accomplishments

Under studies and evaluations, the Department has funded a variety of research efforts that have increased understanding of the needs of limited English proficient students and the instructional services they receive. The findings of some of these studies are discussed under Part A and Part C. Two major studies are nearing completion: the National Longitudinal Evaluation of the Effectiveness of Services for Language-Minority, Limited English Proficient Students; and the Longitudinal Study of Immersion Programs for Language Minority Children. Other ongoing studies include: a study of Innovative Approaches for Educating Limited English Proficient Students; a Descriptive Study of Exemplary Alternative Programs; and the Bilingual Fellows Supply and Demand Study; an Evaluation of Personnel Training programs; a Descriptive Analysis of Capacity Building; a Descriptive Study of Adult English Instruction; a Descriptive Study of the Immigrant and Refugee Education Programs; and a Review of Local Title VII Evaluation and Improvement practices.

1991 Budget Proposal

For Part B, Support Services, a total of $10,838,000 is proposed, the same as the 1990 appropriation level. Within Part B, all activities will be level funded. In fiscal year 1991 research funds will be used to continue ongoing studies, perform secondary analysis of several large data bases, and fund the first phase of a major new impact study.

Impact Data	1989	1990	1991
Grants to SEAs	$6,040,000	$5,975,000	$5,975,000
Number of projects	52	52	52
Evaluation assistance centers	$1,115,000	$1,246,000	$1,246,000
Number of projects	2	2	2
Studies and evaluations	$2,551,551	$2,617,000	$2,617,000
Clearinghouse	$1,065,449	$1,000,000	$1,000,000
Total — BA	$10,772,000	$10,838,000	$10,838,000

Bilingual and Immigrant Education

---

1. Bilingual education: c. Training grants
   (Elementary and Secondary Education Act, Title VII, Part C)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$31,913,000	$31,913,000	---

1/ ESEA Section 7002(b)(3) reserves 25 percent of the total bilingual education appropriation (minus funds for State educational agency grants) for Part C.

Purpose and Method of Operation

Part C of the Bilingual Education Act authorizes training and technical assistance activities through grants and contracts. These activities are intended to increase the pool of trained teachers and strengthen the skills of teachers currently providing instruction to limited English proficient children.

- Educational personnel grants to institutions of higher education support degree and non-degree training in fields related to instructional services for limited English proficient children. This program seeks to increase the supply of new teachers and teacher aides and to upgrade the qualifications and skills of existing educational personnel.

- The fellowship program provides grants to graduate students at participating institutions of higher education. For the period 1979 to 1985, most fellows were at the doctoral level. The current policy is to award fellowships for pursuit of both master's and doctoral degrees. Fellows must work in a field related to the purposes of the Act for a period of time equal to that of the fellowship, or repay the amount of the fellowship.

- Training development and improvement provides small grants to institutions of higher education to encourage the reform, innovation, and improvement of higher education programs that train teachers of limited English proficient students. Activities may relate to education curricula, the structure of the academic profession, or the recruitment and retention of higher education faculties.

Purpose and Method of Operation--Continued

- Short-term training institutes provide in-service training for educational personnel or parents of children participating in programs for limited English proficient students. Institutes are funded through grants to institutions of higher education, private organizations, school districts, and State educational agencies.
- Multifunctional resource centers conduct training activities and also provide technical assistance, primarily to local educational agencies. They are linked through a network with the national clearinghouse on bilingual education to ensure effective coordination and prevent duplication of effort. The centers provide assistance for all language groups in the region that they serve.

This is a current-funded program for which funds are available from October 1 to September 30. Funds appropriated and awarded in one fiscal year are generally used for activities carried out in the following fiscal year.

Accomplishments

Educational personnel grants to institutions of higher education for training teachers, teacher aides, parents, and administrators totaled 140 in 1989. A report on this program (RMC Research Corporation, 1981) found that many of the participants were teachers and aides who were improving their credentials, rather than persons preparing to become first-time teachers. The same report found that the training programs do not focus strongly on methods of teaching English. A typical master's degree program included courses in: teaching reading and other subjects in the native language (20 percent of curriculum), culture and ethnic studies (19 percent), issues in bilingual education (16 percent), linguistics (8 percent), and teaching English (7 percent). The Department awarded a contract for a new evaluation of bilingual teacher training programs funded under the Bilingual Education Act in fiscal year 1989. The final report from this study is expected by May 1991.

The 1989 Appropriations Act barred the Department from making bilingual fellowship awards until, first, the Department submitted an interim report on the fellowship program, and, second, these funds were released "under further statutory Act of Congress." Congress subsequently directed the Department to use funds originally set aside for the fellowship program to make additional awards under the educational personnel training program.

Accomplishments--Continued

The Department summarized all available data on the bilingual fellowship program in its interim report dated May 19, 1989. The report includes data indicating that a significant number of past fellows did not secure employment directly related to the goals of the Bilingual Education Act. Data in the report also show that 86 percent of the past fellows were complying with their contractual agreement to work in an appropriate field or repay the grant, but 10 percent were in default. (The status of another 4 percent could not be determined.) For the period 1979-1986, 42 percent of doctoral fellows received their degree.

The Department has recently taken several steps to improve the efficiency of the bilingual fellowship program. The Department now has a tracking system for all fellows who entered the program since 1979. This system makes possible a running tabulation of the repayment status of all past fellows. In the future, it will also enable the Department to keep track of degree completion rates and post-fellowship employment. In addition, the Department's Financial Management Service now has a system dedicated to tracking fellows scheduled to repay their fellowships. Finally, the forthcoming supply and demand study, funded in fiscal year 1988, should provide information relevant to estimating the need for additional persons with graduate training in the education of limited English proficient students. The Department anticipates that this study will answer questions about the continuing need for a Bilingual Fellowship program.

Pursuant to language in the 1990 Appropriations Act, the Department will make 200 fellowship awards in 1990.

1991 Budget Proposal

For Training Grants (Part C) a total of $31,913,000 is proposed, the same as the 1990 appropriation level. Funding for bilingual fellowships will be increased by $1 million while educational personnel training funds will be decreased by the same amount. The fellowship increase will make possible a small number of new awards in 1991 as well as to continue current fellows. The other three Part C activities will be level funded. This proposal reflects the Department's policy of allocating all available resources to Part A where they provide direct services to at-risk students. Over the life of the program, the Department has invested almost $490 million in training activities and has assisted in building the capacity of some 250 institutions of higher education to operate bilingual teacher training programs. In addition to Part C funds, training of bilingual education personnel is funded through Part A LEA grants. Successful applicants for 1989 new and continuation grants projected that 10 percent of their grants would be used for training. Based on these data, the Department estimates that Part A funds finance in-service training for at least 5,300 local instructional personnel annually in school district projects. Consequently, the Department believes that the requested level is sufficient to meet the overall need for training activities.

Bilingual and Immigrant Education

1. Bilingual education: c. Training grants

Impact Data	1989	1990	1991
Educational personnel	$18,431,653	$16,813,000	$15,813,000
Number of projects	140	128	120
Fellowships	---	$2,000,000	$3,000,000
Number of fellows	---	200	300
Training development	$937,626	$1,000,000	$1,000,000

Training institutes	$1,043,721	$1,900,000	$1,900,000
Number of projects	11	20	20
Multifunctional centers	$10,000,000	$10,200,000	$10,200,000
Number of projects	16	16	16
Total -- BA	$30,413,000	$31,913,000	$31,913,000

2. Immigrant education
(Elementary and Secondary Education Act, Title IV, Part D)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$30,144,000	$30,144,000	---

Purpose and Method of Operation

The Immigrant Education program provides grants to local educational agencies (LEAs) enrolling substantial numbers of recent immigrant students. Participation is limited to districts with at least 500 such students or where immigrant children represent at least 3 percent of the enrollment. Funds are channeled through State educational agencies which award subgrants to LEAs on the basis of the number of immigrant children enrolled. This is a current-funded program for which funds are available from October 1 to September 30. Funds appropriated and awarded in one fiscal year are generally used for activities carried out in the following fiscal year.

Accomplishments

Immigrant Education grants were made to 31 States in fiscal year 1989; the same number of grants is expected in 1990. Under current law, these funds can be used for any purpose relating to the education of immigrant students. Consequently, the Department has no current basis for evaluating the program's impact on the quality of educational services for immigrant students. However, the Department funded a descriptive study of the Immigrant and Refugee Education programs in fiscal 1989 and expects to receive the final report from this study by September 1991.

1991 Budget Proposal

The Department proposes to fund this activity at $30,144,000, the same level as the 1990 appropriation. Last year the Department submitted legislation to require that Immigrant Education grants supplement, but not supplant, local funding. Under the proposed legislation funds could only be used to meet the special needs of immigrant students rather than simply reimbursing local school districts for the cost of providing basic instruction. The Department continues to support this legislation, which will make this program more effective in meeting the needs of recent immigrant students.

STUDENT FINANCIAL ASSISTANCE AND GUARANTEED STUDENT LOANS

WITNESSES

LEONARD J. HAYNES, III, ASSISTANT SECRETARY FOR POSTSECONDARY EDUCATION

ROBERTA B. DUNN, DEPUTY ASSISTANT SECRETARY FOR STUDENT FINANCIAL ASSISTANCE, OFFICE OF POSTSECONDARY EDUCATION

SALLY KIRKGASLER, DIRECTOR, POLICY DEVELOPMENT STAFF, OFFICE OF POSTSECONDARY EDUCATION

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

ROBERT DAVIDSON, DIRECTOR, POSTSECONDARY ANALYSIS DIVISION, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

INTRODUCTION OF WITNESSES

Mr. NATCHER. At this time, we take up the budget request for the fiscal year 1991 for student financial assistance and guaranteed student loans.

We have before the committee Mr. Leonard Haynes. Mr. Haynes, before you give us your statement, tell us who you have at the table.

Mr. HAYNES. Good morning, Mr. Chairman, and members of the committee. I am joined for this hearing by Dr. Roberta Dunn, Deputy Assistant Secretary for Student Financial Aid; Ms. Sally Kirkgasler, Director of the Policy Development Staff, Office of Postsecondary Education; Ms. Sally Christensen, Director of the Budget Service, Office of Planning, Budget and Evaluation; and Mr. Robert Davidson, Director, Postsecondary Analysis Division, Budget Service, Office of Planning, Budget and Evaluation.

Mr. NATCHER. We are glad to have all of you before the committee. Mr. Haynes, we will be pleased to hear from you at this time.

STUDENT ASSISTANCE BUDGET REQUEST FOR 1991

Mr. HAYNES. Thank you very much.

Mr. Chairman, with your permission what I will do is to summarize my statement and submit the full text for entry into the record.

Mr. Chairman and members of the committee, our budget request for fiscal year 1991 is nearly $9,500,000,000, which we estimate will provide in excess of $18,000,000,000 to needy postsecondary students. This budget will assure access to a postsecondary education for the financially disadvantaged by providing 9,782,000 awards for grant, loan and employment assistance to an estimated 5,857,000 students.

Additionally, it enlarges the scope of our default reduction initiative by including a number of proposals designed to safeguard the Federal investment in these programs by affording increased protection to the student consumer, requiring greater institutional accountability, and further addressing the still unacceptably high level of defaults and the issues of rights and responsibilities.

Fair play for students is at the core of our efforts to reduce defaults. Consequently, we are proposing to require any school with a default rate greater than 30 percent to implement a pro rata refund policy for any Title IV aid recipient who withdraws during the first few weeks of class.

Second, to protect individuals from high pressure sales techniques, we are proposing to prohibit schools from employing anyone other than salaried employees or volunteers in recruiting or admissions activities.

Finally, we are proposing to modify the "ability to benefit" provision so that passing a test formulated and administered by an independent third party would be a condition for eligibility for Title IV aid for any admitted students without a high school diploma or its recognized equivalent. These proposals would discourage institutions from enrolling academically ill-prepared individuals, thus protecting students as well as taxpayers from unscrupulous institutional practices and lessening the opportunity for program abuses.

We are proposing additional default reduction and enhanced collection measures which are unique to the loan programs. The 1991 budget proposes to require lenders and institutions to check routinely the credit histories of all prospective borrowers who are age 21 or over.

If the borrower has a poor credit history, the loan could be granted only if a creditworthy co-signer were obtained. Those with no credit history, the vast majority of student borrowers, would not be affected. Thus, access to loan assistance would not be obstructed.

We also propose requiring institutions to collect from the student more information that would assist in locating the borrower, thereby improving the collection potential of loans. This information would include the borrower's driver's license number, address of next of kin, expected address upon graduation, and the name and address of the borrower's prospective employer.

PELL GRANTS

The Pell Grant program request is $5,277,000,000, an increase of $472,500,000 over the 1990 appropriation, in order to fully fund the Pell Grant program at a maximum award level of $2,300. This request sustains the maximum award in effect for 1990–1991, including funding for less-than-half-time students, and provides funds to cover the funding shortfalls of $371,000,000 from prior years, all of which demonstrate the Department's commitment to maintaining grant support for the neediest students. This request would provide assistance to an estimated 3,389,000 students, 175,000 more than the current year, who would receive grants averaging $1,443.

SUPPLEMENTAL EDUCATIONAL OPPORTUNITY GRANTS

The budget request for the Supplemental Educational Opportunity Grant program is $458,600,000, which maintains the current Federal funding level. However, the aid available to students under this program would increase by $27,400,000 and the number of students participating in the program would increase by 18,000 students in academic year 1991–1992 compared with that available in 1990–1991, due to the higher institutional match required by statute. The Federal funds, together with the required institutional match, would provide grants averaging $740 to 696,000 students.

WORK-STUDY

The fiscal year 1991 request for Work-Study is $601,800,000, the same level of funding as in 1990. In academic year 1991-1992, the total aid available under the Work-Study program is expected to be $823,200,000, which would provide average earnings of $945 to 871,000 students.

INCOME CONTINGENT LOANS

For the Income Contingent Loan program, the budget proposes $15,000,000 in new capital contributions for fiscal year 1991, an increase of $10,100,000 over the funding level in academic year 1990–1991. This amount would support awards in academic year 1991–1992.

The 1991 budget request, when supplemented by institutional matching contributions, would provide approximately $16,000,000 in new loans, averaging $2,500, to approximately 6,000 student borrowers.

Two important program changes are being proposed in order to expand institutional and student participation. The first would make graduate students eligible to borrow. The second proposed change would remove the current 10-institution limit on participation and permit consortia of institutions to participate.

Enhanced access to these loans is an important element in the overall effort to reduce defaults. This program avoids the repayment problems associated with traditional short-term, equal-installment payment schedules. Also, the flexible income-sensitive repayment plans avoid discouraging students from pursuing careers in low-paying fields.

PERKINS LOANS

The 1991 budget does not request new Federal capital for the Perkins Loan Program, since these loans provide substantial and unnecessary Federal interest subsidies. However, institutions may continue to make Perkins loans from their revolving funds. In 1991–1992, these funds would provide an estimated $744,000,000 in new loans averaging $1,070, to about 695,000 student borrowers.

No new funds are requested for Perkins loan cancellation payments in fiscal year 1991. This request does not represent a policy shift, but reflects a temporary funding surplus, because recent annual reimbursement requests from institutions have been lower than expected. Appropriations will again be required in fiscal year

1992 and beyond for institutional reimbursements for certain loan cancellations.

STATE STUDENT INCENTIVE GRANTS

No funding for the State Student Incentive Grants program is requested for fiscal year 1991. The program goal of stimulating all States to provide need-based grants to postsecondary students has been accomplished. All States now have grant programs, and most States considerably overmatch the Federal contribution.

For example, of the 42 States that overmatched Federal funds in 1988–1989, almost all provided at least 75 percent more need-based student grant aid than was required to match Federal funds.

State expenditures have continued to expand even as Federal SSIG funding has declined or remained level. This expansion rate, 6 to 13 percent per year in recent years, suggests a considerable commitment at the State level and indicates that Federal funds are no longer necessary to encourage States to provide need-based student financial assistance.

GUARANTEED STUDENT LOANS

This year we are requesting an appropriation of $3,368,000,000 to meet the costs of the Guaranteed Student Loan account. This request includes $260,400,000 to finance obligations incurred in 1990 under contract authority.

We believe Guaranteed Student Loans continue to be an effective mechanism for financing postsecondary education. More than 4,000,000 students and their parents will receive over $11,000,000,000 through the Stafford Student Loan, PLUS and Supplemental Loans for Students, SLS, programs in fiscal year 1991. Subsidies to lenders for interest and special allowance costs, after taking into account the receipt of student loan origination fees, will be approximately $1,700,000,000.

Compared to the late 1970s and early 1980s, interest and special allowance costs have been restrained due to declining interest rates, while the costs of defaults have increased substantially. The gross default rate for all Guaranteed Student Loans is expected to increase from 14.2 percent in fiscal year 1989 to 15.4 percent in fiscal year 1991. Of the $3,108,000,000 we are requesting for the payment of obligations in fiscal year 1991, almost two-thirds, $2,021,000,000, will be needed to pay for loans that have gone into default.

The Department has to take a number of actions to improve collections on defaulted loans. In fiscal year 1989, we received $569,000,000 in collections from guarantee agencies and through our own collection efforts. This amount is $74,000,000 more than in fiscal year 1988 and $88,000,000 more than in fiscal year 1987. We have taken numerous steps to make the collection apparatus more efficient and cost-effective and project that by 1991, our collections will increase to $729,000,000.

Improved practices by some guarantee agencies also have proven to be successful. However, increased efforts to collect on defaulted loans will not, by themselves, solve the default problem. We must continue to take direct action to prevent defaults. These increasing default costs undermine the public confidence in the program. Consequently, we are proposing additional modifications to the program cost and abuse.

As partners with the Department, guarantee agencies should share some of the risk associated with loan programs. Therefore, we are proposing to revise the current "trigger system" formula, which provides for a reduction of reinsurance payments to a guarantee agency dependent upon default experience in the agency's State, in order to stimulate greater collection diligence by guarantee agencies and to reduce the Federal Government's reimbursement costs.

The Federal reinsurance of default claims paid by guarantee agencies would be changed to a flat 90-percent rate each year in place of the current 100-90-80-percent sliding scale. This would also be an incentive for guarantee agencies to enforce lender due diligence requirements. Also, the current two-tier assistance premium paid by guarantors to the Department would be changed to one-half of 1 percent of all new loans.

The 1991 budget proposes to delay disbursement of loans to first-time borrowers for 30 days from the student's first day of classes. This would help reduce the inordinately high rate of default by students who withdraw during the first few weeks of classes.

We are proposing to require lenders to offer optional graduated repayment schedules to all Stafford and SLS borrowers. Smaller payment amounts early in the repayment period, as little as accrued interest only in the first year, enable borrowers to establish disciplined repayment habits that avoid later defaults.

We also propose to authorize guarantee agencies to garnish defaulters' wages, up to 10 percent of disposable pay, after due process. Wage garnishment is particularly appropriate in this program since deferments are available to unemployed borrowers.

My colleagues and I will be pleased to respond to any questions members of the committee may have on our budget request.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

Leonard L. Haynes III
Assistant Secretary for
Postsecondary Education

on

Student Financial Assistance and Guaranteed Student Loans

Mr. Chairman and Members of the Committee:

It is a pleasure to be here to present our budget request for the Student Financial Assistance and Guaranteed Student Loan accounts. Our budget request for fiscal year 1991 is nearly $9.5 billion, which we estimate will provide in excess of $18 billion to needy postsecondary students. This budget will help assure access to a postsecondary education for the financially disadvantaged by providing 9,782,000 awards for grant, loan and employment assistance to an estimated 5,857,000 students. Additionally, it enlarges the scope of our Default Reduction Initiative by including a number of proposals designed to safeguard the Federal investment in these programs by affording increased protection to the student consumer, requiring greater institutional accountability, and further addressing the still unacceptably high level of defaults and the issues of rights and responsibilities.

Fair play for students is at the core of our efforts to reduce defaults. Consequently, we are proposing to require any school with a default rate greater than 30 percent to implement a pro-rata refund policy for any Title IV aid recipient who withdraws during the first few weeks of class. Second, to protect individuals from high pressure sales techniques, we are proposing to prohibit schools from employing anyone other than salaried employees or volunteers in recruiting or admissions activities. Finally, we are proposing to modify the "ability to benefit" provision so that passing a test formulated and administered by an independent third party would be a condition for eligibility for Title IV aid for any admitted students without a high school diploma or its recognized equivalent. These proposals would discourage institutions from enrolling academically ill-prepared individuals, thus protecting students as well as taxpayers from unscrupulous institutional practices and lessening the opportunity for program abuses.

We are proposing additional default reduction and enhanced collection measures which are unique to the loan programs. The 1991 budget proposes to require lenders and institutions to check routinely the histories of all prospective borrowers who are age 21 or over. If the borrower has a poor credit history, the loan could be granted only if a credit-worthy cosigner were obtained. Those with no credit history, the vast majority of student borrowers, would not be required to have a cosigner. Thus, access to loan assistance would not be obstructed. We also propose requiring institutions to collect from the student more information that would assist in locating the borrower, thereby improving the collection potential of loans. This information would include the borrower's driver's license number, address of next of kin, expected address upon graduation, and the name and address of the borrower's prospective employer.

Pell Grants

The Pell Grant program request is $5.277 billion, an increase of $472.5 million over the 1990 appropriation, in order to fully fund the Pell Grant program at a maximum award level of $2,300. This request sustains the maximum award in effect for 1990-91, includes funding for less-than-half-time students, and provides funds to cover the funding shortfalls of $371 million from prior years, all of which demonstrate the Department's commitment to maintaining grant support for the neediest students. This request would provide assistance to an estimated 3,389,000 students (175,000 more than the current year) who would receive grants averaging $1,443.

Supplemental Educational Opportunity Grants

The budget request for the Supplemental Educational Opportunity Grant program is $458.6 million, which maintains the current Federal funding level. However, the aid available to students under this program would increase by $27.4 million and the number of students participating in the program would increase by 18,000 students in academic year 1991-92 compared with that available in 1990-91, due to the higher institutional match required by statute. The Federal funds, together with the required institutional match, would provide grants averaging $740 to 696,000 students.

Work-Study

The fiscal year 1991 request for Work-Study is $601.8 million, the same level of funding as in 1990. In academic year 1991-92, the total aid available under the Work-Study program is expected to be $823.2 million which would provide average earnings of $945 to 871,000 students.

Income Contingent Loans

For the Income Contingent Loan (ICL) program, the budget proposes $15 million in new capital contributions for fiscal year 1991, an increase of $10.1 million over the funding level in academic year 1990-91. This amount would support awards in academic year 1991-92. The 1991 budget request, when supplemented by institutional matching contributions, would provide approximately $16 million in new loans, averaging $2,500, to approximately 6,000 student borrowers. Two important program changes are being proposed in order to expand institutional and student participation. The first would make graduate students eligible to borrow. The second proposed change would remove the current 10-institution limit on participation and permit consortia of institutions to participate.

Enhanced access to these loans is an important element in the overall effort to reduce defaults. This program avoids the repayment problems associated with traditional short-term, equal-installment payment schedules. Also, the flexible income-sensitive repayment plans avoid discouraging students from pursuing careers in low-paying fields.

Perkins Loans

The 1991 budget does not request new Federal capital for the Perkins Loan program, since these loans provide substantial and unnecessary Federal interest subsidies. However, institutions may continue to make Perkins Loans from their revolving funds. In 1991-92, these funds would provide an estimated $744 million in new loans averaging $1,070, to about 695,000 student borrowers. No new funds are requested for Perkins Loan cancellation payments in fiscal year 1991. This request does not represent a policy shift, but reflects a temporary funding surplus, because recent annual reimbursement requests from institutions have been lower than expected. Appropriations will again be required in fiscal year 1992 and beyond for institutional reimbursements for certain loan cancellations.

State Student Incentive Grants

No funding for the State Student Incentive Grants program is requested for fiscal year 1991. The program goal of stimulating all States to provide need-based grants to postsecondary students has been accomplished. All States now have grant programs, and most States considerably overmatch the Federal contribution. For example, of the 42 States that overmatched Federal funds in 1988-89, almost all provided at least 75 percent more need-based student grant aid than was required to match Federal funds.

State expenditures have continued to expand even as Federal SSIG funding has declined or remained level. This expansion rate (6 to 13 percent per year in recent years) suggests a considerable commitment at the State level and indicates that Federal funds are no longer necessary to encourage States to provide need-based student financial assistance.

Guaranteed Student Loans

This year we are requesting an appropriation of $3.368 billion to meet the costs of the Guaranteed Student Loan account. This request includes $260.4 million to finance obligations incurred in 1990 under contract authority.

We believe Guaranteed Student Loans continue to be an effective mechanism for financing postsecondary education. More than 4 million students and their parents will receive over $11 billion through the Stafford Student Loan, PLUS and Supplemental Loans for Students (SLS) programs in fiscal year 1991. Subsidies to lenders for interest and special allowance costs, after taking into account the receipt of student loan origination fees, will be approximately $1.7 billion.

Compared to the late 1970s and early 1980s, interest and special allowance costs have been restrained due to declining interest rates, while the costs of defaults have increased substantially. The gross default rate for all Guaranteed Student Loans is expected to increase from 14.2 percent in fiscal year 1989 to 15.4 percent in fiscal year 1991. Of the $3.108 billion we are requesting for the payment of obligations in fiscal year 1991, almost two-thirds, $2.021 billion, will be needed to pay for loans that have gone into default.

The Department has taken a number of actions to improve collections on defaulted loans. In fiscal year 1989 we received $569 million in collections, from guarantee agencies and through our own collection efforts. This amount is $74 million more than in fiscal year 1988 and $88 million more than in fiscal year 1987. We have taken numerous steps to make the collection apparatus more efficient and cost effective and project that by 1991, our collections will increase to $729 million. Improved practices by some guarantee agencies also have proven to be successful. However, increased efforts to collect on defaulted loans will not, by themselves, solve the default problem. We must continue to take direct action to prevent defaults. These increasing default costs undermine the public confidence in the program. Consequently, we are proposing additional modifications to the program designed to reduce program cost and abuse.

As partners with the Department, guarantee agencies should share some of the risk associated with loan programs. Therefore, we are proposing to revise the current "trigger system" formula, which provides for a reduction of reinsurance payments to a guarantee agency dependent upon default experience in the agency's State, in order to stimulate greater collection diligence by guarantee agencies and to reduce the Federal Government's reimbursement costs. The Federal reinsurance of default claims paid by guarantee agencies would be changed to a flat 90 percent rate each year in place of the current 100/90/80 percent sliding scale. This would also be an incentive for guarantee agencies to enforce lender due diligence requirements. Also, the current two-tier reinsurance premium paid by guarantors to the Department would be changed to one-half of one percent of all new loans.

The 1991 budget proposes to delay disbursement of loans to first-time borrowers for 30 days from the student's first day of classes. This would help reduce the inordinately high rate of default by students who withdraw during the first few weeks of classes. We are proposing to require lenders to offer optional graduated repayment schedules to all Stafford and SLS borrowers. Smaller payment amounts early in the repayment period -- as little as accrued interest only in the first year -- enable borrowers to establish disciplined repayment habits that avoid later defaults. We also propose to authorize guarantee agencies to garnish defaulter's wages, up to 10 percent of disposable pay, after due process. Wage garnishment is particularly appropriate in this program since deferments are available to unemployed borrowers.

My colleagues and I will be pleased to respond to any questions members of the Committee may have on our budget request.

NAME : Leonard L. Haynes III

POSITION : Assistant Secretary for Postsecondary Education

BIRTHPLACE AND DATE : Boston, Massachusetts, January 26, 1947

EDUCATION : Southern University, B.A., History
Carnegie-Mellon University, M.A., American History
Ohio State University, Ph.D., Higher Education Administration

EXPERIENCE

1989 - Present : Assistant Secretary for Postsecondary Education, Department of Education

1988 - 1989 : Assistant Superintendent, Office of Academic Programs, Louisiana State Department of Education

1982 - 1985 : Executive Vice President and System Vice President for Academic Affairs, the Southern University System, Baton Rouge, Louisiana

1979 - 1982 : Director, Office for the Advancement of Public Black Colleges, Washington, D.C.

1976 - 1979 : Director, Desegregation Policy Studies Unit, Institute for Services to Education, Washington, D.C.

Honors and Awards : Outstanding Young Men of America, 1976; Department of Health, Education, and Welfare Fellowship, 1976; Who's Who in Washington, 1982; Black College Network Family Achievement Award, 1984

ESTIMATED REDUCTION IN GUARANTEED STUDENT LOANS

Mr. **Natcher**. Thank you, Dr. Haynes.

Dr. Haynes, when the Secretary appeared before our committee, we discussed with him generally the increases as far as education are concerned, the reductions and matters of great interest to you and to us as members of our committee.

As you know, the total increases as far as education are concerned I think total $1,646,000,000. As far as new programs are concerned, I believe the figure is $476,000,000. Chapter 1, I believe, is $246,000,000. There are other increases and deductions as we go along.

Now, we asked the Secretary how he could justify a reduction of $696,000,000 for guaranteed student loans. You know about this, Dr. Haynes, this figure of $696,000,000 for guaranteed student loans. How do you justify the reduction, Dr. Haynes? I want to see if you and the Secretary are on the same playing field. Are you all together on this matter?

Mr. **Haynes**. Mr. Chairman, members of the committee, this reduction is generally attributed to the lower T-bill rates.

Mr. **Natcher**. Lower interest rates?

Mr. **Haynes**. Lower interest rates.

Mr. **Natcher**. Last year, we had to have a supplemental of $892,000,000 because of underestimates of interest rates and also defaults as far as loans are concerned. What is going to prevent us from having to do the same thing this year as far as this reduction here of $696,000,000? Are you assuming the economy will be the same as it is today, that interest rates will not increase, or that interest rates will drop.

How do you feel about it, generally, when you have the history staring you right in the face over what happened last year—$892,000,000?

Mr. **Haynes**. Mr. Chairman, and members of the committee, the estimates that we go by are made available by OMB, and they are standard through all Government agencies. This is their call.

FEDERAL EXPENDITURES FOR EDUCATION

Mr. **Natcher**. After the deductions and the increases as far as education are concerned, Dr. Haynes, we have approximately a $496,000,000 net increase for education. It is about 2 percent.

Any of you at the table, what about the $496,000,000? Isn't that figure correct, just any one of you, net increase in education.

Ms. **Christensen**. That is right, Mr. Chairman.

Mr. **Natcher**. Dr. Haynes, do you agree with that figure; not only as to the correctness of the figure, but as far as the increase in education is concerned?

I personally like President Bush, I like him. I have known him for years. Dr. Haynes, I have served with eight Presidents. I want this President to be the Education President. You cannot be the Education President with a $496,000,000 increase. You can't do it at all.

When the Secretary was with us, Dr. Haynes, we said to him, "Mr. Secretary, what about a $2,000,000,000 increase in education?" We would like for you to talk to us about it. Can you give us any suggestions you want to make as to where the $2,000,000,000 should go? That is, $2,000,000,000 is not too much.

Ms. CHRISTENSEN. Mr. Chairman, the $500,000,000 increase is really a net increase, a 2-percent increase. You have to take into account the fact that we have minus or gross decreases totaling $1,300,000,000 in the budget, a large portion of that is due to the decrease in the student loan program.

We also proposing decreases in other lower-priority areas. If you add that to the $500,000,000 net increase, we really have a $1,800,000,000 increase for the entire Department. Overall, that is a 6.2-percent increase for all discretionary programs.

Within that, we have several areas that are much, much higher than that.

Mr. NATCHER. Ms. Christensen, I believe you were here, and maybe not, and I asked the Secretary how much he requested of OMB. He said $1,600,000,000 less than the amount he received. Were you here when that took place?

Ms. CHRISTENSEN. Yes.

Mr. NATCHER. Now, Dr. Haynes, I know you are not supposed to decide all these matters pertaining to education, but this is not enough money. I say that to you frankly.

When you talk about education, I don't know of anyone, Dr. Haynes, who has attempted or will attempt to impair the security of our country, but I know that in the last nine years, we have appropriated and the Department of Defense has spent $2,360,000,000,000 for defense. For education during this nine-year period, we have spent about $199,000,000,000.

How does that sound to you, Dr. Haynes, $199,000,000,000 for education, and $2,360,000,000,000 for defense?

Mr. HAYNES. Mr. Chairman, I think the Department fared well compared to other departments. I was not here at the time the budget was prepared, and I would say that the budget we have available to work with is a budget that makes sense.

We certainly fared better than many other departments of the Government. I would say this, too: When you factor in State spending, local and private efforts in terms of what they devote to education, the figure that you come up with is much larger than that which you just cited.

We certainly spend a lot of money on education in this country across the board.

Mr. NATCHER. In the last nine years.

Mr. HAYNES. I don't have the figures on the last nine years, sir, but I think it is an unfortunate misconception that we are not spending the money on education. I think we are. The problem is, are we getting the results that we want. I think we are all concerned about that.

Mr. NATCHER. I think the people are very much concerned about results. I don't disagree with you about that. But at the same time, in order to continue living in the strongest country in the world, you have to take care of the health of your people and educate your children.

What is this at the Federal level, about 6 percent?

Ms. CHRISTENSEN. Yes, Mr. Chairman, about 6 percent.

FEDERAL LIABILITY FOR GUARANTEED STUDENT LOANS

Mr. **Natcher**. Mr. Haynes, what is the current outstanding liability of the Federal Government under the guarantee loan programs, both total guarantees and those in current repayment status?

Mr. **Haynes**. We estimate that the loan principal outstanding at the end of the fiscal year 1990 will be the following: Stafford loans, a little more than $44,200,000,000; for the SLS program, $4,000,000,000; for the PLUS program, slightly more than $1,000,000,000; for the Consolidation Loan Program, $2,500,000,000.

In other words, the total for all the GSL programs is over $51,700,000,000.

Mr. **Natcher**. What will be the direct cost to the taxpayer from loan defaults under the Stafford program in 1991 and 1990?

GSL DEFAULT COSTS

Mr. **Haynes**. We estimate the Department will pay default claims under GSL equal to $2,023,000,000 in fiscal year 1990 and $2,021,000,000 in fiscal year 1991.

Mr. **Natcher**. What is your current best estimate of the gross default rate for Stafford loans in fiscal year 1991, and tell us, if you will, how this has changed over the last five years.

GSL DEFAULT RATES

Mr. **Haynes**. Mr. Chairman, our estimate for the fiscal year 1991 rate is 15.4 percent. Our estimates for the past five years are: 1990, 14.9; fiscal year 1989, 14.2; fiscal year 1988, 13.6; fiscal year 1987, 13.1; and for fiscal year 1986, 12.6.

In terms of implementation of our default reduction initiative, we expect that significant improvement in the default rate will be reflected in the cohort default rates released in March of 1993 and thereafter.

Mr. **Natcher**. Do you expect the default rate to get better or worse over the next several years?

Mr. **Haynes**. Mr. Chairman, our expectation is that when the default rate cohort is released in March 1993, it will reflect data on the kids coming through their entire postsecondary experience under the new initiative. We expect the default rate to go down.

We have implemented the default initiative; and already, we have noted collections are up compared to previous years. So, we have gotten the attention of the American public.

Mr. **Natcher**. You have changed the system in the last several years. Was that two or three years ago? Is that right?

Mr. **Haynes**. Yes, sir, we have implemented new methods of collection, and we are committing more time and resources to that task.

Ms. **Dunn**. Also, in 1986, the Department issued new, what are called due diligence regulations, which detail the servicing requirements of lenders. That has also made a difference in reducing defaults.

Mr. **Natcher**. Some people say it will go as high as 20 percent as far as defaults are concerned, one out of five; you people don't agree with that, do you?

Mr. HAYNES. Mr. Chairman, if you look at where we are, I think defaults are leveling off now. We went back several years and noted, at about one point, we were at about 9 percent. As I cited, the last five years we have been between 12.5 and 14.9. When the results of the default initiative will be really felt after 1993, we expect a decline.

I think, as a result of our default reduction efforts, we can expect a better attitude on the part of the American public toward the student aid programs. A loan by any name is a loan. It must be repaid. That is the message we are trying to get out.

Ms. DUNN. Also, these are gross default rates, whereas the net default rate has stayed relatively the same. We expect that to continue or improve with our enhanced collection efforts.

Mr. NATCHER. Mr. Pursell.

DEFINITION OF DEFAULT RATES

Mr. PURSELL. What is the difference between the gross and net default rate?

Ms. DUNN. The gross default rate is the rate before collections are taken into account. The net rate eliminates any defaulted loans that have been collected and thus reduces the dollar amount in default.

Standardly that net default rate has been around ten percent. That means in contrast to one-in-five students not paying, really one-in-ten students don't pay.

DEPARTMENT'S DEFAULT REDUCTION INITIATIVE

Mr. PURSELL. Did you implement new initiatives last year?

Ms. DUNN. The Secretary's new default initiative was announced June 5. The required servicing activities for banks were implemented in 1986.

Mr. PURSELL. What impact have we had since then?

Ms. DUNN. We have not been able to measure it per se. You cannot factor that out particularly. Let me say there are a number of major banks, in fact, most of the major banks in this country, that have suffered a significant loss of either interest or interest and principal since 1986, when their violations of those procedures have been observed.

The proper servicing of a loan in the course of repayment, which includes sending the letters to the kids defaulting or making telephone calls, results in a significant reduction in defaults.

Mr. PURSELL. Some years ago when we had high default rates, the Secretary would impose penalties on a given school. Are you doing any of that now?

Mr. HAYNES. Yes, sir. We have, as you know, the Secretary's default reduction initiative. We are presently able to cut off student aid funds to institutions and lenders. If we have reliable information, the Secretary can do this to prevent the loss of Federal funds.

Mr. PURSELL. How many institutions have been cut off under this Secretary?

Mr. HAYNES. It was just implemented.

Mr. PURSELL. What is the number of institutions that have been cut off?

Mr. **Haynes**. This is just being implemented.

Mr. **Pursell**. There are no institutions under any penalties whatsoever?

Ms. **Dunn**. Under the Secretary's default initiative announced in June, any school that has a cohort borrower rate over 20 percent has to implement a default management plan. 1,530 institutions across this country fell into that category. Now every single one of those, 100 percent of those institutions has turned into the Department a default management plan.

We are looking through them. We have imposed 56 percent of those and we expect to have all 1,500 of those plans imposed by the beginning of May. That is with schools over 20 percent.

Mr. **Pursell**. How many schools are over?

Ms. **Dunn**. 1,530.

Mr. **Pursell**. Are any over 30 percent?

Ms. **Dunn**. I don't have those figures. It is a smaller number. They have to delay the certification of a loan so that the student does not get the funds for 30 days. This is important in reducing defaults because we find a large percentage of defaulters are students who drop out of a program during the first 30 days.

So requiring the high default schools to not allow that money into the student's hands immediately has a significant impact. The Secretary also requires the schools over 30 percent to provide a pro rata refund of student aid. Starting in 1991, schools that are over 60 percent will be subject to limitation, suspension or termination from the program.

Each successive year any school that does not lower its default rate by five percent until we get the maximum down to 40 percent will be subject to termination.

Mr. **Davidson**. The number of schools with default rates over 30 percent is 1,040. That would be for the prorated requirement. Over 40 percent is 456 schools and over 60 percent is 101 schools affected. That would involve the potential limited termination after January 1, 1991.

I would also like to add that in addition to these termination procedures that are going into effect, a small number of schools, too high a number of schools, are routinely brought under LS&T or had various penalties applied to them if they had not followed the regulations in implementing the student aid programs in general, or GSL in particular.

So a relatively small number of schools are terminated on a regular basis.

EMERGENCY ACTIONS

Ms. **Dunn**. The procedures Dr. Haynes was talking about, the emergency "stop funding" authority, was enacted by Congress in the reconciliation bill. As you know, that was signed into law December 19 of last year.

So we have been carefully monitoring it. As of yet, we have not taken that action. We do have a couple of schools that the I.G. is looking at. We are considering internally taking that action.

The reason it has not been utilized is because that action was taken very recently—at the end of the year.

BURDEN OF INSTITUTIONS

Mr. **Pursell**. I did not vote for reconciliation, and this is one of the reasons why: because of the whole default problem. It seems to me, the definition, as you outlined, of 100 schools in 60 percent default, there is something wrong with the system that generates such high numbers. Maybe there is not consultation with the loaning institutions and the universities.

Don't you sense it is a serious issue here that is not getting resolved in a more reasonable manner with respect to the student and university who are sitting out there taking these rules and regulations without a lot of opportunity to negotiate a more practical system to reduce the default rate?

It sounds like it is all coming from the top and we are not really getting a good representative voice here. Because for the number of universities and students out there in the country, these numbers, to me, appear to be out of balance.

Mr. **Haynes**. Mr. Congressman, if I may, the Secretary recognized that defaults were a serious problem. The initiatives and proposals that we have advanced are designed to put the horses back into the corral.

They have run away so far, we are trying to get a grip on it so money is available for future generations. As we look at the Higher Education Act, we are going to look carefully at how this is structured and what is the appropriate Federal role.

I think your concern about it coming from the top down will be addressed because we have an open process in reauthorization and have invited public comment.

ROLE OF COLLEGES IN POLICY DEVELOPMENT

Mr. **Pursell**. How extensively are the representatives of the universities and community colleges participating in the development of public policy with respect to this?

Mr. **Haynes**. Mr. Congressman, we held seven public hearings around the country last year. We invited comment from each sector of postsecondary education.

Mr. **Pursell**. How many public hearings?

Mr. **Haynes**. Seven. But we also received close to 2,000 responses to our request for public comment.

Mr. **Pursell**. In all due respect to public hearings, we have all been through that over 20 or so years of experience. It does not create a forum for good negotiating in terms of developing a public policy.

It is good for venting feelings and presenting points of view. But putting that together in terms of negotiating a Federal policy, that next step seems to be a void here.

Mr. **Haynes**. We have had meetings with the groups that represent the various sectors, community colleges, for example. We have listened carefully to their testimony.

Mr. **Pursell**. Can you say there have been open negotiations, give and take, with respect to developing the rules and regulations.

Mr. **Haynes**. As we look at reauthorization, certainly we will maintain an open process until we make our final proposals. We want to be sure all views are included in the discussion.

Mr. **Pursell**. Will you provide the committee with a list of universities that the department has met with, universities and colleges, those that you have met with in negotiating on developing rules and regulations.

Mr. **Haynes**. Yes, sir.

[The information follows:]

Higher Education Community Consultation

During the Department's development of student loan default reduction initiatives in 1988 and 1989, Department officials met with numerous college officials and their association representatives. The Secretary's general request for public comments on the loan default problem resulted in some 1,227 letters to the Department, mostly from officials of postsecondary institutions. In addition, the public comments on the GSL default regulation itself totalled about 3,600. The final regulation reflected many of the comments we received.

More recently, in soliciting input on the Higher Education Act's forthcoming reauthorization, Secretary Cavazos personally met with representatives from all of the higher education associations. The Department then held a series of seven public hearings on this subject last October and November, and the Secretary personally chaired the final hearing here in Washington. We received some 1,400 public comment letters, again mostly from officials of postsecondary institutions. Although we do not have complete records on all of the higher education officials we have met with on this subject, we can say that each of the 13 Department work groups on the Higher Education Act reauthorization has met informally with numerous higher education representatives, and the Secretary and Assistant Secretary have met with higher education groups on numerous occasions on this important subject.

HIGHER EDUCATION AS A PRIORITY

Mr. **Pursell**. The Chairman's question on the higher educational need of this country, and everybody seems to think this is a priority, this committee has always thought it was the national priority. I did not vote for the defense bill last year. Every time we put it on the floor, it opens up about 250 amendments, and everybody puts their own fighter plane in.

The governors have just met and there is a lot of concentration on elementary and secondary. There has not been too much discussion on post-secondary. Do you care to comment on that?

Mr. **Haynes**. Mr. Congressman, I think the goals were approved yesterday. There were two parts in the goals that address postsecondary. Postsecondary did get into the national goals, especially as they relate to increasing the number of minorities who finish postsecondary education.

Mr. **Pursell**. Were there any discussions at the White House or Department of Education with respect to funding undergrad and graduate programs in education?

Mr. **Haynes**. There were no numbers. As I read the goals issued, under the comment about restructuring as related to K through 12, it was with reference to the student aid programs assuring access.

Mr. **Pursell**. I was sort of concerned if there was heavy emphasis, and there should be, on elementary and secondary but almost no voice for postsecondary and higher education, public and private sector.

In all our discussions with the governors, it did seem that a strong voice was missing there in terms of goals and whatever peace dividend was available in the long or short term. There was not much substantive discussion on higher education.

Mr. **Haynes.** I can assure you that the Secretary expressed his view that postsecondary concerns be included in the statement. He said that repeatedly.

We feel the reauthorization of the Higher Education Act, the process we are in now, will cause the American public to pay more attention to postsecondary issues. We are talking about K through 12, all the way up through graduate school, that we need to focus our attention on. You are right, that the focus has been on K through 12, but to the extent that higher education takes the products from K through 12. There were some parts of the goal statement that included postsecondary issues.

I don't have the statement before me now, but it did recognize these needs. I expect we will get more attention as we get down to reauthorizations. That is one of the purposes of that process. I am trying to get out on the stump and make sure everybody knows about it.

SUPPLEMENTAL BUDGET REQUESTS

Mr. **Pursell.** Do you anticipate any supplementals this year? I know those are ball park estimates you are looking at.

Ms. **Christensen.** There is a general policy from OMB that there will be no supplementals. This was in agreement with Congress last year, that there would be no supplementals unless there was a dire emergency. We don't have any supplementals anticipated. We have taken into account shortfalls in both the large Guaranteed Student Loan program and the Pell Grant program, where we have the money in the 1991 budget to take care of those.

Mr. **Pursell.** Thank you.

REPORT ON STUDENT LOAN DEFAULTS

Mr. **Natcher.** Dr. Haynes, when will the committee receive the initial report on student loan defaults which we requested last year?

Mr. **Haynes.** Mr. Chairman, the report is in preparation and you should receive it shortly.

PROPRIETARY SCHOOL PARTICIPATION IN AID PROGRAMS

Mr. **Natcher.** What percentage of Pell grants and student loans are going to trade and proprietary schools in 1991, and how has this changed over the last decade?

Mr. **Haynes.** Mr. Chairman, the proportion of Pell Grants going to proprietary is leveling off. In 1987 it was 25 percent and it is staying relatively constant.

Mr. **Natcher.** What was it ten years ago,, Dr. Haynes?

Mr. **Haynes.** For proprietary schools ten years ago, it was ten percent.

Mr. **Natcher.** What is the current student loan default rate for proprietary schools?

Mr. **Dunn.** It is approximately 32 percent.

Mr. **Natcher.** How serious, in your personal opinion, is the problem with fraud and abuse of federal student aid programs in the proprietary sector? How do you feel about that, Dr. Haynes?

Mr. HAYNES. Mr. Chairman, let me answer you by saying that there are instances of fraud and abuse across postsecondary education, not just in proprietary schools, but also in community colleges, four-year institutions, as well as graduate and professional schools. It so happens that the media has focused a great deal of attention on the proprietary sector. There are problems here and there, but there are also problems in other sectors.

There are some excellent proprietary schools and some that are selling dreams. There are some excellent community colleges and some that are not performing. Our concern has to be with the student and the taxpayer's money regardless of the sector.

"INDEPENDENT STUDENT" DEFINITION

Mr. NATCHER. Over 60 percent of students receiving Pell grants qualify as independent students according to last year's testimony. In your opinion, are these students clearly independent as the definition of that tem would indicate?

Mr. HAYNES. The authorizing legislation specifies the conditions under which an individual is supposed to be self-supporting or financially independent of his parents. One of the criteria is age. The law defines a student at least 24 years old as independent. The average person believes that if you are 24 years old you must be independent from your parents. I hope my children follow that.

SAVINGS FROM LEGISLATIVE PROPOSALS

Mr. NATCHER. Your 1991 budget includes a series of savings proposals discussed in your general statement. Many require changes in the basic law. If the committee follows House rules and deletes all points of order language, how much money will need to be added to your request if we want to maintain a maximum grant of $2,300? How much will we have to add?

Mr. HAYNES. Mr. Chairman, failure to enact the measures we are proposing would require an additional $218,000,000 for the Pell Grant program for 1991, if we are to maintain the award maximum at $2,300.

Mr. NATCHER. Assuming we are unable to add additional funds, what maximum grant could our budget buy under existing basic Pell Grant law? What would the figure be?

Mr. HAYNES. If we do not get the $218,000,000, we would have to issue a payment schedule that reflected a linear reduction to individual Pell Grants. If we implement that, approximately 150,000 students with an average award of $273 would have their Pell Grants eliminated.

An additional 965,000 students would have their awards reduced by an average of $80.

Mr. DAVIDSON. Mr. Chairman, I would add, your question was about the maximum award. That would not be reduced. Under linear reduction, the lowest income students who qualified for the maximum are maintained at the $2,300 level. It is the award to the marginal or middle income-student that would be reduced or eliminated.

SUBMISSION OF REAUTHORIZATION PROPOSALS

Mr. Natcher. When do you plan to submit your proposals for a comprehensive rewrite of the Higher Education Act and what is the earliest that these proposals, if adopted, could be effected?

Mr. Haynes. If we maintain our present schedule, I think early next year we should have our reauthorization proposal before you.

SHORTFALLS IN PELL GRANT FUNDING

Mr. Natcher. The 1991 budget includes, as you know, a $473,000,000 increase for Pell Grants, most of which is earmarked for prior-year costs. What can you tell us about your most recent data on both the 1989 and 1990 shortfalls?

Mr. Haynes. Mr. Chairman, the Department's fiscal year 1990 appropriations act includes $131 million to help meet the anticipated shortfall for the '89–90 academic year. This shortfall reflects the CBO's estimate of 1989–90 Pell Grant programs costs, not the Department's.

We believe that an additional $265 million is needed to assure full Pell funding for the current '89–90 year. It is difficult to overstate the urgency of this request, since we have insufficient FY 89 funds to meet our program needs beyond the next few weeks.

Mr. Natcher. Mr. Kolb testified last week as to how difficult it is to estimate these costs. As Ms. Christensen remembers, however, your estimate shifted by almost $1,000,000,000 in less than a month. Isn't there something we can do to get some sort of warning when there is going to be a radical change in estimates?

Mr. Haynes. Our Pell estimation model was singled out yesterday as a very good model by GAO. We cannot account for all the variations in the student market, but our estimates have been, over the last several years, highly reliable.

Mr. Natcher. Ms. Christensen, how do you justify the $1,000,000,000 change?

Ms. Christensen. The big part of that problem last year was the large increase in the number of independent students applying for Pell Grants as compared to the previous year. We have taken that into account in our estimates this year. The model has been refined to reflect that large increase. Right now, we still feel very sure that our estimates are very close.

"ABILITY TO BENEFIT" PROPOSAL

Mr. Natcher. The appropriation request includes, as you know, bill language tightening up eligibility for so-called ability to benefit students. How would this provision be administered and also tell us what this provision will save? What will it save and how will it be administered?

Mr. Haynes. The ability-to-benefit proposal would require an independent third party to administer a test to determine whether or not a student entering a postsecondary institution would be able to benefit from the education. This independent third party would administer the test and determine the score.

We feel this would improve the completion rates of students who enter institutions on the basis of an ability to benefit. We feel that it would save approximately $113 million for 1991.

FUNDING FOR LESS-THAN-HALF-TIME STUDENTS

Mr. NATCHER. The bill language proposes to restore eligibility for less-than-half-time students. What is your current estimate of the amount of student aid which would likely go to these students in 1991? How do you expect this to grow in the future?

Mr. HAYNES. Mr. Chairman, we believe under the '91–92 budget proposal, approximately 169,000 less-than-half-time students will be Pell recipients, with awards averaging about $271.

Mr. NATCHER. Do you have data comparing the academic success rate of these less-than-half-time students with students attending full-time?

Mr. HAYNES. I don't think we have that kind of data. It requires longitudinal data over an extended period of time. We do know that part-time students in the 1980's are more likely to persist through the completion of a two-year degree or a four-year program than were part-time students in the 1970's. The increased participation of part-time students is a phenomena that is currently being experienced across higher education. We are having more part-time students appearing in traditional institutions. Many of these students do complete degree programs.

Mr. NATCHER. Dr. Haynes, our committee has no opposition to less-than-half-time students, but how can we justify expanding the Pell Grant program to a new group when we cannot even afford a cost-of-living increase for current students? How do we justify that, Dr. Haynes?

Mr. HAYNES. Mr. Chairman, our proposal to support less-than-half-time students is based on the fact that we recognize that there is a changing student market across all of postsecondary education. As I indicated, there are more less-than-half-time students showing up in the enrollment patterns of institutions. These students have needs and we have to ensure access.

We want to be sure we have covered the entire student profile, not just those who are two- or four-year oriented. We have to provide access to all deserving students.

NO-COST SUPPLEMENTAL REQUESTS

Mr. NATCHER. The President's budget includes two no-cost supplemental requests. What can you tell us about these issues? I believe these are language changes, is that correct? What about that.

Mr. DAVIDSON. One of them, of course, is for the Pell Grant program, for the authorization to use fiscal year 1990 appropriations for the '89–90 award year. It is critical to get this authority clarified in law so that we can use 1990 funds to meet the needs of '89–90. Otherwise, we will be turning away requests from schools as early as next month for additional funds for award year '89–90.

The other language supplemental that we are seeking has to do with the Title III endowment program. In that language request, we are seeking to establish a setaside for historically black colleges for endowments of $5 million within Part C of Title III. Out of the $17 million that has been appropriated for 1990, $5 million would be set aside for HBCUs. That HBCU setaside would increase to $15 million in 1991, out of a total appropriation of $33 million for Part C. If that language is not provided, we would of course spend the appropriated funds for all eligible Title III schools, including HBCUs and others.

Mr. NATCHER. There are no supplementals, as you know, moving at this time. There may not be one this year. Could the Pell Grant program problem be addressed by putting this language into the 1991 bill?

Mr. HAYNES. Mr. Natcher, we are going to run out of money in late April.

Mr. NATCHER. Have you talked to them downtown and explained that to them? They have a little provision, Mr. Haynes. Ms. Christensen may not have told you, but they have a provision in the budget the size of the Chicago telephone directory that provides that all supplementals in 1991 should come out of existing funds. You know about that Ms. Christensen. You didn't put that in there?

Ms. CHRISTENSEN. No, I did not. That is part of the agreement with OMB and the Congress.

Mr. NATCHER. I knew you would not put that in there. But it is in there. From out of existing funds?

Mr. HAYNES. Yes.

Mr. NATCHER. So if you don't have something to offset in the bill that might be grounds for a veto. It is in there.

So Dr. Haynes, as you go along, you might want to read that provision. You might want to read it.

Mr. Pursell.

DELAYED DISBURSEMENT OF AID

Mr. PURSELL. I have a short question. What is the delay? If a student registers now and this does apply to all programs, there is a 30 day waiting period.

Can you explain that? The intent was, as I understand it, that students drop out and then do not repay the loans.

Mr. HAYNES. Yes. You are talking about the delayed disbursement. As you know, we are trying to stop students from receiving the funds and not continuing with their program. This is one way to ensure that they are in fact in class.

Mr. PURSELL. So every student must comply with the 30 day waiting period?

Mr. HAYNES. Just the first-year students receiving loans.

Mr. PURSELL. They have to wait 30 days?

Mr. HAYNES. This is delayed disbursement before they receive the awards.

Mr. HAYNES. But the condition is that they stay in school to receive the dollars.

Mr. HAYNES. Yes sir.

Mr. DUNN. Remember, also, there are other types of student aid that are available, including institutional aid. So, often the student does not have problems the first 30 days. It prevents putting excess funds in student hands. Sometimes the tuition charges can be covered by Pell. So there is other aid available. It reduces the amount of excess aid in the student's hands that, if the student drops out, would be a possible default.

Mr. PURSELL. Was the institution in favor of that proposal?

Mr. **Dunn**. Yes and no. We heard in the reauthorization hearings that some institutions would like the ability to hold student loan funds and disburse them in multiple disbursements, perhaps monthly.

Some higher education schools would rather not have it.

Mr. **Davidson**. Many schools already do that.

Mr. **Pursell**. That is my understanding. Now, you have a uniform policy that applies to all?

Mr. **Davidson**. Yes. Even those doing the voluntary would like to see it so they could say it is a matter of law.

Mr. **Pursell**. Thank you.

AMNESTY FOR LOAN DEFAULTERS

Mr. **Natcher**. Will the department be prepared, Dr. Haynes, to implement the new loan amnesty program next month as required in last year's reconciliation bill?

Mr. **Haynes**. Mr. Chairman, the answer to that is yes. We announced the program on February 15. We have notified over 600,000 defaulters whose loans we hold. We have notified the regional offices. We have issued "dear colleague" letters to those responsible for the programs and, also to all schools, a press release encouraging them to publicize the program.

In addition to that, we are negotiating now within the Department the possibility of undertaking the following additional actions: public service announcements on major radio markets, advertisements in newspapers, and utilizing the Pell public inquiry contractor. As you know, the six-month program was authorized under Reconciliation. We feel that we are out there now with this and we hope that we can bring some money back into the Treasury this way.

Mr. **Natcher**. What is your current estimate, Dr. Haynes, of the amount of money which this amnesty program might generate and where will this money go?

Mr. **Haynes**. CBO has an estimate of about $33 million.

Mr. **Natcher**. This completes the budget request for student financial assistance and guaranteed student loans. Mr. Haynes, we want to thank you and your associates for appearing before our committee at this time.

[The following questions were submitted to be answered for the record:]

NEED FOR SUPPLEMENTAL LANGUAGE

Mr. Natcher: Many people believe that borrowing is already authorized under the Pell Grant laws. Would you insert in the record at this point a legal analysis of why you believe this supplemental is necessary.

Mr. Haynes: The Department is currently unable to provide this analysis. It will be provided to the committee as soon as possible.

IMPACT OF 1990 REDUCTION IN SSIG FUNDING

Mr. Natcher: Last year Congress approved a 20 percent reduction in the State scholarship programs. Have you been able to determine if the States will be able to replace these funds?

Mr. Haynes: Over the last 4 years, States have increased their expenditures for grants to needy students by an average of $96 million a year, regardless of the level of Federal support. The most recent large reduction in Federal SSIG funding was in fiscal year 1983. In that year, the Federal Government reduced its support by $14 million, but the States increased their expenditures for need-based grants to students by $93 million. We therefore expect that the States will more than compensate for the $13 million reduction in the SSIG appropriation in 1990.

EXTENSION OF AVAILABILITY OF PELL GRANT FUNDS

Mr. Natcher: The budget proposal appears to extend the availability of 1991 student aid funds through all of 1993. Why are you requesting an additional year of availability for these funds?

Mr. Haynes: The Department has requested appropriations bill language extending only the Pell Grant funding availability period to 3 fiscal years instead of 2. Although current appropriations language permits funds to remain available for only 2 fiscal years, actual Pell program operations and regulations under the authority of the authorizing language allow activity for each academic year program for at least 3 years. The availability of funds for obligation for 2 fiscal years under the current appropriations language is thus inconsistent with program legislation and operations, and creates significant administrative difficulties for the Department.

IMPLICATIONS OF NEW GRADUATION RATE INFORMATION

Mr. Natcher: Last week one of the college associations released a study which found that less than one out of six college students finishes a degree within four years. What can you tell us about this data and its implication for student aid policies?

Mr. Haynes: The report to which you refer was conducted by the National Association of Independent Colleges and Universities and utilized information collected by the Department during one of its major longitudinal studies, the High School and Beyond (HS&B) series. The Department has routinely made these data, as well as the results of other data collection efforts, available to all interested researchers.

The results of the NAICU analysis were simply misreported by the press. In fact, the percentage of high school graduates enrolling in 4-year colleges immediately after high school who earn a degree within four and one half years is 31 percent, not 15 percent as reported. Each year after that, more students graduate and the completion percentage rises.

It does appear that many students are taking longer to complete a degree and that many students never complete their degree at all. It is difficult to say what the implications are for student aid policies because aided and non-aided students display roughly the same level of persistence, after controlling for background variables.[1]

Student aid is available for part-time study and is not limited to four calendar years. For example, Pell Grants are limited to supporting students for 4 years or whatever combination of time it takes a student to complete a 4-year curriculum if he or she is attending school part-time. The GSL program limits the dollar amount a student may borrow for undergraduate studies and does not consider how long it may take a student to complete the curriculum. The effect of these provisions on intensity of enrollment and degree of persistence is unknown.

The Department will be reviewing the incentive effects of various design elements of the student aid programs in preparation for the development of the Administration's upcoming Higher Education Act reauthorization proposals.

PELL GRANT 10-YEAR TABLE

Mr. Natcher: Insert in the record at this point a 10-year table for the Pell Grant program showing:

a. total appropriations.
b. number of recipients.
c. maximum grant in current $'s.
d. maximum grant in constant 1991 $'s.
e. average grant in current $'s.
f. average grant in constant 1991 $'s.
g. percent of students qualifying as independent.
h. percent of students going to proprietary schools.

Cabrero, "Exploring the Effects of Student Aid On Attrition", Journal of Student Financial Aid, Vol. 16, No. 2 (Spring, 1986), pp. 28-40; or Tullisse A. Murdock, "Does Financial Aid Really Have an Effect on Student Retention?", Journal of Student Financial Aid, Vol. 19, No. 1 (Winter, 1989), pp. 4-16.

PELL GRANT PROGRAM--FY 1981-91

Mr. Haynes: Following is a table presenting the requested data covering the last 10 years of the Pell Grant program. Please note that the data from 1988 to 1991 are primarily estimates, while actual program data are presented for 1981 through 1987. Constant 1991 dollar calculations were prepared using the GNP deflator.

PELL GRANT 10-YEAR TABLE

	1981	1982	1983	1984	1985	1986	1987	1988 (est.)	1989 (est.)	1990 (est.)	1991 (est.)
Total Appropriation (in millions)											
Current Dollars	$2,604	$2,419	$2,419	$2,800	$3,682	$3,580	$4,187	$4,260*	$4,484*	$4,804*	$5,277*
Constant 1991 Dollars	$3,836	$3,322	$3,187	$3,554	$4,534	$4,293	$4,873	$4,811	$4,859	$5,006	$5,277

* Actual data

STUDENT LOAN DEFAULT RATES

Mr. Natcher: Insert a 10-year table showing the gross default rate for Perkins and Stafford loans.

Mr. Haynes: A gross default rate for Perkins loans cannot be calculated because the default information that is collected from institutions is designed to calculate the statutory definition of an institution's default rate. This statutory definition does not include defaulted loans that have been assigned to the Department, nor does it include the amount of gross defaults before collections. The result is a net default rate that fluctuates each year, based on the amount of loans assigned to the Department. This fulfills the statutory requirement for calculating an institution's default rate for purposes of the Perkins loan allocation formula, but unfortunately, it does not yield a gross default rate for the entire Perkins Loan program. The Department is currently developing a procedure for calculating the net default rate that would account for all defaults in the Perkins Loan program.

A 10-year table that displays the gross default rates for the Guaranteed Student Loan programs (Stafford, PLUS and SLS) is presented below:

Guaranteed Student Loans

Fiscal Year	Gross Default Rate	Net Default Rate
1980	12.5%	10.1%
1981	12.3	9.7
1982	11.2	8.7
1983	10.7	8.4
1984	10.9	8.4
1985	11.6	8.9
1986	12.5	9.4
1987	13.1	9.5
1988	13.6	9.6
1989	14.2	9.7

Mr. Natcher: Explain the difference between the gross and net default rate measures of loan problems.

Mr. Haynes: Both the gross and net default rates are computed using cumulative data. That is, the rates computed at the end of each fiscal year must be viewed as describing the manner in which the program has performed, relative to defaults, since its inception. In this sense, then, these are not annual rates that capture default and collection activity for a given fiscal year.

The denominator for both calculations is "matured paper." Matured paper is defined as the cumulative dollar amount of loans that have ever gone into repayment. In other words, it equals the total dollars disbursed to borrowers since the program began (in 1965) less the current amounts in the in-school and grace periods.

The numerator in the calculation of the gross default rate is the cumulative dollar amount of default claims paid to lenders. The numerator in the calculation of the net default rate is the cumulative dollar amount of default claims paid to lenders minus the amount of cumulative collections on defaulted loans.

SEQUESTER RULES FOR GUARANTEED STUDENT LOANS

Mr. Natcher: Include in the record at this point a short description of how the sequester process is applied to the Guaranteed Student Loan program.

Mr. Haynes: In the Guaranteed Student Loan (GSL) programs, the sequester process reduces the interest subsidies which the Federal Government provides to both borrowers and lenders. The Gramm-Rudman law stipulates sequester effects on both the "origination fee" which is paid by all Stafford borrowers and the "special allowance" which ensures a specific yield to lenders.

All Stafford borrowers pay an origination fee, equal to 5 percent of the loan amount, which offsets a portion of the high Federal interest subsidy. Under a sequester order, the origination fee is increased to 5.5 percent on all disbursements for any loan made on or after October 1. The lender must disclose the increased fee to the borrower following the procedures established by each guarantee agency for this purpose. For the purposes of a sequester, a loan is considered made on the date the loan proceeds are disbursed in whole or in part to the borrower. A multiply disbursed loan is considered made on the date of the first disbursement.

The sequester order amends the formula for computing the special allowance on Stafford, PLUS, SLS and Consolidation loans by reducing the percentage specified in section 438(b)(2)(A)(iii) of the Higher Education Act of 1965, as amended. The reduction is 0.4 percentage points, although the special allowance rate--now at 3.25 percent--cannot be reduced to less than 3 percent, for each of the first four quarterly special allowance payments made on such loans. That is, the first four special allowance payments on loans made on or after October 1 would be reduced by either 0.4 percentage points for loans made or purchased with tax-exempt funds, or 0.25 percentage points for all other loans. The savings resulting from changes to the origination fee and to the special allowance rate are calculated using a model developed by the Congressional Budget Office.

In this discussion, October 1 represents the effective date for the initial sequester order. If necessary, the President would issue a final sequester order on October 16 which would reflect any enacted legislation. If enacted legislation achieves the required deficit levels, the final sequester order would eliminate the sequester; if not, the final sequester order affecting the GSL programs would make the initial order permanent or would alter the initial order to achieve the required deficit-reduction level.

TRANSFER OF FUNDS BETWEEN SEOG AND WORK STUDY

Mr. Natcher: The basic law allows up to a 10 percent transfer of funds between Work-Study and SEOG grants. Do schools exercise this option?

Mr. Haynes: Yes; postsecondary institutions do exercise this option. The total amount transferred from Work-Study to the Supplemental Educational Opportunity Grant program (SEOG) for the 1987-88 award year was $27,182,860. For the same award year, the amount transferred from SEOG to Work-Study was $1,736,531.

IMPACT OF THE NEW MINIMUM WAGE ON THE WORK-STUDY PROGRAM

Mr. Natcher: What impact will there be on the College Work-Study program as a result of the increase in the minimum wage?

Mr. Haynes: We do not expect any appreciable impact on the average amount of Work-Study assistance awarded or on the number of recipients. We base this projection on our past experience with minimum wage increases, which did not appear to affect recipient numbers, and on the nature of the program. Since the Work-Study program is primarily a student aid program and not an employment program, the amount awarded to a student is based on the need of the student and not on a set number of work-hours. For an institution that increases its Work-Study wage rate because of the new minimum wage, the impact on its Work-Study students would most likely be that they would work fewer hours for the same amount of Work-Study assistance.

NEED FOR WORK-STUDY AID

Mr. Natcher: Has the emerging shortage of new entry level workers diminished the need for federally subsidized jobs on campus?

Mr. Haynes: Yes. Although specific data on near-campus part-time entry-level job vacancies are not available, the Nation's economy is strong and unemployment is low. As a result, job opportunities in the private sector are at a high level in many college towns and cities.

"INDEPENDENT STUDENT" DEFINITION

Mr. Natcher: What standard is used to determine if a student qualifies as "independent"?

Mr. Haynes: Currently, section 411F(12) of the Higher Education Act, as amended, defines the term "independent" to mean: (1) a student who is 24 years of age or older by December 31 of the award year; (2) is an orphan or ward of the court; (3) is a veteran of the Armed Forces of the United States; (4) is a graduate or professional student who declares that he or she will not be claimed as a dependent for income tax purposes by his or her parents (or guardian) for the first calendar year of the award year; (5) is a married individual who declares that he or she will not be claimed as a dependent for income tax purposes by his or her parents (or guardian) for the first calendar year of the award year;

(6) has legal dependents other than a spouse; (7) is a single undergraduate student with no dependents who was not claimed as a dependent by his or her parents (or guardian) for income tax purposes for the 2 calendar years preceding the award year, and demonstrates to the student financial aid administrator total self-sufficiency during the 2 calendar years preceding the award year in which the initial award will be granted by demonstrating annual total resources (including all sources of resources other than parents) of $4,000; or (8) is a student for whom a financial aid administrator makes a documented determination of independence by reason of other unusual circumstances.

DEFAULTS AT PROPRIETARY SCHOOLS

Mr. Obey: The Administration is asking for $2 billion for default claims for Stafford and PLUS/SLS loans. How much of that amount is projected to cover defaults in the proprietary sector?

Mr. Haynes: We estimate that approximately 55 percent of the total request, $1.1 billion, is needed to pay default claims from the proprietary sector.

DEPARTMENT'S DEFAULT REDUCTION INITIATIVE

Mr. Obey: Have institutions with high default rates (over 20%) submitted default management plans as required by Department of Education default reduction regulations, published June 5, 1989?

Mr. Haynes: All institutions required to submit a default management plan have done so. As of March 12, 1990, 75 percent of the school default management plans have been approved. We expect the remaining 25 percent to be approved by the end of March, when the fiscal year 1988 cohort default rates will be announced.

Mr. Obey: Does the Department's estimate of $2 billion for default costs assume savings based on the successful reduction of default costs through these default management plans?

Mr. Haynes: The impact of the default management plans will not be fully felt until 1993 when we calculate and disseminate the cohort default rate for fiscal year 1991. Since the default management plans submitted by schools based on their fiscal year 1987 cohort default rates were approved in the second quarter of fiscal year 1990, there will be only one-half year's experience this year. Therefore, fiscal year 1991 will be the first full year for which the required default management plans will be place. We will be calculating the fiscal year 1991 cohort default rates in the Spring of 1993. At that time we will be in a better position to assess the initial impacts of the default management plans and other default reduction initiatives.

Mr. Obey: If so, what would the cost of default claims be if these default management plans are not successful?

Mr. Haynes: As previously described, there were no default costs savings resulting from the implementation of institutional default management plans included in our fiscal year 1991 budget request. It is still too early to estimate these savings with an acceptable level of accuracy; more experience with implementation of these plans is needed.

Mr. Obey: Does the Department have adequate resources to monitor whether or not institutions actually implement these plans and whether these efforts actually bring down defaults?

Mr. Haynes: Yes. The Department has requested additional resources in fiscal year 1991 for the default reduction initiative. The Department will conduct over 1,300 program reviews in 1991, compared to 768 in 1989 and 1,200 in 1990. Many of these reviews will provide an opportunity for the Department to determine whether schools are implementing their default reduction plans.

To assist in this effort, guarantee agencies are required to conduct biennial program reviews of all schools not required to submit these plans to the Department for approval. At this time, this group of schools includes all schools with default rates that exceed 40 percent. These schools are expected to implement all of the default reduction requirements included in Appendix D of the Department's default reduction regulations which were published on June 5, 1989. Therefore, they are not required to submit their plans to the Secretary for approval.

STUDENT LOAN DEFAULTERS

Mr. Obey: What proportion of this $2 billion request does the Department estimate are attributable to borrowers who cannot repay due to unemployment or low incomes, rather than will not repay?

Mr. Haynes: Nationally representative data with respect to borrower-provided reasons for default are not available at this time. However, student loan debt burden does not appear to be a problem for most borrowers. Preliminary results of a Department study of 1985-86 graduates of 4-year programs indicate that the average student loan repayment burden was only 4 to 5 percent of income in the first year out of school, when income is the lowest.

We would also note that borrowers who cannot pay due to unemployment can avoid defaulting on their loan by requesting a deferment. Finally, recognizing that repayment burden may be a cause of default in some cases, the Department is proposing a statutory amendment requiring lenders to offer graduated repayment schedules--which will keep repayment burdens low during the first few, often lower-income, years after a borrower leaves school.

Mr. Obey: What data does the Department have on whether or not these borrowers have been the victims of misrepresentation by certain institutions regarding their chances of employment?

Mr. Haynes: Although nationally representative survey data are not available on this subject, the anecdotal evidence, including evidence from program reviews, Inspector General audits, State-level reviews and media reports, suggests that misrepresentation of this kind is a continuing problem.

Mr. Obey: If the data doesn't exist, what are the Administration's plans for determining reasons for default, and then figuring out corrective remedies?

Mr. Haynes: A significant component of the Department's 1987 National Postsecondary Student Aid Study (NPSAS) is the "Student Loan Recipient and Postsecondary Transcript Survey" which collected postsecondary school transcripts for Stafford Loan recipients. This component provides the means to analyze such basic policy issues as the relationship between a borrower's educational activities and ability to cope with indebtedness, and the patterns of (although not the reasons for) student loan repayment or default.

The Department is building upon this effort by conducting research to analyze and compile statistics on defaults to determine why defaults occur, and to project default rates based upon the impact of the new initiatives. Also, we are currently studying completion and retention issues, and we plan to evaluate the effectiveness of the default reduction initiative. Finally, we expect to publish and make available to institutions of postsecondary education a compilation of known effective default prevention techniques.

OVERALL IMPACT OF STUDENT AID PROPOSALS

Mr. Stokes: Given the erosion of the Pell Grant dollar, I am disappointed that the Department has not chosen to strengthen other sources of financial aid. The State Student Incentive Grants are once again slated for elimination. The Work-Study program is proposed for level funding, as is the Supplemental Educational Opportunity Grant Program. The Department claims that it is expanding educational opportunities for disadvantaged students, but I do not see that the financial needs of these students are being taken into consideration. Can you address this situation? Does the Department have a strategy for ensuring that disadvantaged students truly have access (financial) to higher education?

Mr. Haynes: There has not been any erosion in Pell Grant support for needy students. Between 1980 and 1989, for example, the level of Pell Grant aid for students rose by 36 percent, after adjustment for inflation. Also, the Administration's request for State Student Incentive Grants (SSIG), Supplemental Educational Opportunity Grants (SEOG) and the Work-Study program does not indicate a lack of support for the Title IV student aid programs. Our SSIG request reflects the fact that the program has accomplished its goal of encouraging States to develop need-based grant assistance programs. All States now support need-based aid programs, and State expenditures for grant aid have continued to expand in recent years as Federal funding has decreased or remained level. Total grant assistance to students under the SEOG program will increase by about 6 percent in fiscal year 1991 due to the statutorily mandated increase in the required institutional share of program expenses.

More importantly, though, the Department's fiscal year 1991 request for Pell Grants, the most need-targeted student aid program, represents nearly a 10 percent increase over the prior year appropriation. While it is true that a large part of the increase is earmarked for prior year funding deficiencies, it is, nevertheless, evidence of the Department's commitment to providing meaningful grant assistance to disadvantaged students. In other words, the Department's response to the fiscal year 1989 shortfall could have been to implement the statutory reduction formula and reduce awards to many students and completely eliminate the awards of others. Similarly, we could have proposed to reduce fiscal year 1990 awards in addition to the reduction required by the Gramm-Rudman sequester. In both cases, we chose not to. These actions, in addition to the increase requested specifically for fiscal year 1991--which would provide Pell Grants to 175,000 more students in 1991 than in 1990--demonstrate our resolve to continue to help assure access to postsecondary education for disadvantaged students.

ABILITY-TO-BENEFIT PROVISION

Mr. Stokes: As part of its effort to strengthen the Pell Grant program, the Department is proposing to modify the ability-to-benefit provisions of the Pell Grant. Under this proposal, any student admitted on the basis of ability-to-benefit would have to pass, prior to enrollment, a test developed and administered by an organization independent of the enrolling institution.

How do you envision this would work? Would there be one standardized test or is there the possibility that each institution would have its own test?

Mr. Haynes: The ability-to-benefit test would be required for all Title IV student aid programs, not just Pell Grants. It would be formulated and administered by an independent organization such as an academic testing service. The Department would determine that the testing organization is truly independent of the schools that rely on the test to establish their students' ability-to-benefit. The test would measure the student's ability to complete successfully the course of study for which the student has applied for admission. Requiring that a student pass a test in order to obtain Federal student financial assistance would significantly reduce the abuse of the current ability-to-benefit criteria by limiting a school's capacity to enroll inadequately prepared students in order to increase the Federal funds flowing to the school. More than one test could be developed for purposes of this provision in order to measure appropriately a student's ability to complete a particular type of educational program.

The appropriate accrediting agency would determine what constitutes a passing score on the test. However, if the Secretary determines that students who achieved passing scores on the test are not achieving substantially the same graduation, job placement, or State licensing examination pass rates as students attending the same schools who received their high school diplomas or GEDs prior to admission to such schools, the Secretary may:

- establish a different passing score;

- requires a different accrediting agency to establish the passing score on the test; or
- require that a different test be administered to students seeking admission at the institution.

Mr. Stokes: What percentage of students eligible for Pell Grants are admitted to institutions on an ability-to-benefit basis?

Mr. Haynes: Data from the Department's 1987 National Postsecondary Student Aid Survey indicate that 2.4 percent of all undergraduate students are admitted on an ability-to-benefit basis. The Department estimates that approximately 5 percent of all Pell Grant recipients are admitted on an ability-to-benefit basis.

According to a 1984 GAO study, approximately 28 percent of Pell Grant recipients at proprietary institutions are admitted on the basis of ability-to-benefit proposal would eliminate one half of the recipients admitted on an ability-to-benefit basis.

DEFAULTS AT PROPRIETARY SCHOOLS

Mr. Stokes: Have the proprietary schools taken steps to bring down the default rate? Is the Department working with them?

Mr. Haynes: We expect that all schools with high default rates will make the required effort to lower their rates. Otherwise, schools with default rates above 40 percent would be exposed to Department-initiated adverse actions (limitation, suspension and termination) beginning in fiscal year 1991.

Currently, all schools with default rates above 20 percent must carry out a default management plan, and schools with rates above 30 percent must delay the disbursement of loan proceeds for first-time borrowers for 30 days and implement a pro rata refund policy for all loan recipients at their schools.

The Department is working with all institutions to reduce default rates, and expects to publish a booklet of known effective default prevention techniques which can be used by institutions in their efforts to reduce defaults. We also plan to evaluate all aspects--administrative, regulatory, statutory--of the Secretary's Default Reduction Initiative.

The Department plans to enhance its consumer information activities as well. All schools offering undergraduate nonbaccalaureate vocational training are now required by regulation to disclose graduation, job placement and State licensing examination pass rates. The Department intends to compile these statistics in a guide that will be widely available to consumers. We believe this information will help students better evaluate their chances of success in different programs and institutions. Better consumer decisions regarding vocational training programs and increased pressure on schools to improve their performance in these critical areas will ultimately reduce the incidence of dropouts and defaults.

Mr. Stokes: Has the Department considered the possibility of establishing a separate financial aid program for students at proprietary schools? Would it be feasible or desirable to do so?

Mr. Haynes: On September 28, 1989, the Secretary announced public hearings and solicited written comments regarding the reauthorization of the Higher Education Act of 1965 (HEA). The Secretary specifically invited comment on the issue of proprietary school participation in the Title IV student assistance programs. The Administration's HEA reauthorization proposal will address this issue.

WORK-STUDY

Mr. Stokes: You expect to assist 876,000 students through the Work-Study program in FY 1990. The FY 1991 request would only support 871,000. Why would the Department propose to assist fewer students?

Mr. Haynes: We do estimate that our proposal to level-fund the Work-Study program would result in larger awards to 5,000 fewer students. However, given the limited funds available for increases in student aid, we feel that the increases should be targeted primarily toward the most need-based of the Department's student aid programs--the Pell Grant program. (We estimate that our 1991 student aid proposals will provide Pell Grants to 175,000 more students than in 1990.) We also know that the Nation's economy is strong and that unemployment is low. As a result, job opportunities in the private sector are at a high level.

DEPARTMENT'S REPORT ON DEFAULTS

Mr. Early: The committee requested in the 1990 House Report that the Department report on the history of the default problem and default loses under both Stafford and Perkins Loans to be submitted by January 1, 1990. What is the status of this report?

What changes does the report recommend to improve the default rate of either the Stafford or Perkins Loan programs? Is the Administration planning on implementing any of the report recommendations?

Mr. Haynes: The Department has almost completed this descriptive report and will be submitting it to the Congress shortly. The report will not include new policy recommendations.

"LESS-THAN-HALF-TIME" STUDENTS

Mr. Early: The Administration is requesting that eligibility for the Pell Grant program be reinstated for less-than-half-time students. If this request is adopted, how many less-than-half-time students will participate in Pell? What will be the cost of less than half time students for FY 1991 to the Pell Grant program?

Mr. Haynes: The Department estimates that the fiscal year 1991 request for Pell Grants would provide assistance totaling $46 million to 169,000 less-than-half-time students.

GRADUATION RATE OF LESS-THAN-HALF-TIME STUDENTS

Mr. Early: What is the graduation rate of less-than-half-time students for the past 10 years?

Mr. Haynes: Nationally representative data on graduation rates for less-than-half-time students do not exist. Such data would, necessarily, need to track students for an exceptionally long period of time. Furthermore, a student may be in less-than-half-time status for only one semester and attend full-time from then on, making it very difficult to make a summary statement about less-than-half-time attendance status.

However, the Department's 1987 National Postsecondary Student Aid Study (NPSAS) provides some insights into less-than-half-time students and their postsecondary education experience. Less-than-half-time students are usually in their first or second year of study, and intermittent enrollment is characteristic of these students. That is, they tend to "stopout" and then subsequently re-enroll (which distinguishes them from "dropouts"). Of those who leave school, three-fourths indicate their intention to return.

Other Department of Education longitudinal studies, including the National Longitudinal Study of 1972 (NLS-72) and High School and Beyond (HS&B), provide some information on the stopout phenomenon. Degree attainment for these students is improving. The graduation rate for stopout students in the HS&B cohort from 1980, six and one-half years after graduation, was 30.3 percent while the rate over a similar time period for students from the NLS-1972 study was 19.0 percent.

Mr. Early: How many years does it take for the average less-than-half-time student to graduate?

Mr. Haynes: The Department cannot confidently answer this question since nationally representative data on graduation rates for less-than-half-time students do not exist. It is especially difficult to describe the characteristics of the "average" less-than-half-time student since a student may be attending school full-time one semester, but taking only one course the next semester. If a student were to remain less-than-half-time and went to school year round including the summers, it would take about 10 years to complete a BA degree. But we doubt that many students are doing this. Less-than-half-time students are probably just starting their education or taking on a lighter workload one semester for personal reasons in between semesters of full-time or part-time course work.

Mr. Early: What is the average cost per class (including fees and tuition) for less-than-half-time students, and how does that compare to the cost of the average full time student?

Mr. Haynes: The Center for Education Statistics does not collect student tuition charge data by the attendance status of the student. We do know that undergraduate tuition and required fees averaged $1,160 and $6,820 for public and private institutions, respectively, during the 1987-88 academic year. The student's cost for less-than-half-time attendance would, of course, be less than half of these charges.

The Department's 1987 National Postsecondary Student Aid Study (NPSAS) collected student-level information regarding full-time and part-time enrollment, but not less-than-half-time enrollment. However, we do know from NPSAS that part-time students (enrolled in the fall of 1986) typically attended public community colleges, where costs are relatively low.

PROPOSED AMENDMENT REGARDING "SPECIAL CIRCUMSTANCES"

Mr. Early: The Administration is proposing language which would permit the Secretary to prescribe "special circumstances" under which the definition of adjusted annual family income may be modified. Could you give me examples of what would be "special circumstances"?

Mr. Haynes: "Special circumstances" include loss or reduction of income due to 1) a recent death, 2) disability, 3) loss of untaxed income or unemployment compensation, 4) extended unemployment (ten weeks or more), 5) a natural disaster, and 6) separation or divorce. These conditions are applicable to the parent(s) of a dependent student or to the independent student and his or her spouse.

INDEPENDENT STUDENTS

Mr. Early: Students who turn 24 are automatically considered to be independent for Federal financial purposes. How many students fell under this category during FY 1990?

Mr. Haynes: For 1987-88, the most recent year for which this information is available, 44 percent of all Pell Grant recipients were 24 years or older.

Mr. Early: Are there more students under this category now than was the case in previous years?

Mr. Haynes: During the 1986-87 award year, 42% of all Pell Grant recipients were 24 or older. This proportion grew to 46 percent in 1987-88. Additionally, the proportion of all independent students among Pell Grant recipients continues to rise. In fiscal year 1990, the Department estimates that nearly 61 percent of all Pell Grant recipients will be financially independent of their parent(s) using the definition of independence in current law. This ratio is estimated to increase to slightly higher than 62 percent in fiscal year 1991 under our request.

Mr. Early: If so, what reasons does the Administration believe contribute to this rise?

Mr. Haynes: The increasing proportion of independent students among Pell Grant recipients is likely due in part to a relative aging of the postsecondary student population. The reasons for this aging include individuals who delayed their entry into postsecondary education after high school, returned to college or vocational schools for further education and/or training for job advancement purposes, or simply now realize the opportunities made available through higher education.

In addition, the 1986 change in the statutory definition of student independence has clearly resulted in additional applicants being considered independent under a number of different independence criteria.

EXPENDITURES FOR INDEPENDENT STUDENTS

Mr. Early: What was the total FY 1989 expenditure for independent students?

Mr. Haynes: Fiscal year 1989 Pell Grant program expenditures for independent students are estimated to total $3.055 billion.

Mr. Early: What is the predicted FY 1990 and FY 1991 expenditure for independent students?

Mr. Haynes: We estimate that for fiscal years 1990 and 1991, expenditures for independent students in the Pell Grant program will be $3.172 billion and $3.320 billion, respectively.

Mr. Early: How much money does the Administration believe would be saved if students who turned 24 were not automatically considered independent, but independence was determined on a case-by-case basis?

Mr. Haynes: In 1986-87, 38 percent of all Pell recipients were independent and 24 years of age or older. The percent of all recipients age 24 or older was 42. For 1987-88, 43 percent of all Pell recipients were independent and 24 years of age or older, while 43 percent of all recipients were age 24 or older.

The dramatically increased percentage of independent recipients age 24 and above in 1987-88 reflects 1) changing the definition of an independent student to include all students age 24 or older, and 2) overall growth in the number of independent students applying for Pell Grants. It is impossible to separate the percentage of the increase attributable to program growth from the percentage attributable only to the changing definition.

Further, if the law were to revert to the definition of an independent student that was in effect for the 1986-87 award year (which included measures of independence for those 24 or older), some independent students would be eliminated from the program while others would remain eligible, but as dependent students. There are no data available to show which students would be eliminated and which would become dependent.

Taking all of these problems into consideration, the Department has developed a gross estimate of the savings related to eliminating automatic independence at the age of 24 years. For 1991-92, it is estimated that roughly $54 million would be saved if students were not automatically considered independent at age 24.

SUPPLEMENTAL EDUCATIONAL OPPORTUNITY GRANTS

Mr. Early: The Administration is proposing level funding for SEOG for FY 1991 at $458,650,000 due to the increase in institutional matching funds. If the FY 1991 appropriation was adjusted for inflation, and added to that were the institutional matching funds, how many students would be served? How does this number compare to the Administration proposal?

Mr. Haynes: If the 1991 appropriation for the Supplemental Educational Opportunity Grant program were to be increased over the 1990 level to adjust for inflation (which we are currently estimating at 4.1 percent), the new funding level would be $477,455,000. Counting the amount generated by the program's institutional matching requirement, this appropriation would result in $536,500,000 of aid for 725,000 students, or 29,000 more students than under the President's Budget Request.

INCOME CONTINGENT LOANS

Mr. Early: The Administration is requesting $15,000,000 for Income Contingent Loans, an increase of $4,137,000. Could you provide a list of the number of applicants (not institutions) participating in the Income Contingent Loan program for each fiscal year since the program began?

Does the Administration believe this number represents an interest by students to participate in this program?

Mr. Haynes: The following table displays the number of Income Contingent Loan (ICL) recipients and the total amount loaned for each fiscal year for which institutionally reported data are available:

Fiscal Year	Number	Amount
1987	2,148	$4,727,626
1988	2,135	4,296,455

About one-half of the students who were offered ICLs in fiscal year 1987, the first year of the program, accepted them. In fiscal year 1988, this percentage increased to more than 63 percent. This indicates an increasing level of student interest in ICLs. However, our proposal for expanding the ICL demonstration program is not based on the level of student demand at the 10 currently participating schools. It is based, instead, on the need to improve the value of the demonstration by involving a more broadly representative sample of schools and students. It is estimated that approximately 30 institutions would participate in the ICL program under the proposed expansion.

GEOGRAPHIC CONSIDERATIONS FOR PELL GRANT ELIGIBILITY

Mr. Dwyer: The number of students receiving Pell Grants in New Jersey has declined in recent years. Some have argued that this has occurred, in part, because of the dramatic increases in real estate prices in New Jersey. As you may know, legislation, H.R. 1169, has been introduced which would exempt the family residence from Pell Grant need analysis. Does the Department support this legislation? What efforts are currently made to take a State's economic demographic into account?

Mr. Haynes: The amount of a Pell Grant is determined on the basis of a national eligibility formula, which is specified in the authorizing legislation and does not consider economic conditions specific to a particular State. At this time, the Department would reserve judgment on legislation that seems to address the need analysis formula on a piecemeal basis, inasmuch as we intend to address this issue in a more comprehensive manner in the Administration's proposal for reauthorizing the Higher Education Act.

ENROLLMENT STATUS OF ADDITIONAL 1991-92 PELL GRANT RECIPIENTS

Mr. Dwyer: This year, the Administration is requesting $5.277 billion in Pell Grant funding, an increase of $473 million. Of this amount, $106 million is slated to cover a projected shortfall for fiscal year 1990 and a $265 million shortfall in fiscal year 1989. In reality, the fiscal year 1991 budget request would only receive a $102 million increase, an extremely small increase. The budget justification states that the Department believes the fiscal year 1991 request will serve an additional 175,000 recipients. Will this number only reflect an increase in the less-than-half-time students? If not, what percentage of the 175,000 students will be part- or full-time?

Mr. Haynes: Of the additional 175,000 students who would receive Pell Grants in fiscal year 1991, we estimate that 169,000 would be enrolled on a less-than-half-time basis. Of the remainder about 93 percent or 5,580 would be full-time students and about 420 would be less-than-full-time but at least half-time.

REDUCTION IN PERKINS LOANS

Mr. Dwyer: In the budget justification repeated references are made to supporting student assistance programs which serve the most needy. Despite the Administration's interest in helping lower income students, the Administration has once again called for the elimination of the Perkins Loan program, which provides long-term, low-interest loans to financially needy students. How can you justify this request?

Mr. Haynes: The Department has not called for the elimination of the Perkins Loan program; rather, we have not requested any additional Federal capital contribution. The enabling legislation for this program in 1958 envisioned a revolving fund composed of funds repayed by students who have received assistance under this program and of some minimal additional Federal capital contribution. Over the last 30 years, Federal capital contributions have totalled over $6 billion. The majority of institutions now participating in the Perkins Loan program have an adequate pool of money from these repayments to continue making new loans to qualified students. Approximately $744 million will be available for new loans in school year 1991-92 from institutional revolving funds, without additional Federal capital.

Perkins Loans provide heavy and unnecessary Federal interest subsidies to borrowers who pay no interest while in school and pay only a five percent interest rate during the repayment period. Under such costly and inefficient terms, the appropriation of additional Federal capital cannot be justified.

DECREASE IN GSL COSTS

Mr. Dwyer: As your budget justification states, "Guaranteed Student Loans play a major role in helping to provide access to and a measure of choice in postsecondary education." In addition, you have estimated that the $10.9 billion in GSLs made in 1989 represent 62% of Department of Education aid made to postsecondary students. Yet, the Department has requested a significant cut in these loan programs. It is my understanding that this decrease is based in part on unrealistic declines in our interest rates. Do you believe that these assumptions may cause the Department to request a supplemental?

Mr. Haynes: The primary reason for the reduced request is that Federal subsidy costs are expected to decrease due to a projected decline in 91-day Treasury bill rates. The average yield for 91-day Treasury bills is expected to be 7.4 percent in fiscal year 1990 and 5.7 percent in fiscal year 1991. Interest rate assumptions are provided as part of the general set of economic assumptions that is used by all Federal agencies to assure consistency in the Executive Branch's budget estimates.

When appropriations are insufficient to cover the costs of Guaranteed Student Loans for any reason, including an unanticipated rise in interest rates, the Department is nonetheless authorized to incur obligations through contract authority. Contract authority exists because of the entitlement nature of the subsidies related to these loans. In a shortfall situation, the Department has two options for securing the cash needed to liquidate unfunded obligations: (1) request a supplemental appropriation; or (2) request the additional cash in the subsequent fiscal year's budget. In the past, the Department has experienced such deficiencies, and at different times, each option has been employed. For FY 1990, the Administration has indicated that no supplemental appropriation would be requested for Guaranteed Student Loans.

DEFAULT REDUCTION EFFORTS

Mr. Dwyer: A number of legislative and regulatory changes have been made to the GSL program in order to curb the escalating default rate. When do you believe we shall see some improvements in this area? Do you believe that any of these changes may prove to be excessively onerous to smaller institutions, such as community colleges? Does the Department plan to request additional measures in this area during 1990?

Mr. Haynes: Under our regulatory and administrative initiatives and the legislative actions taken by Congress in the Omnibus Budget Reconciliation Act of 1989, net default costs are expected to decrease every year starting in 1991, and net cumulative default rates are expected to begin to decline in 1992. Yearly default costs are projected to stabilize and collection receipts are projected to increase.

The Department delayed implementation of the major sanctions of limitation, suspension or termination for an institution with a high default rate, to January 1, 1991, in order to allow the necessary time for the results of the default management efforts to be reflected in a school's cohort default rate. The recent media attention and congressional and Administration efforts may have already had a beneficial effect, given that the cohort default rate declined slightly from FY 1986 to FY 1987 (21 percent to 17 percent). However, for various technical reasons this trend is inconclusive. Other variables may have influenced the FY 1987 rate, such as improvement in the quality of data. The 1988 cohort default rate will be released shortly, and we hope to see the downward trend continue.

The Department does not believe that any of the default reduction measures are particularly onerous to smaller institutions, whether they are community colleges, proprietary or vocational schools, or small 4-year schools. Our goal is to improve student outcomes, and to reduce the incidence of defaults. The Department's 1991 budget request for GSL includes additional proposals to reduce defaults. These include: delaying disbursements to all first-time borrowers; prohibiting commissions for recruiting and admissions activities; requiring credit checks for borrowers age 21 or older; requiring lenders to offer borrowers graduated repayment options; allowing defaulter wage garnishment by guarantee agencies; and tightening the ability-to-benefit provisions.

MEASURES TO IMPROVE COLLECTIONS

Mr. Dwyer: In addition to measures taken to curb future defaults, the Department has been pursuing a variety of administrative measures to improve collections on already defaulted loans, including IRS offsets and private collection services. Have the administrative measures taken to date improved collections? What proposals can we expect in the future in this area?

Mr. Haynes: Yes, these measures have been extremely effective. Since 1986, IRS offsets have produced collections of over $600 million; since 1982, Federal Salary Offsets have produced collections of over $50 million; and since 1981, the use of private collection services has produced collections of over $300 million. In fact, the rate of collections has increased as well as the absolute amount. Even though the cumulative gross default rate has increased since 1980, the cumulative net rate (reflecting collections) is virtually unchanged.

The FY 1991 budget request also proposes several legislative changes that would aid future collection efforts. Requiring students to provide driver's license numbers and other skip tracing information would make it easier to locate defaulters. Requiring lenders to perform credit checks on applicants age 21 or older would prevent defaults by identifying potential borrowers with bad credit histories and requiring them to obtain a credit-worthy co-signer. Future collection-related proposals may be anticipated when the Administration's Higher Education Act (HEA) reauthorization legislation is submitted to Congress with the 1992 Budget.

INCOME CONTINGENT LOANS

Mr. Conte: Dr. Haynes, the Income Contingent Loan program, a five year demonstration project, was started in the 1987-88 award year with the requirement that it be reviewed every five years. What is the status of that review? What do you now know that makes you want an additional $5 million for the program before you do the study?

Mr. Haynes: An evaluation report on the performance of the ICL demonstration project, during its initial year of operation (1987-88), is being prepared and will be distributed in the near future. During the ICL program's initial year of operation, the 10 participating schools made approximately $4.8 million in loans to about 2,100 students. The average loan amount was approximately $2,300.

For the past several years, the Department has requested the expansion of program participation beyond the ten institutions currently authorized. Given the sectoral (mostly private four-year colleges, only one two-year college, and no proprietary schools) and geographic distributions (two institutions located west of the Mississippi) of the participating schools, we do not think that a representative cross-section of students is being examined. This small sample of ten institutions cannot demonstrate the value and feasibility of the program for the broader institutional community.

Mr. Conte: What percentage of students who receive Income Contingent Loans are classified as having "need"?

Mr. Haynes: All ICL borrowers must have "need" in that their loans may not exceed educational costs minus other estimated assistance. In fiscal year 1987, 1,486 of the 2,148 I.C.L. borrowers (about 70 percent) had demonstrated "need" for financial assistance when an "expected family contribution" based on family need analysis is also taken into account. The corresponding figures for fiscal year 1988 were 1,434 of 2,135 (about two-thirds). The statute does not require that borrowers undergo need analysis, as is required for Stafford or Perkins Loan eligibility. This is appropriate because the ICL program does not contain any Federal subsidies, while the Stafford and Perkins loan programs do. Note that the largely unsubsidized SLS and PLUS loan programs also do not require need-testing.

Mr. Conte: Calculations I've seen indicate that for a graduate owing $13,000 from the I.C.L. program, who takes an $11,000 per year job and receives annual pay increases of 4%, it would take 24 years to repay $48,000, almost four times the amount borrowed. Under the Stafford program, a truly needy student could repay $19,000 in 10 years. What evidence do you have that the I.C.L. program is good for students? Would we be better off putting the money in other programs?

Mr. Haynes: We do not believe so. Using your example, we can illustrate the advantages of the Income Contingent Loan (ICL) program for student borrowers.

The interest obligation for Stafford borrowers is 8 percent for the first four years and 10 percent for the subsequent six years of repayments. Thus, the average interest rate for a ten year repayment period is 9.2 percent. Since the monthly repayment obligation for a $19,000 loan at 9.2 percent interest for ten years is about $243, the total amount repaid would be a little more than $29,000. For an individual with an $11,000 annual income, $243 is more than one-fourth of monthly before-tax income.

The same student who borrows $13,000 under the ICL program would have a monthly payment equal to five percent of income (about $46) for the first year. The monthly payment obligation increases as income increases, but the average monthly repayment over the term of the loan would be only $167. This can be quite advantageous, especially in the initial years, when borrower income--and repayment amount--will likely be low. In a very real sense ICL borrowers are free from the prospect of large repayment amounts that are often associated with Stafford loans and SLS, allowing them the economic freedom to pursue careers in less renumerative areas of interest (e.g., public service).

Moreover, I would like to emphasize that the ICL program is not interest subsidized and usually offered by institutions as an alternative to commercial loans or to PLUS or SLS loans, rather than to the heavily subsidized Stafford Loan. The monthly repayment burden comparison between ICL and SLS is even more dramatic than the Stafford Loan comparison provided above.

FREE APPLICATIONS

Mr. Conte: I've seen reports that the budget includes $7 million to permit needy students to apply for student aid without an application fee. Where is that reflected in the budget?

Mr. Haynes: We have included an increase of $7 million in our Program Administration budget request to allow students to apply for Federal student aid without an application fee beginning in the 1991-92 school year. Our multiple data entry (MDE) contractors will provide the Federal assistance portion of their applications free to students.

Mr. Conte: I've also detected some distress that the Department does not plan to continue publishing its student aid guide. Can you tell us or even show us what guide it is that you're not publishing and what you propose in its place?

Mr. Haynes: While budget limitations necessitated the publication of a shorter Fact Sheet, the Department continues to provide the essential information about Federal student assistance to the public. We have provided the committee with a copy of the The Student Guide: Financial Aid from the U.S. Department of Education 1989/90 and a copy of the Federal Student Aid Fact Sheet 1990-91.

DEFAULT AMNESTY

Mr. Conte: Last year's Reconciliation bill called for a student loan default amnesty of 6 months starting March 1. Can you tell us what your plans are here? Does this amnesty have anticipated revenues associated with it?

Mr. Haynes: The Department intends to implement the student loan default amnesty program as effectively and efficiently as possible. Over the past several weeks we have initiated the following activities to publicize this program:

- announced the program via Departmental press release on February 15, 1990;
- notified all defaulters (more than 600,000) whose loans are held by the Department;
- sent letters to the National Council of Higher Education Loan Programs (NCHELP), each guarantee agency, and the Department's regional offices on February 16, 1990, containing the press release and encouraging each guarantor to contact defaulters whose paper they currently hold as the Department has done;
- issued a "Dear Colleague" letter to all guarantee agencies describing their responsibilities for the program;
- issued a "Dear Colleague" letter to all schools including the press release and encouraging them to publicize the program in their alumni publications; and
- suggested to Members of Congress that they include a description of the program in their constituent newsletters.

The following additional actions in this publicity campaign are also likely:

- broadcasting public service announcements in major radio markets nation-wide;
- advertising in newspapers in 10 major urban newspapers timed to coincide with the radio announcements;
- publishing columns in weekly "shopper" newspapers, again on the same schedule as the radio announcements; and
- utilizing the Department's Public Inquiry Contractor (PIC) to assist defaulters in locating their note holders.

The Department estimates that collections on defaulted loans during this 6-month period will amount to approximately $33 million more than would have been collected had this program not been implemented. However, it should be noted that this estimate assumes a reduction in revenues after fiscal year 1990 because many of these defaulters would probably have repaid their loans in later years. Because of timing and estimation problems, neither 1990 savings nor 1991 and beyond costs due to this program are reflected in GSL estimates contained in the 1991 Budget.

GUARANTEED STUDENT LOAN SHORTFALL

Mr. Conte: Both the Pell Grant and Stafford Loan programs have prior year obligations. You are requesting additional funds to offset the Pell Grant shortfall but not requesting any for the Stafford Loan program. Why are you treating the Stafford Loan program differently?

Mr. Haynes: The Department's 1991 appropriation request of $3.368 billion includes $260 million to cover GSL obligations incurred in 1990.

Mr. Conte: When interest rates climb, the Stafford Loan program is very vulnerable. How much would a one percent increase in interest rates during 1990 cause the student loan program to increase?

Mr. Haynes: In the Stafford Loan program, interest subsidies are paid on the outstanding principal balance of loans and the amount of the "special allowance" subsidy varies quarterly with the average 91-day Treasury bill rate. Our estimate of the outstanding principal balance of Stafford Loans at the end of fiscal year 1990 is $44.246 billion. A one percent increase in the average 91-day Treasury bill rate would add about $442 million to fiscal year 1990 Stafford program costs.

INTEREST RATE ASSUMPTIONS

Mr. Conte: What interest rate assumptions did you use to develop your budget proposal? How vulnerable is that program?

Mr. Haynes: The interest rate projections the Department uses for estimating Stafford Loan program costs are the 91-day Treasury bill rates included in the Administration's economic assumptions accompanying the President's Budget. These assumptions project average T-bill rates of 7.4 percent for fiscal year 1990 and 5.7 percent for fiscal year 1991. All Federal agencies use these assumptions to assure consistency in the Executive Branch's budget estimates.

Given the nature of the Stafford Loan interest subsidies, program costs are very susceptible to external economic developments. However, the 91-day T-bill rate has fallen considerably in the past year and there is no compelling reason to believe that it will not continue to fall in the near future.

Mr. Conte: What will you do if program costs have increased when the mid-session review is conducted?

Mr. Haynes: When appropriations are insufficient to cover the costs of Guaranteed Student Loans, the Department is nonetheless authorized to incur obligations through contract authority. Contract authority exists because of the entitlement nature of the subsidies related to these loans. The Department has two options for securing the cash needed to liquidate unfunded obligations: (1) request a supplemental appropriation; or (2) request the additional cash in the subsequent fiscal year's budget. In the past, the Department has experienced such deficiencies and, at different times, each option has been employed. For 1990, the Administration has indicated that no supplemental appropriation would be requested.

CONSUMER DISCLOSURE REQUIREMENTS

Mr. Conte: The consumer disclosure requirements in the June 1989 regulations frequently don't make sense for community colleges. Are you considering changing these requirements?

Mr. Haynes: The consumer disclosure requirements apply to all schools that offer undergraduate non-baccalaureate vocational training programs or that make specific claims regarding job placements of their graduates. These requirements apply only to specific training programs that are vocational in nature--not to all courses offered by community colleges.

The purpose of the regulations is to allow the student consumer to have comparable data on the success rates of the school's former students, in order to make an educated choice regarding the best program for that individual.

The Department is not contemplating a modification to these requirements. However, we have been working with schools to make the initial year of implementation as smooth as possible. We will continue to work with schools to refine the requirements and lessen the administrative burden.

WORK-STUDY--IMPACT OF NEW MINIMUM WAGE

Mr. Conte: Last fall Congress raised the minimum wage. How is this change reflected in your budget? Won't level funding for this program produce a net reduction in aid to students?

Mr. Haynes: We do not anticipate that the new minimum wage will have an appreciable impact on the average amount of Work-Study assistance awarded or on the number of recipients. We base this projection on our past experience with minimum wage increases, which did not appear to affect recipient numbers, and on the nature of the program. Since the Work-Study program is primarily a student aid program and not an employment program, the amount awarded to a student is based on the need of the student and not on a set number of work-hours. If an institution must increase its Work-Study wage rate because of the new minimum wage, the impact on its Work-Study students would most likely be that they would work fewer hours for the same amount of Work-Study assistance.

However, we are projecting a small increase in the average Work-Study award and a small reduction in the number of recipients in 1991 primarily to reflect the trends in recipients and average awards under this program over the last several years. Award amounts have increased slightly, with recipients declining slightly, during years in which the appropriation level has stayed the same or varied in small amounts.

INSTITUTIONAL CERTIFICATION

Mr. Conte: What are you doing to follow-up to the Inspector General's recommendation that the rules pertaining to certifying institutions for financial aid eligibility be more strictly enforced?

Mr. Haynes: We have carefully reviewed the report to which you refer, "Financial Analysis Certification Process Not Adequate to Protect Students and Government" (OIG, 9/89). This audit made 22 recommendations for strengthening the certification process. In our response to OIG, we concurred with 20 of these recommendations and have either implemented them or initiated action to implement them.

FINANCIAL AID PERSONNEL TRAINING

Mr. Pursell: Student loan defaults have ballooned in recent years, and I am pleased that the Administration is proposing measures in next year's budget to address this problem.

Loan defaults are nothing new -- like the general public, students have defaulted on loans in the past and a certain number of defaults will continue to occur no matter what measures are taken. Some are the result of economic misfortune on the part of the student who otherwise would have been able to repay, given his or her career preparation. In other cases, the borrower never had any intention of repaying.

I would venture to guess that most defaults are the result of a loan that should have never been granted in the first place -- that is, the student was not likely to be able to repay upon graduation.

What role does the Department perform to educate and train financial aid personnel in the schools, to help them provide necessary guidance to students and to successfully determine student eligibility? How has this role changed in recent years?

Mr. Haynes: The Office of Student Financial Assistance (OSFA) provides a wide variety of information and training-related services to financial aid personnel at postsecondary educational institutions. Several publications are updated and disseminated annually to all institutions; these include the Federal Student Financial Aid Handbook, a comprehensive reference manual covering all facets of aid administration, and the Pell Grant and Congressional Methodology Formula Books, which provide detailed explanations and worksheets for determining a student's Expected Family Contribution under each formula.

OSFA also sponsors national and region training workshops throughout the year, including week-long Basic Training sessions aimed at aid administrators who are just entering the field or whose schools are just beginning participation in the Federal programs. A workshop series on the delivery of Federal student aid (covering the application process through disbursement of funds) is held annually, and sessions targeted at specific topic areas are conducted on an as-needed basis. For aid personnel who cannot attend training, OSFA offers a set of written modules, A Self-Instructional Course in Student Financial Aid Administration, which can be completed on the job.

In addition, the Federal Student Aid Information Center operates a toll-free information line that is available to aid personnel, students, and parents. The Center can answer a full range of questions about aid administration, application procedures, and student eligibility. To educate students about the aid process and their responsibilities, OSFA publishes a Fact Sheet which is disseminated through postsecondary and high schools nationwide.

In recent years, as the aid program requirements have become more complex and new initiatives, such as the Default Reduction Initiative, have been implemented, the information and training-related services to aid personnel and students has expanded to meet changing needs.

CONSUMER INFORMATION DISCLOSURE REQUIREMENT

Mr. Pursell: I have received complaints from many educational institutions in my State regarding the Default Reduction Regulations which were implemented last year.

I am very pleased that the Department has taken measures to address loan defaults in areas where defaults have been traditionally very high. These regulations are necessary to address the problems we often find at the trade schools, where high default rates and low job placement rates are common.

Do you agree that liberal arts colleges and universities should also be covered by the new Default Reduction Regulations? For example, there are colleges in my district whose students are already employed when they start school, and who are pursuing a degree for promotion opportunities and NOT as a means for choosing a career. And yet, the college must provide job placement rate data to and on these students.

Do you believe the regulations are being effectively applied in these instances?

Mr. Haynes: The provisions require schools to collect and disseminate certain consumer disclosures (completion rates, job placement and pass rates of State examinations, if applicable) to prospective students who enroll in specific types of programs. These include: (1) undergraduate, nonbaccalaureate programs designed to prepare students for a particular vocational, trade or career field; or (2) all programs (not restricted to undergraduate, nonbaccalaureate programs) for which the school makes a claim with respect to the job placement experience of its students in order to attract students to enroll in the program. Thus, liberal arts colleges generally are required to make such consumer disclosures when the school makes job placement claims. The Department believes that the regulations are being applied effectively because the disclosure requirements are limited to programs that lead generally to employment in a particular trade or vocational field.

STATE STUDENT INCENTIVE GRANTS

Mr. Pursell: State Student Incentive Grants (SSIG's) is a rare Government investment providing a State match dollar-for-dollar. Given that this program is need-based and that the States match dollar-for-dollar, and in many cases provide a higher match, do you agree with the Administration's proposal to terminate Federal participation? Do you believe that the States, particularly the poorer ones, would have the incentive or the ability to continue the SSIG program?

Mr. Haynes: We believe that Federal support for the SSIG program should be discontinued because the program has fulfilled its purpose of encouraging States to expand their student assistance programs. As your question indicates, State expenditures for student aid have now increased beyond the required match to the point that the Federal share constitutes less than 4 percent of the total State grant effort. Furthermore, we do not believe that State legislatures would reduce current funding levels if Federal support were withdrawn. Over the last 4 years, States have increased their support for need-based student grants by an average of $96 million a year, regardless of the level of Federal support.

COLLEGE COSTS AND STUDENT AID

Mr. Pursell: During the last decade, as college costs have risen dramatically, how has Federal financial assistance fared as a percentage of total costs? Is the Federal Government providing the same level of assistance as it was 10 years ago?

Mr. Haynes: According to the Department's Digest of Education Statistics (1989), the average undergraduate cost (tuition, required fees, room and board) for the 1980-81 academic year at institutions of higher education was $3,101. The most recent comparable figure was $5,510 for the 1987-88 academic year. This represents a 77 percent increase.

During the same time period: (1) federally supported student assistance increased by 64 percent; (2) the Consumer Price Index (adjusted to correspond to the academic year, that is, July 1 to the following June 30) increased by 33 percent; and (3) per capita after-tax personal income increased by 50 percent. Clearly, the Federal Government continues to provide substantial financial assistance to economically disadvantaged students. While aid volume has not fully kept up with the growth in postsecondary costs, it has grown in real terms, increasing almost twice as fast as general inflation over this period.

DEPARTMENT'S DEFAULT REDUCTION RULES

Mr. Porter: The Department made a number of significant changes to the loan programs to reduce defaults. Please describe these changes briefly.

Mr. Haynes: Recent final default reduction regulations contain the following key elements:

- a graduated series of default rate "triggers" which mandate specified default-reduction measures for postsecondary institutions based on the seriousness of their default problem;
- consumer information requirements designed to inform students of their educational opportunities and their loan obligations in a more effective manner;
- a pro-rata refund policy for high default schools; and
- a provision requiring delayed disbursement of student loans to first-time borrowers, also for high default schools.

Administrative initiatives by the Department to improve its default prevention efforts include intensified enforcement of existing Guaranteed Student Loan program requirements, and strengthening loan collection efforts.

We are also seeking, additional legislative changes, such as risk-sharing by the guarantee agencies, requiring leaders to provide graduated repayment schedules, garnishment of defaulters' wages, delayed disbursement for all schools, prohibiting schools from employing commissioned sales representatives for recruiting and admissions activities, and requiring students to provide license numbers and other skip-tracing information.

Mr. Porter: In dollar terms, what effect will these changes have on defaults in FY 1990? In FY 1991?

Mr. Haynes: Any effect of the default reduction actions will likely not be apparent in fiscal year 1990 since most new regulatory and legislative initiatives will affect only new loan volume and therefore will reduce default costs in the future. While the Department expects some impact in fiscal years 1990 and 1991, we anticipate an even greater impact in the outyears.

However, delayed disbursement and pro-rata refund requirements for schools with default rates greater than 30 percent are examples of regulatory measures which should affect costs in both fiscal year 1990 and 1991. These provisions went into effect on October 1, 1989 and are expected to produce approximate savings of $6 million in 1990 and $16 million in 1991. Additionally, the 1989 Reconciliation Act provides legislative measures which should also reduce default costs, by reducing the SLS loan volume. For instance, "ability-to-benefit" students are not eligible for the SLS program until they obtain a GED or equivalent. In all, these legislative provisions are expected to produce an approximate savings of $5 million in 1990 and $94 million in 1991.

LIMITATION/SUSPENSION/TERMINATION ACTIVITIES

Mr. Porter: How many schools were subject to Limitation, Suspension and Termination (LS&T) activities in each of the last five years? Please break these numbers out by each of the three activities.

Mr. Haynes: The following table provides the information requested:

Summary of Administrative Actions

	FY 85	FY 86	FY 87	FY 88	FY 89
Terminations Initiated	14	13	14	27	30
Terminations Completed	3	5	1	10	16
Suspensions*	--	--	--	--	--
Limitations/Settlements	6	8	2	8	5
Emergency Actions	2	2	2	9	1

---

* Suspension authority is rarely used because it is effective for only 60 days, and yet requires the same administrative hearing process as a termination.

Mr. Porter: How many do you expect in FY 1990? In FY 1991?

Mr. Haynes: We estimate the following number of schools to be subject to limitation, suspension and termination actions in FY 1990 and FY 1991:

	FY 1990	FY 1991
Terminations	30	100*
Limitations	8	8
Suspensions	0	0
Emergency Actions	5	10

---

* Includes 70 schools with current default rates greater than 60 percent.

CONSUMER DISCLOSURE REQUIREMENTS

Mr. Porter: Please describe the reporting requirements of community colleges under Section 668.44 in the Title IV regulations under the Higher Education Act.

Mr. Haynes: All postsecondary institutions must comply with the same reporting requirements under section 668.44 if the schools offer specific types of programs. These include: (1) undergraduate, nonbaccalaureate programs designed to prepare students for a particular vocational, trade or career field; or (2) all programs (not restricted to undergraduate, nonbaccalaureate programs) for which the school makes a claim with respect to the job placement experience of its former students in order to attract students to enroll in the program. This provision applies to community colleges, private career schools and 4-year colleges and universities that offer the types of programs covered.

For such courses, institutions are required to report the number and percentage of those students entering the program who complete the program, who pass the State licensing exam in the field, and who are placed in a job in that field. Note that only specific programs within a community college or other institutions that are designed to lead to a trade are affected by these requirements.

Mr. Porter: For the purposes of Section 668.44, community, technical, and junior colleges are treated the same as proprietary schools. Why is this?

Mr. Haynes: The consumer disclosure requirements apply to all schools that offer non-baccalaureate vocational programs or that make specific claims regarding job placements of their graduates. Since many community, technical and junior colleges offer the same types of programs as proprietary schools, the regulations apply to each sector in an identical manner.

The purpose of the regulations is to allow the student consumer to have comparable data on the success rates of the school's former students, in order to make an educated choice regarding the best vocational program for that individual, regardless of the type of school that offers the program. This disclosure requirement will ultimately benefit many community, technical, and junior colleges with relatively low default rates. It is apparent that the market forces that should operate to reward effective programs and weed out the ineffective ones are not currently working as well as they should. The Department believes that more informed consumer choice will do much to correct that problem, but this can only be accomplished if consumers have access to the information required under this provision for all programs of this nature, good and bad.

DEFAULT RATE OF TWO-YEAR SCHOOLS

Mr. Porter: I understand that together, community, technical, and junior colleges represent only 6% of the total dollars in default under the GSL program. Senior colleges and proprietary schools represent the other 94%. Are these figures accurate?

Mr. Haynes: No; they are not correct. Approximately 13 percent of the total dollars in default is attributable to 2-year schools, both public and non-profit privates. These same institutions account for about 6 percent of the total loan volume.

Mr. Porter: If so, how do you justify treating community colleges and proprietary institutions as one group?

Mr. Haynes: It is correct to note that with respect to defaulted dollars, the amount attributable to community, technical and junior colleges is a rather small percentage (13 percent) of the total. It should also be noted that 2-year colleges account for 6 percent of the total loan volume, so the incidence of defaulters at these schools is higher than could be expected.

The Secretary believes that all schools with high default rates, irrespective of the dollar value in default, should and can help reduce defaults. The strategy of the default regulations is to ensure more successful educational outcomes and thereby reduce the incidence of defaults by students who do not benefit from their education.

Mr. Porter: Many community colleges, including those in my district and throughout Illinois, believe that the deadline for compliance with Section 668.44 is unrealistic. What is the deadline, and how strictly is the Department enforcing it?

Mr. Haynes: This requirement became effective December 1, 1989. However, we have been working with schools to make the initial year of implementation as smooth as possible. For example, in many cases schools will be able to use sample data, instead of providing complete information during the first year. We will continue to work with schools to refine the requirements and lessen the administrative burden.

COMMENTS TO DEFAULT REDUCTION REGULATIONS

Mr. Porter: What kind of response did you get when these regulations were proposed? How many comments did you receive? How were these comments incorporated in the final regulations?

Mr. Haynes: The Secretary extended the public comment period for the September 16, 1988 notice of proposed rulemaking (NPRM) through February 28, 1989. The Department's extensive review of the 3,600 comments received in response to this NPRM resulted in many policy changes when the final rule was published on June 5, 1989.

A number of commenters suggested that the disclosures required by section 668.44 of the NPRM should be reserved for institutions having "unacceptable" default rates. Many commenters agreed that the disclosures were needed but suggested they apply to all programs and all schools. Several commenters supported the Secretary's proposal to target these disclosures to vocational training programs, particularly given the aggressive marketing techniques employed by many trade and technical schools. Several other sections of the NPRM, including the default management plans and the provisions requiring entrance counseling for borrowers, generated far more negative comment than section 668.44.

The final regulations did not change the types of programs covered by 34 CFR 668.44 because the Secretary believes that adequate and accurate information on dropout, job placement and State licensing examination pass rates is of critical importance to prospective students in evaluating the quality of undergraduate, nonbaccalaureate programs, in particular vocational, trade or career courses which are marketed and purchased almost exclusively for their value in imparting employable vocational skills. However, other changes were made in section 668.44. For example, the final rule requires that a school disclose a job placement rate based on the information it has regarding the job placement of its students, including dropouts. This disclosure of job placement rates for all students, not just graduates, provides prospective students with more useful information regarding their likelihood of success in the program than would disclosure of job placement rates for graduates only.

The Secretary revised section 668.15 of the regulation to implement a multi-tiered approach that authorizes the initiation of a limitation, suspension or termination (LST) action beginning in 1991 if the school does not implement an approved default management plan, and the school's default rate exceeds 60 percent, or if that rate exceeds 40 percent and has not been reduced by an increment of at least 5 percentage points from the preceding year's rate. Furthermore, the Secretary revised the NPRM to evaluate schools with small numbers of borrowers (fewer than 30) entering repayment in a fiscal year by a 3-year average default rate rather than the annual rate.

CONSUMER DISCLOSURE REQUIREMENTS

Mr. Porter: The new reporting requirements place a heavy data collection burden on community colleges. Most colleges simply don't have the capability to meet them. How is the Department assisting community colleges with compliance?

Mr. Haynes: All schools that offer nonbaccalaureate vocational programs have the same reporting requirements. The Department has issued guidance to schools clarifying the consumer disclosure measures and suggesting ways in which the administrative burden can be reduced. For example, schools are permitted to use sampling techniques to estimate their completion and placement rates for periods of enrollment prior to December 1, 1991. Similarly, schools need only report on the completion rates of their full- and half-time students for the initial year of the disclosures.

Additionally, the Department is considering ways to refine the regulations to reduce the administrative burden.

DATA COLLECTION MODELS FOR COMMUNITY COLLEGES

Mr. Porter: Have you developed any data collection models which recognize the unique data comparison requirements of community colleges? If so, when will they be available to community colleges? If you have not developed data collection models, shouldn't community colleges be exempt from the reporting requirements until the Department is able to offer adequate technical assistance?

Mr. Haynes: The Department has not developed any data collection models which schools may use to calculate the rates mandated by section 668.44. A number of States have approached the Department with requests to use the data collection methods which are currently in place of the community colleges in their States, although these systems do not correspond exactly with the regulatory requirements. The Department examines requests such as these on a case-by-case basis.

The Department has published two "Dear Colleague" letters which provide guidance to schools regarding methods to use to comply with the default reduction regulations during the initial years. These letters also provide explicit technical assistance and permit greater flexibility with respect to regulatory compliance, such as the use of sampling techniques to calculate job placement rates and the inclusion of only full- and half-time students in computing their completion rates.

DISCRETION TO DENY A LOAN

Mr. Porter: Does an educational institution have the right to deny a loan to a student, even if it has evidence that the student will not, or cannot, repay the loan? Given the responsibilities for default reduction that are now incumbent on educational institutions, why shouldn't they be allowed such discretion?

Mr. Haynes: Under current law, schools do not have the authority to deny a student the right to borrow under the Guaranteed Student Loan (GSL) programs as long as the student meets all eligibility criteria. The school may, however, inform the lender of any information which may indicate the borrower's unwillingness to repay the loan. Furthermore, the Department encourages all schools (and requires schools with default rates above 30 percent) to delay certifying GSL applications of newly enrolled students, until the student has established an attendance record during the first month of enrollment. This practice provides enhanced control to schools by avoiding the certification of applications, and thus the making of loans, to those students who drop out after a short period of time.

The Department is currently formulating the Administration's proposal for reauthorizing the Higher Education Act. This issue, providing schools with greater discretion in the area of selecting recipients in the student loan programs, will be addressed at that time.

EQUITY OF THE NEED ANALYSIS SYSTEM

Mr. Porter: Last year I asked about new formulas for determining student eligibility for loans and grants. I believe, as you do, that financial assistance should be targeted to low-income students. However, the eligibility formulas measure family assets as well as income. Do you believe the current system is equitable?

Mr. Haynes: The student eligibility formulas specified in the authorizing legislation currently do target grant and loan assistance to low-income students. The statute also provides an alternative calculation, the simplified needs test, for the lowest-income (less than $15,000) applicants which omits non-liquid assets from the formulas. Thus, for the lowest-income applicants, income is the sole financial determinant of eligibility.

In general, the current system appears equitable. However, there may be ways that the system can be improved. The Department is in the process of developing the Administration's proposals for reauthorizing the Higher Education Act. The Administration's views regarding the student eligibility formulas will be offered at that time.

Mr. Porter: Don't you believe that a purely income-based determination would be more equitable?

Mr. Haynes: If a family has assets which are available to pay for their children's postsecondary education, then those assets should be considered, at least in part, in the determination of financial need. We know, from the population of Pell Grant applicants, that family incomes and assets are positively correlated. That is, the level of assets tends to increase as incomes increase. It appears, then, that a purely income-based eligibility determination might favor those with higher asset levels, that is, higher-income families. In other words, dropping asset assessment could mean skewing the distribution of aid away from the neediest students.

Mr. Porter: What changes would you recommend to the eligibility formula?

Mr. Haynes: The Department is reviewing the current eligibility formulas as part of its consideration and discussion of issues for reauthorizing the Higher Education Act. Any changes to those formulas would be contained as part of the Administration's legislative proposals for reauthorization.

STUDENT LOAN FRAUD

Mr. Porter: How does the Department address criminal fraud in the loan programs? How many prosecutions are currently underway? Shouldn't the Department be doing more in this area?

Mr. Haynes: All allegations of criminal fraud are referred to the Office of Inspector General for Investigations (OIGI), which is the office that investigates criminal activity for the Department. The OIGI investigates all referrals that it receives.

If an investigation reveals criminal activity, the OIGI refers the matter to the Department of Justice, or to State and local officials, as warranted, for prosecution. If the Justice Department accepts the case, once it obtains an indictment or a conviction, the Department may also suspend or debar the target, as warranted, pursuant to its suspension and debarment authority. During FY 1990, through February 1990, the Department has imposed 3 suspensions, proposed 31 debarments, and imposed 25 debarments based on criminal indictments and convictions.

The Department may also initiate proceedings to terminate the eligibility of institutions to participate in the student aid programs when those institutions have violated program requirements, including commission of fraud. Where criminal allegations are involved, the Department usually defers to the wishes of the U.S.

Attorneys handling the criminal cases concerning whether and when to initiate such termination proceedings.

For the period from April 1, 1989 through September 30, 1989, OIGI investigations resulted in 97 indictments/informations and 114 convictions against individual loan recipients, school owners or officials, lending institutions or officials. Virtually all of these cases involved student loan funds.

Finally, the Department does all it can, within the confines of relevant laws and regulations, to prosecute and control criminal fraud in the student loan and other student aid programs.

SCHOOLS WITH HIGH DEFAULT RATES

Mr. Porter: Individual schools may develop high default rates for any number of reasons. In many cases, a high default rate may result from the poor quality of the services provided by the school.

However, some schools, despite good completion and placement rates, may still experience high defaults. For instance, severe regional unemployment or high incidence of poverty among former students may contribute to a high default rate. How do the new regulations protect good schools from LS&T proceedings when high defaults result from circumstances beyond their control? Are these protections adequate? What changes would you suggest to protect the "good apples" from procedures that are designed to punish the "bad apples?"

Mr. Haynes: Any school which feels it is potentially subject to LS&T proceedings is encouraged to implement the default management plan described in Appendix D of the GSL default reduction regulations (34 CFR 668), published June 5, 1989. An institution with a default rate that exceeds the threshold rate for a limitation, suspension, or termination may avoid these sanctions by demonstrating that it has made a diligent effort to implement the measures included in this appendix.

STUDENT FINANCIAL ASSISTANCE

For carrying out subparts 1[,] and 2[, and 3] of part A and parts C[,] and D[, and E] of title IV of the Higher Education Act, as amended, [$6,044,097,000 together with an additional $131,000,000 which shall be available only for unfinanced costs in the 1989-90 award year Pell Grant program: Provided, that $286,000,000 shall only be available if such funds are necessary to pay a maximum grant of $2,300 during the 1990-91 program year] for award year 1991-92, 1/ $6,352,415,000, of which $5,277,000,000 for subpart 1 of part A shall remain available until September 30, 1993 and of which $1,075,415,000 for other programs shall be available until September 30, 1992: 2/ Provided, That up to $371,000,000 of the amount for subpart 1 of part A may be used for unfinanced costs in prior award year Pell grant programs: 3/ Provided further, That the maximum Pell grant that a student may receive shall be $2,300: 4/ Provided further, That notwithstanding section 479A of the Higher Education Act of 1965 (20 U.S.C. 1001 et seq.), student financial aid administrators shall be authorized, on the basic of adequate documentation, to make necessary adjustments to the cost of attendance and expected student or parent contribution (or both) and to use supplementary information about the financial status or personal circumstances of eligible applicants only for purposes of selecting recipients and determining the amount of awards under subpart 2 of part A, and parts B, C, and E of title IV of the Act [: Provided further, That notwithstanding section 411(b)(6)(B) of the Higher Education Act of 1965 as amended, no basic grant under subpart 1 of part A of title IV of that Act shall be awarded to any student who is attending on a less than half-time basis for a period of enrollment beginning on or after January 1, 1990, except that any such student who received a basic grant for a period of enrollment beginning before January 1, 1990, shall be eligible to receive a basic grant for a period of enrollment beginning on or after such date from funds appropriated for fiscal year 1989: Provided further, That notwithstanding section 411(b)(6)(B) of the Higher Education Act of 1965 as amended, no basic grant under subpart 1 of part A of title IV of that Act shall be awarded from funds appropriated for fiscal year 1990 to any student who is attending on a less than half-time basis:] 5/ : Provided further, That notwithstanding section 411F(1) of the Higher Education Act of 1965 as amended, the term "annual adjusted family income" shall, under special circumstances prescribed by the Secretary, mean the sum received in the first calendar year of the award year from the sources described in that section: 6/ Provided further, That any institution participating in any loan program authorized under part B of title IV of the Higher Education Act of 1965 as amended, with a default rate, as determined by the Secretary, that exceeds 30 per centum shall implement a pro rata refund policy that complies with minimum standards established by the Secretary in regulations, for any title IV aid recipient who withdraws before the earlier of six months from the beginning of the course of study for which the loan was received, or the date on which the student completes one-half of that course [and these provisos, except as specifically indicated, shall apply to all fiscal year 1990 funds, which shall remain available until September 30, 1991: Provided further, That the maximum Pell grant that a student may receive in the 1990-91 award year shall be $2,300.]: Provided further, That notwithstanding section 484 of the Higher Education Act of 1965 as amended, in order for a student to be eligible to receive grant, loan, or work assistance under title IV of that Act, the student shall be required to have received a high school diploma or its recognized equivalent, or, prior to enrollment in the course for which such assistance is sought, shall have secured a passing grade on a test of ability to complete that course which is developed, administered, and graded by one or more independent organizations identified by the Secretary. 7/ (Department of Education Appropriations Act, 1990; legislative action required.)

Explanation of Language Changes

1/ This language clarifies that all provisions, unless otherwise stated, apply to the 1991-92 award year.

2/ This provision would make Pell Grant funds available for three fiscal years. In authorizing language, activity for each award year program is allowed for three years. This change makes consistent the length of time that funds are available with the length of time that program activities are authorized for each award year.

3/ A total Pell Grant program shortfall of $371 million is anticipated for prior award years ($265 million in 1989-90 and $106 million in 1990-91). This provision would finance the projected shortfalls.

4/ This provision overrides the $3,100 maximum award authorized by the Higher Education Amendments of 1986.

5/ The 1990 appropriations language included a temporary programmatic change that eliminated eligibility for less-than-half-time students. The Department is not proposing to continue this change.

6/ The Administration recognizes that there is a need for limited aid officer authority to adjust student awards in cases of unusual family financial circumstances. This addition incorporates language that was included in the Transportation Department appropriations bill for 1990 (P.L. 101-164) and permits the Secretary to prescribe the special circumstances for redefining the term "annual adjusted family income" and adjusting the expected family contribution.

7/ This provision relating to a change in the "ability-to-benefit" criterion would tighten the student eligibility requirements in order to prevent institutions from enrolling inadequately prepared students.

Student Financial Assistance

Language Analysis

Language Provision	Explanation
...of which $5,277,000,000 for subpart 1 of part A shall remain available until September 30, 1993	This language makes Pell Grant funds available for three fiscal years, the same period of time that program activities are authorized for each award year.
Provided, That up to $371,000,000 of the amount for subpart 1 of Part A may be used for unfinanced costs in prior award year Pell grant programs:	This language specifies that $371 million of the 1991 appropriation can be used to cover unfinanced Pell Grant costs for previous award years. Current program cost estimates exceed appropriated amounts by $265 million for 1989 and $106 million for 1990.
Provided further, That the maximum Pell grant that a student may receive shall be $2,300:	This language overrides the $3,100 maximum Pell Grant award authorized for 1991-92 by the Higher Education Amendments of 1986 and establishes a $2,300 maximum award.
[: Provided further, That notwithstanding section 411(b)(6)(B) of the Higher Education Act of 1965 as amended, no basic grant under subpart 1 of part A of title IV of that Act shall be awarded to any student who is attending on a less than half-time basis for a period of enrollment beginning on or after January 1, 1990, except that any such student who received a basic grant for a period of enrollment beginning before January 1, 1990, shall be eligible to receive a basic grant for a period of enrollment beginning on or after such date from funds appropriated for fiscal year	This deletion would discontinue the 1990 appropriations language that eliminated Pell Grant eligibility for less-than-half-time students.

Student Financial Assistance

Language Analysis -- Continued

Language Provision	Explanation
1989: Provided further, That notwithstanding section 411(b)(6)(B) of the Higher Education Act of 1965 as amended, no basic grant under subpart 1 of part A of title IV of that Act shall be awarded from funds appropriated for fiscal year 1990 to any student who is attending on a less than half-time basis:]	
Provided further, That notwithstanding section 411F(1) of the Higher Education Act of 1965 as amended, the term "annual adjusted family income" shall, under special circumstances prescribed by the Secretary, mean the sum received in the first calendar year of the award year from the sources described in that section:	This language permits the Secretary to prescribe special circumstances under which the definition of annual adjusted family income may be modified.
: Provided further, That notwithstanding section 484 of the Higher Education Act of 1965 as amended, in order for a student to be eligible to receive grant, loan, or work assistance under title IV of that Act, the student shall be required to have earned a high school diploma or its recognized equivalent, or, prior to enrollment in the course for which such assistance is sought, shall have secured a passing grade on a test of ability to complete that course which is developed, administered, and graded by one or more independent organizations identified by the Secretary.	This language requires students to have a high school diploma, its recognized equivalent, or to pass a test of ability to complete the course work in order to establish eligibility for title IV grant, loan, or work assistance.

Student Financial Assistance

Amounts Available for Obligation

	1989	1990	1991
Appropriation:			
Annual..............	$5,814,320,000	$6,175,097,000 1/	$6,352,415,000 2/
Sequester...........	---	-84,331,000	---
Subtotal, adjusted appropriation.......	5,814,320,000	6,090,766,000	6,352,415,000
Recovery of prior year obligations....	95,331,000	---	---
Unobligated balance, start of year.......	1,812,479,000	1,521,487,000	1,510,922,000 3/
Unobligated balance, end of year.........	-1,521,487,000	-1,510,922,000 3/	-1,864,280,000 3/
Unobligated balance lapsing.............	-739,000	---	---
Total obligations...	6,199,905,000	6,101,331,000 3/	5,999,057,000

1/ Includes $131,000,000 to fund unfinanced Pell Grant costs in the 1989-90 award year.

2/ Includes $371,000,000 to fund unfinanced Pell Grant costs of $265,000,000 in the 1989-90 award year, and $106,000,000 in the 1990-91 award year.

3/ These amounts should be equivalent to the comparable amounts on lines 21.40, 24.40 and 71.00 of the Program and Financing schedule for the Student Financial Assistance programs in the 1991 Budget Appendix. However, they each differ by $4,308,000 due to erroneous double-counting in the Appendix of Pell Grant program administrative expenses of that amount in fiscal year 1990. The amounts included in the table above are correct.

Student Financial Assistance

Budget Authority by Activity

	1989 Appropriation	1990 Appropriation	1991 Request
1. Pell grants...............	$4,483,915,000	$4,804,478,000 1/	$5,277,000,000 2/
2. Supplemental educational opportunity grants.......	437,972,000	458,650,000	458,650,000
3. Work-study................	610,097,000	601,765,000	601,765,000
4. Income contingent loans...	4,940,000	9,863,000 3/	15,000,000
5. Perkins loans:			
(a) Federal capital contributions.......	183,507,000	135,129,000	—
(b) Loan cancellations...	22,000,000	21,700,000	—
Subtotal.........	205,507,000	156,829,000	—
6. State student incentive grants..................	71,889,000	59,181,000	—
Total..................	5,814,320,000	6,090,766,000	6,352,415,000

1/ Includes $131,000,000 to fund unfinanced Pell Grant costs in the 1989-90 award year.

2/ Includes $371,000,000 to fund unfinanced Pell Grant costs in the 1989-90 and 1990-91 award years.

3/ The 1990 appropriation will be used to support 2 academic years, 1989-90 and 1990-91. The 1989 appropriation was used to finance the 1988-89 award year in order to overcome a technical error in the 1988 appropriations language that omitted reference to Income Contingent Loans. These 1988 funds constitute the $4,308,000 used to finance Pell administrative costs referred to above.

Authorizing Legislation -- Continued

1/ Payments to institutions based on a $5 per Pell Grant recipient calculation reimburse institutions for a share of the cost of administering the Pell Grant program. Funds for these payments are reserved from the Pell Grant appropriation.

2/ Institutions are authorized to use up to 5 percent of the first $2,750,000 of expenditures for the Supplemental Educational Opportunity Grant, Work-Study and Perkins Loan programs for administrative expenses; in excess of this amount but less than $5,500,000, up to 4 percent; above $5,500,000, 3 percent.

3/ Institutions are authorized to use not more than 10 percent or $30,000 of their Work-Study allocations for the costs of establishing or expanding Job Location Centers.

4/ Institutions are authorized to use not more than 10 percent or $20,000 of their Work-Study allocations for the costs of establishing or expanding community service jobs.

5/ Institutions are authorized to use up to 10 percent of their expenditures under the Community Service-Learning for Low-Income Students program for administrative expenses.

6/ Institutions are authorized to use the student loan fund for administrative expenses, costs of litigation and other collection costs.

2/ Reflects the decision of the House to provide no 1987 allowance for Student Financial Assistance programs that had not yet been reauthorized.

3/ Includes $371,000,000 to fund unfinanced Pell Grant costs of $265,000,000 in the 1989-90 award year and $106,000,000 1990-91 award year.

Student Financial Assistance

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 Senate Report	
Student Aid System Vulnerabilities	
The Senate report states that the Committee expects the Secretary to give careful consideration to findings of the Inspector General on student aid system vulnerabilities related to program structure and administration, and to adjust management practice, promulgate regulations, and propose legislation where appropriate.	The Secretary continues to closely monitor and address vulnerabilities to fraud, waste, and program abuse in the Title IV student aid programs, brought to light through reports by the Inspector General as well as by other means. The Secretary is proposing several legislative changes to resolve these problems in this 1991 budget request, which are detailed in the Account Summary. Also, many of the recommendations made by the Inspector General to reduce loan defaults were recently incorporated into regulations as well as the administrative procedures that are part of the Secretary's Default Initiative. The Office of the Inspector General is also very much involved in the development of the Secretary's proposals for reauthorization of the Higher Education Act, to assure that these program vulnerabilities continue to be addressed at the legislative level.
Pell Grant Program Cost Estimates--Report Requested from GAO	
The Senate Committee instructs the Comptroller General to thoroughly review and verify the accuracy of the President's 1990 Pell Grant budget request and report to the Committee on the adequacy of the Secretary's Pell Grant cost monitoring program, as well as factors that drive program costs. The Comptroller General's report is due to the Committee in January 1990. (Also included in the 1990 Conference Report.)	Department of Education staff have met with a GAO representative on several occasions to respond to technical questions regarding the Pell Grant Cost Estimation Model and questions about budget formulation procedures. All requested documentation has been promptly provided to GAO. The Department is cooperating fully with this review of Pell Grant program cost estimation and cost monitoring procedures.

Student Financial Assistance

Significant Items in Congressional Appropriations Reports — Continued

Item	Action taken or to be taken
1990 Conference Report	
Pell Grant Cost Estimates -- Shortfall and Linear Reduction	
The Conference report states that any attempt to impose a linear reduction Pell Grant awards for 1989-90 is unacceptable and unnecessary given the bill language providing $131,000,000 for the shortfall and some savings achieved by eliminating less-than-half-time students whose periods of enrollment begin on or after January 1, 1990.	The Department of Education has no plans at this time to impose a linear reduction for the 1989-90 award year. We are continuing to monitor program data and have requested additional funding in FY 1991 budget request to meet current projections of the insufficiencies.
Pell Grant Cost Estimates — Cost Savings Mandated	
The Conference report includes legislative modifications which are intended to address the Pell funding problem by limiting student aid refund policies at postsecondary institutions with loan default rates in excess of 30 percent; and delaying eligibility of less-than-half-time students, with the exception of the 1989-90 award year students who received a Pell grant for the enrollment period beginning prior to January 1, 1990. Conferees state that these legislative changes, which raise jurisdictional concerns, are included since they address recognized problems which contributed to the funding difficulties of the Pell Grant program.	The Department has modified the student financial aid delivery system to incorporate the legislative modifications provided for in FY 1990 appropriations language. Additionally, a "Dear Colleague" letter has been distributed informing the financial aid community of new procedures to be used in implementing the cost-savings provisions.

1/ Includes $131,000,000 to fund unfinanced Pell Grant costs in the 1989-90 award year.

2/ Includes $371,000,000 to fund unfinanced Pell Grant costs in the 1989-90 and 1990-91 award years.

3/ The 1990 appropriation will be used to support 2 academic years, 1989-90 and 1990-91. The 1989 appropriation was used to finance the 1988-89 award year in order to overcome a technical error in the 1988 appropriations language that omitted reference to Income Contingent Loans.

The Department of Education administers seven Federal student aid programs. The oldest program, the Perkins Loan program (previously the National Defense/Direct Student Loan program), dates from the National Defense Education Act of 1958. The Work-Study program was enacted in 1964 as part of the Economic Opportunity Act. The Higher Education Act of 1965 incorporated these two programs and also authorized the Educational Opportunity Grant program (later renamed the Supplemental Educational Opportunity Grant program), for students of "exceptional financial need," and the Guaranteed Student Loan program. The Education Amendments of 1972 established the Basic Educational Opportunity Grant program (now the Pell Grant program) to provide basic postsecondary education access to students from low and lower-middle income families. The 1972 Act also created the State Student Incentive Grant program to emphasize the State role in need-based student financial aid and to increase the flow of State dollars to students. More recently, the Higher Education Amendments of 1986 authorized the Income Contingent Loan program to provide a flexible, manageable and long-term loan repayment option for borrowers. Additional legislation over the years has expanded the scope and complexity of these programs and broadened student and school borrower eligibility.

A commensurate growth in Federal appropriations, aid available to students, and number of students served has paralleled the expansion of the Department's programs. In fiscal year 1969, total appropriations for the student assistance programs were $532.9 million. Appropriations were approximately $4.7 billion in fiscal year 1979, and were more than $9.9 billion in fiscal year 1990. In academic year 1969-70, the Federal programs generated over $1.3 billion in aid (1,962,000 total awards to 1,402,000 students). Twenty years later in academic year 1989-90. over $18 billion in aid is being provided (9,988,000 awards to 5,981,000 students).

1991 Request

The 1991 budget request supports the goal of assuring access to postsecondary education, especially for the most needy students, and proposes program improvements to strengthen institutional accountability and to reduce error and program abuse. The request will help to assure postsecondary access by:

o Increasing the annual Pell Grant appropriation by $472.5 million;

o Increasing the Income Contingent Loan (ICL) appropriation by $10.1 million over the amount appropriated for academic year 1990-91; and

o Expanding student eligibility for the ICL program to include graduate students and removing the current 10-institution limit on institutional participation in the program.

In addition, although the Department is requesting no increase for the Supplemental Educational Opportunity Grant (SEOG) program, an increase in the institutional matching requirement mandated by the Higher Education Amendments of 1986 will generate increased SEOG aid to students.

Proposed legislation would reduce program abuse and strengthen institutional accountability through a variety of changes:

o The institutional authority to waive, on an individual basis, the expected family contribution and cost of education rules in the Pell Grant program would be permanently eliminated.

o The "ability-to-benefit" student eligibility provisions would be amended to require any student who is admitted without having a high school diploma or its recognized equivalent to pass a test administered by an independent organization.

- Participating postsecondary institutions would be prohibited from employing commissioned sales representatives for recruiting and admitting activities.

- Institutional eligibility provisions would be amended to require participating institutions with default rates in excess of 30 percent to implement, for Title IV recipients who withdraw near the beginning of their enrollment periods, a refund policy under which the institution would be required to refund a portion of the amount charged the student that is at least equal to the remaining portion of the enrollment period.

The 1991 budget request also addresses the problem of skyrocketing student loan default costs. To prevent defaults, lenders and institutions would be required to perform credit checks of all Title IV loan applicants ages 21 and over and to require those with poor credit histories to obtain a credit-worthy co-signer. To assist in loan collection, each Title IV borrower would be required to provide his or her driver's license number and, during the school exit interview, his or her expected address, the address of his or her next-of-kin, and the name and address of his or her expected employer after graduation.

Finally, inappropriate Federal contributions under the Perkins Loan and State Student Incentive Grant (SSIG) programs would be eliminated. No funds are requested for new Federal capital contributions to the highly subsidized Perkins Loan program, although institutions could continue to make loans using payments collected from borrowers. Also, no funds are requested for the SSIG program. This program has served its purpose to stimulate all States to offer need-based grants to their students.

The 1991 budget request, as detailed above, contains policy proposals which affect all the student financial assistance programs and policies which affect only specific programs. Those program policies affecting specific activities are described in more detail within the individual activity requests. The proposals affecting all student assistance programs are discussed below.

Modifying the abilty-to-benefit provision

Any student admitted on the basis of ability-to-benefit would have to pass, prior to enrollment, a test developed and administerd by an organization independent of the enrolling institution. The test would measure the student's ability to complete successfully the chosen course of study. The current ability-to-benefit requirements have been insufficient to prevent institutions from enrolling inadequately prepared students. This has resulted in dropouts, defaults, and waste of Federal student aid funds that have damaged the integrity of the student aid programs and victimized many disadvantaged students.

Student Financial Assistance

Account Summary -- Continued

Prohibiting schools from employing commissioned sales representatives for recruiting and admitting activities

In order to decrease the exploitation of unqualified students, this proposal would prohibit volunteers from conducting recruitment or admission activities. It would also prohibit the paying of commissions, bonuses, or other incentives, based solely on enrollment or student aid volume, to persons engaged in recruiting or admitting activities.

Requiring pro rata refunds

All institutions participating in Title IV programs would be required to implement fair and equitable refund policies and to inform, in writing, currently enrolled and prospective students of those policies. Institutions with default rates over 30 percent would be required to implement a "*pro rata* refund policy" for any recipient of Title IV aid who withdraws before completing half, or 6 months, of the program of study, whichever is earlier. Under this policy, the institution would be required to refund the portion of the amount charged the student for tuition, room and board, and all other fees that is equal to the portion of the enrollment period remaining at the time the student withdraws. This amendment would remove the incentive for schools to enroll students lacking a reasonable prospect for completing their programs of study and would minimize the problem of defaults by students who withdraw shortly after enrolling. It would therefore significantly reduce the waste of Federal funds caused by these enrollment practices.

Authorizing emergency actions when Federal funds are at risk

The Secretary's authority to take a short-term emergency action to suspend the participation of a school or lender when Federal funds are at risk would be clarified. This authority is essential to respond quickly to the misuse of Federal funds, but the Secretary's emergency action authority has been challenged successfully in recent litigation. Without emergency action authority, lenders and institutions against which the Secretary has initiated limitation, suspension, or termination proceedings would continue to receive Federal funds throughout the course of protracted legal proceedings; and they would therefore have little incentive to resolve the proceedings quickly.

Prohibiting certification of schools for program eligiblility after loss of accreditation

The ability of accrediting agencies to uphold their standards is compromised when a school that loses its acreditiation can easily switch to another agency to avoid making improvements in the quality of education offered by the school. To address this problem, legislation is proposed to prohibit school eligibility certification or recertification if, during the preceding 24 months, its accreditation has been withdrawn, revoked, or otherwise terminated for cause or if it has withdrawn from institutional accreditation voluntarily under a show cause or suspension order. A school could regain eligibility prior to the end of the 24-month period if its accreditation has been restored by the same accrediting agency that had previously accredited it.

---

1. Pell grants
(Higher Education Act, Title IV, Part A, Subpart 1)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,804,478,000	$5,277,000,000	+$472,522,000

Purpose and Method of Operation

The Pell Grant program is designed to provide need-based grants to low-income undergraduate students to promote access to postsecondary education and to lower the burden of its financing. Appropriations for the Pell Grant program are discretionary and not based on entitlements, with the level of funding dependent upon the availability of appropriations. Funds are available for obligation from October 1 of the fiscal year of appropriation through September 30 of the subsequent fiscal year. Funds appropriated in fiscal year 1991 would primarily support awards in academic year 1991-92.

A national need analysis formula, defined in the authorizing statute, determines financial eligibility for Pell Grants and is applied uniformly to all applicants. This national need analysis formula determines a student's "Expected Family Contribution" (EFC). The fundamental elements in this need analysis formula are the parent's and the student's income and assets, the family's household size and the number of family members attending postsecondary institutions. Separate formulas are used for dependent and independent students.

Upon notification of eligibility, students may use their grants at any one of approximately 8,000 participating postsecondary institutions. Students must be undergraduates and enrolled with the purpose of obtaining a degree or certificate at an eligible institution. Students must also have a high school diploma (or its equivalent) or a demonstrated ability-to-benefit from the training offered by the institution. Under certain circumstances, students attending school on a less-than-half-time basis and who had EFCs equal to zero were eligible for Pell Grants in 1989. This eligibility was eliminated in 1990, but authorizing language establishes eligibility for less-than-half-time students in 1991 if their EFCs are less than or equal to $200.

Purpose and Method of Operation — Continued

Pell Grants are disbursed to the student through the institution. The annual award amount may vary from a minimum of $200 up to a statutorily specified maximum of $3,100 for 1991. The 1990 appropriations language limited the 1990 maximum award to $2,300, the same as the 1989 maximum award.

The amount of the Pell Grant award is the lesser of (1) the maximum award minus the EFC, (2) the cost of attendance minus the EFC, or (3) 60 percent of the cost of attendance. The cost of attendance, determined by the institution, includes actual or average tuition and fee charges, a standard "living allowance" (which may not exceed $2,300), an allowance for child care expenses up to $1,000, and an allowance for handicapped expenses. Under the Higher Education Amendments of 1986, financial aid administrators at participating schools may adjust a student's Pell award by changing the cost of attendance or the EFC to reflect individual circumstances. This authority was eliminated for the 1989-90 and 1990-91 award years in appropriations act language.

Accomplishments

The Pell Grant program, formerly known as the Basic Educational Opportunity Grant program, was enacted as part of the 1972 Education Amendments to provide direct need-based, voucher-like grants to postsecondary students to be used at any eligible institution selected by the student.

In 1973, only freshmen were eligible for grants and, at a cost of $122 million, 185,000 awards averaging $269 were made. In each of the 3 subsequent years, eligibility was extended to an additional academic class. In 1976 when all undergraduate students were eligible, the maximum grant was $1,400 and approximately $1.5 billion was distributed to almost 2 million students. The Middle Income Student Assistance Act of 1978 liberalized the Pell Grant program, resulting in appropriations increases which, for the most part, supported relatively small awards to "middle income" students. In 1989, the maximum grant awarded under the Pell Grant program was $2,300 and approximately 3.3 million students participated in the program.

The following tables illustrate the growth of the Pell Grant program and the trends in distribution of program funds by institution type.

1990 Appropriation

Congress appropriated $4.804 billion for fiscal year 1990 of which $131 million is available only for unfinanced costs in the 1989-90 award year and $286 million is available only if needed to fund awards for the 1990-91 award year. This appropriation reflects a sequester of $66.5 million, pursuant to P.L. 99-177, and authorizes a $2,300 maximum award for 1990-91, the same as the maximum award for 1989-90.

The $66.5 million reduction in Pell Grant funding is estimated to result in the elimination of awards to 14,000 students (with awards averaging $200) and approximately 1.3 million students will receive awards reduced by an average of $50 to achieve sequester savings. A payment schedule implementing the statutory linear reduction formula for the 1990-91 award year will be published by February 1, 1990.

1991 Budget Proposal

In fiscal year 1991, $5.277 billion is requested for the Pell Grant program, an increase of $473 million over the fiscal year 1990 sequestration level. Of this amount, $106 million is requested to cover a projected shortfall in fiscal year 1990 and $265 million for a projected shortfall in 1989. The Department is proposing to maintain the Pell Grant maximum and minimum awards

---

1991 Budget Proposal — Continued

at the 1990-91 academic year levels of $2,300 and $200, respectively. While the award levels will remain constant, the number of recipients will grow by 175,000 and will include those less-than-half-time students with an EFC less than or equal to $200.

Additionally, the Department proposes to eliminate aid officer discretion to alter awards, to implement a pro rata refund policy at institutions with loan default rates in excess of 30 percent, and to require students admitted on the basis of an "ability-to-benefit" to pass an independently administered test (prior to enrollment) that measures the student's ability to complete the course. These three proposals are discussed below:

The current provision permitting an institution to adjust an individual student's expected family contribution or cost of attendance in "special circumstances" would be repealed. This provision in the law is potentially quite costly—aid administrators could adjust expected family contributions and/or costs of attendance to increase Pell awards. This provision prevents effective program monitoring and cost estimation and could provide the opportunity for significant program abuse at the institutional level. It also could limit the Secretary's capability to carry out linear award reduction as provided by the authorizing statute in the event of less than adequate appropriations. Secretarial authority to regulate adjustments in special circumstances would be sought.

The ability-to-benefit student eligibility criterion would be amended to require that any student admitted on the basis of ability to benefit must, prior to enrollment, pass a test developed, administered, and graded by an independent organization. The test would measure the student's ability to complete successfully the chosen course of study. The current ability-to-benefit requirements have been insufficient to prevent institutions from enrolling inadequately prepared students.

Institutional eligibility conditions would be amended to require that all institutions participating in a Title IV program implement a fair and equitable refund policy, and inform prospective students in writing of that policy. Institutions with default rates in excess of 30 percent would be required to implement a refund policy which yields a refund equal to or greater than the amount calculated under a pro rata calculation that would require the refund amount to be in proportion to the amount of the time remaining in the enrollment period at the time the

2. Supplemental educational opportunity grants
(Higher Education Act, Title IV, Part A, Subpart 2)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$458,650,000	$458,650,000	---

Purpose and Method of Operation

The purpose of the Supplemental Educational Opportunity Grant (SEOG) program is to provide, as a supplement to Pell Grants and other Federal, State, and institutional aid, need-based aid to eligible undergraduate students to reduce financial barriers to postsecondary education. Federal grants for this purpose are awarded to qualifying postsecondary institutions. Unlike the Pell Grant program, the SEOG program is administered by institutional financial aid administrators who have substantial flexibility in determining student awards. The maximum grant authorized per student for an academic year is $4,000; however, the average award is about $700.

Beginning in fiscal year 1989, institutions have been required to provide a match to receive SEOG program funding. The institutional share must be at least 5 percent in fiscal year 1989, 10 percent in fiscal year 1990 and 15 percent in fiscal year 1991. Thus, total SEOG assistance in 1991 will increase significantly even if there is no appropriation increase. The institutional share can be met using the institution's own resources, including tuition or fee waivers, State scholarships, and foundation or other charitable organization funds.

The SEOG program is a discretionary program in that the appropriations are discretionary, and not based on entitlements. Program funds are available for obligation from October 1 of the fiscal year of appropriation through September 30 of the subsequent fiscal year. Funds appropriated in fiscal year 1991 support awards in academic year 1991-92.

Institutional Participation: Approximately 4,600 postsecondary institutions receive funds under the SEOG program. As mandated by statute, funds are distributed to each institution first on the basis of the institution's fiscal year 1985 SEOG program allocation and then on the basis of the aggregate need of the eligible undergraduate students in attendance.

Student Participation: Students qualify for grants by demonstrating financial need under a statutory need analysis system. The institution awards grants

---

Purpose and Method of Operation -- Continued

first to students with exceptional need (those with the lowest expected family contributions) who also receive Pell Grants. If the institution has remaining SEOG funds after giving SEOG awards to all the Pell Grant recipients at that institution, the institution must award grants to remaining eligible students with the lowest expected family contributions. A reasonable proportion of SEOG awards must be made to students who are enrolled on a less-than-full-time basis if such students are counted by the institution in calculating and reporting its need for funds.

Administrative Provisions: An institution may transfer up to 10 percent of its annual SEOG program allotment to Work-Study or vice versa. Under a statutory formula, up to 5 percent of the SEOG program expenditures during an award year may be used by institutions to meet administrative costs associated with the SEOG, Work-Study, and Perkins Loan programs.

Accomplishments

The SEOG program, first known as the Educational Opportunity Grant program, was first authorized by the Higher Education Act of 1965. In fiscal year 1967, almost $47 million of Federal funds were awarded to over 123,000 students at 1,383 institutions. A decade later almost 500,000 students at 3,619 institutions received over $243 million. In academic year 1989-90, an estimated 633,000 students will receive SEOG grants totalling $442 million.

1991 Budget Proposal

The fiscal year 1991 budget request for the SEOG program is $458.6 million, which is the same as the fiscal year 1990 appropriation. However, the amount of aid available to students in academic year 1991-92 would increase by 6 percent due to the statutorily mandated increase in the institutional matching share. This program helps reduce financial barriers to postsecondary education for low-income students and thereby enhances their educational opportunity and supports the Administration's goal of providing these students access to a quality education.

The Administration also proposes legislative amendments to Title IV student eligibility and institutional eligibility provisions that would strengthen institutional accountability for the SEOG program and the other Title IV student aid programs. The "ability-to-benefit" student eligibility provision would be amended to require any student who is admitted without having a high school diploma or its recognized equivalent to pass a test administered by an independent organization. Second, institutional eligibility provisions would be amended to require participating institutions with default rates in excess of 30 percent to implement, for Title IV recipients who withdraw near the beginning of their enrollment periods, a refund policy under which the institution would be required to refund a portion of the amount charged the student that is at least equal to the remaining portion of the enrollment

3. Work-study
(Higher Education Act, Title IV, Part C)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$601,765,000	$601,765,000	---

Purpose and Method of Operation

The purpose of the Work-Study program is to assist needy undergraduate and graduate students in financing postsecondary education costs through part-time employment. Federal grants for this purpose are awarded to qualifying institutions that select needy students for employment. Students may be employed by the institution itself; by a Federal, State, or local public agency or private nonprofit organization; or by a private for-profit organization. The statutory institutional matching share of student earnings increased from 25 percent in fiscal year 1989 to 30 percent in fiscal year 1990 (or 50 percent in the case of private, for-profit organizations).

The Work-Study program is a discretionary program in that the appropriations are discretionary, and not based on entitlements. Program funds are available for obligation from October 1 of the fiscal year of appropriation through September 30 of the subsequent fiscal year. Funds appropriated in fiscal year 1991 support awards in academic year 1991-92.

Institutional Participation: Approximately 4,000 institutions participate in and receive funds under the Work-Study program. Funds are distributed to each institution first on the basis of the institution's 1985 Work-Study allocation and then on the basis of the aggregate need of eligible students in attendance.

Institutions have the discretion to use their allocations to support a variety of Work-Study activities in addition to the regular work-study employment for which the program was initially authorized. Up to 10 percent of an institution's allocation may be devoted to the employment of students under a Community Service-Learning program. Institutions also may operate a Job Location and Development program, designed to locate and develop regular work-study and community service jobs for eligible students. In addition, up to 25 percent of an institution's allocation may be used to provide jobs with private, for-profit organizations.

Purpose and Method of Operation -- Continued

Proprietary schools participating in the program are subject to several special requirements. First, students employed by these schools may be placed only in on-campus jobs. Second, their jobs must be related, as much as possible, to their educational objectives. Third, these students must be employed only in jobs furnishing student services. Finally, their jobs may not involve the solicitation of potential students to enroll in the school.

Student Participation: Students qualify for a Work-Study award by demonstrating financial need under a statutory need analysis system. There is no limit on a student's Work-Study earnings. However, hourly earnings must not be less than the Federal minimum wage. A reasonable proportion of Work-Study awards must be made to students who are enrolled on a less-than-full-time basis if such students are counted by the institution in calculating and reporting its need for funds.

Administrative Provisions: Under a statutory formula, up to 5 percent of the amount of an institution's Work-Study payments to students may be used by the institution to meet administrative costs associated with the SEOG, Work-Study, and Perkins Loan programs. Also, the institution may transfer up to 10 percent of its Work-Study allotments to the Supplemental Educational Opportunity Grant program or vice versa. Finally, the institution may retain up to 10 percent of its Work-Study allotment for the next fiscal year. If funds become available for reallotment because of under-utilization by institutions, 25 percent of these funds must be distributed to institutions for the purpose of developing Community Service-Learning programs.

The following components of the program have been added since its initial authorization in 1964:

- Community Service-Learning. An institution may use up to 10 percent of its Federal Work-Study allotment for the Community Service-Learning program, which provides community service jobs that serve low-income individuals. The institution is required to contribute only 10 percent of the amount it pays to students under this program. It may use more than 10 percent of its Federal allotments for payments to students employed in community-service jobs, but it must contribute to payments in excess of this 10-percent limit at the regular program matching rate of 30 percent.

- Private Sector Employment. An institution may use up to 25 percent of its Work-Study allotments to match dollar-for-dollar with non-Federal contributions earnings of students working for private, for-profit organizations. No Work-Study funds may be used to pay any employee who would otherwise be employed by the private organization, and the jobs must be relevant to the students' academic interests.

Purpose and Method of Operation — Continued

- Job Location and Development. An institution may use up to 10 percent of its Work-Study allotment (up to $30,000) for the administrative expenses associated with the establishment or expansion of a Job Location and Development (JLD) program, which locates and develops off-campus part-time jobs for currently enrolled students. An institution may use an additional 10 percent (up to $20,000) to pay for similar costs associated with locating and developing community service jobs for eligible students. The Federal share of the JLD program costs cannot exceed 80 percent.

Accomplishments

The Work-Study program was established as part of the Economic Opportunity Act of 1964. It was later transferred to the Higher Education Act (HEA) and became the work component of the Federal work, grant and loan effort to assist financially needy students in obtaining a postsecondary education. An initial appropriation of $56 million in fiscal year 1965 for Work-Study provided assistance to 115,000 students at 1,095 institutions. A decade later the appropriation had increased to $420 million and provided aid to 570,000 students at over 3,000 institutions. In the 1989-90 academic year, an estimated 835,000 students will earn $781 million under the Work-Study program.

1991 Budget Proposal

The fiscal year 1991 budget request for the Work-Study program is $601.8 million, which is the same as the fiscal year 1990 appropriation. Continued support for this program will help students to overcome financial barriers to postsecondary education. More specifically, since the Work-Study program encourages students to help themselves in financing their educational costs, funding for this program supports the self-help role of students while assisting them in meeting their financial responsibilities.

The Department also proposes legislative amendments to HEA, Title IV student eligibility and institutional eligibility provisions that would help reduce abuse of the Work-Study program and the other Title IV student aid programs. The "ability-to-benefit" student eligibility provision would be amended to require any student who is admitted without having a high school diploma or its recognized equivalent to pass a test administered by an independent organization. Second, participating institutions with Guaranteed Student Loan cohort default rates over 30 percent would be required to implement, for Title IV recipients who withdraw near the beginning of their enrollment periods, a refund policy under which the institution refunds a portion of the amount charged the students that is at least equal to the remaining portion of the enrollment period. Third, schools would be prohibited from employing commissioned sales representatives for recruiting and admitting activities. These proposals are described in more detail in the Account Summary.

4. Income contingent loans
(Higher Education Act, Title IV, Part D)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$9,863,000 1/	$15,000,000 2/	+$5,137,000

1/ The 1990 appropriation will be used to support two academic years, 1989-90 and 1990-91.

2/ Fiscal 1991 appropriations would support awards in academic year 1991-92.

Purpose and Method of Operation

Grants are made in this program to selected postsecondary institutions for the purpose of testing the feasibility of an unsubsidized, institutionally administered student loan program with income contingent repayments. Loans are made from institutional revolving funds composed of the Federal contribution which is matched by one institutional dollar for every nine Federal dollars. As the program matures, school-level collections on prior year student loans also will revolve back into institutional funds making available a renewable source of loans to new students. Under the Income Contingent Loan (ICL) program, loans are made to undergraduate students who repay these loans on the basis of aggregate loan debt and the borrower's income during the repayment period.

The ICL program allows lower repayment amounts in the early years of the repayment cycle, just after graduation, if borrower earnings are low. The maximum annual repayment obligation is held at 12 percent of the borrower's annual income. However, the institution may, with borrower consent, adjust the annual repayment obligation up to 15 percent to cover the interest, which accrues annually.

The ICL program is a discretionary program in that appropriations are not based on entitlements. The level of funding is dependent upon the availability of appropriations. It is expected that funds appropriated in fiscal year 1991 will support awards in academic year 1991-92. However, because of technical problems with the availability of past appropriations, ICL awards have not been made in the same cycle as other student aid awards.

Purpose and Method of Operation — Continued

For example, fiscal year 1989 funds supported awards in academic year 1988-89 instead of academic year 1989-90, as would normally be the case. In order to restablish a normal funding pattern, the 1990 appropriation of $10 million will be used to support two academic years, 1989-90 and 1990-91, which is consistent with congressional intent as expressed in committee reports. Fiscal year 1991 appropriations will support academic year 1991-92.

Institutional participation: Up to 10 institutions of higher education, which offer a program creditable to an undergraduate degree, may receive an award under this program. Institutions are selected for participation under a competitive process based in part on demonstrated administrative capability. The institutions' administrative capabilities are evaluated using the following criteria: (1) findings regarding the institution's prior program and audit reviews; (2) current Perkins Loan default rate; (3) the institution's proposed plan to operate an ICL program; and (4) the institution's geographic location, academic program level, institutional control and enrollment size. The size of the award is based on the aggregate student need at the institution.

Institutions are reponsible for loan servicing and collections. The Secretary provides a suggested model income contingent repayment schedule, but may approve alternative schedules developed by institutions.

For any year in which an institution receives an allocation of new Federal capital, it may draw from its ICL revolving fund an amount of up to 5 percent of its allocation as reimbursement for the administrative and collection costs of operating this program.

Student participation: In general, undergraduate students qualify for loans by demonstrating need under the same need analysis system as the other campus-based programs (Work-Study, Supplemental Educational Opportunity Grants, and the Perkins Loan program). After loans have been made available to needy students, institutions may use any remaining funds to make loans to students who do not demonstrate financial need.

The following conditions apply to Income Contingent Loans:

Loan limits. A student may borrow up to $2,500 each of the first two academic years of school, $3,500 for the third year, and $4,500 for each of two additional years with an overall aggregate limit of $17,500.

Interest rate. Interest on the loan accrues at the 91-day Treasury bill rate plus 3 percentage points and accrues during all in-school, grace and deferment periods. Interest continues to accrue until the loan is paid in full.

Purpose and Method of Operation — Continued

Deferments. A "financial hardship" deferment (up to three years) may be provided to a borrower who is unable to make scheduled repayments due to extraordinary circumstances.

Repayment terms. The borrower may, but is not required to, make repayments while in school, but interest continues to accrue.

- A borrower's annual repayment obligation is set according to the total amount borrowed as well as the borrower's income for the preceding year.
- Income is documented through borrower submission of Federal income tax forms.
- Repayment amounts range from zero (for those borrowers with no income) to as much as 15 percent of income.
- The repayment period for the ICL is divided into two parts. Initially, during the first 2 years, the repayment amount is computed by the institution on 5 percent of the borrower's adjusted gross income. Subsequently, the repayment amount is computed on between 7 and 12 percent of income, the total loan amount, and year of repayment (the percentage of income payable increases as the repayment period progresses).
- Interest continues to accrue during any period of non-payment.
- Repayment period extends until the loan is repaid.
- Cancellation of the loan obligation occurs only upon the borrower's total disability or death.

Accomplishments

The ICL demonstration project was established to test the feasibility of an unsubsidized, institutionally administered student loan program with income contingent repayment. Since 1987, Federal capital has been appropriated for investment in the revolving funds at 10 pilot institutions. An evaluation report on the performance of the ICL demonstration project, during the initial year of operation (1987-88), is being prepared and will be distributed in the near future. During the ICL program's initial year of operation, the 10 participating institutions made available about $4.8 million in loans to almost 2,100 students. The average loan amount was approximately $2,300. The 1990 appropriation of $9.863 million (which will support awards during two academic years, 1989-90 and 1990-91), combined with school matching contributions, will make about $10.521 million available in award years 1989-90 and 1990-91.

Accomplishments -- Continued

This level of funding will provide for a total of approximately 4,800 loans, averaging $2,200 in each of two academic years. A list of the institutions participating in the ICL demonstration projects is provided below under Impact Data.

1991 Budget Proposal

For the Income Contingent Loan (ICL) program, $15 million is requested for academic year 1991-92, $5.137 million more than the 1990 appropriation for academic years 1989-90 and 1990-91. When supplemented with institutional matching contributions, a total of almost $16.1 million will be available for the 1990-91 program year, providing ICL loans averaging $2,500 to approximately 6,400 students. It is estimated that about 30 institutions would participate in the ICL program under the proposed expansion. The funds would continue to be awarded to institutions that have the capability to implement and demonstrate an income contingent loan program. This request continues and expands the Pilot Demonstration Project initiated in 1987.

The 1991 budget request for the Income Contingent Loan program proposes policies which support the goals of: (1) reducing financial barriers for needy students to postsecondary education; (2) promoting decent education for needy students by providing an additional source of financial aid; and (3) strengthening institutional accountability and reducing error and program abuse.

The Department proposes several legislative changes in order to expand institutional and student participation and to make certain features of the program more accessible to the education community and to student borrowers. The proposals are highlighted below.

The expansion of the ICL Pilot Demonstration Project is intended to accomplish the following objectives.

- Assist additional students by making the loan repayment burden related to an unsubsidized loan manageable, flexible, and as long-term as needed to accommodate individual income circumstances after graduation.

- Improve program cost-efficiency by providing more student loans on an unsubsidized basis (which ultimately would enable the fund to revolve indefinitely at no net cost to the Federal Government in providing loan capital).

- Facilitate higher education access for postsecondary students under an institutionally administered student aid program.

- Provide for broader institutional representation for proposes of evaluating the feasibility of this approach for all types of participating institutions.

Student Financial Assistance

4. Income contingent loans

1991 Budget Proposal -- Continued

The expansion of the ICL program would be accomplished by removing the numerical limit on institutional participation and extending ICL participation to consortia. Also, graduate students would be authorized to borrow under the ICL program. These proposals are discussed in detail below:

- Remove the Numerical Limitation on ICL participation. The limit on institutional participation in the ICL program of 10 institutions would be removed. The purpose of the ICL pilot—to demonstrate the feasibility of a loan program which features repayment amounts based on the borrower's income after graduation--cannot be fully accomplished without examining a representative cross section of educational institutions. A small sample of 10 institutions cannot adequately demonstrate the value and feasibility of the program for the broader institutional community whose characteristics differ widely depending on: (1) geographic location; (2) school size; (3) type and control; and (4) characteristics and income levels of participating students.

- Extend ICLs to Graduate Students. Graduate students would be eligible to receive ICLs, with increased borrowing limits of $10,000 per year, up to a $50,000 cumulative limit for graduate and undergraduate borrowing. These students, in particular, need added financial aid opportunities since: (1) some aid programs are limited to undergraduates; (2) some graduate students have already reached cumulative loan limits under current loan programs; and (3) higher graduate school costs require additional sources of aid. In addition, graduate students may be more receptive to borrowing under the terms and conditions of the ICL program, since they are more likely to have more confidence in their future earning potentials.

- Open ICL Participation to Consortia. Consortia of institutions would be allowed to participate in the ICL program. This would encourage the participation of smaller institutions which might be reluctant to administer the new ICL program on their own.

For 1991, the Department continues to propose reforms designed to limit defaults and reduce the incidence of program abuse across all Federal student aid programs. The primary features of the proposals affecting ICLs are noted below.

Student Financial Assistance

4. Income contingent loans

1991 Budget Proposal — Continued

- Require Institutions to Perform Credit Checks. To prevent defaults by individuals who have already demonstrated a lack of credit-worthiness, institutions would be required to check the credit histories of all ICL borrowers ages 21 and over. Borrowers with poor credit histories would be required to obtain a credit-worthy co-signer. ICL access would not be affected for the vast majority of students who have little or no credit history.

- Require Students to Provide Driver's License Numbers and Other Skip-Tracing Information. In order to facilitate collection of ICLs, borrowers would be required to provide their driver's license number to institutions when they apply for a loan. Also, during the school's exit interview, students would have to provide the address of their next-of-kin, expected address after graduation and the name and address of their expected employer.

- Strengthening Institutional Accountability. The Department also proposes legislative amendments to Title IV student eligibility and institutional eligibility provisions that would strengthen institutional accountability for the Income Contingent Loan program and the other Title IV student aid programs. The ability-to-benefit student eligibility provision would be amended to require any student who is admitted without having a high school diploma, or its recognized equivalent, to pass a test administered by an independent organization. Second, institutional eligibility provisions would be amended to require participating institutions with default rates in excess of 30 percent to implement, for Title IV recipients who withdraw near the beginning of their enrollment periods, a refund policy under which the institution would be required to refund a portion of the amount charged the student. This refund amount must be at least equal to the charges associated with the remaining portion of the enrollment period. Finally, schools would be prohibited from employing commissioned sales representatives for recruiting and admitting activities. These proposals are described in more detail in the Account Summary.

5. Perkins loans: a. Federal capital contributions b. Loan cancellations (Higher Education Act, Title IV, Part E)

1991 Authorization: Indefinite

Budget Authority:

	1990 Appropriation	1991 Request	Increase or Decrease
Federal capital contributions......	$135,129,000	---	-$135,129,000
Loan cancellations...	21,700,000	---	-21,700,000
Total..............	156,829,000	---	-156,829,000

Purpose and Method of Operation

The Perkins Loan program provides long-term, low-interest loans on a discretionary basis to financially needy students to assist them with higher education costs. Loans are made from institutional revolving funds composed of: (1) newly appropriated Federal capital contributions (FCC), which are matched by schools at a rate of one institutional dollar for every nine Federal dollars; (2) school-level collections on prior year student loans; and (3) Federal payments for loan cancellations granted in exchange for specified types of teaching, military or public service.

The Perkins Loan program is a discretionary program in that, with the exception of Loan cancellations, the appropriations are discretionary and not based on entitlements. The level of funding is dependent upon the availability of appropriations. Funds appropriated in fiscal year 1991 support awards in academic year 1991-92.

FCC and institutional participation: Approximately 3,300 postsecondary institutions receive a FCC under the Perkins Loan program. As mandated by the statute, funds are distributed to institutions, first, on the basis of the institution's 1985 Perkins Loan allocation and, second, on the basis of the aggregate need of eligible students in attendance. In addition, adjustments are made in consideration of an institution's loan collection/default performance. A school does not qualify for a new FCC if its default rate exceeds 20 percent; and a school's FCC allocation is reduced at default rates above 7.5 percent but no more than 20 percent. If a school's default rate does not exceed 7.5 percent, it qualifies for the full allocation amount determined by other factors. As of June 30, 1988, there were 3,290 institutions participating in the Perkins Loan program. Of that number, 1,623 had default rates less than 7.5 percent; 1,138 schools had default rates greater than 7.5 percent, but less than 20 percent; and 529 institutions had default rates exceeding 20 percent.

Purpose and Method of Operation -- Continued

Schools are fully responsible for loan making, servicing and collections, including the establishment of repayment schedules and borrower counseling. For any year in which an institution receives an allocation of new Federal capital, it may draw from its Perkins Loan revolving fund an amount equal to 5 percent of the amount of new loan awards for that year as reimbursement for the administrative costs of operating this and other Federal student aid programs.

Student participation: Students qualify for loans by demonstrating financial need under a statutory need analysis system. Eligible borrowers are needy undergraduate, graduate, and professional students who are enrolled at an eligible postsecondary institution. However, a student already in default on a Perkins or Title IV Loan, or who owes a refund on any other previously received Federal aid, may not borrow under the program.

The cumulative maximum amounts a student can borrow under the Perkins Loan program are: (1) $4,500 for a student who has not completed 2 academic years of study; (2) $9,000 for a student who has completed 2 academic years of study; and (3) $18,000 for study toward a professional or graduate degree. For the combination of undergraduate and graduate study, the aggregate borrowing limit is $18,000. There are no annual loan limits.

During in-school, grace, and deferment periods, the borrower makes no principal repayments and interest is neither paid nor accrues. During the repayment period (which normally may not exceed 10 years), interest is charged at a 5 percent annual rate.

Loan cancellations: In order to encourage student borrowers under this program to enter certain fields of public interest, and to provide some additional compensation for the performance of military service in "areas of hostilities," legislative provision has been made for cancelling all or a portion of the repayment obligation on Perkins Loans in exchange for specified periods of such service. Annual loan cancellation rates are statutory. The amount that can be cancelled varies from 50 percent to 100 percent depending upon the type of public service performed and when the loan was made. The amount that can be cancelled in any one year also varies from 12.5 percent to 30 percent. Perkins loans may be cancelled for the following types of service: (1) teaching of the handicapped; (2) teaching in schools with high concentrations of low-income students; (3) working as a professional Head Start member; or (4) participating in the Peace Corps or VISTA. For loans made prior to June 30, 1972, schools are reimbursed for the amount of the institutional matching contribution on cancelled loans (which reimbursement may or may not—at institutional discretion—be reinvested in the school's revolving loan fund). For loans made after June 30, 1972, the reimbursement is for 100 percent of the principal amount of the loan cancelled (all of which is then required to be reinvested in the school's loan fund). These payments are entitlements.

Student Financial Assistance

5. Perkins loans: a. Federal capital contributions b. Loan cancellations

---

Accomplishments

For nearly 31 years, Federal capital has been appropriated each year for investment in this program's revolving student loan funds administered by postsecondary institutions. The initial appropriation in 1959 of $31 million assisted about 25,000 students with loans averaging $383. The 1990 appropriation of $135.129 million combined with school matching contributions, school-level collections on prior year student loans, and Federal payments for loan cancellations will make about $860 million available in school year 1990-91 for approximately 804,000 loans averaging $1,070.

Loan defaults have plagued the program since its inception. Some progress in reducing defaults has been made over the past few years. This has been due to improved school-level default collections effort (inspired in part by statutory and regulatory penalties), and the assignment of problem defaults to the Department to allow for Federal collections measures.

1991 Budget Proposal

No funds are requested in fiscal year 1991 for Federal capital contributions under the Perkins Loan program. This policy continues the budget policy set forth in the President's FY 1990 budget request. Perkins Loans provide heavy and unnecessary Federal interest subsidies. Collections from prior loans are expected to be sufficient to provide new loans to students without any additional Federal capital contributions. Approximately $744 million from payments made on loans in repayment will be available for new loans in school year 1990-91 from institutional revolving funds. It is estimated that without recourse to a 1991 direct capital appropriation, this level of loan repayments would provide loans averaging $1,070 to approximately 695,000 students.

Increased efforts will continue to be made to reduce outstanding defaults in the Perkins Loan program by strengthening institutional collection requirements and by intensifying Federal collection activities. Enhanced institutional collection efforts should result in more funds becoming available for new loans.

Because Perkins Loan Cancellation reimbursement requests from institutions have been lower than expected -- about $15 million annually -- the current funding level is temporarily in excess of projected needs. Therefore no new funds are being requested for cancellation payments in fiscal year 1991. This funding request does not represent a policy shift but merely reflects a temporary funding surplus. The Department anticipates that approximately $10 million will be required for cancellation payments in fiscal year 1992 and about $15 million annually thereafter.

1991 Budget Proposal -- Continued

In addition, the Department is proposing several reforms designed to reduce defaults. These proposals include:

- Requiring credit checks. To prevent defaults by individuals who have already demonstrated a lack of credit-worthiness, institutions would be required to check the credit histories of all Perkins Loan borrowers ages 21 and over. Borrowers with poor credit histories would be required to obtain a credit-worthy co-signer. Perkins Loan access would not be affected for the vast majority of students who have little or no credit history.

- Requiring students to provide driver's license numbers and other skip-tracing information. In order to facilitate collection of Perkins Loans, borrowers would be required to provide their driver's license numbers to institutions when they apply for a loan. Also, during the school's exit interview, students would have to provide the address of their next-of-kin, expected address after graduation and the name and address of their expected employer.

- Strengthening institutional accountability. The Department also proposes legislative amendments to Title IV student eligibility and institutional eligibility provisions that would strengthen institutional accountability for the Perkins Loan program and other Title IV student aid programs as discussed in the Account Summary. The "ability-to-benefit" student eligibility provision would be amended to require any student who is admitted without having a high school diploma or its recognized equivalent to pass a test administered by an independent organization. Second, institutional eligibility provisions would be amended to require participating institutions with default rates in excess of 30 percent to implement, for Title IV recipients who withdraw near the beginning of their enrollment periods, a refund policy under which the institution would be required to refund a portion of the amount charged the student. This refund amount must be at least equal to the charges associated with the remaining portion of the enrollment period. Finally, schools would be prohibited from employing commissioned sales representatives for recruiting and admissions activities. These proposals are described in more detail in the Account Summary.

6. State student incentive grants
(Higher Education Act, Title IV, Part A, Subpart 3)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$59,181,000	—	-$59,181,000

Purpose and Method of Operation

The purpose of the State Student Incentive Grants (SSIG) program is to provide grants to States to assist them in providing need-based grant and work-study assistance to eligible postsecondary students. The work-study assistance is provided through campus-based community service work-learning study programs. Grants and job earnings are limited to $2,500 per academic year for full-time students.

The SSIG program is a discretionary program in that the appropriations are discretionary and not based on entitlements. Program funds are available for obligation from October 1 of the fiscal year of appropriation through September 30 of the subsequent fiscal year. Funds appropriated in fiscal year 1991 support awards in academic year 1991-92.

State participation: Each State's allotment is based on its relative share of the total national population of students eligible to participate in the SSIG program, except that no State is to receive less than it received in 1979 (when the appropriation was $76.75 million). If insufficient Federal SSIG funds are appropriated, each State is allotted an amount proportional to the amount of funds it received in 1979. If a State does not use its allotment, the excess funds are distributed to other States in the same proportion as the original distribution, except that no State can receive more than it can use. Eligible students are defined as those who attend institutions eligible to participate in the State's program. If a State's allocation formula for institutions is based in part on less-than-full-time student enrollment, then a reasonable portion of the awards must be made to less-than-full-time students.

States must, at a minimum, match Federal SSIG grants dollar-for-dollar with State funds that are provided through direct State appropriations for this purpose. They must administer the program under a single State agency agreement and meet maintenance-of-effort criteria.

Purpose and Method of Operation — Continued

States may use up to 20 percent of their SSIG allotments in support of campus-based work-learning jobs which provide community services. Community services are those services which are designed to improve the quality of life for community residents and which provide participating students with work-learning opportunities related to their educational or vocational goals.

Institutional participation: All public or private non-profit institutions of higher education and all postsecondary vocational institutions in a State are eligible to participate in the SSIG program unless specifically excluded by the State's constitution or by a State law enacted before October 1, 1978.

Student participation: Students must demonstrate need under a need analysis system established by the State and approved by the Secretary in order to qualify for an SSIG grant or work-learning job. States may serve graduate as well as undergraduate students, although only nine States are currently exercising this option.

Accomplishments

Prior to authorization of the SSIG program in 1972, only 31 States had student grant programs. The number of State programs has increased since then so that all 50 States and seven outlying areas now have such programs. State need-based grant dollars for undergraduate students have grown from $364 million in academic year 1973-74 (the last year prior to the availability of SSIG awards) to over $1.5 billion in academic year 1988-89. Approximately 1.4 million recipients benefitted from these funds in that year.

1991 Budget Proposal

This program is not proposed for funding in fiscal year 1991 because Federal funds are no longer needed to encourage States to provide State-based aid. All States now support need-based aid programs. Furthermore, State expenditures for grant aid have continued to expand in recent years even as Federal funding has dropped or remained level. In 1988-89, it is estimated that State spending for grants to needy students increased by 8 percent even though funding for SSIG was reduced by over 4 percent compared with the previous year.

Most States considerably overmatch the Federal contribution. It is estimated that in 1988-89, of the 42 States that overmatched their Federal SSIG allotments, 40 provided at least 75 percent more need-based grant aid than was required to satisfy the program's matching provision. This suggests a considerable level of State commitment regardless of Federal expenditures.

1/ Reflects savings from legislative changes proposed for later transmittal.

NOTE: Totals may not add due to rounding.

Guaranteed Student Loans

Obligations and Budget Authority by Activity 1/

	1989	1990	1991 2/
Obligations:			
1. Stafford loans 3/......	$4,925,183,000	$4,221,220,000	$3,549,544,000
2. SLS loans..............	226,495,000	329,033,000	282,699,000
3. PLUS loans.............	52,165,000	64,769,000	69,993,000
Total obligations......	5,203,843,000	4,615,022,000	3,902,236,000
Total budget authority.	4,284,695,000	3,856,344,000	3,107,957,000

1/ Budget authority (contract authority) cannot be allocated by activity. Budget authority levels, in total, take into account receipts, recoveries and net unobligated balances. Since these resources are not allocated by activity, no meaningful way to allocate budget authority by activity exists. Here and elsewhere the principal display is of obligations.

2/ Reflects legislative changes proposed for later transmittal.

3/ Stafford obligations include costs of Consolidation loans, here and elsewhere.

Guaranteed Student Loans

Obligations by Object

	1989	1990	1991 1/

1/ Reflects enacted supplementals, rescissions and reappropriations in amounts appropriated prior to fiscal year 1985.

2/ Senate Committee action.

3/ Includes $329,928,000 necessary to finance obligations incurred in 1988 under contract authority.

4/ Fiscal year 1990 amended budget request.

5/ Includes $217,867,000 to finance obligations incurred in 1989 under contract authority.

6/ Reflects legislative changes proposed for later transmittal. Includes $260,379,000 to finance obligations incurred in 1990 under contract authority.

Guaranteed Student Loans

Significant Items in Congressional Appropriations Requests

Item	Action Taken Or To Be Taken
1990 House Report	
Report on Status of Loan Defaults	
The Committee requests that a report on the history of the default problem and default losses under both Stafford and Perkins loans be submitted January 1 and July 1 of 1990.	The Department is preparing a report on student loan defaults. The initial report will be submitted to the Committee in the near future.
1990 Senate Report	
Institutional Default Reduction "Self-Initiatives"	
The Committee strongly encourages the development of pilot projects that would encourage schools or guarantee agencies to develop their own procedures for reducing defaults, improving data quality, and enhancing student loan processing.	Through a variety of means, the Department encourages participating schools, lenders, and guarantee agencies to initiate innovative practices designed to reduce defaults, improve data quality, and promote application processing efficiencies. For several years, the Department has supported an "institutional quality control" project involving the administration of all Title IV student aid programs at some 63 schools. The feasibility of expanding this approach to lenders and guarantee agencies is being evaluated, and the possibility of changes in or waivers to existing regulatory and statutory provisions in support of such pilot projects is being reviewed.

Guaranteed Student Loans play a major role in helping to provide access to and a measure of choice in postsecondary education. In 1989, over $10.9 billion in Guaranteed Student Loans were made (the largest amount ever). This amount represents 62 percent of Department of Education aid made available to postsecondary students. These programs continue to be the single largest source of Federal student aid. There are four program components:

(1) Stafford loans (formerly regular loans) under which the Federal Government pays the interest while the student is in school and during certain grace and deferment periods;

(2) PLUS loans, which do not have interest subsidies for borrowers;

(3) Supplemental Loans for Students (SLS) made to undergraduates and graduate students, which also do not have interest subsidies for borrowers; and

(4) Consolidation Loans under which borrowers may have their obligations consolidated and their repayment schedules extended if they borrowed a minimum of $5,000 under federally insured and reinsured Stafford loans, Perkins (formerly NDSL) loans, SLS, PLUS loans made to students prior to enactment of the SLS program, and Health Professions Student Loans.

Guaranteed Student Loans

Account Summary -- Continued

The Stafford loans, SLS, and PLUS loan components provide an indirect subsidy to approximately 9,000 participating universities, colleges, and vocational schools by promoting the availability of loans from 13,000 participating banks and other lenders to eligible students and their parents to help meet postsecondary education costs. This is accomplished through Federal reinsurance of loans against borrower default and through the provision of substantial interest subsidies and other support. In general, the programs are administered through State and private nonprofit guarantee agencies which serve as intermediate loan insurors, defaulted loan collectors, and providers of various services to lenders. The Federal Government also provided direct insurance of loans through July 1984, and continues to be responsible for collecting on defaulted directly insured loans.

Loan Volume

By the end of fiscal year 1989, Guaranteed Student Loans had supported over $93 billion in loans to students and parents since the program's inception. Of this amount, $7 billion was directly insured by the Federal Government and $86 billion was insured by guarantee agencies and reinsured by the Federal Government. The increasing popularity of Guaranteed Student Loans and their costs to the taxpayer are reflected in the following table.

Recent History of Guaranteed Student Loans

	1983	1984	1985	1986	1987	1988	1989

Default Problems

A major challenge for the Department is control of Guaranteed Student Loan default costs. Default costs continue to increase, with approximately $1.9 billion expended in fiscal year 1989 to cover defaults on loans. The Department recently announced a four-pronged default reduction initiative: (1) final regulations which encompass a graduated approach — increasing sanctions based on a series of default rate thresholds — to encourage default prevention by the participating schools; (2) a Notice of Proposed Rulemaking which would require that all private vocational schools establish a "teach-out" with another school in case of school closure; final regulations will be published in March 1990; (3) legislative proposals to reduce defaults, eliminate program abuses, and improve collections; and (4) increased administrative activities by the Department to improve default prevention, enforcement, and collection efforts.

The following table illustrates historical and projected default rates and costs to the taxpayer.

Guaranteed Student Loan Defaults

	1988	1989	1990	1991
Gross default rate	13.6%	14.2%	14.9%	15.4%
Net default rate [1/]	9.6%	9.7%	10.0%	10.0%
Annual default cost (in millions of dollars)	$1,389	$1,911	$2,023	$2,021

[1/] The net default rate reflects collections on defaults. Due to increased collection efforts by the Department and guarantee agencies, this rate is not rising as rapidly as the gross default rate.

The Department will continue to pursue administrative measures designed to improve collections and reduce defaults. The Department has expanded its use of private collection agencies to complement Federal collectors, offset the salaries of Federal employees in default, offset defaulters' Federal tax refunds, and increased lender and guarantee agency collection "due diligence" requirements. The Department will also review its policies on debt compromise in 1990 to ensure that Federal revenues from compromise are maximized. Receipts from collections on defaulted loans (both Federal collections and guarantee agency reimbursements) are estimated to increase from $569 million in 1989 to $637 million in 1990.

Guaranteed Student Loans

Account Summary -- Continued

1991 Budget Request

Guaranteed Student Loan programs are appropriated entitlement programs. Title IV, Part B, of the Higher Education Act expressly permits the Department to incur obligations in excess of or in advance of appropriations. The Department's request for Guaranteed Student Loans in 1991 ($3,368,336,000) reflects estimated entitlement costs of $3,157,427,000 and savings of $49,470,000 from legislation proposed for later transmittal. The 1991 appropriation request also includes $260,379,000 to finance obligations incurred in 1990 under contract authority.

Legislative Proposals

The proposed 1991 budget incorporates several changes in Guaranteed Student Loans and reflects savings based on the Department's legislative proposals. These proposals address the still unacceptably high costs associated with student loan defaults and Federal subsidies, while at the same time providing loan availability to ensure students both access and choice in their postsecondary education. The proposed changes include the following:

- Risk-sharing with guarantee agencies: In order to stimulate greater collection diligence by guarantee agencies and reduce the Federal Government's reimbursement costs, the Federal reinsurance of default claims paid by guarantee agencies would be changed to a flat 90 percent rate, in place of the current 100/90/80 sliding scale each year. In addition, this proposal would stimulate guarantee agencies to enforce lender due diligence. Also, the Department would apply a flat reinsurance fee rate of 0.5 percent to all new loans.

- Delayed disbursement: Disbursements of loans to first-time borrowers would be delayed until 30 days from the student's first day of classes. This would help reduce the inordinately high rate of default by students who withdraw within the first few weeks of class. This requirement would build on the 1989 Omnibus Budget Reconciliation Act, which applies such a requirement only to SLS loans.

- Require lenders to perform credit checks: To prevent defaults by individuals who have already demonstrated a lack of credit-worthiness, lenders would be required to check the credit histories of all Guaranteed Student Loan applicants who are age 21 or older. Applicants with poor credit would be required to obtain a credit-worthy co-signer. Guaranteed Student Loan access would not be affected for the many students who have little or no credit history.

Guaranteed Student Loans

Account Summary — Continued

Legislative Proposals — Continued

- Require lenders to provide graduated repayment options to borrowers: This proposal would require lenders to offer optional graduated repayment schedules to all Stafford and SLS borrowers prior to commencement of repayment. The schedules would provide for the repayment of as little as only accrued interest during the first year of repayment and would require the borrower to resume repayment, on an equal installment basis, after the fourth year of repayment, so that the 10-year statutory maximum period would not be extended. The borrower's active involvement in establishing repayment terms would reinforce the seriousness of the repayment obligation. Smaller payment amounts early in the repayment period also would enable the borrower to establish the kind of disciplined repayment habit that avoids later default.

- Require students to provide driver's license numbers and other skip-tracing information: Difficulty in locating delinquent borrowers is another problem related to defaults. To make it easier to locate delinquent and defaulting borrowers, the Department proposes to require schools to obtain, at the time of application, the borrower's driver's license number. Similarly, during the exit interview, the school would obtain the borrower's expected address after graduation, the address of the borrower's closest relative, and the name of the borrower's expected employer after graduation. Access to such information would enhance collection efforts with little increase in the administrative burden on schools or lenders.

- Authorize guarantee agencies to garnish defaulters's wages: This proposal would authorize guarantee agencies to garnish defaulter's wages, up to 10 percent of disposable pay, after the defaulter is provided notice and an opportunity for a hearing. Wage garnishment is particularly appropriate in this program since unemployment is grounds for a deferment, and since a major benefit of the program for borrowers is the opportunity to acquire employment skills. Use of defaulter wage garnishment nationwide would serve as a default deterrent and should significantly increase collections.

- Modify ability-to-benefit provision: This proposal would require applicants of all title IV student aid programs who are admitted under the "ability-to-benefit" criteria to pass a test, prior to enrollment, formulated and administered by an independent organization. The Secretary would determine that the organization is truly independent of the schools that would be using the test to establish their students' ability to benefit. The Secretary would not assess or regulate the adequacy of a test unless the students who achieved passing scores are

Legislative Proposals — Continued

not achieving substantially the same graduation, job placement, or State licensing examination pass rates as students attending the same schools who received their high school diploma or GEDs prior to admission to such schools. Mandating an independent regimen of test administration before enrollment would eliminate the widely publicized abuses of the ability-to-benefit criteria that have resulted in dropouts and defaults. The high rate of dropouts and defaults has damaged the integrity of the Department's student aid programs and victimized many disadvantaged students.

- Prohibit schools from employing commissioned sales representatives for recruiting and admissions activities: In order to help prevent high pressure sales techniques and the exploitation of unqualified students, this proposal would prohibit schools from employing anyone other than salaried employees or volunteers to conduct recruiting or admitting activities. It would also prohibit the paying of commissions, bonuses, or other incentives, based solely on enrollment or student aid volume, to persons engaged in recruiting or admissions activities.

1989 Budget Reconciliation Act

The Department anticipates significant cost savings as a result of the 1989 Omnibus Budget Reconciliation Act. The Act includes the following provisions:

Guaranteed Student Loan Deferments and Forbearance for Medical Interns:

- o A medical intern is no longer eligible to receive an in-school deferment (with no time limit) while he or she is serving in a medical residency or internship program. Previsouly, medical students attending schools that classify interns as full-time students could receive deferments for their entire internships under the in-school deferment provision (an average of three or four years), versus the two-year maximum under the internship deferment provision--which remains available. This provision applies to all Guaranteed Student Loans, including loans made prior to enactment of this amendment.

- o Lenders are required to grant forbearance to a medical intern, upon written request and renewable at 12-month intervals, for a period equal to the length of time remaining in the borrower's medical internship, after the two-year medical internship deferment period has ended (i.e., no cap on the medical internship forbearance period).

Guaranteed Student Loans

Account Summary -- Continued

1989 Budget Reconciliation Act — Continued

Disbursement of Guaranteed Student Loans:

- Multiple disbursement of loan proceeds according to a schedule established by the institution is required for any period of enrollment for all loans guaranteed under the Higher Education Act, Part B. (Previously, the law required multiple disbursement only for Stafford and SLS loans, and only for periods of enrollment greater than 6 months and amounts of $1,000 or more.) The minimum interval between the first and second installment will not be less than one-half of the enrollment period, except as necessary to permit the second installment to be disbursed at the beginning of the second semester, quarter, or similar division.

- An institution is required to delay disbursement for first-year undergraduate students of any SLS loan proceeds until 30 days after the borrower begins a course of study.

- These provisions also clarify that the lender must withhold the second disbursement of a Stafford or SLS loan, if the borrower ceases to be enrolled on at least a half-time basis before the second (or any succeeding) installment has been disbursed. Furthermore, if the sum of a Stafford loan disbursement and the other financial aid obtained by a student exceeds the student's eligibility for Title IV aid, the institution is required to return to the lender the portion (or all) of such disbursement that exceeds the eligible amount. The returned amount will be credited to the borrower's loan and treated as a prepayment.

Guaranteed Student Loan Default Reduction Program:

- GSL defaulters will be given a six-month (March 1, 1990 through September 1, 1990) "amnesty" opportunity. Defaulters who repay their loans in full (principal & interest) will:

  1) not be assessed any penalties (e.g., collection costs);
  2) have their credit bureaus informed that their loans have been paid in full; and
  3) be eligible to receive additional Federal student aid.

- The default reduction program also extends the rehabilitation program (formerly a pilot program) to all defaulted loans, as a repayment incentive program.

Guaranteed Student Loans

Account Summary -- Continued

1989 Budget Reconciliation Act -- Continued

Sanctions Against Lenders and Schools:

- This provision establishes in the law the Secretary's authority to take emergency actions against institutions and lenders by immediately cutting off student aid funds in instances where the Secretary receives reliable information regarding program violations, determines that immediate action is necessary to prevent the loss of Federal funds, and determines that the likelihood of loss outweighs the importance of following limitation, suspension, or termination (LST) procedures.

Effect of Loss of Accreditation:

- An institution that loses its accreditation is now required to wait 24 months before it can again be eligible to participate in the Federal student aid programs, unless its accreditation is restored by the same accrediting agency which had accredited it prior to the withdrawal or if the institution demonstrates its academic integrity to the satisfaction of the Secretary. The Secretary is authorized to initiate LST proceedings against an institution which loses accreditation.

National Student Loan Data System:

- The Secretary is directed to develop, with the assistance of guarantee agencies, lenders, and institutions, a "mutually agreeable" proposal for the establishment of the NSLDS containing information regarding loans made and insured under the Guaranteed Student Loan and Perkins Loan programs. The prohibition against its use in enforcing eligibility rules is repealed. The data system will include:

  --the exact amount of loans made;
  --the names, social security numbers, and addresses of the borrowers (and in the case of dependent students, the names and addresses of the parents of such students);
  --the guarantee agency responsible for the guarantee of the loan;
  --the institution of higher education or organization responsible for loans made under part E;
  --all institutions attended by the borrower;
  --total and net loan balances;
  --the lender, holder, and servicer of loans;
  --default status (date of default and collection of loan);
  --repayment status and date of cancellation of the loan upon completion of repayment.

1989 Budget Reconciliation Act -- Continued

- For the purposes of research and policy analysis, the following additional data shall be collected: income level of the borrower and his/her family, extent of the borrower's need for student aid, type of institution attended, years attended, other student financial assistance received by the borrower and information concerning Federal costs associated with the GSL program, e.g., interest subsidy costs, special allowance payments and other subsidies.

Limits on the SLS Program:

- Undergraduate students are now prohibited from borrowing SLS funds if enrolled at an institution with a cohort default rate of 30 percent or higher. The cohort default rate for institutions with more than 30 borrowers entering repayment in any fiscal year is based on the percentage of students who enter repayment in a given year who default before the end of the following fiscal year. This is identical to the default rate used by the Department for the Secretary's default reduction initiative. For institutions with less than 30 borrowers entering repayment, the cohort default rate for any fiscal year is calculated based on an average of the percentages for the three most recent fiscal years of students entering repayment in a given year who default before the end of the following fiscal year. This restriction was effective January 1, 1990, and will cease to be effective on October 1, 1991.

- Maximum loan limit remains at $4,000, except for students who have not successfully completed their first year and who are not enrolled full-time for a complete academic year:

  - $2,500 for a student who is enrolled for at least two-thirds of an academic year;

  - $1,500 for a student who is enrolled for less than two-thirds but at least one-third of a complete academic year;

  - $0 for a student who is enrolled for less than one-third of an academic year.

- Students who are admitted on the basis of their "ability to benefit" from the postsecondary training are no longer eligible for the SLS program until they obtain a GED or equivalent. In order to participate in Title IV programs, any institution which admits students on the basis of their ability to benefit are now required to make available to each student a program proven successful in assisting students in obtaining a certificate of high school equivalency.

1/ Reflects legislative changes proposed for later transmittal.

Guaranteed Student Loans

1. Stafford loan program

Purpose and Method of Operation

Stafford loans may be borrowed by any eligible student, regardless of the student's year in school or dependency status. The loan limits are $2,625 annual for first and second year undergraduates, $4,000 annual for other undergraduates, and $17,250 cumulative for undergraduates. Graduate student loan limits are $7,500 annual and $54,750 cumulative (inclusive of undergraduate Stafford loans borrowed by the student). Students may borrow only up to the amount of their need (i.e., cost of attendance minus expected family contribution minus other aid), as determined by an approved need analysis system.

Interest subsidies. The purpose of Federal interest subsidization of Stafford loans is to promote the availability of relatively low-interest loans to students who would otherwise be unable to secure such low-interest loans from commercial banks and other lenders for use in financing their postsecondary education. Subsidization of Stafford loans to all eligible students is provided throughout the life of the loan. The interest obligation of borrowers is currently 8 percent through the fourth year of repayment, and 10 percent thereafter, although the Federal Government pays this obligation (the "interest benefit") while Stafford loan borrowers are in school, and during grace and deferment periods. Loan principal need not be repaid during the in-school, grace and deferment periods. In view of this high subsidization, the Omnibus Budget Reconciliation Act of 1981 created a 5 percent Stafford loan "origination fee" which is paid by Stafford loan borrowers to help offset Federal interest subsidy payments.

o Interest benefits - Payments to lenders are equal to the Stafford loan borrower's interest obligation (8 percent to new borrowers) during in-school, grace and deferment periods. The Department of Education makes quarterly payments to lenders based on lender reports of eligible loan volume.

o Special allowance - The purpose of a special allowance is to provide lenders with a yield adequate to assure lender participation. This supplemental interest payment to lenders varies with 91-day Treasury bill rates. Quarterly payments to lenders (based on outstanding loan volume) assure that, when added to the borrower's interest (or the interest benefits subsidy), the lender receives a total variable yield equal to the

---

Purpose and Method of Operation — Continued

quarterly average of 91-day Treasury bill rates plus 3.25 percentage points, or the borrower's interest rate, whichever is greater. As a result of the fiscal year 1990 sequestration order required by the Gramm-Rudman-Hollings Act, for loans originated in the first quarter of fiscal year 1990, lenders will receive for the first calendar year, a total variable yield equal to the quarterly average of 91-day Treasury bill rates plus 3.0 percentage points. Lenders using the proceeds of tax-exempt obligations to make or purchase loans are entitled to a total variable yield equal to the quarterly average of 91-day Treasury bill rates plus 1.75 percentage points, or 9.5 percent, whichever is greater.

- Origination fees - Stafford loan borrowers are charged a loan origination fee equal to 5 percent of the loan principal to help offset Federal interest subsidy payments. This fee is generally paid out of the loan proceeds. Rather than forwarding the origination fees to the Department, the quarterly interest subsidy payments to lenders are generally offset by the amount of origination fees collected by lenders during each quarter. As a result of the fiscal year 1990 sequestration order, required by the Gramm-Rudman-Hollings Act, the Stafford loan origination fee was increased by 0.5 percentage points for the period October 1, 1989 through December 31, 1989.

Insurance costs. These costs promote the availability of loans to students for postsecondary education by providing Federal reinsurance to participating State and private nonprofit guarantee agencies for up to 100 percent of their losses in insuring commercial banks and other lenders against borrower default on Stafford loans. The Department of Education also reimburses guarantee agencies for 100 percent of their losses due to borrower death, disability and bankruptcy.

Prior to July 1984, the Federal Insured Student Loan (FISL) program provided direct Federal insurance for loans to students who did not have reasonable access to State or private non-profit guarantee agency programs. For these loans, the Department of Education pays the lending institution 100 percent of the unpaid principal balance plus interest on defaulted loans. In addition to default claims, insurance costs include commission payments to private collection firms, and payments for death, disability and bankruptcy claims.

Purpose and Method of Operation -- Continued

Debt collection. Guarantee agencies promote lender participation and provide various services to lenders. They must also require collection diligence on the part of lenders as a condition of paying default claims. Once a claim has been paid to the lender, the guarantee agencies collect on defaulted accounts. They return to the Secretary about 70 percent of their collections, depending upon the level of Federal reinsurance and the percentage retained to meet administrative expenses (by statute, 30 or 35 percent of collections may be retained for this purpose).

Since fiscal year 1988, the Department has mandated assignment of defaulted accounts from guarantee agencies to the Department for two purposes: (1) salary offset of Federal employees who are defaulters, and (2) a study comparing the guarantee agencies' collection performance with that of Department collectors. As annual Federal employee matches are conducted, the Department will continue to require that the accounts of matched defaulters who have not made satisfactory arrangements to repay the guarantee agency be assigned to the Department for salary offset. Also, as of 1989, guarantee agencies were required to turn over to the Department "aged" accounts. "Aged" accounts are those which have passed or are within 6 months of the end of the State statute of limitations.

Consolidation loans. The Higher Education Amendments of 1986 authorized a Consolidation Loan program under which long-term loans are made without need analysis to eligible borrowers. The purpose of these loans is to facilitate borrower repayment of multiple student loans and thus help reduce defaults. Borrowers must consolidate a minimum of $5,000 in federally insured and reinsured Stafford loans, Perkins (formerly NDSL) loans, SLS, PLUS loans made to students prior to enactment of the SLS program, and Health Professions Student Loans. The interest rate is the greater of 9 percent or the weighted average of the interest rates of the loans discharged by consolidation, rounded to the nearest whole percent. The Federal Government does not pay in-school, grace or deferment period interest on Consolidation loans. The borrower is responsible for his/her own interest payments during these periods. Repayment of principal begins within 60 days after all loans selected for consolidation have been discharged unless the borrower is eligible for deferment. No origination fee is assessed.

Guaranteed Student Loans

1. Stafford loan program

Accomplishments

Through the provision of interest subsidies and loan insurance and reinsurance, 42 million low-interest loans have been made by over 13,000 banks and other lenders since the inception of the program. These subsidies have reduced the cost of borrowing for students and parents in meeting the costs of education or training at approximately 9,000 participating universities, colleges and vocational schools. In 1989, over $8.4 billion in Stafford loans were disbursed to 3.2 million students. Guarantee agencies now operate in all 50 States, American Samoa, the District of Columbia, Guam, the Northern Mariana Islands, Puerto Rico, the Trust Territory of the Pacific Islands and the Virgin Islands.

Receipts from collections on defaulted loans (both FISL collections and guarantee agency reimbursements) are estimated to increase from $539 million in 1989 to $590 million in 1990. This increase is attributable to continuing and expanding collection activities, as well as the continuing increase in outstanding defaults.

Regulation Measures to Reduce Defaults

The Department is pursuing a variety of regulatory measures to reduce defaults and improve collections. In June of 1989, the Department published final regulations which include the following default reduction provisions:

Provision	Effective Date
Require schools with default rates above 30% to delay certification and disbursement for first-time borrowers	10/1/89
Authorize the Secretary to impose individual default management plans that address causes of default at a particular school (for schools with default rates over 20%)	8/22/89. So far, 1,177 of the 1,182 schools with default rates over 20 percent have submitted default management plans, and 419 of the plans have been approved. All 1,182 schools are expected to have approved plans by May 1990.

Guaranteed Student Loans

1. Stafford loan program

Accomplishments — Continued

Provision	Effective Date
Require all schools to provide entrance counseling to first-time borrowers	8/22/89
Increase guarantee agency program reviews of schools	7/20/89
Require all schools that offer an undergraduate nonbaccalaureate vocational training program to compile and disclose consumer information, including program completion and job placement data, to all prospective students	12/1/89 (i.e., for loans certified for periods of enrollment beginning on or after 12/1/89)
Require lenders to keep schools informed of borrowers' delinquent status	12/5/89
Require schools with default rates above 30% to use a pro-rata tuition refund policy	6/5/90 (regulatory effective date superseded by the 1990 Appropriation Act; new effective date, 10/1/89)
Authorize the Secretary to initiate Limitation/Suspension/Termination (LST) proceedings if a school's default rate is above 60%	1/1/91
Authorize the Secretary to initiate LST proceedings if a school with a default rate above 40% does not reduce its rate by 5 percentage points per year, until the rate decreases to below 40%	1/1/91

Guaranteed Student Loans

1. Stafford loan program

Accomplishments — Continued

In addition to the final regulations, the Secretary is proposing two new regulatory policies for public comment: A requirement that a nonbaccalaureate vocational school must make arrangements with another school to "teach out" any students of the first school if it closes; and a requirement that borrowers be notified if their loans are purchased and payments have to be delivered to a new address. Final regulations should be issued by March 1990.

Collection Improvement Measures

The Department is also pursuing a variety of administrative measures to improve collections on defaulted loans. Among these are:

-- Due Diligence Enforcement. The Department monitors and enforces "due diligence" regulations (published in 1986) which established minimum lender and guarantee agency collection effort requirements.

-- Credit Bureau Reporting. ED continues to report ED-held defaults to consumer credit bureaus in order to affect adversely a defaulter's ability to obtain credit financing until satisfactory repayment arrangements are made.

-- Federal Employee Match. Since the Federal employee salary offset program was authorized in 1982, more than 60,000 Federal employees have been identified and sent notices to repay defaulted student loans. Cumulative collections resulting from the Federal salary offset program total over $32 million. Federal agencies have implemented screening procedures to prevent student loan defaulters from being hired without having entered into repayment agreements.

-- IRS Offsets. The IRS offset of defaulters' Federal tax refunds has resulted in over $637 million in collections from fiscal year 1986 through fiscal year 1989 on approximately 1.2 million accounts.

-- Referrals to Justice. ED continues to refer delinquent debt to the Justice Department for litigation. Cumulative collections on these accounts total an estimated $41 million. In fiscal year 1989, collections totaled $11 million.

-- Private Collection Services. ED has expanded contracts with private sector collection services to collect on ED-held defaults. New collection contracts were awarded in December 1989.

Guaranteed Student Loans

1. Stafford loan program

Accomplishments — Continued

— **Write-off Treatment. ED has improved write-off policies and procedures to ensure that two steps are completed — write-off and close out. Accounts that are deemed uncollectable are written off for accounting purposes, but remain active for possible subsequent offset against future benefits, refunds or other Federal payments. Accounts are not closed out until the debt is 10 years old to the Federal Government (the statute of limitations for the IRS offset is 10 years). Closed out accounts are considered as taxable income of the borrower, resulting in an increased tax liability.**

1991 Budget Proposal

Gross obligations of $3.550 billion are expected to be incurred in fiscal year 1991 for: interest benefits; special allowances; default claims; related contract collection costs; and death, disability and bankruptcy claims. This compares with an expected $4.221 billion in total obligations for 1990. The difference is primarily due to a projected reduction in 91-day Treasury bill rates.

The Department proposes several changes to the Stafford loan program that are designed to reduce the loan default rate. The gross default rate for all Guaranteed Student Loans is expected to increase from 14.2 percent in fiscal year 1989 to 15.4 percent in fiscal year 1991. This unacceptably high default rate will require American taxpayers to pay more than $2 billion in fiscal year 1991 to cover defaults on loans. These excessive costs threaten to undermine public confidence in the loan programs.

Many of the Department's legislative initiatives are designed to reduce the incidence of defaults. These initiatives, which also affect PLUS and SLS loans, are discussed in the Account Summary. Those default reduction proposals discussed in the summary that require legislative changes include the following:

--Reducing guarantee agency reinsurance to a 90% flat rate;

--Increasing reinsurance fee rate to 0.5%;

--Delaying disbursements of first-time borrowers;

--Prohibiting commissions for recruiting and admitting activities;

Guaranteed Student Loans

1/ Reflects legislative changes proposed for later transmittal.

Purpose and Method of Operation

SLS loans are made to undergraduate and graduate and professional students. SLS loans have an annual limit of $4,000, except for students who have not successfully completed their first year and who are not enrolled full-time for a complete academic year. For these students, the annual limit is $2,500 for a student who is enrolled for at least two-thirds of an academic year, and $1,500 for a student who is enrolled for at least one-third of an academic year. SLS loans have a cumulative limit of $20,000. There is no need analysis requirement, although borrowing cannot exceed cost of attendance minus other aid. Repayment of loan principal begins within 60 days of disbursement unless the borrower is eligible for deferment. For any award year (July 1 - June 30), the borrower's interest rate is the lesser of 12 percent or the average 52-week Treasury bill rate for the 12 months preceding June 1 of the prior award year plus 3.25 percentage points. The Federal Government does not pay the interest during in-school, grace or deferment periods. No origination fee is assessed.

Purpose and Method of Operation — Continued

Implicit interest subsidies. Although SLS loans are less subsidized than Stafford loans, the current interest rate applicable to SLS loans (based on the preceding year's 52-week Treasury bill rate plus 3.25 percentage points) is 12 percent, which is still lower than market interest rates on loans which would have similar terms and conditions.

Special allowance. The purpose of a special allowance is to provide lenders a yield adequate to assure lender participation. This supplemental interest payment to lenders is made only when the borrower's interest rate (52-week Treasury bill rate plus 3.25 percentage points) exceeds 12 percent. Under this condition, these quarterly payments to lenders (based on outstanding loan volume) assure that, when added to the borrower's interest, the lender receives a total variable yield equal to the quarterly average of 91-day Treasury bill rates plus 3.25 percentage points. Because Treasury bill rates are expected to remain below 8.75 percent in 1990 through 1995, no special allowance payments to lenders are projected under current law.

Insurance costs. These costs promote the availability of SLS loans for postsecondary education by providing Federal reinsurance to participating State and private nonprofit guarantee agencies for up to 100 percent of their losses in insuring commercial banks and other lenders against borrower default on SLS loans. Based on annual default claim experience, an agency's reinsurance rate can drop to 90 or 80 percent. The Department of Education also reimburses guarantee agencies for 100 percent of their losses due to borrower death, disability and bankruptcy.

Debt collection. The guarantee agencies promote lender participation and provide various services to lenders. They must also require collection diligence on the part of lenders as a condition of paying default claims. Once a claim has been paid to a lender, the guarantee agencies attempt to collect on defaulted accounts. They return to the Secretary about 70 percent of their collections, depending upon the level of Federal reinsurance and the percentage retained to meet administrative expenses (by statute, 30 or 35 percent of collections may be retained for this purpose).

Purpose and Method of Operation -- Continued

Since fiscal year 1988, the Department has mandated the assignment of defaulted accounts from guarantee agencies to the Department for Federal employee salary offset; and for a study comparing guarantee agency and Department collection performance. Guarantee agencies are also required, as of fiscal year 1989, to turn over to the Department defaulted accounts that have passed or are within 6 months of the State statute of limitations ("aged" accounts).

Omnibus Budget Reconciliation Act of 1989

The Department anticipates that the 1989 Reconciliation Act (P.L. 101-239) will significantly reduce SLS loan volume and default costs due to the following provisions:

- Undergraduate students are prohibited from borrowing SLS funds if enrolled at an institution with a cohort default rate of 30 percent or higher.
- The maximum annual loan limit is reduced for students who have not successfully completed their first year and who are not enrolled full-time for a complete academic year.
- "Ability-to-benefit" students are not eligible for the SLS program until they obtain a GED or equivalent. In order to participate in title IV programs, any institution which admits students on the basis of their ability to benefit is required to make available to each student a program proven successful in assisting students in obtaining a certificate of high school equivalency.
- An institution is required to delay disbursement for first-year undergraduate students of any SLS loan proceeds until 30 days after the borrower begins a course of study.

New SLS loan volume is expected to decline from $1.8 billion in 1989 to $1.4 billion in 1990 as a result of these provisions (see Impact Data section).

Accomplishments

The Department is pursuing a variety of regulatory measures to reduce defaults. In June 1989, the Department published final regulations which include several default reduction provisions that apply to Stafford and SLS loans. These provisions are discussed in detail in the Accomplishments section for the Stafford Loan program.

Accomplishments — Continued

The SLS reinsurance program has successfully promoted the availability of SLS loans for 1.8 million students. In fiscal year 1989, over $1.8 billion in SLS loans were disbursed to 676,000 students. Guarantee agencies now operate the SLS loan program in all 50 States, American Samoa, the District of Columbia, Guam, the Northern Mariana Islands, Puerto Rico, the Trust Territory of the Pacific Islands and the Virgin Islands.

1991 Budget Proposal

Gross loan obligations of $283 million are expected for the SLS program in fiscal year 1991. This is a decrease of $46.3 million from the expected fiscal year 1990 level of $329 million. SLS net obligations, which reflect collections and other receipts, are expected to decrease from $283.3 million in 1990 to $233.2 million in 1991.

In order to increase default risk-sharing with guarantee agencies and to reduce default costs by modifying lender practices, the Department is seeking the following legislative amendments for the SLS, PLUS and Stafford Loan programs:

- Reduced reinsurance: In order to stimulate greater collection diligence by guarantee agencies, the Federal reinsurance of default claims by guarantee agencies would be reduced to a flat 90 percent rate from the current 100/90/80 percent sliding scale each year. In addition, this proposal would stimulate guarantee agencies to enforce lender due diligence. Also, the Department would apply a flat reinsurance fee rate of 0.5 percent to all new loans.
- Credit checks: To prevent defaults by individuals who have already demonstrated a lack of credit-worthiness, lenders would be required to check the credit histories of all Guaranteed Student Loan applicants who are age 21 and older. Applicants with poor credit would be required to obtain a credit-worthy co-signer.

Guaranteed Student Loans

2. SLS loan program

1991 Budget Proposal -- Continued

- Graduated repayment options to borrowers: Lenders would be required to offer optional graduated repayment schedules to all Stafford and SLS borrowers prior to commencement of repayment. The schedules would provide for the repayment of only accrued interest during the first year of repayment and would require the borrower to resume repayment, on an equal installment basis, after the fourth year of repayment, so that the 10-year statutory maximum period would not be extended.

The other proposed Guaranteed Student Loan program improvements discussed in the Account Summary would apply to the SLS program.

1/ Reflects legislative changes proposed for later transmittal.

Purpose and Method of Operation

PLUS loans are made to parents of dependent students. PLUS loans have an annual limit of $4,000 and a cumulative limit of $20,000. There is no need analysis requirement, although borrowing cannot exceed cost of attendance minus other aid. Repayment of loan principal begins within 60 days of disbursement unless the borrower is eligible for deferment. For any award year (July 1 - June 30), the borrower's interest rate is the lesser of 12 percent or the average 52-week Treasury bill rate for the 12 months preceding June 1 of the prior award year plus 3.25 percentage points. The Federal Government does not pay the interest during in-school, grace or deferment periods. No origination fee is assessed.

Purpose and Method of Operation — Continued

Implicit interest subsidies. Although PLUS loans are less subsidized than Stafford loans, the current interest rate applicable to PLUS loans (based on the preceding year's 52-week Treasury bill rate plus 3.25 percentage points) is 12 percent, which is still lower than market interest rates on loans which would have similar terms and conditions.

Special allowance. The purpose of a special allowance is to provide lenders with a yield adequate to assure lender participation. This supplemental interest payment to lenders is made only when the borrower's interest rate (52-week Treasury bill rate plus 3.25 percentage points) exceeds 12 percent. Under this condition, these quarterly payments to lenders (based on outstanding loan volume) assure that, when added to the borrower's interest, the lender receives a total variable yield equal to the quarterly average of 91-day Treasury bill rates plus 3.25 percentage points. Because Treasury bill rates are expected to remain below 8.75 percent in 1990 through 1995, no special allowance payments to lenders are projected under current law.

Insurance costs. These costs promote the availability of PLUS loans for postsecondary education by providing Federal reinsurance to participating State and private nonprofit guarantee agencies for up to 100 percent of their losses in insuring commercial banks and other lenders against borrower default on PLUS loans. Based on annual default claim experience, an agency's reinsurance rate can drop to 90 or 80 percent. The Department of Education also reimburses guarantee agencies for 100 percent of their losses due to borrower death, disability and bankruptcy.

Accomplishments

The PLUS reinsurance program has successfully promoted the availability of PLUS loans for the parents of 878,000 undergraduate students. In fiscal year 1989, over $689 million in PLUS loans were disbursed to 218,000 parents. Guarantee agencies now operate the PLUS loan program in all 50 States, American Samoa, the District of Columbia, Guam, the Northern Mariana Islands, Puerto Rico, the Trust Territory of the Pacific Islands and the Virgin Islands.

1991 Budget Proposal

Gross loan obligations of $70 million are expected for the PLUS program in fiscal year 1991. This is an increase of $5.2 million from the expected fiscal year 1990 level of $64.8 million. PLUS net obligations, which reflect collections and other receipts, are expected to increase from $54.1 million in 1990 to $54.8 million in 1991.

1991 Budget Proposal — Continued

In order to increase default risk-sharing with guarantee agencies and to prevent defaults, the Department is seeking the following legislative amendments for the PLUS, SLS, and Stafford loan programs:

- o Reduced reinsurance: In order to stimulate greater collection diligence by guarantee agencies, the Federal reinsurance of default claims by guarantee agencies would be reduced to a flat 90 percent rate. Also, the Department would apply a flat reinsurance fee rate of 0.5 percent to all loans.

- o Credit checks: To prevent defaults by individuals who have already demonstrated a lack of credit-worthiness, lenders would be required to check the credit histories of all Guaranteed Student Loan applicants who are age 21 and older. Applicants with poor credit would be required to obtain a credit-worthy co-signer.

The other proposed Guaranteed Student Loan program improvements discussed in the Account Summary would also apply to the PLUS program.

HIGHER EDUCATION AND POSTSECONDARY FACILITIES

WITNESSES

LEONARD L. HAYNES, III, ASSISTANT SECRETARY FOR POSTSECONDARY EDUCATION

JOHN B. CHILDERS, DEPUTY ASSISTANT SECRETARY FOR HIGHER EDUCATION PROGRAMS, OFFICE OF POSTSECONDARY EDUCATION

SALLY KIRKGASLER, DIRECTOR, POLICY DEVELOPMENT STAFF, OFFICE OF POSTSECONDARY EDUCATION

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

ROBERT DAVIDSON, DIRECTOR, POSTSECONDARY ANALYSIS DIVISION, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

Mr. NATCHER. Now we take up the Higher Education and Postsecondary Facilities requests. We again have before the committee Dr. Haynes.

Dr. Haynes, before you give us your statement, tell us who you have with you there at the table.

Mr. HAYNES. Mr. Chairman and Members of the committee, we have to my far left Mr. John B. Childers, Deputy Assistant Secretary for Higher Education Programs, Office of Postsecondary Education; Sally Kirkgasler, Director, Policy Development Staff, Office of Postsecondary Education; Sally H. Christensen, Director, Budget Service, Office of Planning, Budget and Evaluation; and Robert Davidson, Director, Postsecondary Analysis Division, Budget Service, Office of Planning, Budget and Evaluation.

Mr. NATCHER. Now, Dr. Haynes, we will be pleased to hear from you.

Mr. HAYNES. Thank you, Mr. Chairman.

With your permission, I will summarize my statement and request that the full text be entered into the record.

Mr. NATCHER. It is so ordered.

Mr. HAYNES. The request for fiscal year 1991 for this budget is $657,700,000 for higher education, and $8,400,000 in appropriations and $5,000,000 in new borrowing authority in College Housing and Academic Facilities Loans. No funds are requested for Higher Education Facilities Loans and College Housing Loans. The request also includes a 1990 language supplemental to transfer $5,000,000 from Title III, Part C Endowment Grants to HBCU Endowment Grants.

Our fiscal year 1991 budget request reflects the Administration's commitment to meeting the postsecondary education aspirations of poor and disadvantaged individuals. To meet this commitment, we propose to increase significantly Federal support for programs that promote educational opportunities for disadvantaged individuals.

Specifically, we propose to target funds to those activities that assist historically black colleges and universities in their mission of servicing disadvantaged and minority students and that provide support services and financial assistance for these students at both the undergraduate and graduate levels.

In addition, we propose significant funding to stimulate excellence and quality in postsecondary education, to meet mandatory interest subsidy costs of construction loan commitments made in prior years, and to provide limited new loan capital to meet critical construction needs.

The Higher Education account has historically funded a number of small programs which are overly narrow in scope, have already demonstrated the effectiveness of a particular educational approach, or which duplicate other programs. We have proposed to phaseout a number of these programs over the next several years. Other programs have been proposed for elimination in fiscal year 1991.

TITLE III

Our fiscal year 1991 request includes $214,900,000 for Title III of the Higher Education Act, which provides support for institutional development and endowment building. These programs help institutions that enroll substantial numbers of disadvantaged individuals. Consistent with the initiatives President Bush proposed in the "Educational Excellence Act of 1989," the 1991 request contains an important new initiative setting aside $15,000,000 for Part C endowment grants for historically black colleges and universities (HBCUs). In addition, we are requesting a 1990 language supplemental to transfer $5,000,000 from Part C Endowment Grants to the HBCU Endowment Grants.

From their inception, the programs authorized under Title III have played a key role in assisting the Nation's historically black colleges and universities. These institutions were the primary source of postsecondary education for blacks prior to the Supreme Court's desegregation ruling, and they continue to play an important role in providing access to educational opportunities for students from socioeconomically disadvantaged backgrounds. Because of student preference, location, low tuition, and institutional mission, HBCUs continue to enroll a disproportionate number of minority and low-income students. These institutions enroll one in five blacks attending college today and award more than 30 percent of all bachelor's degrees to blacks. In recognition of the critical role that these institutions play in our Nation's system of higher education, we are requesting $110,400,000 for HBCUs under Parts B and C of Title III. The request includes $83,900,000 under the Part B formula grant program, $11,400,000 for the five historically black graduate institutions and $15,000,000 for endowment grants to HBCUs.

The budget request for Title III also includes $86,600,000, an increase of $3,700,000, for new and non-competing continuation grants under the Strengthening Institutions program—Part A. The institutions served by this program, like HBCUs, provide access to higher education for many low-income and minority students. Federal funds are used to help participating institutions enhance institutional effectiveness by stabilizing their management and fiscal operations, developing and expanding their academic programs and faculty, and by providing student services.

Also requested is $17,900,000 for the general endowment grant program. This request would enable institutions participating in the other Title III programs to build endowments so that they can become financially independent and no longer need Federal assistance under Title III to operate.

MINORITY SCIENCE IMPROVEMENT PROGRAM

Closely related to the Title III program is the Minority Science Improvement program, MSIP, for which we request $5,600,000 for fiscal year 1991, an increase of $217,000, or 4 percent, over the 1990 appropriation. The program provides grant assistance to enhance the capacity of minority institutions to develop and maintain quality science education programs, and to increase the flow of underrepresented minorities into the fields of science, math, and engineering.

TRIO

The Special Programs for the Disadvantaged, commonly referred to as the TRIO programs, provide services to promote access to and retention in postsecondary education for disadvantaged persons. Our request for these programs in fiscal year 1991 is $269,700,000, which is an increase of $28,000,000, or 11.5 percent, over the 1990 appropriation. We are requesting support for all six of the currently funded programs under the TRIO authority—Student Support Services, Upward Bound, Talent Search, Education Opportunity Centers, EOCs, Ronald McNair Post-baccalaureate Achievement program, and Staff Training. These programs complement the financial assistance available to disadvantaged students by providing services to identify, motivate, and assist them in developing the necessary skills to complete high school, and enter and complete postsecondary and graduate education.

Our TRIO request also includes $1,000,000 to complete evaluations of the two largest programs: Upward Bound and Student Support Services. These evaluations will ensure that federal funds are used effectively and assist as many students as possible.

SCHOOL, COLLEGE AND UNIVERSITY PARTNERSHIPS

We are requesting $2,960,000 for the School, College and University Partnerships program which encourages partnerships between institutions of higher education and secondary schools serving low-income students and supports projects that improve the academic skills of students.

STUDENT LITERACY CORPS

Funds are also sought for the Student Literacy Corps. This program, first funded in fiscal year 1989, is intended to promote the development of literacy corps programs at institutions of higher education. Under this program, institutions receive up to $50,000 to pay administrative costs and stipends for student coordinators. Participating undergraduate students receive academic credit for courses which require that they tutor a minimum of 6 hours per week at public community agencies servicing educationally or economically disadvantaged students. Our request for this program is $5,042,000, the same as provided in fiscal year 1990.

GRADUATE PROGRAMS

Support is sought for a number of programs to encourage graduate and professional study, particularly among minority and disadvantaged students. These programs include Patricia Roberts Harris Graduate Fellowships, Minority Participation in Graduate Education, Graduate Assistance in Areas of National Need, and Legal Training for the Disadvantaged. These four programs, for which a total of $51,900,000 is requested, enable low-income and underrepresented college students to pursue graduate or professional study by providing support services and targeted financial assistance. This is $14,100,000 more than was provided for these programs in fiscal 1990, an increase of 37 percent. Much of the requested increase, $9,700,000, is for Graduate Assistance in Areas of National Need, which promotes graduate study for students of superior ability who are currently studying in the areas of chemistry, engineering, mathematics and physics.

UNDERGRADUATE SCHOLARSHIP PROGRAM

We are also seeking support for three programs for gifted high school students seeking access to postsecondary education. The first of these programs, for which $5,000,000 is requested, is the National Science Scholars program. This program would encourage achievement in the sciences by providing scholarships to graduating high school students who have excelled in the sciences, mathematics, and engineering, and who will continue their undergraduate studies in these disciplines. This program was first proposed by President Bush in February 1989 and was later incorporated into the "Educational Excellence Act" transmitted to Congress in April 1989.

We are also requesting funds for the Robert C. Byrd Honors Scholarships and the Paul Douglas Teacher Scholarships programs. These programs are designed to recognize high school students who have demonstrated outstanding academic achievement and show promise of continued academic success. They provide financial assistance to encourage these students to attend college. In addition, Paul Douglas Teacher Scholarships encourage high school students to pursue teaching careers in elementary and secondary education. We are requesting $23,500,000 for these programs for fiscal year 1991, the same as provided in fiscal year 1990.

We believe that the Federal Government can play a key leadership role in improving the quality of offerings at institutions of higher education. To support this role, we propose to fund two programs—the Fund for the Improvement of Postsecondary Education and International Education.

FUND FOR THE IMPROVEMENT OF POSTSECONDARY EDUCATION

For the Fund for the Improvement of Postsecondary Education, a total of $11,702,000 is requested, which is the same as the fiscal year 1990 appropriation. This funding has proven very beneficial in stimulating improvements in the quality of higher education without intruding on institutional prerogatives.

INTERNATIONAL EDUCATION

Reflecting the Administration's desire to enhance awareness of the trends toward democracy, dominant in Eastern Europe but prevalent world wide, we are continuing our support of the International Education programs. The International Education programs provide for a number of different activities which strive to improve the quality of foreign language and area studies instruction in schools and colleges in the United States. In addition, these programs help fulfill significant trade, diplomatic, and security needs of the United States and foster cultural understanding, by strengthening and broadening scholarly expertise in foreign language, area studies, and international issues. For these programs, we are requesting $39,800,000 for fiscal year 1991, the same as provided in fiscal year 1990.

COLLEGE HOUSING AND ACADEMIC FACILITIES

In addition to the programs discussed above, we are requesting support for two facilities programs: Interest Subsidy Grants—in the Higher Education account and College Housing and Academic Facilities Loans—in a separate account.

Under the Interest Subsidy Grants program, the Federal Government entered into agreements with institutions of higher education to help them construct academic facilities. These commitments were made between 1970 and 1973, and obligate the Department to pay the difference between 3 percent and the commercial lending rate at the time the loan commitments were made. Our request for this program is $20,900,000.

For the College Housing and Academic Facilities Loan account, we are requesting $5,000,000 in borrowing authority for new academic facilities loans and $8,400,000 in appropriations to pay interest costs on loans made in prior years. Our proposal to support new loans in 1991 begins the phase-out of this low-priority activity. Schools themselves will also gain better access to private capital for construction as the new College Construction Loan Insurance Association expands its operations. An appropriation of $8,400,000 is needed to pay interest to the Department of Treasury on prior-year loans, since the amount of interest paid by borrowers is less than the amount the Department must pay Treasury for capital borrowed to finance those loans.

No funds are currently needed for either the College Housing Loan or Higher Education Facilities Loan programs.

ELIMINATION OF PROGRAMS

The 1991 request proposes elimination of several programs in the Higher Education account. These programs have either fulfilled their original purpose, provide services available from other programs, or are fundamentally not a Federal responsibility. These programs are very low priority and should be eliminated to help reduce the Federal deficit and to focus Federal expenditures on more critical areas.

The Cooperative Education and Law School Clinical Experience programs have fulfilled their original purpose. These programs have demonstrated the soundness of cooperative education and clinical legal education. Furthermore, the effectiveness of these educational methodologies has been well-documented, many institutions provide such services without Federal funding, and the institutions would continue these programs without Federal support.

We propose to phase out two graduate education programs beginning in fiscal year 1991. These programs are the Jacob K. Javits Fellowship and the Patricia Roberts Harris Public Service Fellowships programs. Requests for both programs total $6,613,000 in fiscal year 1991 to cover the costs for continuing fellows, $4,560,000 less than in fiscal year 1990. These two programs duplicate a number of Federal and non-Federal graduate programs.

The Veterans' Education Outreach program has outlived its original purpose, which was to address the special educational needs of large numbers of returning Vietnam veterans. The few veterans now enrolled in institutions will find the services that they require already available through general counseling and support service programs. For this reason, no funds are requested for this program in fiscal year 1991.

UNFUNDED PROGRAMS

Finally, no funds are requested for Innovative Community Services, Assistance to Guam, and the Margaret Chase Smith Library Center. These are all non-essential and, therefore, low priority. Moreover, these activities are more properly the responsibility of colleges and universities, State and local governments, and private sector users and beneficiaries of higher education services.

Again, thank you for the opportunity to appear before you today in support of the budget request for the Higher Education and postsecondary facilities accounts. My colleagues and I will be happy to respond to any questions you may have.

DEPARTMENT OF EDUCATION

Statement by

Leonard L. Haynes III
Assistant Secretary for Postsecondary Education

on

Higher Education and Postsecondary Facilities

Mr. Chairman and Members of the Committee:

Thank you for the opportunity to present the fiscal year 1991 budget request for the Higher Education and the postsecondary facilities accounts which totals $671.1 million. This request is $12.4 million more than was appropriated for fiscal year 1990. The request for fiscal year 1991 by account is $657.7 million for Higher Education, and $8.4 million in appropriations and $5 million in new borrowing authority in College Housing and Academic Facilities Loans. No funds are requested for Higher Education Facilities Loans and College Housing Loans. The request also includes a 1990 supplemental to transfer $5 million from Title III, Part C Endowment Grants to HBCU Endowment Grants.

Our fiscal year 1991 budget request reflects the Administration's commitment to meeting the postsecondary education aspirations of poor and disadvantaged individuals. To meet this commitment, we propose to increase significantly Federal support for programs that promote educational opportunities for disadvantaged individuals. Specifically, we propose to target funds to those activities that assist historically black colleges and universities in their mission of serving disadvantaged and minority students and that provide support services and financial assistance for these students at both the undergraduate and graduate levels.

In addition, we propose significant funding to stimulate excellence and quality in postsecondary education, to meet mandatory interest subsidy costs of construction loan commitments made in prior years, and to provide limited new loan capital to meet critical construction needs.

The Higher Education account has historically funded a number of small programs which are overly narrow in scope, have already demonstrated the effectiveness of a particular educational approach, or which duplicate other programs. We have proposed to phase out a number of these programs over the next several years. Other programs have been proposed for elimination in fiscal year 1991.

Aid for Institutions

Our fiscal year 1991 request includes $214.9 million for Title III of the Higher Education Act, which provides support for institutional development and endowment building. These programs help institutions that enroll substantial numbers of disadvantaged individuals. Consistent with the initiatives President Bush proposed in the "Educational Excellence Act of 1989," the 1991 request contains an important new initiative setting aside $15 million for Part C endowment grants for historically black colleges and universities (HBCUs). In addition, we are requesting a 1990 supplemental to transfer $5 million from Part C Endowment Grants to the HBCU Endowment Grants.

From their inception, the programs authorized under Title III have played a key role in assisting the Nation's historically black colleges and universities. These institutions were the primary source of postsecondary education for blacks prior to the Supreme Court's desegregation ruling, and they continue to play an important role in providing access to educational opportunities for students from socio-economically disadvantaged backgrounds. Because of student preference, location, low tuition and institutional mission, HBCUs continue to enroll a disproportionate number of minority and low-income students. These institutions enroll one in five blacks attending college today and award more than 30 percent of all bachelor's degrees to blacks. In recognition of the critical role that these institutions play in our Nation's system of higher education, we are requesting $110.4 million for HBCUs under Parts B and C of Title III. The request includes $83.9 million under the Part B formula grant program, $11.4 million for the five historically black graduate institutions and $15 million for endowment grants to HBCUs.

The budget request for Title III also includes $86.6 million, an increase of $3.7 million, for new and non-competing continuation grants under the Strengthening Institutions program--Part A. The institutions served by this program, like HBCUs, provide access to higher education for many low-income and minority students. Federal funds are used to help participating institutions enhance institutional effectiveness by stabilizing their management and fiscal operations, developing and expanding their academic programs and faculty, and by providing student services.

Also requested is $17.9 million for the general endowment grant program. This request would enable institutions participating in the other Title III programs to build endowments so that they can become financially independent and no longer need Federal assistance under Title III to operate.

Closely related to the Title III program is the Minority Science Improvement program (MSIP) for which we request $5.6 million for fiscal year 1991, an increase of $217,000, or 4 percent, over the 1990 appropriation. The program provides grant assistance to enhance the capacity of minority institutions to develop and maintain quality science education programs, and to increase the flow of under-represented minorities into the fields of science, math, and engineering.

Aid to Students

The Special Programs for the Disadvantaged, commonly referred to as the TRIO programs, provide services to promote access to and retention in postsecondary education for disadvantaged persons. Our request for these programs in fiscal year 1991 is $269.7 million, which is an increase of $28 million, or 11.5 percent, over the 1990 appropriation. We are requesting support for all six of the currently funded programs under the TRIO authority--Student Support Services, Upward Bound, Talent Search, Education Opportunity Centers (EOCs), Ronald McNair Post-baccalaureate Achievement program, and Staff Training. These programs complement the financial assistance available to disadvantaged students by providing services to identify, motivate, and assist them in developing the necessary skills to complete high school, and enter and complete postsecondary and graduate education.

Our TRIO request also includes $1 million to complete evaluations of the two largest programs: Upward Bound and Student Support Services. These evaluations will ensure that Federal funds are used effectively and assist as many students as possible.

We are requesting $2.96 million for the School, College and University Partnerships program which encourages partnerships between institutions of higher education and secondary schools serving low-income students and supports projects that improve the academic skills of students.

Funds are also sought for Student Literacy Corps. This program, first funded in fiscal year 1989, is intended to promote the development of literacy corps programs at institutions of higher education. Under this program, institutions receive up to $50,000 to pay administrative costs and stipends for student coordinators. Participating undergraduate students receive academic credit for courses which require that they tutor a minimum of six hours per week at public community agencies serving educationally or economically disadvantaged students. Our request for this program is $5.0 million, the same as provided in fiscal year 1990.

Support is sought for a number of programs to encourage graduate and professional study, particularly among minority and disadvantaged students. These programs include Patricia Roberts Harris Graduate Fellowships, Minority Participation in Graduate Education, Graduate Assistance in Areas of National Need, and Legal Training for the Disadvantaged. These four programs, for which a total of $51.9 million is requested, help enable low-income and underrepresented college students pursue graduate or professional study by providing support services and targeted financial assistance. This is $14.1 million more than was provided for these programs in fiscal year 1990, an increase of 37 percent. Much of the requested increase, $9.7 million, is for Graduate Assistance in Areas of National Need, which promotes graduate study for students of superior ability who are currently studying in the in areas of chemistry, engineering, mathematics and physics. We are also seeking support for three programs for gifted high school students seeking access to postsecondary education. The first of these programs, for which $5 million is requested, is the National Science Scholars program. This program would encourage achievement in the sciences by providing scholarships to graduating high school students who have excelled in the sciences, mathematics, and engineering, and who will continue their undergraduate studies in these disciplines. This program was first proposed by President Bush in February 1989 and was later incorporated into the "Educational Excellence Act" transmitted to Congress in April 1989.

We are also requesting funds for the Robert C. Byrd Honors Scholarships and the Paul Douglas Teacher Scholarships programs. These programs are designed to recognize high school students who have demonstrated outstanding academic achievement and show promise of continued academic success. They provide financial assistance to encourage these students to attend college. In addition, Paul Douglas Teacher Scholarships encourage high school students to pursue teaching careers in elementary and secondary education. We are requesting $23.5 million for these programs for fiscal year 1991, the same as provided in fiscal year 1990.

Strengthening Quality of Postsecondary Education

We believe that the Federal Government can play a key leadership role in improving the quality of offerings at institutions of higher education. To support this role, we propose to fund two programs -- the Fund for the Improvement of Postsecondary Education and International Education.

For the Fund for the Improvement of Postsecondary Education, a total of $11.7 million is requested, which is the same as the fiscal year 1990 appropriation. This funding has proven very beneficial in stimulating improvements in the quality of higher education without intruding on institutional prerogatives.

Reflecting the Administration's desire to enhance awareness of the trends toward democracy, dominant in Eastern Europe but prevalent world wide, we are continuing our support of the International Education programs. The International Education programs provide for a number of different activities which strive to improve the quality of foreign language and area studies instruction in schools and colleges in the United States. In addition, these programs help fulfill significant trade, diplomatic, and security needs of the United States and foster cultural understanding, by strengthening and broadening scholarly expertise in foreign language, area studies, and international issues. For these programs, we are requesting $39.8 million for fiscal year 1991, the same as provided in fiscal year 1990.

Academic Facilities

In addition to the programs discussed above, we are requesting support for two facilities programs: Interest Subsidy Grants--in the Higher Education account and College Housing and Academic Facilities Loans--in a separate account.

Under the Interest Subsidy Grants program, the Federal Government entered into agreements with institutions of higher education to help them construct academic facilities. These commitments were made between 1970 and 1973, and obligate the Department to pay the difference between 3 percent and the commercial lending rate at the time the loan commitments were made. Our request for this program is $20.9 million.

For the College Housing and Academic Facilities Loans account, we are requesting $5 million in borrowing authority for new academic facilities loans and $8.4 million in appropriations to pay interest costs on loans made in prior years. Our proposal to support new loans in 1991 begins the phase-out of this low priority activity. Schools themselves will also gain better access to private capital for construction as the new College Construction Loan Insurance Association expands its operations. An appropriation of $8.4 million is needed to pay interest to the Department of Treasury on prior year loans, since the amount of interest paid by borrowers is less than the amount the Department must pay Treasury for capital borrowed to finance those loans.

No funds are currently needed for either the College Housing Loan or Higher Education Facilities Loan programs.

Other Higher Education Programs

The 1991 request proposes elimination of several programs in the Higher Education account. These program have either fulfilled their original purpose, provide services available from other programs, or are fundamentally not a Federal responsibility. These programs are very low priority and should be eliminated to help reduce the Federal deficit and to focus Federal expenditures on more critical areas.

The Cooperative Education and Law School Clinical Experience programs have fulfilled their original purposes. These programs have demonstrated the soundness of cooperative education and clinical legal education. Furthermore, the effectiveness of these educational methodologies has been well documented, many institutions provide such services without Federal funding, and the institutions would continue these programs without Federal support.

We propose to phase out two graduate education programs beginning in fiscal year 1991. These programs are the Jacob K. Javits Fellowship and the Patricia Roberts Harris Public Service Fellowships programs. Requests for both programs total $6.6 million in fiscal year 1991 to cover the costs for continuing fellows, $4.5 million less than in fiscal year 1990. These two programs duplicate a number of Federal and non-Federal graduate programs.

The Veterans' Education Outreach program has outlived its original purpose, which was to address the special educational needs of large numbers of returning Vietnam veterans. The few veterans now enrolled in institutions will find the services which they require already available through general counseling and support service programs. For this reason, no funds are requested for this program in fiscal year 1991.

Finally, no funds are requested for Innovative Community Services, Assistance to Guam, and the Margaret Chase Smith Library Center. These are all non-essential and, therefore, low priority. Moreover, these activities are more properly the responsibility of colleges and universities, State and local governments, and private sector users and beneficiaries of higher education services.

Again, thank you for the opportunity to appear before you today in support of the budget request for the Higher Education and postsecondary facilities accounts. My colleagues and I will be happy to respond to any questions you may have.

DEPARTMENT OF EDUCATION

Office of Postsecondary Education

Biographical Sketch

NAME : Leonard L. Haynes III

POSITION : Assistant Secretary for Postsecondary Education

BIRTHPLACE AND DATE : Boston, Massachusetts, January 26, 1947

EDUCATION : Southern University, B.A., History
Carnegie-Mellon University, M.A., American History
Ohio State University, Ph.D., Higher Education Administration

EXPERIENCE

1989 - Present : Assistant Secretary for Postsecondary Education, Department of Education

1988 - 1989 : Assistant Superintendent, Office of Academic Programs, Louisiana State Department of Education

1982 - 1985 : Executive Vice President and System Vice President for Academic Affairs, the Southern University System, Baton Rouge, Louisiana

1979 - 1982 : Director, Office for the Advancement of Public Black Colleges, Washington, D.C.

1976 - 1979 : Director, Desegregation Policy Studies Unit, Institute for Services to Education, Washington, D.C.

Honors and Awards : Outstanding Young Men of America, 1976; Department of Health, Education, and Welfare Fellowship, 1976; Who's Who in Washington, 1982; Black College Network Family Achievement Award, 1984

Mr. NATCHER. Thank you very much, Dr. Haynes. Now, Mr. Conte, I yield to you.

PELL GRANT SEQUESTER

Mr. CONTE. Mr. Haynes, I welcome you to the hearing. Your resume says you worked in Louisiana, I hope you can find a little Mardi Gras in Washington tonight. In the audience there are a number of students who are advocating financial assistance for universities in Massachusetts. I believe this is their tenth annual visit to Washington to pound the halls on behalf of student aid. Many of them are in college because of the assistance provided by the Federal Government.

It was Federal assistance—the G.I. bill—that allowed me to go to college after World War II. So, I have a feel for how important these student aid programs are.

Dr. Haynes, neither your supplemental or the 1991 request contains funding to replace the $66,000,000 shortfall caused by sequestering. Some 14,000 students will have their awards wiped out completely, and another 1,300,000 will have their awards cut by an average of $50.00.

Now, don't you think this should be fixed? I don't like sequester. I think it hits the good programs as well as the bad programs. Why should we fix the damage done by the sequester with a supplemental?

Mr. HAYNES. Mr. Conte, we were following the Gramm-Rudman law which you passed.

Mr. CONTE. Even so you can come up here with a supplemental. You are from Boston. You know how to do that.

Mr. HAYNES. Well, Louisiana does it too. We followed the law. Supplementals are just not in our language.

Ms. CHRISTENSEN. Mr. Conte, the Pell Grant program is not a true entitlement program.

Mr. CONTE. But they are going to try to make it a true entitlement program. If everything becomes an entitlement program pretty soon there won't be a need for an appropriations committee. Isn't that right, Mr. Chairman?

Mr. NATCHER. That is right.

Mr. CONTE. We need to do the right thing.

Ms. CHRISTENSEN. I just want to make the point that it took its rateable share among all discretionary programs in the total Federal Government.

It was about 1.4 percent across the board. That was the amount for this program. It was not treated any differently than any other discretionary program.

Mr. CONTE. The budget proposes very little new money for Pell Grants; only about $102,000,000 or a 2 percent increase. This serves some additional students and excludes others, but keeps the maximum grant at $2300. Why isn't it a priority of the department to provide enough of an increase in Pell Grant program to at least to keep up with inflation or the rise in college tuition?

Mr. HAYNES. Mr. Conte, your question is tilted to the issue of pricing. I don't believe it is the Federal role to keep pace with the pricing that happens in higher education.

I don't think we can. If you look at where costs are going, if the analysts are correct, by the year 2000—with 8 percent increase—it will be $9,800 for public institutions and $29,500 for private institutions.

I don't think the Federal role can keep pace when that increase occurs.

REQUEST TO OMB

Mr. CONTE. I disagree with you. You said my question was a question of pricing. I think it is a question of priorities. I think we have our priorities wrong. What was the Secretary's request to the Office of Management and Budget for the Pell Grants?

Mr. HAYNES. Mrs. Christensen.

Ms. CHRISTENSEN. Our request was $5,546,000,000, Mr. Conte, but this was based on a larger assumption of what we could have received at that time for 1990, for the 1990 budget. It was also assuming a larger maximum grant.

PELL GRANT SHORTFALL

Mr. CONTE. So, a lot of what you put in here will just go to cover the 1989 and 1990, shortfalls?

Ms. CHRISTENSEN. That is true. There are amounts for both of those shortfalls. I would say that our budget will provide for an increase of about 175,000 additional students in the Pell Grant program. I think that is an important point.

I think the more important point, though, is that, as the Secretary explained the other day, we do have an emphasis on elementary and secondary education programs in our budget. Just as we were talking to Mr. Purcell—we were discussing the goals statements earlier—the problem is that that is where all the tests, in subjects like geography, reading, and others indicate that there is such a deficiency in the performance of our students. We need to make a big push at that level to have them better prepared as they enter college.

That is reflected in our budget, too.

At the same time, we are certainly maintaining our commitment that every eligible student will have access to college education by maintaining the over $18,000,000,000 aid available level. They can get access to college through a combination of loans, grants and work/study, but the commitment is there along with the Department's emphasis on elementary and secondary education.

Mr. CONTE. What would it cost for each $100 increase in the Pell Grant program.

Ms. CHRISTENSEN. About $250,000,000 increase for each $100.

Mr. CONTE. Dr. Haynes, what happens if Congress doesn't honor the request to cover the $371,000,000 shortfall? Would the Department request a supplemental appropriations or again implement the deep linear reductions?

Mr. HAYNES. Mr. Conte, the Pell shortfall is $371,000,000. The GSL program appropriation request of $3,368,000,000 also includes a shortfall.

GUARANTEED STUDENT LOAN SHORTFALL

Mr. **Conte**. Is that shortfall included?

Mr. **Haynes**. Yes, sir. The shortfall in GSL is over $260,000,000.

Mr. **Conte**. There is a discrepancy between the budget and the justification. Somebody ought to see that.

Ms. **Kirkgasler**. I think there is confusion. The budget was laid out differently this year. You are correct, there is a confusion between the appropriation request and the contract authority.

Many of us have been confused.

Ms. **Christensen**. Mr. Conte, continuing, the Guaranteed Student Loan program operators under what we call contract authority, which means that since it is an entitlement program, whatever is required in a certain year; we are authorized to enter into obligations to incur those costs. When we run short of what has been appropriated we incur the obligations, but we have to request money in the next year to give us funds to liquidate or make the actual cash payments against those obligations that the Government has incurred.

In this year, for example, for the fiscal year 1991 request we have $260,000,000 carried over as shortfall from 1990. This amount is included in our appropriation request but the budget authority that is shown in the President's budget for each year reflects the actual cost of the program for that fiscal year. It reflects the true cost of the program. You have to net out those shortages carried over each year to calculate the amount we ask your committee to appropriate for the actual fiscal year costs.

I would be happy to insert for the record a simple table that shows what has happened over the last three years in order to provide a crosswalk between the appropriations and the budget authority.

[The information follows:]

GSL APPROPRIATIONS AND BUDGET AUTHORITY

[Dollars in thousands]

	1989	1990	1991[1]
Appropriation	$4,066,828	$3,826,314	$3,368,336
Adjustment to finance prior-year shortfall		−217,867	−260,379
Current-year shortfall	217,867	260,379	
Budget authority (contract authority)	4,284,695	3,868,826	3,107,957
Sequester		−12,482	
Adjusted budget authority	4,284,695	3,856,344	3,107,957

[1] Reflects legislative changes proposed for later transmittal.

Mr. **Conte**. Okay. I understand this figure for GSL is all based on the assumption of what the interest rate is going to be next year.

Ms. **Christensen**. That is right.

Mr. **Conte**. I am willing to bet you a good bottle of perfume for a good bottle of bourbon that you are wrong and you will be back for a supplemental.

Ms. **Christensen**. I would say that OMB's projections of interest rates have been very close.

Mr. CONTE. They have. I have to give them credit for that. I think the way I see the economy going and interest rates, they will be higher, not lower.

Ms. CHRISTENSEN. The first quarter of this year has come down.

STATE STUDENT INCENTIVE GRANTS

Mr. CONTE. State Student Incentive Grants help the states to provide grants and work-study opportunities to students. Perkins loans provide a campus based loan program to respond to the needs of individual students. Elimination of these programs, as proposed in the budget, would result in elimination of 305,000 awards to students. What happens to those 305,000 students who don't receive awards?

Mr. HAYNES. Mr. Conte, students who don't receive awards can participate in other financial aid programs.

Mr. CONTE. What other programs?

Mr. HAYNES. The States are going to continue their efforts. As a matter of fact, recent data indicate that State aid has gone up 12 percent.

Mr. CONTE. Not in my State. My State is fighting to stay alive.

Mr. HAYNES. But the majority of States have indicated that their State aid has gone up.

Mr. CONTE. What evidence do you have that States or colleges or the Federal Government or anyone will be able to fill the void, especially the State of your birthplace?

Mr. HAYNES. Mr. Conte, I refer here to a chart that was in the Chronicle of Higher Education, dated February 21, 1990. The chart reports the need-based assistance that the States are providing. It might be helpful, if this chart were entered into the record. It demonstrates that there are a number of States which have increased their aid dramatically.

Of course, I know that there are some States which are economically depressed, Louisiana included, that are not able to do as much.

I certainly think the attention on the part of State and Federal legislators and the constituents in those States are more sensitive to the need for the States to do more in the financing of higher education both in terms of student aid and institutional support.

SUPPLEMENTAL EDUCATIONAL OPPORTUNITY GRANTS

Mr. CONTE. Things in Massachusetts are so bad we are thinking about closing three colleges.

For SEOGs, another campus-based program, you have proposed level funding. Over the past ten years, SEOGs have only grown from $370,000,000 to $458,000,000, while Pell Grants have more than doubled from $2,400,000,000 to $4,800,000,000 in 1990.

What is so bad about campus-based programs, Dr. Haynes? Is a little bit of flexibility to meet the needs of individual students a bad thing?

Mr. HAYNES. Mr. Conte, are you asking whether flexibility is a bad thing?

Mr. CONTE. Yes, Is it a bad thing?

Ms. **Dunn**. No, Mr. Conte, the Secretary believes in flexibility. However, in the SEOG program, it is important to remember that even if it is level-funded, there will be more money available because of the increased institutional match.

It will go from 5 percent in 1989 to 10 percent in 1990 and to 15 percent in 1991. Therefore, we assume there will be more money available.

Mr. **Conte**. Have you factored in the new minimum wage bill passed by the Congress?

Ms. **Dunn**. That is in work-study. Yes, that has been factored in. Remember, a student may be working only to earn a certain amount of money. It is quite possible that if a student earns a set amount of money, the student would work fewer hours.

Mr. **Conte**. Mr. Chairman, you have been very kind to me. I have a lot more questions.

Thank you, Mr. Chairman.

Mr. **Natcher**. Yes.

ENDOWMENTS FOR HBCUS

Now, Dr. Haynes, would you explain if you will to the committee your proposed legislation regarding endowment funds for historically black colleges and universities? What do we have here, Dr. Haynes?

Mr. **Haynes**. Mr. Chairman, under the endowment program of Title III, we presently are providing eight grants. For 1991, we are providing 25. We are proposing an additional $15,000,000 to the HBCU endowment progam in 1991.

Mr. **Natcher**. This would require a change in the law?

Mr. **Haynes**. Yes, sir.

Mr. **Natcher**. If your supplemental is not approved, how will you spend the $5,000,000 which was provided for in the 1990 bill?

Mr. **Haynes**. Mr. Chairman, that $5,000,000 will go back into Part C for the regular endowment.

PROGRAMS RECOMMENDED FOR ELIMINATION

Mr. **Natcher**. The President's budget proposes to eliminate funding for several programs as you know. These include Cooperative Education, Law School Clinical Experience and Veterans Outreach. Can you tell us briefly why you believe Federal support should be terminated for these activities?

Mr. **Haynes**. Mr. Chairman, the Veterans Education Outreach program has outlived its original purpose which was of course to meet the needs of returning Vietnam veterans.

Since that time, the number of veterans has declined and those who are in need of help have available to them the Student Support Services programs that are included in TRIO, and other campus support and counseling programs.

The Cooperative Education and Law School Clinical Experience programs have, we feel, accomplished their purposes by demonstrating their effectiveness.

We note that across the country, more than one thousand institutions are supporting cooperative education programs.

COLLEGE HOUSING AND ACADEMIC FACILITIES

Mr. NATCHER. What is the current value of the portfolios held under each of the various college housing and academic facilities loan programs?

Mr. HAYNES. Mr. Chairman, in terms of loans outstanding at the end of fiscal year 1989, the college housing loans portfolio is $679,100,000, $103,500,000 for Higher Education Facilties Loans, and for College Housing and Academic Facilities Loans, $24,200,000.

Mr. NATCHER. Are there any plans to sell off these loans?

Mr. HAYNES. Yes, sir. The Department has proposed to repeal the prohibition on selling college housing loans and academic facilities loans, so that the loans could be sold in fiscal year 1991 to the extent that the Government's financial interests are best served. We plan to offer for sale if this goes through just over $400,000,000 in loans under the College Housing and Higher Education Facilities Loan accounts. If we sell this, we expect to realize a total of $236,500,000 from the sale, assuming current market conditions, or approximately 58 percent face value.

Mr. NATCHER. You say 58 percent?

Mr. HAYNES. Yes, sir.

Mr. NATCHER. Your statement refers to these loan programs as low priority activities. Why is the department so negative about these particular loans.

Mr. CHILDERS. Mr. Chairman, If I might.

Mr. NATCHER. Go right ahead.

Mr. CHILDERS. In general I believe the whole area of facilities has to be focused on by Federal agencies generally. It is not considered the highest priority at the present time given the amount of funds and the need for access and retention programs. It is, of course, an increasing concern generally with deteriorating facilities around the country but it is not considered one of our highest priorities.

COLLEGE CONSTRUCTION LOAN INSURANCE ASSOCIATION

Mr. NATCHER. What is the current situation with the new college construction loan insurance program known as Connie Lee? Are they financially solvent and still making loans?

Mr. CHILDERS. Mr. Chairman, Connie Lee is up and running. They received a pronouncement from the Treasury Department allowing them to process direct tax exempt bonds and insurance activities. This recent IRS decision will allow Connie Lee to expand its activities without the commitment of additional Federal funds.

Mr. NATCHER. What is the approximate amount of loans, in money, expected to be made in 1991? Can you give us some idea about the amount? Do you have any figure?

Ms. CHRISTENSEN. Do you mean under our budget request?

Mr. NATCHER. No. How much under Connie Lee?

Mr. HAYNES. We will have to get that information and supply it for the record.

[The information follows:]

CONNIE LEE INSURANCE ACTIVITY

The College Construction Loan Insurance Association estimates reinsuring $2.2 billion in debt during 1991. Neither Connie Lee nor the Department have specific estimates of direct insurance activity for 1991. However, Connie Lee's total insurance activity is expected to increase significantly once a triple A credit rating is obtained. Connie Lee projects that a total of $125 million in equity capital will be raised in fiscal year 1990 without any federal assistance. This should be sufficient to secure the issurance of a triple A credit rating for bonds that Connie Lee intends to insure directly in the direct insurance business.

Mr. CONTE. Mr. Chairman, Connie Lee is not running very fast.

Mr. DAVIDSON. In 1989, $1,500,000,000 was reinsured by Connie Lee. That is before Connie Lee was exempted from Section 149(b) of the IRS code. Now, they can provide direct insurance as well. So, they now believe that they can expand considerably beyond the $1,500,000,000 reinsured during 1989.

PH.D. APPLICANT SHORTAGE

Mr. NATCHER. The committee has been briefed on several studies about a shortfall in Ph.D. applicants. The latest was released by the Association of American Universities last month. What can you tell the committee about this issue as it relates to a potential shortage of faculty later in the 1990s?

Mr. HAYNES. Mr. Chairman, the Department has proposed to consolidate funding under stronger and more appropriate graduate assistance programs. This will certainly address the need to increase and expand the number of minorities and disadvantaged persons going into graduate education, especially in those disciplines designated high priority: math, science and engineering.

We are proposing to phase out the public service portion of the Patricia Harris program and the Jacob K. Javits program, because they are not geared toward assisting disadvantaged persons toward studying high-priority disciplines.

Mr. NATCHER. Does the Department agree that there will be a shortage of Ph.D.s?

Mr. HAYNES. Mr. Chairman, we have reviewed the same reports that you have. Indeed, as your question relates to minorities and disadvantaged persons, they are underrepresented across all disciplines. There will be some shortfalls, we think, in some disciplines, but non-Federal sources, as well as other Federal sources, are still available to assist students. The key is to get students to complete undergraduate education so that they can go on to graduate and professional schools. We have to do a better job there.

PHASE-OUT OF THE HARRIS PUBLIC SERVICE AND JAVITS PROGRAMS

Mr. NATCHER. Explain to the committee a little more in detail how this phase-out proposal will work for these two programs, the Javits and the Harris programs.

Mr. HAYNES. Mr. Chairman, what we would do under our proposal is that we would stop making new fellowship awards in fiscal year 1991 and only support continuation fellowships.

Mr. NATCHER. Mr. Conte, I yield to you.

TRIO

Mr. CONTE. I was delighted to see a proposed increase, $28,000,000, for the TRIO programs.

Dr. Haynes, tell us how this increase will be used.

Mr. HAYNES. Mr. Conte, the increases will help us address, in part, the dropout problem. In our new Talent Search initiative, we are reaching down to the seventh and eighth grade to promote persistence in education.

In Upward Bound, we are going to be able to target some resources on a math and science initiative to get more disadvantaged and minorities into those areas. Also, we will fund projects to promote articulation between two-year and four-year institutions, and we will provide a modest increase for the McNair program, for staff training, and for the Educational Opportunity Centers.

Mr. CONTE. I am very interested in this program, as is my good friend, Mr. Stokes. I think we get a lot from the TRIO program. Is everything on track for using $7 million provided in the FY 90 bill for funding the additional 25 Upward Bound programs?

Mr. HAYNES. Yes.

Mr. CHILDERS. The Office of Higher Education has processed the paperwork on that. It is in the final process of negotiation with the schools involved.

Mr. CONTE. I noticed you announced a new expansion of the Talent Search program in 1989 for the current dropout projects for high school students. Tell us how those fit in with the other dropout prevention plans.

Mr. HAYNES. Mr. Conte, as you know, across the country, we have a national dropout problem, especially as it relates to minorities and disadvantaged. Our proposal was to reach to the seventh and eighth grades. We felt by getting the TRIO effort complementing the dropout programs funded at secondary schools, we ought to be able to make a serious dent in dropout problems. We are trying to keep students in school so they can persist into postsecondary education.

Mr. CONTE. The grant announcement stated the funds were drawn from a discretionary account in the Staff Training for Professional Development programs. How big is that discretionary fund?

Mr. CHILDERS. I am not familiar with the grant announcement, sir, but the TRIO funds are fungible to a certain degree. I am not sure where that came from. I will supply that for the record.

Mr. CONTE. Sure, no problem.

[The information follows:]

TALENT SEARCH INITIATIVE

The funds for the Talent Search initiative did not come from a separate discretionary account. The funds came from the appropriation for the Special Programs for the Disadvantaged (TRIO). These funds are appropriated as a single line-item. As a result, the Department has considerable discretion in how to allocate funds among the various programs. After examining the need for funds in the other TRIO programs, the Department decided to use approximately $2.9 million of the $219.3 million appropriated for the TRIO programs to expand services under the Talent Search Program to 7th and 8th grade students.

INTERNATIONAL EDUCATION

Mr. CONTE. The 1990 bill provided up to $1,000,000 for critical language training centers. Similar language was put into the defense bill with the idea that it made sense to try to build an interagency set of resources for people who are familiar with the language and culture of the country critical to the interests of the United States. We were thinking mainly of China, and other parts of the world.

Can you give me an idea how the discussions have gone? Is there any hope for a cooperative relationship?

Mr. CHILDERS. I am very pleased to tell you, sir, that there have been discussions between our Center for International Education and the Defense Department. They have been very cooperative. There is a good spirit in DOD about this program.

After we have our competitions this year, we think DOD will help support those centers with their own money to help increase the overall level of support.

COOPERATIVE EDUCATION

Mr. CONTE. Speaking of cooperative relationships, can you give me some idea why cooperative education is zeroed out under the "kinder and gentler" budget? Clearly, colleges support programs out of their own pocket, but don't you continue to need funds to initiate new projects or improve or expand new projects?

I think if you are not expanding student aid, you would be in favor of programs that help students pay for their own education.

Mr. HAYNES. The Cooperative Education program has accomplished its purpose by demonstrating the effectiveness of providing kids with an opportunity to study and earn pay for related work.

Only 159 of these programs are Federally supported. Over one thousand of the Nation's postsecondary institutions have a cooperative education program, which they are supporting without Federal funds. We think it is a recognition of the benefits of this approach.

We think this is where the Federal leadership has succeeded in demonstrating an approach that works. Now, we can step away and it will be ongoing.

Mr. CONTE. Well, I disagree with you. Let's see what happens when we go to mark up. If we give you the money, I know you will handle it well.

Mr. HAYNES. Yes.

FIPSE

Mr. CONTE. One of the most lauded and least funded programs in the Department is the Fund For Improving Postsecondary Education. Funding has remained level at $11,000,000 in the eighties. Now things have gotten to the point where, two-thirds of all colleges and universities submit applications for 50 grants. That is a ratio of 35 applications for one grant award.

Isn't it time this program got an increase to allow its excellence to be more widely distributed?

Mr. HAYNES. Mr. Conte, you are correct, the FIPSE program is an outstanding program. It demonstrates that the appropriate use of Federal resources can maximize qualitative returns. The budget that was prepared keeps it at the same level, because we feel that it is working very, very well.

The key thing is to disseminate the results of this effort.

Ms. **Christensen**. Mr. Conte, I would add that of the FIPSE awards that have been funded, the average affects about 20 other institutions in its own area. Moreover, virtually all of those projects continue once the Federal funding expires.

So, we are getting a really big bang for the buck on those programs.

Mr. **Conte**. Isn't that another reason why we need a little more money?

Ms. **Christensen**. My point is, of course, that they are expanding, the benefits are being widely disseminated even without our own efforts.

Mr. **Conte**. I understand the Director of FIPSE is a former Williams College professor, right?

Mr. **Haynes**. Yes, sir.

Mr. **Conte**. Williams College is in my backyard, I don't know why you keep hiding him. Bring him up here. Let me take a look at him.

Mr. **Haynes**. Mr. Conte, if you want to see him, we will bring him up here.

Mr. **Conte**. Thank you.

Mr. **Natcher**. Mr. Stokes.

TITLE III, PART B

Mr. **Stokes**. Your budget request provides $83,000,000 for Part B of Title III—Aid to Historically Black Institutions. This amount is the same as the amount in the fiscal year 1990 budget. In light of the fact that your budget summary narrative states that the Department is including significant increases for programs providing assistance and services for those most in need, the disadvantaged, handicapped, minorities and needy college students, why would this program be an exception and not even receive an increase for inflation?

Mr. **Haynes**. Mr. Stokes, we are trying to help the institutions, especially the HBCU community, to become more self-sufficient. So, we are putting additional support into the endowment program. If you notice, the endowment program was increased. We have requested language to target that funding.

Mr. **Stokes**. Let's talk about the endowment program a little bit. You are requesting $15,000,000 to implement the endowment grant set-aside program for the HBCUs. This is the only increase for HBCUs in the budget.

However, the legislation needed to authorize the funding of this program, that is, the Excellence in Education Act, is still pending before Congress. Therefore, there would be no increase for the HBCUs unless this legislation is passed, isn't that correct?

Mr. **Haynes**. Yes, sir, no targeted support.

Ms. **Christensen**. Mr. Stokes, we do have a Senate bill now, and we are expecting the House to move very quickly in the near future on that Act. So, we are very optimistic that we will have the authorization for that.

Mr. **Stokes**. Let me ask you this: The HBCU program envisioned would be located in Part C of Title III, which authorizes the endowment grants, although not specifically to HBCUs. Part B of the

Title specifically relates to HBCUs. Why did the Administration request funding for this program in Part C and not Part B?

I ask this because the difference is that if the authorizing legislation is not enacted, then the funds, if appropriated, would remain in Part C.

Mr. CHILDERS. Yes, sir, that is correct, but HBCUs would be eligible to apply for endowment funds. It would just not be a guaranteed set-aside. They could still apply for those endowment funds next year.

Mr. STOKES. They could apply for them, right?

Mr. HAYNES. Yes, sir.

Ms. CHRISTENSEN. Mr. Stokes, even under our proposal, even if that legislation is put into effect, they would still be eligible to compete for the other regular endowment program.

Mr. STOKES. Yes, but they are not given any type of set-aside.

Ms. CHRISTENSEN. They would not get the set-aside, but when they submit their application, once the set-aside is used for HBCUs, you would go down the list and pick up the HBCUs beneath that. The point is that there is not just that set-aside available for HBCUs.

Mr. STOKES. Is it your feeling, Dr. Haynes, that HBCUs have reached the point of maturity where they do not need any consideration?

Mr. HAYNES. Mr. Stokes, we need to properly evaluate that. That has been one of my concerns. A number of HBCUs have been participants in the Title III programs for a number of years now. One of the issues that we have to look at is to what extent are the resources that we are providing enable HBCUs to make the kind of qualitative improvements that they choose to make.

I discussed this with the Deputy Assistant Secretary. We need to begin to look very quickly at evaluating the uses of the resources that we have, in terms of the Title III program.

Ms. CHRISTENSEN. It is also true, Mr. Stokes, that since 1981, our set-aside for HBCUs has grown from about $40,000,000 to $110,000,000 in our current budget. I am not saying we don't need to continue to look at it, but there has been a dramatic increase that shows the commitment for HBCUs.

HOWARD UNIVERSITY AND REAUTHORIZATION

Mr. STOKES. Let me ask you this, Dr. Haynes: You are aware that the Department of Education held hearings on reauthorization of the Higher Education Act last fall.

Mr. HAYNES. Yes, sir.

Mr. STOKES. When Secretary Cavazos was before our Committee a few days ago, I asked whether he had received testimony pertaining to the inclusion of authorizing language for Howard University within the Act. He replied at that time that the Department had not received any testimony on this issue.

Since then, I have learned that testimony was presented by Howard University and by the National Association of Equal Opportunity in Higher Education. I see you nodding your head. Are you assenting that the Secretary was not properly informed on this issue?

Mr. **Haynes**. Yes, sir. The testimony is in. We have received it from Howard.

Mr. **Stokes**. These organizations, are very concerned about this proposal and recommended that it not be implemented. Are you planning to consider any of their comments?

Mr. **Haynes**. Mr. Stokes, in the reauthorization process we have, as you know, held not only the public hearings, but we have also interacted with various groups. I have met with the officials from Howard University, and we have talked about their reauthorization interests.

I assured them that we would give their proposal every consideration as we begin to formulate our own proposal, but we are not there yet.

Ms. **Kirkgasler**. The comments we received in response to our solicitation reflected some misunderstanding about the Federal Register notice. They were concerned that we were suggesting that Howard University lost its special status, and that it would be subsumed in Title III. When the question was posed, I don't believe that was the intent.

I think it was whether the authorizing legislation for Howard University would be better housed in the Higher Education Act, not that it would lose its separate identity. I think there was misunderstanding of the question.

Ms. **Christensen**. I think the Secretary also made clear since then that his intent in asking for comments on that was the same as the other programs within the Higher Education Act. That is, how can we enhance and improve Federal participation in those programs or in Howard University, and what are some of the best things we can do to help them.

CLEO

Mr. **Stokes**. Mr. Haynes, in your opening statement, you stated the budget request reflects the Administration's commitment to meeting the postsecondary aspirations of poor and disadvantaged individuals. You also said they were planning to target funds to those programs that provide support and assistance to these people at the graduate and undergraduate levels.

The CLEO program, which provides disadvantaged students the opportunity to attend law school, is proposed for level funding in 1991. Can you tell us why this program was not among those that received an increase in the President's budget?

Mr. **Haynes**. Mr. Stokes, over the past 20 years, the CLEO program has assisted over 5,000 students in gaining admission to law schools. We feel that law schools have come up with resources to support needy students, and they seem to be doing a better job of providing access in terms of support.

Mr. **Stokes**. When you say law schools have come up with resources to help needy students, you are not talking about minority needy students, disadvantaged minorities. The whole legal profession in this country is probably less than 3 percent black, with black people being 12 percent of the total population.

Mr. **Childers**. I think it is a reflection in the budget that other areas are even more deserving of our funds for minority participation. Therefore, support for graduate programs in math and science is reflected in the national needs programs. Further, there is some sentiment that support for future graduate education ought to be more focused on Ph.D. degrees and less on completion of professional schools or Master's degree levels.

I think those two factors, focus on Ph.D. and also math and science, contributed to level funding of the law program.

MINORITY SCIENCE IMPROVEMENT PROGRAM

Mr. **Stokes**. You mentioned math and science. Your justification mentions an increase in funding for the Minority Science Improvement Program. In reality, this increase is about $217,000, a 4-percent increase for inflation.

The justification says, "Many of the urgently needed new scientists and engineers will have to come from minority groups, which have traditionally been underrepresented in technological fields."

Do you really believe that this request is adequate, in light of your own statement about minorities in this area?

Mr. **Childers**. I think that should be looked at in the context of other programs as well, that had larger increases for minority participation and graduate education. It is true that that particular program has a small increase, but others do have more substantial increases.

Mr. **Stokes**. Thank you, Mr. Chairman.

Mr. **Natcher**. Mr. Pursell?

JACOB K. JAVITS PROGRAM

Mr. **Pursell**. I have just one question on the Javits program that I would like to put in the record.

TRIO EVALUATION

Now, the TRIO program the committee supported, is that funded pretty adequately? We have had significant increases since 1980 in those programs. You are monitoring over 1,000 projects now. How do you manage that from a staff standpoint, and you do list the number of students that are participating and gaining some advantage from that?

How can you really effectively manage 1,000-some projects that are under student support services?

Mr. **Haynes**. Mr. Pursell, we have an evaluation that we are going to conduct of the TRIO program. We have $1,000,000 set aside for this evaluation.

Mr. **Pursell**. That is new this year?

Mr. **Haynes**. Yes, sir.

Mr. **Pursell**. They are looking at all the programs that are working and that are not working?

Mr. **Haynes**. It is just the two largest programs, Upward Bound and Student Support Services.

Ms. **Christensen**. Mr. Pursell, we have $1,400,000 that you appropriated last year to begin this effort, and we have $1,000,000 in our budget to continue it.

Mr. **Pursell**. Are you going to complete that this year?

Ms. **Christensen**. Yes. We are well under way in the work statement in getting the current year's project going. We want to look at the most effective projects in the TRIO program to see which ones work, to keep the students in school, and to motivate them to go into postsecondary education and take the courses best-suited to them. This way, we can determine the strategies that work best, and get those results around to all other schools in the country, the other TRIO programs, to make them effective; as well as to other schools that are not even getting TRIO money.

There is such a need out there for these kinds of services to complement all our schools.

Mr. PURSELL. Are there urban schools, where the need is critical, that are not getting the money?

Ms. CHRISTENSEN. I am sure there are.

Mr. PURSELL. And that will be part of the report?

Ms. CHRISTENSEN. Yes. Well, the report is going to look at the existing projects that are going on now, where they are located in urban and rural areas, and see how they can best serve different kinds of populations, also.

TRIO EVALUATION CONTRACT

Mr. PURSELL. Is that being done by an outside group?

Ms. CHRISTENSEN. I will have to supply that for the record. I don't know, either.

[The information follows:]

TRIO EVALUATION

The request for proposal for the TRIO Evaluation will be released for competition this fiscal year, and a contract will be awarded prior to September 30, 1990.

Mr. PURSELL. Is it a consulting group?

Mr. HAYNES. We will get the name.

Mr. CHILDERS. Congressman, the contract is yet to be awarded, so we don't know the answer to that. The design of the contract is currently being worked on by the Office of Planning, Budget and Evaluation and the Office of Postsecondary Education. They are working together on the design of the survey and the work.

But the contract has yet to be awarded.

Mr. PURSELL. When will we award that contract?

Mr. CHILDERS. This fiscal year.

Mr. PURSELL. Any time up through September?

Mr. CHILDERS. I believe this summer is the target.

Mr. PURSELL. Will you notify the committee and our office who that contractor is?

Mr. HAYNES. Yes, sir.

Mr. PURSELL. I think that is a very important, critical program, and we want to see it work. I know you do, too. I know we need to do that.

When you say you are putting in counselors, reaching down into the seventh and eighth grades to prevent dropouts, I think that is the right direction, but I am not sure it is early enough.

We are finding potential dropouts, drug abuse problems, and illiteracy in the early grades. Programs like Head Start and the budget are reflected to some extent, but we have no counselors in the elementary system. The counselors have gravitated to the high schools, helping students pick colleges and take tests.

Really, counselors ought to be in the elementary system. I have introduced a bill to take a look at that. I am not sure we are reaching down far enough, because you can identify young children who have acute problems in much earlier grades than the seventh and eighth grade. I think we ought to focus to some extent on that.

Mr. HAYNES. Mr. Pursell, as we go through reauthorization, I think an opportunity to take a look at the operation of the TRIO programs will be there. Having left the State system of education, I feel like you, that dropout problems can be identified as early as the third grade. If they persist, the kids will not even finish middle school.

So, this is one of the issues that we will be looking at in terms of the TRIO program. The evaluation will be very helpful to us as well.

Mr. PURSELL. Will that study include new options, new strategies and recommendations?

Mr. HAYNES. I think the study will evaluate what we have in terms of which programs are working, and why are they working. It will probably identify some of the problem areas we have, and how we can solve them. So, we will have some recommendations.

In addition, the task force I co-chair with Mr. Kolb has a working group assigned to looking at the TRIO program as we go through the reauthorization, and they will be issuing internally some papers that will deal with the issue of how we can make this program better, and how we can better address issues like dropouts.

Mr. PURSELL. How long have we had the TRIO program?

Mr. HAYNES. Since the middle sixties.

DEMONSTRATION DROPOUT PROGRAMS

Ms. CHRISTENSEN. Mr. Pursell, we also have a $50,000,000 initiative in our budget for demonstration dropout programs at the elementary and secondary level.

Mr. PURSELL. How much is in that account?

Ms. CHRISTENSEN. It is $50,000,000. The bill authorizing it is just finishing up in both the House and the Senate. You will recall that a couple of years ago, we had a two-year program. What this is going to do now is build on that. It is going to build on those projects that were funded and announce new competitions that will be more controlled. From the very beginning, it will look at cohort groups and really get a very firm look at what procedures and techniques work best in helping these children; and how you can begin at the earliest grades of elementary and secondary schools to identify the most promising techniques, and disseminate them around.

Part of that, $5,000,000 of the $50,000,000, will be used for research. That is, to set up a national coordinating center to help disseminate and get the results out, as well as individual researchers to come in and look at problems. So, we think we are doing all we can to get the field to come in with creative approaches, and that we will be able, then, to look at and evaluate the most effective ways of reaching these children.

I don't think anybody has really done that yet. That is why kids are still dropping out. We just have not done that. I think you are exactly right that we need to get down to the early grades, and that is what we plan to do with that money.

Mr. PURSELL. You need to go back into the junior highs and lower grades and find out. There is no national research. There is a big gap in the research in junior high.

Ms. CHRISTENSEN. Exactly. That is what this is intended to do. That is a small amount of money, but it will have a big impact on all the funds that are being spent out there, State, Federal and local.

Mr. HAYNES. Mr. Pursell, one of the problems of dropout concerns the definition. Only 31 States have a common definition used by the Center for Educational Statistics. So, across the United States, we are not there in terms of what constitutes a dropout.

Mr. PURSELL. A lot of students graduate with a diploma and cannot read or write.

Mr. HAYNES. Yes, sir. We call it taking up space.

RESEARCH CENTERS

Mr. PURSELL. All the research on the basic national level may have some merit, but I think the research centers ought to be back in the States. We ought to have 51 research institutes or something tied into all of them. In my State, Michigan, we have eight public higher educational universities that are giving diplomas for teachers. They are doing some research, but even that is not reaching into the classroom.

The network of all the local education agencies, namely the school systems, are not tied into the research levels of either the State Boards of Education or the national level. There is an enormous gap there. There is no coordinated network.

So, we spent years and years on research looking at the dropout program, and we have talked about this for 25 years, as I recall. I was in the classroom years ago myself. We are no farther ahead in bringing those numbers down. It seems to me that the research pieces ought to be down in the local levels, where there is some curriculum teacher service connection to what the research dollars we are spending at the national and State level, and there is not.

DROPOUT PREVENTION

Mr. HAYNES. Before I left the State of Louisiana, I put together a comprehensive assistance plan, which went from birth all the way through high school, which took into account all the measures we needed to do in the State of Louisiana to keep kids in school.

This is the first time this had happened, you are absolutely right. There is not a coordinated effort toward combatting dropouts, there are a variety of sources. We have not put the focus there. But, I am encouraged by the fact that there are more States now looking at comprehensive completion plans that begin from early childhood education all the way up through high school.

The City of New Orleans in 1988 spent over $12,000,000 on dropouts and did not make a serious dent in the problem. But, someone got $12,000,000 to do something. I am not saying the money is not needed, but are we using the money wisely?

Mr. **Pursell.** That is why I was concerned. The committee funded it every year, because we basically support the intent and concept, but I am not sure some of the programs are working.

Ms. **Christensen.** Mr. Pursell, our new Assistant Secretary for OERI, Christopher Cross, has developed some very exciting plans on getting the research results out into the hands of parents and schools. He will be here to testify tomorrow. I think you will be interested in some of the things he plans.

This whole area of research is a big thrust in our budget this year.

TRIO EVALUATION

Mr. **Pursell.** Will you provide the specs on the contract for evaluation of TRIO?

[The information follows:]

TRIO Evaluation

The specifications for the TRIO evaluation will consist of the following components: 1) an analysis of program records of Upward Bound grantees to provide descriptive information on the demographic characteristics of participants, 2) a mail survey and case studies of Upward Bound and Student Support Services grantees to identify and evaluate program methods, 3) an analysis of High School and Beyond data (National Longitudinal Study 1972) on Upward Bound students and the long-term effects of program participation, and 4) a supplement to the National Educational Longitudinal study of 1988 (NELS 88) to provide information about high school experiences of Upward Bound participants, academic growth as well as post-secondary enrollment performance and completion.

A request for proposal will be released this spring which will address the analysis of program records, mail survey, and the case studies.

Mr. **Haynes.** Yes.

Mr. **Pursell.** I would like to see the format for that.

Thank you, Mr. Chairman.

Mr. **Natcher.** Dr. Haynes, we want to thank you and your associates for appearing before our committee at this time on behalf of your budget request fiscal year 1991. The committee will now adjourn until 2:00 this afternoon.

[The following questions were submitted to be answered for the record:]

PAUL DOUGLAS TEACHER SCHOLARSHIPS

Mr. Natcher: What percentage of students who receive Paul Douglas teacher scholarships actually go into teaching as a career?

Mr. Haynes: As of June 30, 1989, 1,015 Douglas Scholarship recipients, or 93 percent of those who had completed their course of study the prior year, had begun teaching.

FUNDING FOR GRADUATE ASSISTANCE IN AREAS OF NATIONAL NEED

Mr. Natcher: What are the outyear commitments which would be necessary in 1992 and 1993 if this budget for National Needs fellowship grants is approved? Are we looking into further increases beyond those in this year's request?

Mr. Haynes: Our 1991 budget request estimates for the Graduate Assistance in Areas of National Need program for 1992 and 1993 are the same as for 1991--$25.5 million. We do not anticipate increasing our requests for 1992 and 1993, since we will be able to make new fellowships in those years without an increase in appropriations. The portion of funds used to make continuation awards to the 1991 and 1992 "graduating" classes will become available for awards to a new class of graduate students beginning their studies in 1992 and 1993, respectively.

TRIO

Mr. Natcher: Is there any question in your mind about the capacity of the TRIO program to absorb this increase?

Mr. Haynes: We are entirely confident that the TRIO programs can accommodate the increase proposed for fiscal year 1991. The TRIO programs have always assisted only a small fraction of the potential beneficiaries. The recent increases have made it possible for us to increase the number of persons served as well as pursue other special initiatives which we believe will strengthen the programs.

TRIO FUNDING

Mr. Natcher: Insert in the record at this point a 10-year table of funding for TRIO with the amount and percentage increase each year.

Mr. Haynes: A table showing the amount and percentage increases for the TRIO programs from the period of 1980 to 1990 with estimates for 1991 follows:

Summary of Funding for the Special Programs for the Disadvantaged (TRIO) Fiscal Years 1980-89 with Estimates for 1990 & 1991

Program	1980	1981	1982	1983	1984	1985
Upward Bound	62,500	66,501	63,720	68,366	70,754	73,614
Student Support	60,000	63,885	60,702	60,556	67,295	70,084
Talent Search	15,300	17,113	17,057	17,058	17,628	20,728
EOC	7,700	8,001	7,800	7,800	8,102	9,209
Training	2,000	1,000	960	960	960	1,303
McNair	---	---	---	---	---	---
Total	147,500	156,500	150,239	154,740	164,739	174,938
Percent Increase	---	6.1%	-4.0%	3.0%	6.5%	6.2%

Program	1986	1987	1988	1989	1990Est	1991Est
Upward Bound	72,338	74,548	80,414	93,609	106,002	117,542
Student Support	67,070	70,962	90,810	85,393	90,638	97,730
Talent Search	19,607	20,384	22,229	25,864	27,115	34,841
EOC	8,814	9,210	11,163	11,630	12,095	13,910
Training	957	1,006	1,229	1,279	1,535	1,596
McNair	---	---	---	1,482	3,000	3,120
Total	168,786	176,110	205,845	219,257	240,385[1]	268,739[1]
Percent Increase	-3.5%	4.3%	16.9%	6.5%	9.6%	11.8%

[1] The following amounts for evaluation of Upward Bound and Student Support Services are excluded: $1,437,000 in fiscal year 1990 and $1,000,000 in fiscal year 1991.

HISTORICALLY BLACK COLLEGES AND UNIVERSITIES

Mr. Natcher: This account includes several programs targeted to historically black colleges and universities. What can you tell us about the general fiscal condition of these schools?

Mr. Haynes: The 1989 _Digest of Education Statistics_ contains the following financial data on traditionally black institutions of higher education. Most of these schools are small institutions with limited resources.

Traditionally Black Institutions of Higher Education
Financial Statistics, 1985-86
($ in 000s)

		Public		Private	
	Total	4-year	2-year	4-year	2-year
Number of Institutions	99	38	5	49	7
Current-fund revenues	$1,966,778	$1,098,481	$29,529	$827,517	$11,251
Average	19,886	28,907	5,906	16,888	1,607

Average	19,743	28,378	5,570	17,124	1,333
Endowment, market value	438,773	20,187	1,149	416,766	670
Average	4,432	531	230	8,505	96
Buildings, replacement value	4,186,359	2,636,038	57,391	1,468,530	24,400
Average	42,286	69,369	11,478	29,970	3,486

HISTORICALLY BLACK COLLEGES AND UNIVERSITIES

Mr. Natcher: Is there any good data about the success of these historically black schools in building their endowments?

Mr. Haynes: The most recent data collected and reported by the National Center for Education Statistics on the market value of endowments held by historically black colleges and universities (HBCU) are presented below.

Market Value of Endowments of Historically Black Colleges and Universities (Dollars in 000's)

			Change 1980-1985	
	1980	1985	$	%
All HBCUs				
Total endowments	$249,777	$438,773	$188,996	+76%

BLACKS IN GRADUATE SCHOOL

Mr. Natcher: The Committee has been concerned about the direct statutory earmarks in the program to assist historically black graduate programs. Are there other schools who should be allowed to compete for these funds?

Mr. Haynes: One-third of the historically black colleges and universities (HBCUs) award graduate degrees. However, most of these institutions grant both graduate and undergraduate degrees and receive funds under the Part B, Title III formula grant program.

The original intent of the Strengthening Historically Black Graduate Institutions program was to provide support for free-standing graduate schools with limited resources due to the lack of an undergraduate enrollment. Four of the six statutorily designated institutions currently fit this description. We are not aware of any additional freestanding historically black graduate institutions.

We are examining this program and other issues relevant to HBCUs in detail as we develop our 1991 reauthorization proposals. We believe it is premature to decide if additional institutions should be added to the current list of eligible historically black graduate schools until reauthorization deliberations have been completed.

O'NEILL LIBRARY

Mr. Natcher: Would you include in the record at this point a short summary of the Federal support for the Thomas P. O'Neill Library, including the current balance in the loan fund.

Mr. Haynes: The Higher Education Amendments of 1986 directed the Secretary to cancel all scheduled annual debt service obligations of Boston College for the O'Neill Library in fiscal years 1987, 1988, 1989 and 1990. The total amount forgiven over these years is $2,700,000. The balance outstanding on this loan is $14,055,000, with their first payment due in October, 1990.

EARMARKED PROJECTS

Mr. Natcher: Please submit to the Committee a list of all earmarked appropriations for higher education projects over the last 10 years with a statement of how each became authorized.

Mr. Haynes: We have listed below the projects that were earmarked in appropriations act language for the Higher Education account for fiscal years 1980 through 1990. We have not included earmarks for an entire program or earmarks contained in the authorizing law or report language.

1990	Washington Library Consortium D.C. Appropriation Bill	$6,700,000
1989	Health and Human Resources Center at Voorhees College in Denmark, S.C. Title III, Part B of the Higher Education Act.	4,446,000
	Urban Education Foundation P.L. 101-45	1,600,000
1987	Bologna Center of the School of Advanced International Studies of the Johns Hopkins University. Title IV, Part A of the Higher Education Act.	1,000,000
1984	Center for Advanced Technology and Development at the University of New Hampshire. Title VII, Part B of the Higher Education Act.	15,000,000
	Central Research Library at Boston College.	7,500,000

	Title VII, Part B of the Higher Education Act.	
	The Maureen and Mike Mansfield Foundation P.L. 98-139	5,000,000
1983	Carl Albert Congressional Research and Studies Center	2,000,000
	Wayne Morse Chair of Law and Politics.	335,000
1982	Two institutions of higher learning in Vermont. Title III, Part A of the Higher Education Act.	300,000

MARGARET CHASE SMITH LIBRARY CENTER

Mr. Natcher: What type of services or activities will be supported with the grant to the Margaret Chase Smith program in fiscal year 1990?

Mr. Haynes: In fiscal year 1990, $5,000,000 was provided for a permanent endowment for the Margaret Chase Smith Library Center in Skowhegan, ME, as authorized in sections 139 and 140 of the Public Law 100-202. Annual income from the endowment will be used to bring together leaders from Government, business, labor, and the nonprofit sector for a regular lecture series. Part of the endowment income shall also be used to support grants to congressional scholars, the acquisition of publications, public exhibits, and the annual expenses of the library center.

HBCU FUNDING

Mr. Natcher: Insert in the record at this point a summary table showing all direct assistance to HBCU's provided by the Department of Education.

Mr. Haynes: The most recent data compiled by The White House Initiative on Historically Black Colleges and Universities, the office responsible for compiling data on these institutions, indicate that in fiscal year 1988 HBCUs received $297,105,318 in direct assistance from the Department, excluding student financial assistance.

Following is a table summarizing the direct assistance received by HBCUs:

DEPARTMENT OF EDUCATION FUNDING TO HBCUs

PROGRAMS	FISCAL YEAR 1988
Special Education Programs	$1,493,986
National Institute on Disability and Rehabilitation Research	518,539
Educational Research and Improvement Programs	2,650
Programs Elementary and Secondary Education	350,507
Bilingual Education	233,955
Fund for the Improvement of Postsecondary Education	607,676
TRIO	24,056,658
Title III	76,061,107
Howard University	172,200,000
International Education	213,658
All other Higher Education Programs	21,366,582
Total	$297,105,318

WASHINGTON LIBRARY CONSORTIUM

Mr. Natcher: Insert in the record at this point a short description and history of the Federal assistance to the Washington Library Consortium authorized in the "D.C." bill last year.

Mr. Haynes: In fiscal year 1988, under P.L. 100-202, the Congress provided $6.7 million for the Academic Facilities program that was thought to be intended for the Washington Library Consortium. However, the statutory requirement for an open competition and other provisions contained in the Higher Education Act (sections 701(b), 721(b) and 721(c)) prevented the Department from providing a noncompetitive grant to the Consortium. The fiscal year 1990 District of Columbia Act, P.L. 101-168, subsequently removed these limitations, and directed the awarding of these funds to the Consortium.

We have been informed by the Consortium that it currently plans to submit to the Department an application for the funds by early June, 1990. The Department will award funds to the Consortium as soon as possible thereafter.

TITLE III

Mr. Roybal: How many institutions are in Part A of Title III?

Mr. Haynes: In fiscal year 1989, 269 awards were made to 267 institutions under Part A of Title III.

TITLE III FUNDING OF TRIBAL COLLEGES

Mr. Roybal: Over the past eight years, how many Tribal Colleges have received assistance under Part A?

Mr. Haynes: From fiscal year 1982 through 1989, 17 institutions with high percentages of native American students have been funded under Part A. Of this total, 14 have been Tribally Controlled Colleges. These 14 colleges received 52 awards over this time period, for a total of $11.6 million.

HISPANIC PARTICIPATION UNDER TITLE III

Mr. Roybal: How many institutions, on the mainland or in the continental United States, with high percentages of Hispanic students have received funds under this program for the past eight years?

Mr. Haynes: Since fiscal year 1982, a total of 191 awards have been made to 50 institutions that enroll high percentages of Hispanic students. Of this total, 81 grants were awarded to 23 institutions located on the mainland. Since 1982, approximately $23.6 million have been awarded to these institutions.

TITLE III FUNDING

Mr. Roybal: The law requires that not less than $51.4 million must be made available to two-year institutions. How much do you plan to spend for two-year institutions in fiscal year 1991?

Mr. Haynes: There is no "plan" to award a certain number of dollars beyond the required $51.4 million. An average of 74 percent of the total appropriation has been awarded to two-year institutions each year over the last 3 years. Using that same percentage, we estimate that approximately $64.0 million of the fiscal year 1991 Part A budget request will be awarded to two-year institutions.

Mr. Roybal: The law also requires that 25 percent of the appropriated amount over $61 million be directed to institutions with the highest percentage of black, Hispanic, Asian American, native Hawaiian, and/or Pacific Islander. How many institutions receive funding under this category?

Mr. Haynes: In fiscal year 1989, 13 institutions received funding under this category at a cost of $2,716,020.

Mr. Roybal: How many applications are you able to fund with the remainder of the funds after the two-year colleges and the 25 percent set-asides?

Mr. Haynes: In fiscal year 1989, the program was able to fund an additional 80 grants after meeting the two-year and 25 percent set-asides. These 80 grants included both new and continuation awards.

Mr. Roybal: How many applications are generally approved but not funded due to lack of funds? What is the ranking score of most of these applications?

Mr. Haynes: Applications are reviewed and ranked according to how they each meet the published scoring criteria. Applications are not "approved" or "disapproved." The actual number of applications funded is entirely dependent on the amount of the appropriation and the number of applications received.

In fiscal year 1989, 672 applications were received and ranked, with the cut-off score 95.0 points due to the level of appropriation. But, for example, using 85.0 points as a score reflecting a good application, 217 colleges scored between 85.0 and 95.0 points.

Mr. Roybal: Is there a discrepancy between the ranking scores of applications funded under the two-year and 25 percent set-asides and the applications funded with the remaining funds? If so, how can this be corrected during fiscal year 1991?

Mr. Haynes: Since fiscal year 1982, the program has not needed to go out of rank order to meet the two-year college set-aside. In 1989, however, the Department funded seven colleges out of rank order and below the cut-off score of 95.0 points in order to meet the highest minority percentage enrollment set-aside. The scores of these seven colleges ranged from 88.5 to 67.0 points.

The possible funding of applications with relatively low scores under the highest minority percentage set-aside requirement cannot be prevented without a revision of the authorizing statute.

COOPERATIVE EDUCATION

Mr. Dwyer: Despite the numerous reports outlining our country's need to ensure a sufficient number of qualified workers, the administration has proposed to eliminate Cooperative Education, a program which helps to develop a more definite linkage between education and work. Has an evaluation been done by the Department to determine if any institutions would not be able to maintain a cooperative education program without Federal support. Are any institutions currently contemplating establishing cooperative education programs which would not do so if the Federal program were eliminated?

Mr. Haynes: The Department has not conducted a study to determine whether institutions would stop offering cooperative education if the Federal program were eliminated, nor have we attempted to determine if institutions planning to offer cooperative education would abandon such a plan without the possibility of Federal support.

We have based our proposal to terminate Federal funding for Cooperative Education on the following facts:

- As competition for student enrollment has increased and increasing numbers of students have demanded cooperative education programs, institutions have been motivated to support the programs on their own;
- This is an area in which institutions have been very successful in obtaining private sector support;
- Four out of five institutions offering cooperative education now do so without Federal support; and
- Most institutions applying for grants under this program already have institutionally funded cooperative education programs.

TRIO

Mr. Dwyer: The President's budget requests an additional $27.0 million for the very successful TRIO programs. TRIO has been considered to be an effective tool in discouraging dropout amongst disadvantaged students. How will this program be integrated into the Department's new dropout prevention initiatives?

Mr. Haynes: The $45 million for dropout prevention demonstrations and the $5 million for dropout research requests represent activities which the Department will develop in close coordination with the TRIO dropout activity, the Department of Labor's dropout program, and others. As part of the TRIO effort, the Department is requesting $8.2 million in fiscal year 1991 for an initiative, begun in 1989, under the Talent Search program. This initiative is focused on counseling services for seventh and eighth graders. Coordination of these activities is key to the administration's efforts to provide Federal support for State and local efforts to meet the national education goals of raising the high school graduation rate to 90 percent by the year 2000.

UPWARD BOUND MAGNET PROGRAMS

Mr. Dwyer: The Department plans an expansion of mathematics and science opportunities in the Upward Bound program. Under the program initiative, regional "magnet" projects will be funded to provide mentoring, internship, and research experiences. Could you explain to the subcommittee how these "magnet" programs will be established and run?

Mr. Haynes: The Department plans to hold a competition during fiscal year 1990 to award funds to approximately 25 to 30 institutions. Beginning in the summer of 1991, these institutions will provide summer residential activities for up to 100 Upward Bound participants per institution selected from among the regular Upward Bound projects in the area or region. The participants will be exposed to an intensive mathematics and science curriculum during the summer and will have opportunities to meet and work with of math and science, so that they are prepared to continue their studies in these areas upon entering college. As you know, this is an important initiative in support of the national goal that by the year 2000 the U.S. will be first in the world in science and mathematics achievement.

NATIONAL SCIENCE SCHOLARS PROGRAM

Mr. Dwyer: The administration has proposed the establishment of a National Science Scholars program. Why is this program not under the auspices of the National Science Foundation?

Mr. Haynes: We strongly believe that the National Science Scholars program should be administered by the Department of Education, rather than by the National Science Foundation (NSF). Our proposed program would be authorized under the Higher Education Act and would be consistent with the Student Financial Assistance programs already under title IV of that Act. National Science Scholars definitions governing eligible students, eligible institutions, etc., would be made uniform with existing title IV programs. Very importantly, our proposed program would be coordinated with other Department student aid programs to ensure that no student receives scholarship and financial assistance in excess of his or her cost of education.

I would also like to point out that the NSF is most experienced in the area of research grants and fellowships for graduate study. The proposed National Science Scholars program would be an undergraduate scholarship program. The NSF administers no such programs.

Mr. Dwyer: How is it different from scholarship programs already in place?

Mr. Haynes: Apart from our very large and broadly available title IV student aid programs, the Department of Education operates two categorical, merit-based scholarship programs for undergraduates. Neither program specifically encourages studies in the math or science fields. The Robert C. Byrd Honors Scholarship program provides students who have demonstrated outstanding academic achievement and who show promise of continued academic excellence with a $1,500 scholarship for the first year of study at an institution of higher education. The Paul Douglas Teacher Scholarship program encourages outstanding high school graduates to pursue courses of study at the postsecondary level that would lead to teaching careers in elementary and secondary education by providing recipients with scholarships of up to $5,000 per year.

MATH AND SCIENCE EDUCATION

Mr. Dwyer: In addition, the budget request states that over half of all 17 year olds are so poorly trained in science that they cannot perform work requiring basic technical understanding. Why then are we waiting so long? Wouldn't it be more effective to put our resources into program which encourage younger children to become scientists and engineers?

Dr. Haynes: The seriousness of this Nation's lack of math and science knowledge at all levels of education requires that we support math and science programs at every level of study. In order to help meet the national goal that by the year 2000 the U.S. will be the world leader in science and mathematics achievement, we are pursuing an array of initiatives at all education levels. We are proposing a 70 percent increase to $230 million for the Eisenhower Mathematics and Science Education program, which helps States improve the preparation of teachers and raise achievement levels of elementary and secondary school students in these subjects. Also, our 1991 request for the Upward Bound component of the Special Program for the Disadvantaged ("TRIO") program would provide for an expansion of the math and science initiative begun in 1990. Under this initiative, regional centers will offer an intense summer math and science curriculum to high school students.

The proposed National Science Scholars program would provide an incentive to high school students to excell in science and mathematics by recognizing their achievement. It would also provide scholars with significant financial resources (up to $10,000 per year) if they continue their studies in these fields at the undergraduate level.

The Department is also requesting significant increases in 1991 for the Patricia Roberts Harris Graduate Fellowships program and for the Graduate Assistance in Areas of National Need program. The request for Patricia Roberts Harris Fellowships, which grants approximately 53 percent of its awards to those studying mathematics, science or engineering, is $17.8 million--an 11 percent increase over 1990. Our 1991 request for Graduate Assistance in Areas of National Need, which makes awards to students studying mathematics, physics, chemistry or engineering, is $25.5 million--a 61 percent increase over 1990.

DOUGLAS TEACHER SCHOLARSHIPS

Mr. Conte: In fiscal year 1990, no funding was requested for Paul Douglas Teacher Scholarships. For fiscal year 1991, you're requesting $14.9 million. Why have you changed your mind?

Mr. Haynes: President Bush and Secretary Cavazos are strongly committed to improving the quality of teaching in America's schools. The Paul Douglas Teacher Scholarship program is one way to encourage some of our best students to pursue teaching careers. It will help us achieve the national education goals announced by President Bush and the Governors.

TRIO

Mr. Conte: The TRIO programs are supposed to complement the financial assistance programs that are available to disadvantaged students by providing them with information and support services designed to get them into college and keep them there. How effective is it to expand Trio while not expanding student aid assistance?

Mr. Haynes: A major goal of the TRIO programs is to provide the necessary student support services to improve educational access and opportunity for the disadvantaged. The TRIO programs have never served more than a fraction of the number of students served by student aid.

One indicator that there are large numbers of needy students not currently being offered these support services is the number of Title IV student aid recipients as compared to the number served by TRIO. In fiscal year 1990, 167,300 students were served under Support Services. While the fiscal year 1991 TRIO request would serve over 3,100 more students, this is a fraction of the 175,000 additional students that would receive Pell Grants under our 1991 request.

Another major TRIO goal is dissemination of information and counseling on higher education opportunity and college admission procedures. Researchers continue to find that the neediest of high school students are less likely to learn of the availability of student aid than other students. Thus, it is important to continue and expand the Upward Bound, Talent Search, and the Educational Opportunity Center programs along with Student Support Services.

INTERNATIONAL EDUCATION

Mr. Pursell: Congress provided a large increase for International Education and Foreign Language Studies in fiscal year 1990, from $31 million to $39.8 million. The Administration proposes to provide the same amount in fiscal year 1991.

With growing emphasis on world trade and an international economy, and given the promise of new relations with Eastern Europe, do you believe that we should place additional emphasis on this program?

Mr. Haynes: The Department strongly supports the International Education and Foreign Languages Studies programs. Recent developments in Eastern Europe and the opening up of potential new marketplaces for American products dramatically point to the need for a continuing U.S. commitment to effective programs of international area studies and foreign language education.

Our budget request for fiscal year 1991 therefore sustains the substantial funding increase of the previous year for the International Education programs. We believe that this level of funding meets the current needs for foreign language and area studies. Moreover, we are currently examining international education and foreign language studies issues and the Department's pertinent programs in great detail as we develop our 1991 reauthorization proposals. We will make recommendations as to the appropriate emphasis to be placed on our International Education programs once this review has been completed.

JACOB K. JAVITS FELLOWSHIPS PROGRAM

Mr. Pursell: The Jacob Javits Fellowships program provides fellowships to students for doctoral programs in the arts, humanities and social sciences. At a time when educators are forecasting a severe shortage of personnel in these areas, do you agree with the administration's proposal to reduce funding from fiscal year 1990, $7.9 million to $5.4 million in fiscal year 1991?

Mr. Haynes: I support the administration's proposal to decrease funding for the Jacob K. Javits Fellowships program. Our priorities in the area of graduate education are to assist disadvantaged persons and to support studies in high priority academic areas. This program is not targeted at either of these priorities. In addition, there are a wide variety of other Federal and non-Federal sources of financial support available for all areas of graduate study, including the arts, humanities and social sciences.

HIGHER EDUCATION

For carrying out, to the extent not otherwise provided for, [titles] title I, part D, [III,] subparts 4 and 6 of part A of title IV, 1/ [sections 501,] section 523, and subpart 1 of part D of title V, title VII, part D, part A and subpart 1 of part B of title X, 2/ and titles [XII] 3/ III, VI, [VII, VIII,]4/ and IX[, and X] 5/ of the Higher Education Act of 1965, as amended, and section 102(b)(6) of the Mutual Educational and Cultural Exchange Act of 1961 6/ [and section 140(b) of Public Law 100-202, 7/ $632,736,000] $657,648,000, of which up to [$18,128,000] $32,893,000 for endowment activities under section 332 of part C of title III, including $15,000,000 for historically black colleges and universities,8/ and [$22,744,000] $20,900,000 for interest subsidies under part D of title VII shall remain available until expended: Provided, That [$8,740,000] $5,000,000 for the National Science Scholars Program is not available until specifically authorized: 9/ Provided further, That $8,627,000 provided herein for carrying out subpart 6 of part A of title IV shall be available notwithstanding sections 419G(b) and 419I(a) of the Higher Education Act of 1965 (20 U.S.C. 1070d-37(b) and 1070d-39(a)): Provided further, That no funds shall be used for part F of title IX of the Higher Education Act: 10/ Provided further, That [$1,456,000] $1,000,000 of the amount provided herein for subpart 4 of part A of title IV of the Higher Education Act shall be for an evaluation of Special Programs for the Disadvantaged to examine the effectiveness of current programs and to identify program improvements. (Department of Education Appropriations Act, 1990; additional authorizing legislation has been proposed for $20,000,000.)

[Of the funds appropriated in Public Law 100-202 for carrying out part B of title VII of the Higher Education Act that remain available for obligation, $6,700,000 shall be awarded without regard to section 701(B), section 721(B), and section 721(C) of said Act to the consortium of institutions of higher education in the Washington, DC metropolitan area for the purpose of constructing and equipping an academic research library to link the library and information resources of the universities participating in the consortium.] 11/ (District of Columbia Appropriations Act, 1990.)

Higher Education

Explanation of Language Changes

1/ This language is added to include the appropriate authorizing citations for the Student Literacy Corps program, Special Programs for the Disadvantaged, and the Robert C. Byrd Honors Scholarship Program.

2/ This language is added to clarify the appropriate authorizing citations for Interest Subsidy Grants, Fund for the Improvement of Postsecondary Education, and the Minority Science Improvement Program.

3/ This language is deleted because no funding is requested for Assistance to Guam in fiscal year 1991.

4/ This language is deleted because no funding is requested for Academic Facilities Grants or Cooperative Education in fiscal year 1991. A specific citation for Interest Subsidy Grants is included above.

5/ This language is deleted because the specific citations for programs for which funds are being requested under Title X are included above.

6/ This language is added to reflect the appropriate legislative citation for the International Overseas (Fulbright-Hays Act) programs.

7/ This language is deleted since no funds are requested for the Margaret Chase Smith Library Center in fiscal year 1991.

8/ This language is added to set aside $15 million of Title III, Part C funds for historically black colleges and universities.

9/ This language is included because the authorizing legislation for the National Science Scholars program (The Educational Excellence Act of 1989) has not yet passed.

10/ This language is added because funding is not requested for the Law School Clinical Experience program. A reference to Title IX is included above because funding is required for the other programs authorized under that Title.

11/ This language is deleted to reflect the one-time nature of the fiscal year 1990 appropriation of the Washington Library Consortium.

Higher Education

Language Analysis

Language Provision	Explanation
...of which up to [$18,128,000] $32,893,000 for endowment activities under section 332 of part C of title III, including $15,000,000 for historically black colleges and universities,and [$22,744,000] $20,900,000 for interest subsidies under part D of title VII shall remain available until expended...	This language specifies a certain funding level for grants under Title III, Part C, establishes a set-aside for HBCUs within that amount, and extends the availability of funds under Title III, Endowment Challenge Grants, and the Interest Subsidy Grant program (Title IV, part D).
Provided, That [$8,740,000] $5,000,000 for the National Science Scholars Program is not available until specifically authorized...	This language acknowledges that the authorizing legislation for the National Science Scholars Program (The Educational Excellence Act of 1989) has not yet become law.
Provided further, That $8,627,000 provided herein for carrying out subpart 6 of part A of title IV shall be available notwithstanding sections 419G(b) and 419I(a) of the Higher Education Act of 1965 (20 U.S.C. 1070d-37(b) and 1070d-39(a))...	This language eliminates the statutory requirement that Robert C. Byrd honors scholars be selected from congressional districts and that scholarships be awarded in local ceremonies by congressmen.
Provided further, that no funds shall be used for title IX of the Higher Education Act...	This language ensures that funds will not be available for the Law School Clinical Experience Program.
Provided further, That [$1,456,000] $1,000,000 of the amount provided herein for subpart 4 of part A of title IV of the Higher Education Act shall be for an evaluation of Special Programs for the Disadvantaged to examine the effectiveness of current programs and to identify program improvements.	This language authorizes funding for the second year of a comprehensive evaluation of the Special Programs for the Disadvantaged.

Higher Education

Language Analysis

Language Provision	Explanation
[Of the funds appropriated in Public Law 100-202 for carrying out part B of title VII of the Higher Education Act that remain available for obligation, $6,700,000 shall be awarded without regard to section 701(B), section 721(B), and section 721(C) of said Act to the consortium of institutions of higher education in the Washington, DC metropolitan area for the purpose of constructing and equipping an academic research library to link the library and information resources of the universities participating in the consortium.]	This language is deleted, since its purpose was a one-time appropriation for the Washington Library Consortium.

Law enforcement education (Omnibus Crime (Control and Safe Street Act of 1968; Law Enforcement Education Assistance Reform Act of 1979)...............................	Indefinite	---	Indefinite	---
Total definite authorizations.................	14,890,000		2,590,000	
Total appropriation...........................		$623,544,000		$657,648,000

1/ Reflects a proposed $5,000,000 set-aside for HBCU endowment grants.

2/ For any fiscal year, funds appropriated for HEA, Title X, Part B are to be allocated as follows: 50 percent for Subpart 1, 33.33 percent for Subpart 2, and 16.67 percent for Subpart 3.

3/ The authorizing language establishes a ceiling of $5,000,000 and stipulates that the funds will remain available until expended.

4/ A total of $1,800,000 is authorized for this project. For fiscal year 1988, $1,723,000 of these funds were appropriated.

5/ A total of $550,000 is authorized for this project. For fiscal year 1988, $526,000 of these funds were appropriated.

6/ One-time only authorization; funds are available until expended.

Authorizing Legislation — Continued

7/ A total of $6,200,000 is authorized for this project. For fiscal year 1988, $5,936,000 of these funds were appropriated.

8/ A total of $1,300,000 is authorized for this project. For fiscal year 1988, $1,245,000 of these funds were appropriated.

9/ For any fiscal year, funds appropriated under HEA, Title XI are to be allocated as follows: 66.67 percent for Part A, and 33.33 percent for Part B.

10/ A total of $6,000,000 is authorized for fiscal years 1987-1990. For fiscal years 1987 and 1988, $5,915,000 of these funds were appropriated.

11/ A total of $6,000,000 is authorized for this project. For fiscal years 1987 and 1988, $5,915,000 of these funds were appropriated.

[1] Reflects enacted supplementals, rescissions, and reappropriations in amounts appropriated prior to fiscal year 1985.

Higher Education

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report	
Mississippi Valley University	
The Committee urges the Secretary to provide a maximum level of support to Mississippi Valley State University under Title III, Part B, Strengthening Historically Black Colleges and Universities.	Title III, Part B — Strengthening Historically Black Colleges of Universities — is a formula grant program. The formula for awarding funds under this program is contained in the statute. If it meets basic eligibility criteria, Mississippi Valley State University will receive the maximum amount for which it qualifies under the formula.
HBCU Endowment set-aside	
The Committee expects a reprogramming of funds should the proposal to allocate $10 million of the Title III Endowment Challenge Grant funds for HBCUs be enacted. If legislation is not enacted prior to the start of the next program year, the funds are to be allocated under Part C.	The Department has submitted a language-only supplemental request for fiscal year 1990 to set aside $5 million of the Title III Endowment Grant funds for HBCUs. Under the fiscal year 1991 request, the Part C set-aside for HBCUs would be increased to $15 million.
International Education Centers	
The Committee includes an increase over the 1989 appropriation of $9.3 million for domestic programs, of which a portion is to be used to establish or expand centers in international business education similar to those authorized in the 1988 Trade Act (P.L. 100-148); and $1 million is for grants for up to two foreign language resource centers to identify the national need for critical language training and to provide programmatic responses to those needs. Grants are to be made in consultation with the Secretary of Defense.	The Secretary is continuing to review various options for the use of additional funds provided for the domestic programs. At the present time, it is anticipated that the post-sequester amount of $4.7 million will be available for the Centers for International Business Education program. In addition, the post-sequester amount of $800,000 will be used to award two grants for foreign language resource centers. The Secretary believes that this lesser amount will be adequate for this purpose.

Higher Education

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report -- Continued	
Upward Bound	
The Committee expects the Secretary to fund 35 additional Upward Bound awards in the TRIO program from "already approved but unfunded" applications.	In early 1990, the Secretary plans to make awards to the 25 projects which, in the 1990-91 competition, ranked immediately below the cut-off score. The Department would like to note that no applications were "already approved but unfunded." Awards are made on a competitive basis from among all applications which meet the basic statutory criteria.
Ronald E. McNair Awards	
The Committee expects the Secretary to make a substantial number of new awards under the Ronald E. McNair Post-baccalaureate Achievement Program.	The Secretary plans to hold a competition for new grants under this program during fiscal year 1990. At this time, he anticipates using approximately $1.46 million for this purpose.
Law School Clinical Experience Evaluation Study	
The Committee intends that $150,000, the increase over the 1989 level, support a national evaluation conference, to be held during fiscal year 1990, to review thoroughly the clinical programs so that future funding can be used in the most effective and efficient manner. 1/	A conference will be convened in fiscal year 1990. A task order is currently being prepared under the Department's existing conference planning contract. Cost information will be available once the contractor responds to the task order. Although program funds cannot, by law, be used for this purpose, the Department plans to hold such a conference using administrative funds.

Higher Education

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 Senate Report	
Foreign Language Resource Centers	
The Senate concurs with the expectation of the House that $1 million shall be used for up to two foreign language resource centers focused on critical language training. Noting that last year the Universities Service Centre in Hong Kong--a major research library of contemporary Chinese affairs--passed from American control due to lack of resources, the Senate encourages the Secretary to review carefully the funding requests from the overseas research centers and to consider their important work when making grants for this appropriation.	The Secretary intends to use $800,000 of the domestic program's funding to award two grants for foreign language resource centers. The Secretary believes that this lesser amount will be adequate for this purpose. It should be noted that the International education and foreign language studies programs have not provided funds to support the Universities Service Centre in Hong Kong. The programs were not designed to support such centers and authorizing legislation would be required. The Department will consider this issue in the development of reauthorization proposals for Title VI of the Higher Education Act. The Department would like to assure the Congress that all funding requests for all programs are carefully reviewed and their relative merits are considered as funding decisions are made.
International Business Education Centers	
The Senate includes $5 million for the expansion of the Centers for International business education program, with reduced second year continuation awards to 1989 grantees as well as a new, larger competition for 3-year awards in 1990.	The Secretary is continuing to review various options for the use of additional funds provided under the domestic programs. At the present time, it is anticipated that $4.7 million ($5 million less amounts sequestered under P.L. 99-177) will be available for the Centers for international business education program. Continuation awards will not be reduced, in accordance with Conference report direction.

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 Senate Report -- Continued	
Community College Demonstration Grant	
The Committee directs the Secretary to use not less than $400,000 to support curriculum or equipment costs through a demonstration grant,to a community college conducting a partnership program linking secondary schools and a university that emphasizes low-income student advancement to higher education and degree completion, leading to employment. The Committee notes that Indian Hills Community College in Ottumwa, Iowa, would be ideally suited to conduct this project, and that the Secretary chose to ignore the Committee's intent regarding this matter in 1989. In 1990, the Committee expects the Secretary to issue an invitational priority for the project described above. 1/	The Secretary plans to hold a competition for funding under this program that will include the invitational priority described in the Senate report.

Higher Education

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 Conference Report	
International Business Education Centers	
The Committee expects that not less than $5 million of the international education domestic programs funding be used to support the international business education centers initiative authorized by Section 6262 (P.L. 100-418). The Committee notes that 1989 grantees would be permitted to compete for expanded levels of funding in 1990, and expects continuing projects to be considered on an equal basis with new applications.	At the present time, it is anticipated that $4.7 million ($5 million less amounts sequestered under P.L. 99-177) will be available to fund the Centers for International Business Education in 1990. It is estimated that the five 1989 grantees would be eligible to compete for $325,000, a $176,800 increase in the total amount awarded to the five grantees in 1989.
Upward Bound	
The Committee directs the Secretary to use $7,000,000 to fund 25 additional Upward Bound awards from "approved but unfunded" applications from the recently held competition.	In early 1990, the Secretary plans to make awards to the 25 projects which, in the 1990-91 competition, ranked immediately below the cutoff score. The Department would like to note that no applications are ever "approved but unfunded." Awards are made on a competitive basis from among all applications which meet basic statutory eligibility criteria.

1/ Also included in the 1990 conference report.

1/ Reflects a proposed $5,000,000 set-aside for HBCU endowment grants.

Higher Education

Account Summary — Continued

The President's 1991 budget request for Higher Education supports three main goals:

1. Improving educational access, opportunity, and retention for minorities and the disadvantaged.

2. Supporting educational excellence through research, teacher training, and rewards for outstanding scholarship and quality performance.

3. Strengthening our Nation's competitive position in the world marketplace by improving the quality of education in areas of national need, such as science, mathematics, engineering, and foreign languages.

Educational Opportunities for the Disadvantaged

The first goal continues the historical focus of the Higher Education programs, which is to support the Federal commitment to disadvantaged populations. In 1991, the President proposes to increase funding to activities that assist institutions serving disadvantaged and minority students or that provide financial aid and support services directly to disadvantaged students.

Increased funds are requested to provide expanded support in two important programs--Aid for Institutional Development (Title III) and Special Programs for the Disadvantaged (TRIO). The requested increase in Part C of Title III reflects the President's continuing commitment to Historically Black Colleges and Universities (HBCUs), by including a substantial set-aside for HBCUs. The Part C request would encourage HBCUs and other institutions serving large numbers of disadvantaged students to build their endowment funds and thereby achieve financial stability and self-sufficiency. The 10-percent increase in TRIO funding would support projects designed to promote access to and persistence in postsecondary education for individuals from disadvantaged backgrounds. For example, one initiative begun in fiscal year 1989 addresses the high dropout rate among our Nation's disadvantaged students by focusing more of the Talent Search counseling services on seventh and eighth graders.

To improve access to graduate education for minority and disadvantaged students, the President is requesting increased funding for four graduate programs. One of these--the Patricia Roberts Harris Graduate and Professional Study fellowships program--assists needy minority students and individuals from traditionally underrepresented groups to pursue advanced degrees in areas of national need. Increased funding for Legal Training for the Disadvantaged would provide pre-law support and increased law school financial aid to a greater number of disadvantaged students. The Minority Participation in Graduate Education increase would provide 72 percent more minority and disadvantaged students with effective preparation for graduate study.

Higher Education

Account Summary -- Continued

The Student Literacy Corps program, which supports literacy tutoring services at public community agencies serving educationally or economically disadvantaged individuals would be maintained. The School, College, and University Partnership program, which helps low-income students enhance their postsecondary education or employment opportunities by improving their academic skills, would be funded at the same level as the 1990 appropriation.

Educational Excellence

The Higher Education programs promote excellence by:

- Encouraging individual excellence through continued funding to merit-based programs such as the proposed National Science Scholars program and the Robert C. Byrd Honors Scholarships program.
- Promoting institutional excellence through programs of teacher training, such as the Paul Douglas Teacher Scholarships.
- Sponsoring innovative research leading to development and dissemination of effective educational practices, through maintained funding to the Fund for the Improvement of Postsecondary Education.

Education in Areas of National Need

The world marketplace is highly competitive and increasingly technological. By the year 2000 our Nation will need 36 percent more scientists, mathematicians, and engineers. [1]

The competitive position of the United States in the future is directly dependent on providing the young people of today with first-rate educational opportunities in critical areas of national need, such as science, mathematics, and engineering and foreign languages.

The President is requesting increased funding for a number of programs designed to ensure that the United States will have the trained, technologically sophisticated workforce it will need. One of these programs--the President's proposed National Science Scholars--would provide tangible rewards for individual excellence by awarding scholarships to outstanding high school science and mathematics students who continue these studies at the postsecondary level. Another fellowship program, Graduate Assistance in Areas of National Need, assists needy minority students to prepare for careers in areas of national need.

Demographic trends also indicate that by the year 2000, one-third of all school-age children in the United States will be black, Hispanic, Asian,

---

[1] From a speech by Dr. Robert Brown, National Aeronautics and Space Administration, before the House Committee on Science, Space, and Technology, May 24, 1989.

Higher Education

Account Summary — Continued

or Native American. Minorities are expected to double their share of the Nation's workforce. 2/ Many of the urgently needed new scientists and engineers will have to come from these groups, which have traditionally been underrepresented in technological fields. Therefore, an important component of the 1991 Higher Education mathematics/science initiative is the provision of expanded opportunities within these fields for traditionally underrepresented groups.

The President is requesting an increase in funding to the Minority Science Improvement Program (MSIP), which provides grants to strengthen science and mathematics instruction at institutions enrolling large numbers of minority or low-income students. The President is also requesting increased funding for both the Graduate Assistance in Areas of National Need and the Minority Participation in Graduate Education Programs. A mathematics and science initiative is included in the Upward Bound program of the TRIO program to prepare disadvantaged high-school students for higher education in these areas.

The requested funding for International Education and Foreign Language Studies (IEFLS) would support activities directly related to important trade, defense, diplomatic, and other security needs of the United States. The Department's activities in this area complement activities suppported with funds from other Federal agencies.

The President is not requesting funding for a number of programs that have achieved their purpose or are duplicative of other aid programs available from the Government or from non-Federal sources. This category includes Innovative Projects for Community Service, Cooperative Education, Law School Clinical Experience, Assistance to Guam, Robert A. Taft Institute of Government, Urban Education Foundation, and Veterans' Education Outreach.

The budget request for Interest Subsidy Grants is limited to the amount needed to support mandatory payment of interest subsidies on the existing portfolio of higher education facilities loans.

The overall goals of the Higher Education programs, as they pertain to the particular programs mentioned above, are discussed in greater detail within the individual activity requests.

2/ National Association of Independent Colleges and Universities, April 14, 1989.

1. Aid for institutional development (Higher Education Act of 1965, Title III)

1991 Authorization: Indefinite

Total...............	196,170,000	214,890,000	+18,720,000

1/ Reflects proposed supplemental language to transfer $5,000,000 from Part C Endowment Grants to HBCU Endowment Grants.

Purpose and Method of Operation

The Aid for Institutional Development programs (commonly referred to as the Title III programs) provide financial assistance to enable eligible institutions to solve problems that threaten their ability to survive, to stabilize their management and fiscal operations, and to build endowments. Funding is focused on institutions which enroll large proportions of disadvantaged students. An important objective of these programs is for participating institutions to improve their program and management and to become financially independent.

From its outset, one of the primary missions of the Title III programs has been to support the Nation's historically black colleges and universities (HBCUs). Nearly all HBCUs have received Title III funds over the past 20 years. Beginning in fiscal year 1984, the annual appropriation bill required that a specific amount of the total Title III appropriation be awarded to HBCUs. The Higher Education Amendments of 1986 authorized two new HBCU-only programs. An earmark of appropriations for these programs replaced the previous setaside. The 1991 request would set aside an additional $15 million for HBCUs under Part C — Endowment Challenge Grants. The total amount reserved for these institutions would increase by $10 million in fiscal year 1991 to $110.366 million.

The authorizing legislation establishes several current-funded Title III programs for which funds are available from October 1 to September 30. The Endowment Challenge Grant program, for which funds are available indefinitely, is the only exception.

Purpose and Method of Operation — Continued

- Strengthening Institutions (Part A) supports three funding competitions for discretionary grants: 1-year planning grants, 3-year renewable development grants, and 4- or 5-year development grants that may not be renewed until an amount of time equal to the number of years of the grant has passed. Institutions may use their Part A funds to plan, develop, and implement activities for: faculty and academic program development, funds and administrative management, joint use of libraries and laboratories, acquisition of equipment to be used in strengthening fiscal management and academic programs, and student services.

  To participate in the Strengthening Institutions program an institution must: award a bachelor's degree or be a junior or community college; provide an educational program legally authorized by the State in which it is located; and have been accredited for 5 academic years, or be making reasonable progress toward accreditation. An institution must also have low average educational and general expenditures per full-time equivalent undergraduate student, and include in its enrollment a significant percentage of financially needy students. The enrollment of needy students criterion may be met if a substantial percentage of its enrolled students are Pell Grant recipients, or if 50 percent of its enrolled students are Title IV need-based aid recipients. The statute provides possible waivers of most of these requirements for certain groups of institutions, particularly those with specified enrollments of minority students. Special consideration for funding is given to institutions that have limited endowment funds or low expenditures for library materials. HBCUs may participate in either Part A or Part B, but not both. In 1989, only one HBCU chose to participate in Part A.

  When the Part A appropriation equals or exceeds $61 million, not less than $51.4 million must be made available to 2-year institutions, and 25 percent of the funds in excess of $61 million must be made available to eligible institutions with the highest percentage of students who are black, Hispanic, Asian American, Native Hawaiian, and/or Pacific Islander.

- Strengthening Historically Black Colleges and Universities (Part B) is a formula grant program for HBCUs designed to help them improve their programs and management and hence enhance educational opportunities for their students. It also is intended to facilitate a decrease in reliance on governmental financial support over the long-term and to encourage development of endowments and private sources of funding. Part B funds may be used to establish or strengthen the physical plants, financial management, academic resources, and endowments of HBCUs. A Part B eligible institution is any accredited, legally authorized HBCU that was established prior to 1964 and whose principal mission was, and is, the education of black Americans. The Part B appropriation is allotted among HBCUs based on

---

Purpose and Method of Operation — Continued

the number of Pell Grant recipients enrolled, the number of graduates, and the percentage of graduates who are attending graduate or professional school in degree programs in which blacks are underrepresented. The statute provides for a $350,000 minimum allotment for each eligible institution.

- Strengthening Historically Black Graduate Institutions (HBGIs) (Section 326) authorizes 5-year grants to the following five postgraduate institutions: Morehouse School of Medicine, Meharry Medical School, Charles R. Drew Postgraduate Medical School, Atlanta University, and Tuskegee Institute of Veterinary Medicine. Except for a minimum set-aside of $3 million for Morehouse School of Medicine (which must be matched dollar-for-dollar), Section 326 grants are limited to $500,000 unless the institution agrees to match the entire grant. Institutions may use Section 326 grants for any Part B purpose, and to establish an endowment or a development office to increase contributions from private sources.

- Endowment Challenge Grants (Part C) enable eligible institutions to establish or increase institutional endowment funds. In general, 2-year, 4-year, or graduate institutions that are eligible for Part A or B are also eligible for endowment challenge grants. An institution may receive up to two endowment grants in any 5-year period. Individual grants may not exceed $500,000 or be less than $50,000 and must be matched dollar-for-dollar by the institution. However, if the Part C appropriation exceeds $10 million, the Federal-institutional match for endowment challenge grants of $1 million or more is $2 Federal to $1 institutional; recipients of such grants are prohibited from reapplying for a period of 10 years.

  The Federal grant and the institution's matching funds (which together make up the endowment corpus) must be invested in low-risk securities such as a federally insured bank savings account or a comparable interest bearing account, certificate of deposit, money market fund, or mutual fund. For a 20-year period after the grant is awarded, institutions may not spend the endowment corpus but may spend up to one-half of the interest earned on any institutional expense.

Accomplishments

Since first funded in 1966 with an appropriation of $5 million, these programs have provided over 7,668 grants totaling over $2 billion in Federal financial assistance to the Nation's developing colleges and universities. Characteristically, these institutions are limited in their ability to attract students, engage outstanding faculty, offer diverse curricula, or acquire adequate financial resources. Grants have been made

---

Accomplishments — Continued

to help them overcome these handicaps and to develop the basic strengths needed to secure financial stability and academic improvements. Title III has helped support institutions providing educational opportunities for many minority, low-income, and disadvantaged students.

1991 Budget Proposal

For fiscal year 1991, the Department is requesting $214.890 million for Aid for Institutional Development, which is $18.720 million more than the fiscal year 1990 appropriation. This request demonstrates the President's continuing commitment to strengthening institutions that provide a significant avenue of postsecondary education access and opportunity for minorities and the financially disadvantaged.

The fiscal year 1991 request would increase the fiscal year 1990 levels for the HBCU programs by 10 percent. Of the total amount requested for Title III, $83.898 would be available to HBCUs under the Part B formula grant program and $11.468 would be available to HBGIs under Section 326. In fiscal year 1990, the Administration will request that the $5 million increase in Part C be set aside for HBCUs. In fiscal year 1991, the Part C HBCU set-aside would increase to $15 million and an additional $17.893 million, $5 million more than the 1990 level, would be available to both HBCUs and other needy institutions. Fiscal year 1991 support for Part A grants would total $86.631 million.

Focusing almost 50 percent of the Title III funds on HBCUs would continue the historical emphasis of the programs on assisting these black institutions of higher education. This policy recognizes the significant contribution these institutions have made in promoting educational opportunity for the disadvantaged. HBCUs were the primary source of postsecondary education for blacks prior to the Supreme Court's desegregation rulings, and they continue to play a key role in enhancing educational opportunity for the disadvantaged. Because of student preferences, location, and institutional mission, HBCUs continue to enroll a disproportionate number of minorities and low-income students, including 30 percent of all blacks enrolled in postsecondary education. The 1991 request reflects the Department's interest in maintaining the historical focus of the Title III program on these institutions.

The budget request includes $17.3 million for the Endowment Challenge Grant program, a 39-percent increase over the fiscal year 1990 appropriation level. This program is designed to help developing institutions (both HBCUs and non-HBCUs) move toward financial stability and self-sufficiency by building endowments. In addition, $15 million is requested specifically for HBCU endowment grants.

1991 Budget Proposal — Continued

To help institutions serving disadvantaged populations, the budget request includes funding for new and non-competing continuation grants under the Part A Strengthening Institutions program. The Federal funds would help such institutions stabilize their management and fiscal operations. The request level is necessary to fully fund all continuation grants to 2-year and 4-year institutions, as well as to meet the statutory set-asides for junior and community colleges and institutions serving minority populations.

Impact Data	1989	1990	1991
Strengthening HBCUs:			
Number of grants	98	98	98
Total allocation	$73,554,000	$83,898,000	$83,898,000

2. Program development: a. Fund for the Improvement of Postsecondary Education
(Higher Education Act of 1965, Title X, Part A)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$11,702,000	$11,702,000	---

Purpose and Method of Operation

The Fund for the Improvement of Postsecondary Education (FIPSE) stimulates improvements in education beyond high school by supporting exemplary, locally developed projects with potential to encourage educational improvement and equal educational opportunity for all.

Small discretionary grants and contracts are awarded competitively to a variety of postsecondary institutions and agencies, including 2- and 4-year colleges and universities, State educational agencies, community-based organizations, and other institutions and organizations concerned with education beyond high school. Awards are made under the following programs:

- Comprehensive Program: FIPSE supports a variety of action-oriented improvement projects under this program. Projects span the full range of postsecondary issues, including improvement in the quality of education, expansion of educational access, integration of education and work, initiation of partnerships between schools and businesses, cost-effectiveness and delivery of appropriate educational services. Projects may receive support for 1-, 2-, or 3-year periods. Funds for the second and third years are awarded non-competitively.

- Final-Year Dissemination Grants: A small number of grants support the dissemination of information about selected Comprehensive program projects in their final year to other institutions, thus increasing the effectiveness of FIPSE grants in advancing educational reforms. The project period may not exceed 12 months.

- Lecture Series: This program provides modest sponsorship for promising work on key issues in postsecondary education, and promotes dissemination and discussion of this work among educational leaders, policymakers, faculty, students and the general public. The program enables individuals to devote at least a month to the development of ideas for presentation in lecture form at educational and other conferences, or in the context of established lecture programs such as those at colleges and universities. The project period may not exceed 12 months.

Purpose and Method of Operation -- Continued

In 1990, FIPSE solicited comprehensive program applications that would:

- Ensure that undergraduate curricula provide the knowledge and skills needed by educated citizens;
- Ensure that recent increases in access to postsecondary education are made more meaningful by improving retention rates without compromising program quality;
- Make campus culture more conducive to academic commitment by all postsecondary students;
- Clarify the ends and purposes of international education at particular institutions, create or renew courses or programs in international education, and assess the effectiveness of these courses or programs in meeting their objectives;
- Reform the education of school teachers by (i) increasing prospective teachers' mastery of the subjects they will teach, (ii) ensuring that prospective teachers have a solid grounding in the traditional arts and sciences, and (iii) broadening the customary preparation in pedagogy to include subject-specific pedagogy and attention to the cultural and learning-style differences in our increasingly diversified school population;
- Develop faculty as teachers by (i) recognizing and rewarding effective teaching through appointment, promotion, and compensation policies, (ii) disseminating proven but unappreciated pedagogies, (iii) providing new opportunities for faculty to stay current with scholarship in the broad range of areas they typically teach, and (iv) facilitating the best possible match between faculty members and institutions;
- Reform graduate education by (i) improving the preparation of Ph.D. candidates bound for college teaching careers, and (ii) broadening the social and ethical perspectives of students in graduate and professional programs generally;
- Improve the quality of undergraduate and graduate education by developing means for assessing student learning and strategies for tying the results of assessment to improvements in the educational process;
- Make the financial practices of postsecondary institutions as conducive as possible to the achievement of the educational objectives of students, institutions themselves, and the Nation by, for example, moderating increases in tuition and revising pricing and aid policies;
- Make postsecondary education responsive to changes in the Nation's economy; and

---

Purpose and Method of Operation — Continued

- Develop innovative educational applications for new and newly-available electronic technologies.

FIPSE is a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

Since its inception in 1972, the Comprehensive program has supported more than 1,330 separate projects totalling over $188 million. The average awards have been $60,000-$70,000, with maximum awards about $150,000. Although locally-developed, the projects have stimulated improvements in the quality of postsecondary education throughout the Nation through conferences, the Lecture Series, and Final-Year Dissemination Grants. Over the years, the projects have: helped students gain access to postsecondary education; facilitated and nurtured the development of assessment; encouraged experiential education; promoted faculty development; helped improve graduate education in general, and minority and female access and retention in particular; supported teacher education improvements; and encouraged the use of technology as a pedagogical tool.

The program is highly competitive. In 1988, 60 new Comprehensive program grantees were selected from 1,876 applications. In addition, 118 non-competing continuation awards were made. Of these 178 awards, 9 percent went to 2-year public institutions; 51 percent went to 4-year public institutions; 26 percent went to 4-year private institutions; and 14 percent went to other organizations and individuals. Nine of the awards went to historically black colleges and universities. In the same year, the Lecture Series topics were workplace/economy (2 awards); demographic shifts (2); curricular changes (1) and administration/leadership (1).

Approximately one-quarter ($2.9 million) of the 1990 appropriation will fund a total of 46 Comprehensive program projects supporting the improvement of postsecondary education in the teaching of mathematics, science, and related subjects.

1991 Budget Proposal

For FIPSE, $11.702 million is requested. This is the same as the fiscal year 1990 appropriation.

This request would maintain the Federal government's unique role in supporting research, improvement and educational reform in postsecondary education. Important research and development is conducted under the Comprehensive program, and information on effective practices is disseminated under the Final-Year Dissemination Grants and Lecture Series. These activities address the most significant quality issues in postsecondary education and support the

---

1991 Budget Proposal — Continued

President's goal of renewing our Nation's commitment to excellence and achievement in postsecondary education.

In particular, the requested funds would also be used, in part, to address a serious problem facing the United States: reduced science and mathematics capability that is reflected in low mathematics and science literacy, reduced bachelors and doctoral degrees in these disciplines, and insufficient and poorly prepared teachers and faculty. These factors in turn threaten the United States' leadership role in technological areas. The FIPSE request would help address these problems. Approximately one-quarter (46) of the 1991 Comprehensive program projects, totalling $2.9 million, would fund activities supporting mathematics, science and related disciplines.

Impact Data	1989	1990	1991

2. Program development: b. Minority science improvement program (Higher Education Act of 1965, Title X, Part B, Subpart 1)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$5,416,000	$5,633,000	+$217,000

Purpose and Method of Operation

The Minority Science Improvement program (MSIP) awards discretionary grants to enhance the capacity of minority institutions to develop and maintain quality science education programs and to increase the flow of individuals from underrepresented minority groups into the fields of science, mathematics, and engineering. Colleges and universities whose enrollment of such individuals is greater than 50 percent are eligible to receive assistance under MSIP. Grant funds are used to purchase needed equipment, to develop curricular materials, and to support advanced faculty training.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

Four categories of grants are supported with MSIP funds:

- Design project grants provide assistance to minority institutions to plan and develop long-range science improvement programs. Design projects may last for up to 12 months.

- Institutional project grants provide assistance to individual minority institutions to support implementation of comprehensive science improvement plans, which may include any combination of activities designed to improve the preparation of minority students for careers in science. Institutional projects may run for up to 36 months.

- Cooperative Project grants, which may run for up to 36 months, assist groups of nonprofit, accredited colleges and universities to work together to conduct science improvement projects.

- Special Project grants support activities that improve the quality of training in science, mathematics and engineering, enhance minority institutions' general scientific research capabilities, provide needed services to groups of eligible minority institutions, or provide in-service training for project directors and faculty from eligible minority institutions. Special projects may run for up to 24 months.

Higher Education

2. Program development: b. Minority science improvement program

---

Accomplishments

MSIP is a successful program of institutional aid that began in fiscal year 1972 under the National Science Foundation Act of 1950 and was transferred to the Department of Education in 1981. Over the history of the program, approximately $90 million has been provided for projects at about 190 institutions. Department studies indicate that MSIP has been successful in improving the quality of science instruction at those minority institutions and in increasing the number of students in those institutions majoring in science. In addition, 75 percent of projects initially supported by MSIP continue to be funded with institutional funds after MSIP support ceases.

1991 Budget Proposal

For 1991, the Department proposes $5.633 million for MSIP. This is $217,000 more than the 1990 appropriation.

The request level demonstrates the President's commitment to supporting institutions that serve special underserved and underrepresented populations. Federal support would continue for the improvement of mathematics, science, and engineering programs at institutions enrolling large numbers of minorities and low-income students, particularly the historically black colleges and universities. This would supplement other assistance available to these institutions under the Title III appropriation, and to their students under the student aid programs. The request level would also promote excellence and quality in mathematics and science education.

By the year 2000, one-third of all the school-age children in the United States will be black, Hispanic, Asian, or Native American. Groups which are now minorities are expected to double their share of the workforce, and a 36-percent increase in the number of trained scientists, mathematicians, and engineers will be needed. Many of the Nation's new scientists and engineers will have to come from traditionally underrepresented groups, including women and minorities.

2. Program development: c. Innovative projects for community services (Higher Education Act of 1965, Title X, Part C)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$1,481,000	---	-$1,481,000

Purpose and Method of Operation

This program supports innovative projects to determine the feasibility of encouraging student participation in community service projects in exchange for educational services or financial assistance and thereby reduce the debt acquired by students in the course of completing postsecondary educational programs.

This program is administered through the Fund for the Improvement of Postsecondary Education (FIPSE). Discretionary grants and contracts are awarded to institutions of higher education and other public agencies and nonprofit private organizations to carry out innovative projects. Awards may be for either 12 or 24 month periods with the 13-24 month award provided on a non-competition continuation basis dependent upon the availability of funds. The National Board of the Fund for the Improvement of Postsecondary Education must approve all applications to be funded.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

Only 36 projects were funded under this program in fiscal year 1988. Twenty-one grants totaling slightly over $1 million were awarded in 1989. These projects proposed a variety of community service activities and a number of financial assistance mechanisms. The financial assistance--which took the form of debt forgiveness, tuition remission, scholarships, stipends, and wages--came from institutional resources, private businesses, local government and Federal Work-Study funds.

1991 Budget Proposal

For Innovative Projects for Community Services, no funds are requested. This is $1.481 million less than the fiscal year 1990 appropriation.

Higher Education

2. Program development: c. Innovative projects for community services

---

1991 Budget Proposal -- Continued

It is inappropriate to support such a small categorical student assistance program which is duplicative of other programs. The concept of providing financial assistance in return for public service is adequately demonstrated under the Work-Study and Perkins Loans programs. The role of the Federal Government in this area is more appropriately expressed through the Department's existing general student financial assistance programs.

Impact Data	1989	1990	1991

2. Program development: d. International education and foreign language studies
(Higher Education Act, Title VI; and Mutual Educational and Cultural Exchange Act of 1961, Section 102(b)(6))

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$39,794,000	$39,794,000	---

Purpose and Method of Operations

The International Education and Foreign Language Studies (IEFLS) programs are designed to strengthen the capability and performance of American education in foreign languages and in area and international studies. IEFLS programs contribute to the improvement of teaching and research, curriculum materials, availability of specialists, and general understanding of the peoples of other countries through first-hand experience overseas.

Seven major IEFLS Domestic programs authorized under Title VI of the Higher Education Act of 1965 are currently supported, including the Language Resource Centers--a Title VI program that has been authorized since 1961 but did not received funding until 1990:

- National Resource Centers support institutions of higher education (IHEs) or consortia of IHEs in establishing, operating, and strengthening advanced centers to train students, specialists, and other scholars; in maintaining important library collections and related training and research facilities; in conducting advanced research and development activities; and in providing outreach and consultative services at the national, regional, and local levels. National Resource Centers are funded for a three-year cycle, with funds allocated on an annual basis pending satisfactory performance by the center and availability of funds.

- Foreign Language and Area Studies Fellowships support academic year and summer fellowships for graduate-level training at IHEs having nationally recognized programs of excellence. Institutions compete annually for funds and, in turn, award them to individual students.

- International Studies and Foreign Language Programs support IHEs or consortia of IHEs in establishing, operating, and strengthening undergraduate instructional programs in international studies. Grant awards are normally made for projects extending over a period of two years. However, organizations, associations and institutional consortia are eligible for three years of support.

Purpose and Method of Operation — Continued

- International Research and Studies Projects support IHEs, public and private nonprofit organizations, and individuals in projects designed to determine the need for improved or increased instruction in modern foreign languages and area and international studies; to develop more effective methods of teaching foreign languages and evaluating competency; and to develop specialized curriculum materials. The Secretary funds participants through grants or contracts.

- Business and International Education Projects supports IHEs in designing short-term projects to train business personnel in various stages of their professional development and to promote linkages between IHEs and the international business community. The Federal share of the cost of the projects cannot exceed 50 percent of the total cost.

- International Business Education Centers supports IHEs by paying the Federal share of the cost of planning, establishing, and operating these centers. Grants are made for a minimum of three years. The Federal share of the cost of planning, establishing, and operating the centers can not exceed 90/70/50 percent in the first, second and third and following years, respectively. The centers provide a comprehensive university approach to improving international business education by bringing together faculty from numerous disciplines. The centers serve as national and regional resources for the teaching of improved business strategies, provide instruction in critical foreign languages and international fields, and support research and training in the international aspects of trade and other fields of study.

- Language Resource Centers support IHEs or consortia of IHEs in projects designed to improve the teaching of foreign langugages. The centers develop new teaching methods and train teachers in their use; formulate and apply proficiency testing; train teachers in the administration and evaluation of the tests; publish instructional materials in less commonly taught languages; and disseminate research results, teaching materials, and strategies to the postsecondary community.

Four major IEFLS Overseas programs (Fulbright-Hays programs) authorized under the Mutual Educational and Cultural Exchange Act of 1961 are supported:

- Group Projects Abroad supports group research, advanced training, and curriculum development overseas for periods of less than one year in length.

Purpose and Method of Operation — Continued

- Faculty Research Abroad supports opportunities for faculty members of IHEs to study and conduct advanced research overseas. Fellowships are generally reserved for scholars whose academic specialization focuses on the uncommonly taught languages and all major world areas with the exception of Western Europe. The fellowships are from 3 to 12 months in length.

- Doctoral Dissertation Research Abroad supports opportunities for graduate students to engage in full-time dissertation research overseas. Fellowships are generally reserved for students whose academic training has focused on the uncommonly taught language and all major world areas with the exception of Western Europe. The fellowships are from 6 to 12 months in length.

- Special Bilateral Projects with foreign countries supports advanced training and research through short-term institutes, academic-year seminars, and exchanges. Funds for special bilateral projects are allocated in a variety of ways, including interagency transfer agreements, contracts, and competitive grants.

IEFLS programs are administered through discretionary grants, contracts, and fellowships. A panel of non-Federal academic specialists reviews annual proposals for IEFLS projects and makes recommendations regarding the selection of grantees. Federal program staff, bi-national commissions, U.S. embassies, and the Board of Foreign Scholarships select the Overseas programs grantees following the non-Federal panel review.

A portion of each year's appropriation is used to reimburse bi-national commissions and U.S. embassies for professional and administrative support they have provided for projects and individuals funded under the Overseas programs. Services include reviewing project proposals for feasibility, political sensitivity, and cost estimates; and providing assistance to grantees in obtaining local research permits and visas.

IEFLS is a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

IEFLS Domestic programs have been funded since 1959, and Overseas programs have been funded since 1964. Since that time, Federal funds have supported a variety of programs that have strengthened and improved the excellence of American foreign language and area and international studies capabilities. IEFLS programs have also helped meet the need for improvement in educational methodologies to address deficiencies in foreign language programs by

---

Accomplishments — Continued

conducting research on new and improved teaching methods. In addition, these programs have contributed to an increased awareness of international issues among the American people. In recent years, IEFLS programs have promoted the study of languages and cultures not commonly taught by awarding grants for a broad range of area concentrations and in areas of critical interest to the United States, particularly those of non-Western countries.

1991 Budget Proposal

For International Education and Foreign Language Studies, a total of $39.794 million is requested—$34.658 million for the Domestic programs and $5.136 million for the Overseas programs. These amounts are the same as provided under the fiscal year 1990 appropriation.

The economic well-being and national security of the United States depend largely on our ability to understand and communicate with other nations and peoples. Approximately 25 percent of the U.S. Gross National Product is derived from foreign trade, and the proportion is growing. Almost one-third of U.S. corporate profits are generated by international business activities. Over one-third of American agricultural land produces food for export. Nevertheless, knowledge and understanding of world events among U.S. citizens is inadequate. The United States remains one of the few countries where students may graduate from a university without studying a foreign language throughout their formal education.

The promotion and development of improved foreign language teaching methodologies and research by the Department reflects its commitment to encourage more Americans to be multilingual, ultimately enhancing the Nation's ability to compete in world markets and strengthening national security. A 1989 review of the Federal Government's international education and foreign language training programs found that other Federal agencies, including the State and Defense Departments and the National Science Foundation, offer a spectrum of training for employees, students, teachers, and scholars. However, these language training programs across the Federal Government primarily prepare "on-board" personnel; they neither promote nor assure the type of broad-based expertise supported by the current IEFLS programs. In contrast, the Department of Education programs reflect a balance between international education programs that focus on the general development and diffusion of international knowledge and the training of specialists. Both areas are of critical importance in the 1990's. The former encourages students and professionals to understand better the languages, cultures, and economies of other nations at a time when international cooperation is a priority. The latter promotes U.S. interests in industrial competitiveness and trade, diplomacy, politics, and our national security. Thus, the 1990 funding level, which represents a significant increase in IEFLS funding over 1989, should be retained in 1991.

1991 Budget Proposal — Continued

In addition to annual Federal appropriations, projects under this activity are also supported with Indian rupees through the United States-India fund (USIF). In 1990, 13.3 million rupees are available, including 71,424 rupees carried over from 1989. The Department will support an estimated 27 projects in 1990 with these funds: 9 Group Projects Abroad, 2 Bilateral Projects, 2 Faculty Research Abroad fellowships, and 14 Doctoral Dissertation Research Abroad fellowships.

2. Program development: e. Cooperative education
(Higher Education Act of 1965, Title VIII)

1990 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$13,445,000	---	-$13,445,000

Purpose and Method of Operation

The Cooperative Education Program awards discretionary grants to postsecondary institutions to stimulate the development of cooperative education programs at the institutions in conjunction with public and private employers. The program provides students with work experiences, either concurrent or alternating with periods of academic study, that generally relate to the student's career or academic objectives and provide earnings, which the student may use to help meet the costs of postsecondary education.

Projects may be funded for up to 5 years, during which they receive annual continuation awards on a non-competing basis. Three categories of grants have been supported in recent years:

- Administration Projects support campus-based cooperative education program operating costs, the Federal share of which declines each year (90%/80%/70%/60%/30%).
- Demonstration Projects are funded with large, multi-year grants to help institutions plan institution-wide, comprehensive cooperative education programs in an effort to include more students from all academic fields.
- Training Projects provide assistance and guidance to faculty and administrators of cooperative education programs.

This is a current-funded program for which funds are available from October 1 to September 30.

Accomplishments

In 1970, there were only 195 cooperative education programs in the country. The number of institutions now offering cooperative education programs has grown to well over 1,000 (though only 159 of these are federally supported). During this time period, cooperative education programs became increasingly accepted and desired by students as they sought to develop a more definite linkage between education and work.

1991 Budget Proposal

For Cooperative Education, no funds are requested. This is $13.445 million less than the 1990 appropriation.

1991 Budget Proposal -- Continued

Federal encouragement and stimulation in the area of cooperative education is no longer necessary. The concept of cooperative education has been demonstrated successfully and accepted, as evidenced by the number of institutions operating such programs without Federal funding. More than one-third of the Nation's postsecondary institutions have cooperative education programs, and only 159 of these programs are federally supported. There is now widespread recognition of the benefits of this educational approach.

As competition for student enrollment has increased and increasing numbers of students have demanded cooperative education programs, institutions have been motivated to support the programs on their own. This is also an area in which institutions have been very successful in obtaining private sector support.

2. Program development: f. Law school clinical experience (Higher Education Act of 1965, Title IX, Part F)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,935,000	---	-$4,935,000

Purpose and Method of Operation

The Law School Clinical Experience program supports annual, competitive discretionary grants to accredited law schools to establish or expand programs of clinical experience in the practice of law for students. The Secretary is authorized to enter into agreements with such schools to finance not more than 90 percent of the cost of establishing or expanding clinical law programs. Project costs are limited to: planning; preparation of related teaching materials; administration; training of faculty members; payments for faculty, attorneys and others directly involved in supervision; and other activities related to the program. The project period is no longer than 12 months.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

The Law School Clinical Experience program was first funded as a demonstration program in fiscal year 1978 with an appropriation of $1 million. Since then, almost $29 million has been appropriated with a low of $605,000 in 1983 and a high of $4.935 million in 1989 and 1990. Program data indicate that approximately 2,120 law students at 53 institutions will participate in supervised, Federally-funded clinical experience programs in academic year 1989-90. These students will gain experience in the preparation and trial of actual legal cases.

In the Conference Report accompanying the Department's 1990 appropriations act, Congress directed the Department to spend $150,000 to fund a national evaluation conference. At this conference, the clinical programs will be reviewed to determine how future funding can be used in the most effective and efficient manner. Although program funds can not, by law, be used for this purpose, the Department plans to hold such a conference using administrative funds.

Higher Education

2. Program development: f. Law school clinical experience

1991 Budget Proposal

For the Law School Clinical Experience program, no funds are requested. This is $4.935 million less than the fiscal year 1990 appropriation.

The purpose of Federal support for this program was to demonstrate the concept of clinical legal education and to encourage law schools to increase their financial commitments for this educational approach. Support of clinical legal education was not intended to be a permanent Federal responsibility.

Clinical programs will continue in the absence of Federal support. The concept of clinical legal education has been adequately demonstrated, and programs are provided at many of the Nation's accredited law schools without Federal funding. Thirty-four percent of the law schools with clinical programs operate them without Federal support. Many law schools are also making a greater financial commitment to clinical education by including clinics in their regular budgets, and are providing tenured positions to clinical professors. There is no longer a demonstrated need for this program.

Impact Data	1989	1990	1991
Number of grants	53	64	---
Average grant	$74,566	$77,109	---
Number of participants	2,120	2,560	---
Average per participant	$1,864	$1,927	---
Budget authority	$3,952,000	$4,935,000	---

2. Program development: g. Student literacy corps
(Higher Education Act of 1965, Title I, Part D, as amended by P.L. 100-407)

1991 Authorization: $10,000,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$5,042,000	$5,042,000	---

Purpose and Method of Operation

The Student Literacy Corps program promotes the development of literacy corps programs at institutions of higher education. Institutions that have participated in community service activities may receive competitive discretionary grants for no more than two years that total no more than $50,000 over the two-year grant period. Under literacy corp programs, undergraduate students in fields such as social science, economics and education receive academic credit for courses in which there is a practicum that requires the student to tutor a minimum of six hours per week. Tutoring services are uncompensated and performed in public community agencies serving educationally or economically disadvantaged individuals.

Funds appropriated for this program may be used by the institution to cover the administrative costs of the program and to pay stipends for student coordinators. Funds may also be used by the Secretary to provide technical assistance to grantees, to collect and disseminate information about student literacy corps programs, and to evaluate and report on such programs.

This is a current-funded program for which funds are available for obligation from October 1 through September 30.

Accomplishments

Fiscal year 1989 was the first year in which funds were appropriated for this program. A total of 105 institutions received $4.858 million in awards averaging $46,000. It is too early to tell how many hours of tutoring will be generated by this program. However, the statute provides that available program appropriations may be used to evaluate and issue reports on projects funded under this program. The Secretary intends to conduct such evaluations once a sufficient number of projects have been completed.

1991 Budget Proposal

For the Student Literacy Corps program, $5.042 million is requested. This is the same as the fiscal year 1990 appropriation. This request would help

---

1991 Budget Proposal — Continued

address a very serious problem facing the United States: adult illiteracy. This problem is taking its toll on individuals at a personal level, and also on the country as a whole in terms of reduced worker productivity in a more technologically-oriented society.

The President is therefore proposing continued funding of the Student Literacy Corps. This program provides an innovative means of addressing illiteracy by requiring trained, supervised undergraduates to provide not less that 6 hours of volunteer services per week at public community agencies serving educationally or economically disadvantaged individuals.

Impact Data	1989	1990	1991
Number of awards	105	110	110
Average award	$46,000	$46,000	$46,000
Budget authority	$4,940,000	$5,042,000	$5,042,000

---

3. Academic facilities: Interest subsidy grants (Higher Education Act of 1965, Title VII, Part D)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$22,449,000	$20,900,000	-$1,549,000

Purpose and Method of Operation

The Interest Subsidy Grants program is designed to help finance the construction, renovation, and equipping of higher education academic facilities by reducing the cost of borrowing from private sources. This financing is intended to help States, local communities, and individual higher education institutions (1) accommodate enrollment increases, (2) maintain and expand research facilities, (3) support energy conservation rehabilitation of existing facilities, and (4) upgrade existing facilities to meet various Federal, State, and local structural requirements relating to health, safety, and access to the handicapped.

Under this program, institutions of higher education and higher education building agencies may be paid interest subsidies on a loan amount that represents no more than 90 percent of project costs. After each such loan is arranged commercially at an acceptable interest rate, the Department of Education enters into an agreement with the borrowing institution or agency to pay an annual subsidy. This subsidy, designed so that an institution pays only 3-percent interest, is the difference between the interest costs incurred at the negotiated, commercial lending rate and the institution's rate of 3 percent. Annual grants are awarded over the full term of the approved loans in satisfaction of these subsidies. The grants are paid for with both newly appropriated monies and, as available, funds carried over from prior years.

No new interest subsidy commitments have been entered into since fiscal year 1973. However, subsidy payments are expected to continue until the year 2013. Currently, the program is carrying out its prior-year commitments to subsidize interest costs on approximately 600 privately financed facilities loans.

Funding for this program is mandatory in that the level of funding is determined by the Government's legal obligation for payment.

Accomplishments

Over the four fiscal year period of 1970-73, 711 commercial loans totaling over $1.43 billion were approved for subsidy and, to date, about $400 million has been appropriated to pay the subsidies.

Higher Education

3. Academic facilities: Interest subsidy grants

1990 Budget Proposal

For Interest Subsidy Grants, $20.9 million is requested. This is $1.5 million less than the fiscal year 1990 appropriation. The requested amount should be sufficient to support interest subsidies on the 551 loans still expected to be in repayment status in fiscal year 1990, with a remaining outstanding loan principal of about $958 million.

The continued payment of interest subsidies on the existing portfolio of higher education facilities loans is guaranteed under agreements with the participating institutions, and the precise amount of each school's annual interest grant is specified in those agreements. As such, this program's budgetary cost is mandatory and essentially predetermined.

Impact Data	1989	1990	1991
Outstanding loans under subsidy (end-of-year):			
Number of loans	563	551	531
Loan volume ($000s)	$1,040,000	$998,000	$958,000
Subsidy payments:			
New budget authority	$27,744,000	$22,449,000	$20,900,000
Unobligated balances, start of year	---	320	695
Unobligated balances, end of year	-320	-695	-347
Total payments	$22,424,000	$22,074,000	$21,248,000

4. Special grants: a. Assistance to Guam
(Higher Education Act of 1965, Title XII, Section 1204(c))

1991 Authorization: $2,000,000

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$494,000	---	-$494,000

Program description

Assistance to Guam provides one-year grants to the University of Guam and Guam Community College for partial reimbursements of costs incurred in providing postsecondary education services to nonresident Micronesian students. Such payments compensate these institutions for sharing their resources and services with students from neighboring entities that have a relative scarcity of higher education institutions and a limited range of curricular offerings.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

1991 Budget Proposal

For Assistance to Guam, no funds are requested. This is $494,000 less than the fiscal year 1990 appropriation. The Department feels that this direct Federal subsidization of the postsecondary institutions is an inappropriate Federal role. In no other instance does the Federal Government make direct payments to postsecondary insitutions to help meet costs related to the education on non-State or non-territorial residents. Moreover, since many of these students receive financial assistance via Federal programs such as the Pell Grant, Supplemental Grant, and Work-Study programs, direct Federal assistance to these institutions represents a unique double subsidy.

---

4. Special grants: b. Margaret Chase Smith Library Center (Public Law 100-202, Section 140(b))

1991 Authorization: $5,000,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$ 2,468,000	---	-$2,468,000

Purpose and Method of Operation

In recognition of the public service of Senator Margaret Chase Smith, up to $5 million is authorized for use in the development and activities of the Margaret Chase Smith Library Center, located in Skowhegan, Maine.

Accomplishments

Fiscal Year 1990 was the first year in which funds were appropriated for this activity.

1989 Budget Proposal

For the Margaret Chase Smith Library Center no funds are requested. This is $2.468 million less than the 1990 appropriation. There are a variety of Federal and non-Federal sources of support for library centers. Further, it is inappropriate to direct limited Federal funds to projects which provide assistance only to local users and, therefore, should be supported by local resources.

5. Aid for students: a. Special programs for the disadvantaged
(Higher Education Act of 1965, Title IV, Part A, Subpart 4)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$241,822,000	$269,739,000	+$27,917,000

Purpose and Method of Operation

The Special Programs for the Disadvantaged, commonly referred to as the TRIO programs, provide services to promote access to, and retention in, postsecondary institutions for individuals from disadvantaged backgrounds. The Secretary is authorized to make discretionary grants to, and enter into contracts with, institutions of higher education, public and private agencies and organizations, and, in exceptional circumstances, secondary schools. Participants must be low-income individuals and/or first generation college students, or, under the Student Support Services program, physically handicapped.

Six programs are authorized under Special Programs for the Disadvantaged:

- Student Support Services projects provide supportive services to postsecondary students from disadvantaged backgrounds who need academic support to successfully complete their education. These services include: remediation, academic counseling and guidance, tutorial services, personal counseling, career counseling, admission and financial counseling for graduate and professional programs, and activities in the preceding areas for students of limited English proficiency.

- Upward Bound projects provide intensive academic assistance to high school students to generate the skills and motivation needed to pursue successfully a program of education beyond high school. Services may include Saturday classes, tutorial/counseling sessions, cultural enrichment activities, or a summer campus residential program.

- Talent Search projects identify and counsel eligible persons aged 12 to 27 years, usually high school students and dropouts, regarding opportunities for completing secondary school and enrolling in postsecondary educational programs. Project staff also assist participants in applying for admission and financial aid.

Purpose and Method of Operation -- Continued

- Educational Opportunity Centers (EOC) provide information on available financial and academic assistance to adults aged 19 or above in low-income areas who wish to pursue a postsecondary educational program. The centers also help participants apply for admission and financial aid. The Departmentawards grants to educational institutions and public and private organizations to operate the centers.

- Ronald E. McNair Post-Baccalaureate Achievement Program projects are authorized to provide grants to institutions of higher education to provide disadvantaged students with effective preparation for doctoral study.

- Staff Training projects provide training to staff and leadership personnel employed in, or preparing for employment in, projects under the Special Programs activity. The grants provide support for conferences, seminars, internships, and workshops, and the publication of manuals designed to improve the operation of projects supported under the other programs.

This is a current-funded program for which funds are available from October 1 to September 30.

Accomplishments

From academic year 1979-80 to 1989-90, funding for the TRIO programs increased 57 percent. During 1989-90, Student Support Services is serving an estimated 164,300 students in 707 projects; Upward Bound is serving an estimated 34,600 students in 477 projects; Talent Search is serving an estimated 193,400 students in 177 projects, EOC is serving an estimated 110,000 students in 40 projects; and Staff Training is serving an estimated 1,600 TRIO staff members under 13 training grants. Overall, from academic year 1987-88 to 1989-90, the TRIO programs increased the number of participants served by approximately 38,500 in 141 additional projects.

Moreover, to focus on reducing the secondary school dropout rate, the Department began an initiative under Talent Search in fiscal year 1989 in which 53 projects were given supplemental funding to serve seventh and eighth graders, in addition to the students in the higher grades who are currently being served. Providing such assistance to these students gives them an increased opportunity to complete secondary school and identify appropriate postsecondary educational programs at a younger age. In addition, this kind of early intervention and counseling allows younger students, who might otherwise drop out of school, to gain critical information concerning postsecondary admissions and financial aid processes. This initiative will be expanded in fiscal year 1991 so that a total of 130 projects will be able to serve these younger students.

Higher Education

5. Aid for students: a. Special programs for the disadvantaged

---

1991 Budget Proposal

For the Special Programs for the Disadvantaged, $269.739 million is requested, which is an increase of $27.917 million over the fiscal year 1990 appropriation. The Administration requests increased funding for all six TRIO programs, listed above, to support the goal of improving educational access and opportunity for minorities and the disadvantaged. This request would maintain the educational services these programs currently provide. Since TRIO complements the student financial assistance provided to needy students under Title IV and helps to ensure equality of opportunity, it is a critical priority for the Administration. In addition to maintaining the important, basic TRIO services, the fiscal year 1991 request would provide funding for three initiatives under the Talent Search, Upward Bound, and Student Support Services programs.

In fiscal year 1991 new competitions will be held for Talent Search and EOC projects, to make awards on the three-year continuation grant basis common to all TRIO programs. The increased funding for these programs would support an expansion in the number of projects and would also expand the initiative, begun in fiscal year 1989, that addresses the Nation's high dropout rate among disadvantaged students by focusing more of the Talent Search counseling services on seventh and eighth graders. All Talent Search projects have been encouraged to apply for funding under this initiative, and it is estimated that approximately 130 projects will be participating by fiscal year 1991.

In support of the goal of strengthening the competitive position of the United States in the world market by improving the quality of education, the request for the Upward Bound program would provide for an expansion of the mathematics and science initiative that will be started in fiscal year 1990. Under this initiative, regional "magnet" projects will be funded to provide mentoring, internship, and research experiences designed to develop the interest of Upward Bound students in mathematics, science, and engineering and to prepare them for higher education in these areas. Selected students in regular Upward Bound projects will have the opportunity to enroll in special mathematics and science programs at these magnet centers. Plans for the initiative are being developed in conjunction with the National Science Foundation and in coordination with the national programs component of the Eisenhower Mathematics and Science Education program. The budget request would support approximately 50 of these regional centers in fiscal year 1991.

The TRIO request would also support an initiative under the Student Support Services program that would provide assistance to students currently enrolled in 2-year institutions to secure admission and financial assistance for enrollment in 4-year postsecondary programs. This service was added to the TRIO programs by the Higher Education Amendments of 1986, but funds have never been provided to projects specifically to allow them to expand into this

1991 Budget Proposal — Continued

area. The initiative is particularly important because of the support it would provide to the improvement of educational access and opportunity for minority and disadvantaged students. The majority of these students start their postsecondary study at 2-year institutions; yet, according to the Ford Foundation, only about 15 percent of 2-year students continue their studies at 4-year institutions.

Finally, $1 million of the TRIO request would support the second year of an evaluation of the Upward Bound and Student Support Services programs. Specifically, it would provide for further analysis and follow-up of the findings generated during the first year of the evaluation. The Department hopes to improve the cost-effectiveness of these programs and thereby improve and expand the significant services they provide to the disadvantaged by: (1) comparing the outcomes for students receiving TRIO services to outcomes for students who are not receiving such services, (2) identifying and documenting successful intervention techniques, and (3) disseminating descriptions of these successful techniques so that they may be replicated by other TRIO projects.

5. Aid for students: b. Support services: (1) Veterans' education outreach
(Higher Education Act of 1965, Title IV, Part A, Subpart 7, Section 420A)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$2,801,000	---	-$2,801,000

Purpose and Method of Operation

The Veterans' Education Outreach program provides one-year formula grants to institutions of higher education to help them support offices of veterans' affairs that provide outreach recruitment, special educational services, and counseling. For an institution to be eligible to receive a grant, it must enroll at least 100 undergraduate veterans with honorable discharges. The amount of the grant is based on the sum of: (1) $300 times the number of full-time equivalent (FTE) enrolled veterans receiving veterans' educational assistance of vocational rehabilitation services; (2) $150 times the number of FTE enrolled veterans who are educationally disadvantaged or disabled; and (3) $100 times the number of FTE veterans with honorable discharges who are no longer eligible for or do not receive veterans' educational benefits. Current legislation limits an institution's total annual award to $75,000. These payments are ratably reduced if the amount appropriated is not sufficient to pay the amounts to which all institution are potentially entitled.

The Veterans' Education Outreach program is a current-funded program for which funds are available from October 1 to September 30.

Accomplishments

This program was created in 1972 to respond to the special postsecondary education adjustment needs of Vietnam-era veterans. The peak year of veteran enrollment in postsecondary education was 1976 when there were approximately 910,000 enrolled veterans eligible for services. By 1981 the number of eligible veterans had declined to 212,000, and in the following 6 years, the number remained at approximately 200,000. Eligible enrollment rose above 300,000 in 1988 as a result of a change in the program's authorizing legislation that expanded eligibility from "Vietnam-era" veterans to all veterans.

Higher Education

5. Aid for students: b. Support services: (1) Veterans' education outreach

---

1991 Budget Proposal

For Veterans' Education Outreach, no funds are requested. This is $2.801 million less than the fiscal year 1990 appropriation.

This program has outlived its original purpose of assisting higher education tutoring and counseling programs that respond to the special educational and education-related needs of large numbers of enrolled Vietnam-era veterans. Even though student eligibility has been expanded to include all veterans, the size of the eligible population has declined dramatically. Since the program's inception, enrollment of veterans has dropped from over 2 million to a projected 400,000 for academic year 1991-92.

The needs of these decreased numbers of student veterans can be met by other existing Federal program including Upward Bound, Student Support Services, and other TRIO programs, as well as numerous activities supported by the Department of Veteran Affairs. Assistance can also be provided through traditional institutional tutorial and counseling services geared toward all students.

Finally, average grants are very small--only $5,489 per institution in 1989. Such limited support is not likely to make a meaningful difference in institutional services to enrolled veterans and is not cost-effective to administer.

Impact Data

	1989	1990	1991

5. Aid for students: b. Support services: (2) Legal training for the disadvantaged
(Higher Education Act of 1965, Title IX, Part E)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$2,468,000	$2,468,000	---

Purpose and Method of Operation

The Legal Training for the Disadvantaged program supports pre-law school preparation and scholarships to assist individuals from disadvantaged backgrounds to undertake training for the legal profession. The Department awards an annual noncompetitive grant to the Council on Legal Education Opportunity (CLEO) to administer this program. In addition, CLEO receives a large percentage of its funds from non-Federal sources.

CLEO conducts a nationwide search for candidates to participate in this program. Participants must be persons who wish to become lawyers, but have been unable to gain admission to law school because of economic disadvantages, marginal academic credentials, or both. Applications are submitted to the CLEO central office where an initial screening process takes place. Eligible applications are then forwarded to regional panels of law school deans and other educators who make the final selection of students.

In the summer prior to law school, the program provides participants with an intensive six-week training session at one of a number of regional institutes. Institute sites are widely distributed to reduce student traveling expenses. This pre-law preparation is designed to train CLEO students so they can perform as well in law school as law students from more advantaged backgrounds. After completing the summer training, participants begin three years of law school during which they receive an annual stipend. In addition, some participating law schools waive the tuition and fees that would normally be charged to these students.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

The Legal Training for the Disadvantaged program, which has been in operation since fiscal year 1968, was first funded from private sources through fiscal

Accomplishments — Continued

year 1970, and then was supported by the Office of Economic Opportunity. In fiscal year 1974, an appropriation of $750,000 was provided to the Office of Education to administer this program.

The program has gained visibility and demonstrated its effectiveness in training disadvantaged individuals for successful careers in the legal profession. In the past 20 years, CLEO has assisted 5,068 students in gaining admission to law schools. A recent survey showed that in 1982 the average rate for passing the bar examination was 97 percent for CLEO fellows who had completed law school, compared with only 87 percent passing the bar examination in 1968.

The Legal Training for the Disadvantaged program assists individuals from disadvantaged backgrounds. Of the 238 participants in CLEO's summer institute training program in 1988, 54 percent were blacks, 33 percent were Hispanics, six percent were whites, five percent were Asian Americans or Pacific Islanders, and two percent were American Indians.

1991 Budget Proposal

For Legal Training for the Disadvantaged, $2.468 million is requested. This is the same as the fiscal year 1990 appropriation, and $576,000 (30 percent) more than the 1989 appropriation.

This request would support the President's commitment to assisting disadvantaged students by providing funds to assist such individuals seeking to enter the legal profession. The 1991 request would maintain the 1990 funding level, which represents a significant increase over 1989. It would allow approximately 240 needy students to participate in CLEO's summer program in 1991, thereby enhancing the likelihood of their success in law school. It would also allow all participants to receive greatly increased financial support during law school--the 1991 average stipend would be $2,831 compared with the 1989 stipend average of $2,085.

Impact Data	1989	1990	1991
Number of summer institutes	7	7	7
Federal cost of institutes	$275,000	$420,000	$420,000

Average stipend	$2,085	$2,831	$2,831
Budget authority	$1,892,000	$2,468,000	$2,468,000

5. Aid for students: b. Support services:
(3) School, college and university partnerships
(Higher Education Act of 1965, Title V, Part B)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$2,961,000	$2,961,000	---

Purpose and Method of Operation

The School, College and University Partnerships program provides grants to institutions of higher education and secondary schools serving low-income students in order to encourage partnerships between these institutions. The grants support projects to improve the academic skills of public and private nonprofit secondary school students, to increase their opportunity to continue a program of education after secondary school, and to enhance their prospects for employment after secondary school.

An institution of higher education and its secondary school partner are eligible to compete for a discretionary grant after entering into a written and binding partnership agreement. In addition, a partnership may include businesses, labor organizations, or other private or public agencies. The agreement, signed by all parties, must include a listing of all partnership participants, the responsibilities of each, and a listing of resources to be contributed by each participant.

Grants may range from $250,000 to $1 million. All grantees must meet a 30-percent, 40-percent, and 50-percent matching requirement in the first, second, and third years, respectively. In making grants, the Department gives preference to programs serving predominantly low-income communities, partnerships administered during the regular school year and summer, and programs serving educationally disadvantaged students, potential dropouts, pregnant adolescents, teen parents, or children of migrant workers. Projects are normally approved for funding for a three-year period, during which they receive annual continuation awards on a non-competing basis.

The Department is also authorized to award grants for pilot community college partnership projects to four specific community colleges, named in the law. Preference is given to applications indicating that the business or industry partner is engaged in technological or aerospace activities.

This is a current-funded program for which funds are available from October 1 to September 30.

Higher Education

5. Aid for students: b. Support services:
(3) School, College and University Partnerships

Accomplishments

Funds were first appropriated for this program in fiscal year 1988, during which nine partnerships were awarded grants. Eleven programs, including the four community college pilot projects provided for by the authorizing statute, were funded in fiscal year 1989. The 1990 appropriation did not provide funding for community college pilot projects.

1991 Budget Proposal

The fiscal year 1991 budget request for School, College and University Partnerships is $2.961 million, which is the same as the fiscal year 1990 appropriation. The request would enable the Department to continue to encourage local school/college partnerships designed to enhance the academic skills of high school students, as well as to increase the students' opportunity to complete high school, to pursue a postsecondary education and to improve their prospects for employment. Ongoing support of School, College and University Partnerships demonstrates the Administration's concern for high-risk youngsters and helps reduce dropout rates.

5. Aid for students: c. Scholarships and fellowships:
(1) Robert C. Byrd honors scholarships
(Higher Education Act of 1965, Title IV, Part A, Subpart 6)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$8,627,000	$8,627,000	---

Purpose and Method of Operation

The Robert C. Byrd Honors Scholarship program is intended to promote student excellence and achievement. Students who have demonstrated outstanding academic achievement and who show promise of continued academic excellence are eligible for a $1,500 scholarship for the first year of study at an institution of higher education.

The Secretary annually assigns to each State participating in the Byrd program the number of Byrd Scholarships which bears the same ratio to the total number of scholarships made available to all States as the State's school-aged population bears to the total school-aged population in all participating States. State education agencies receive one-year formula grants based on (1) $1,500 multiplied by the number of scholarships assigned to the State; plus (2) an administrative allowance equal to $10,000 plus 5 percent of the amount to which the State is eligible under (1) above. This formula differs from the formula specified in the authorizing legislation. The Department's appropriations act for fiscal year 1990 waived the formula included in the authorizing legislation. Report language accompanying the appropriations act specified the formula currently in use.

This is a current-funded program for which funds are available from October 1 to September 30.

Accomplishments

Since the program's inception in fiscal year 1987, approximately 14,400 Byrd Scholarships have been awarded.

1991 Budget Proposal

The fiscal year 1991 budget request for Robert C. Byrd Honors Scholarships is $8.627 million, which is the same as the fiscal year 1990 appropriation.

The request would provide financial support to promote student excellence and achievement. This program allows the Federal Government to recognize

1991 Budget Proposal — Continued

outstanding student achievement by providing student financial assistance based solely on merit and thereby supports the Administration's goal of renewing our Nation's commitment to academic excellence.

From 1987 through 1990 Congress has waived the statutory requirements that Byrd Scholars be selected from congressional districts and that scholarships be awarded in local ceremonies by congressmen. The Department is proposing appropriation language to waive these costly requirements again in 1991.

The 1991 budget request is sufficient to fund an average of 11.8 scholarships per congressional district. This exceeds the number of scholarships provided for by the program's authorizing statute, which provides for the selection of 10 scholars from each congressional district. The maintenance of program benefits from year to year does not involve increased costs because all program expenses are based on the size of each award, which is set by statute at $1,500. Program provisions do not permit any adjustments to the size of an award.

Impact Data	1989	1990	1991
Number of scholars 1/	4,880	5,150	5,150
Average scholarship	$1,500	$1,500	$1,500
Budget authority	$8,200,000	$8,627,000	$8,627,000

1/ Students may receive only one Byrd Scholarship, for their first year of postsecondary study.

5. Aid for students: c. Scholarships and fellowships: (2) National science scholars
(Proposed legislation)

1991 Authorization: $5,000,000 (proposed)

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
—	$5,000,000	+$5,000,000

Purpose and Method of Operation

The National Science Scholars program was first proposed by President Bush in February 1989, as he outlined his "Building a Better America" agenda. The program was subsequently incorporated into the proposed "Educational Excellence for a Better America Act" that was transmitted to the Congress April 5, 1989. The National Science Scholars program would encourage achievement in the sciences by providing scholarships to graduating high school students who have excelled in the sciences, mathematics, and engineering. The scholarships would recognize the academic achievement of these students and would encourage them to continue their education in these academic areas at the postsecondary level.

Each State would nominate between four and ten students per congressional district to receive scholarships. The President would select a total of 570 scholars after considering the recommendations of an advisory board composed of the President's Science Advisor, the Secretary of Education, and the Director of the National Science Foundation (30 scholarships) and the recommendations of Senators and members of the House of Representatives (540 scholarships). The scholars would be nominated in accordance with specific academic achievement criteria that would be developed by the Secretary in consultation with a panel of scientists, mathematicians, engineers and representatives of industries using advanced technologies.

In order to receive an initial scholarship, a student would have to be accepted for enrollment as a full-time student at an eligible postsecondary institution, and declare a major in one of the life, physical, or computer sciences, mathematics or engineering. A student would have to maintain a superior level of achievement in one of the approved majors as a full-time student in order to receive additional scholarships.

The Secretary would disburse scholarships directly to institutions via grants, contracts, or cooperative agreements. An initial scholarship would be awarded for the student's first year of postsecondary education. If the student maintains eligibility, the student would receive scholarships for up to

Purpose and Method of Operation — Continued

3 additional years (or 4, if the student is in a course of study requiring attendance for 5 academic years). Scholars would receive up to $10,000 a year. In order to prevent over-awarding of assistance, the actual amount received could not exceed the cost of attendance less any other aid received. The bill would authorize $5 million for fiscal year 1991. The amount authorized would increase in increments of $5 million per year thereafter. These funding levels would ensure that the scholars would be supported throughout their undergraduate study and that a new group of 570 scholars would be selected each year.

This program would be a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

The National Science Scholars program would be authorized for the first time in 1991.

1991 Budget Proposal

For 1991, the Department proposes $5 million for National Science Scholars. No funds were appropriated for this proposed program in 1990.

Recent studies show that science and mathematics literacy among American school children is at an extremely low level. The 1988 Science Report Card, a study financed under the National Assessment of Educational Progress program, found that science achievement remains well below 1969 levels, with over half of the 17-year-olds so poorly trained in science that they cannot benefit from job training and cannot perform work requiring basic technical understanding. Only 7.5 percent of 17-year olds demonstrate sufficient skills to do well in college-level courses. Science proficiency for black and Hispanic students aged 13 and 17 is at least four years behind the level of whites. Females demonstrate appreciably lower skills than males. The National Research Council reported a similar situation in the field of mathematics: three out of four students do not master enough mathematics skills to do well at work or in college.

Given these findings, it is not surprising that colleges and universities are producing fewer students with undergraduate and graduate degrees in the sciences and mathematics. Notwithstanding significant increases in undergraduate enrollment, the 1988 Digest of Educational Statistics data show that the number of degrees awarded in mathematics and the sciences has dropped—often substantially—from prior year peaks. In 1985-86, undergraduate enrollment totalled 10.6 million compared with only 7.3 million

---

1991 Budget Proposal — Continued

students in 1970-71. However, only 38,524 bachelors degrees were conferred in 1985-86 in the life sciences compared with 54,275 in 1975-76. About 16,300 degrees in mathematics were awarded in 1985-86 compared with 24,801 in 1970-71. Less than 22,000 degrees in the physical sciences were conferred in 1985-86 compared with 24,052 in 1981-82.

Graduate school enrollment has also increased (for example, from 1.0 million in 1970-71 to 1.4 million in 1985-86). However, the number of doctorates conferred has not kept pace with this increase. Doctorates in the life sciences peaked in the early 1970's, declined slightly, peaked again in the early 1980's and again in 1988. However, much of the 1980's increase has been in the health sciences, particularly nursing. Doctorates in the broad fields of physical sciences and engineering peaked in the early 1970's, declined in the latter part of the decade, and began climbing again in the 1980's. However, the number of physical science degrees in 1988—5,309—is still 430 less than the peak set in 1971. Doctoral degrees in mathematics totaled only 749 in 1988 compared with 933 in 1977. In 1960, about 87 percent of new physical scientists doctorates and 77 percent of new engineering doctorates were awarded to U.S. citizens. In 1988, the U.S. citizen percentages were 65 and 46, respectively. Half of the mathematics doctorates were awarded to non-U.S. citizens.

The Nation is currently facing another problem that is related to the distressing situation described above. There is a reported shortage of elementary, secondary and postsecondary education teachers in the sciences, mathematics, business, and computer science fields. Furthermore, these shortages are expected to worsen in the next five years.

The proposed National Science Scholars program provides an excellent vehicle to begin addressing the problems outlined above. The high visibility, prestigious nature, and significant financial reward of scholarships would attract the attention of educators, capable high school students, and the American public regarding the importance of science and mathematics education. More specifically, the program would provide an incentive to high school students to excel in science and mathematics by recognizing their achievement. It would also provide students with immediate, tangible resources if they continue their studies in these fields at an undergraduate level. Given their superior academic caliber, many of the scholars would undoubtedly continue their studies at a graduate level. This would help provide the United States with a continuing supply of talented, academically qualified teachers, and talented scientists, mathematicians, and engineers, and would help the United States to remain competitive in today's world markets.

Higher Education

5. Aid for students: c. Scholarships and fellowships: (2) National science scholars

Impact Data	1989	1990	1991
Number of scholars	---	---	570
Average scholarship	---	---	$8,770
Budget authority	---	---	$5,000,000

5. Aid to students: c. Scholarships and fellowships:
(3) Paul Douglas teacher scholarships
(Higher Education Act of 1965, Title V, Part D, Subpart 1)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$14,922,000	$14,922,000	---

Purpose and Method of Operation

The Paul Douglas Teacher Scholarship program is intended to encourage outstanding high school graduates to pursue courses of study at the postsecondary level which would lead to teaching careers in elementary and secondary education.

Outstanding high school graduates interested in studying elementary and secondary school teaching are eligible for up to four years of scholarship assistance to attend undergraduate school. State agencies receive formula grants to provide up to $5,000 per academic year to recipients chosen on the basis of State-established merit criteria. Recipients must agree to teach for two years per year of supported study or repay with interest the amount of the scholarship, prorated according to the fraction of the teaching obligation not completed. However, recipients who teach in designated teacher shortage areas are obligated to teach only one year for each year of scholarship assistance they have received. The State agencies are responsible for enforcing program rules.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

Fiscal year 1986 was the first year in which funds were appropriated for this activity. Approximately 3,600 scholars were assisted by this program in fiscal years 1986 and 1987.

1991 Budget Proposal

The fiscal year 1991 budget request for Paul Douglas Teacher Scholarships is $14.922 million, which is the same as the fiscal year 1990 appropriation. The Department's request for this program supports the goal of improving educational excellence. More specifically, continued funding for the program would help meet the Nation's needs for elementary and secondary teachers in identified areas and would also address concerns about the quality of

---

1991 Budget Proposal — Continued

education in those areas. The 48 States currently participating in the program should be supported in their efforts to meet the needs for additional teachers that they have documented in their applications for program participation.

Impact Data	1989	1990	1991
Number of awards	3,630	3,550	3,550
Average award	$4,200	$4,200	$4,200
Budget authority	$15,235,000	$14,922,000	$14,922,000

---

5. Aid for students: c. Scholarships and fellowships: (4) Patricia Roberts Harris graduate fellowships (Higher Education Act of 1965, Title IX, Part B)

1991 Authorization: Indefinite

Budget Authority: —

1990 Appropriation	1991 Request	Increase or Decrease
$16,034,000	$17,780,000	+$1,746,000

Purpose and Method of Operation

Patricia Roberts Harris Graduate Fellowship grants are awarded to institutions of higher education to support fellowships for graduate and professional students from minority groups that have been traditionally underrepresented in colleges and universities. The Department allocates grants on a competitive basis to institutions with doctoral and professional degree programs. The institutions, in turn, recruit individuals from underrepresented groups and award fellowships to students who demonstrate financial need and who plan to pursue advanced degrees in academic areas of high national priority. Fellows are granted waivers of institutional tuition and mandatory fees and receive an annual stipend of up to $10,000. In addition, a $6,000 educational allowance per fellow is provided to each institution to help cover each fellow's tuition and other expenses.

A fellow who maintains satisfactory progress in his or her course of study may have the fellowship renewed annually, subject to the availability of funds, for a period of up to 36 months. Institutions do not need to compete for grants to fund these continuation awards.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

Funds were first appropriated for this program in 1978 in the amount of $3.250 million. Institutional grants (for improving faculty, expanding graduate programs, strengthening administrative operations, supporting cooperative agreements with other institutions, and renting or purchasing equipement) were awarded to 26 schools, and 352 fellows at 55 institutions received fellowships averaging $7,800. Authority for the institutional grants was repealed in 1981, but annual appropriations continued to increase periodically. To date, over $141 million has been appropriated for this program since its inception. The average award remained relatively constant, with increases in the number of fellowships, from 1978 until 1987. In that

---

Accomplishments — Continued

year, as a result of an increase in the maximum award under the Education Amendments of 1986, the number of fellowships dropped, and the average award increased greatly.

The purpose of the program has always been to serve those traditionally underrepresented in graduate and professional school. In both 1987-88 and 1988-89 fellowships were distributed approximately as follows:: blacks, 54 percent; Hispanics, 19 percent; Asian or Pacific Islanders, 5 percent; Native American/Alaskan American, 3 percent; and whites, 19 percent. The majority of white participants in each year was female.

Institutions are responsible for identifying areas of high national priority and supporting their selection. The fields studied by fellows have therefore varied somewhat over the years. However, in 1989, the top four intended areas of study were: life sciences (26%), law (14%), physical sciences (13%), and engineering (11%).

1991 Budget Proposal

For Patricia Roberts Harris Graduate Fellowships, $17.780 million is requested. This is $1.746 million more than the fiscal year 1990 appropriation. This request would help address the following major goals with respect to underrepresented minorities: expanding educational opportunities; improving educational achievement, particularly in areas of national need; and increasing the supply of qualified faculty.

According to the National Science Foundation's 1987-88 Survey of Earned Doctorates, 33,456 Ph.D.s were graduated from U.S. universities in 1988. While this represents an increase of 1,089 degrees over 1987, it is nevertheless 299 degrees less than the number of doctorates awarded in the peak year of 1973. Also, 25 percent (7,787) of the doctoral recipients were of a foreign nationality, and of these most had only temporary visas suggesting eventual return to their country of origin.

Among U.S. citizens, several minority groups receive a disproportionately low number of doctorates relative to their proportions in the general population. The 1980 census indicated that whites were 83 percent of the population, Asians were 2 percent, American Indians were 1 percent, blacks were 12 percent and Hispanics were 6 percent. In contrast, in 1988 whites received 90.8 percent of the doctorates, Asians 2.7 percent, American Indians 0.4 percent, blacks 3.5 percent and Hispanics 2.6 percent. In addition, while the American Indian and Hispanic Ph.D. populations have, in general, been slowly growing over the last decade, their numbers decreased in 1988 compared with 1987. Furthermore, the black Ph.D. population has declined 14 percent since 1978: in 1978, 1,106 blacks received 4.4 percent of the doctorates awarded to U.S. citizens; in 1988, 805 blacks received 3.5 percent.

1991 Budget Proposal -- Continued

The number of women receiving doctorates increased in 1988, as it has every year since NSF surveying began. However, women still accounted for only 35.2 percent of all doctorates (11,790 doctorates awarded to women compared with 21,666 doctorates awarded to men).

Low percentages of minority doctoral recipients in 1988 in the life sciences, physical sciences, and engineering are highly disturbing. In the life sciences, 93.1 percent of the 1988 Ph.D.s awarded to U.S. citizens were awarded to whites; 3.0 percent to Asians; 0.4 percent to American Indians, 1.6 percent to blacks; and 1.9 percent to Hispanics. In the physcial sciences, 92.9 percent of the Ph.D.s went to whites; 3.5 percent went to Asians; 0.4 percent went to American Indians; 1.0 percent went to blacks; and 2.2 percent went to Hispanics. Percentages for engineering Ph.D.s were whites, 88.1 percent; Asians, 8.1 percent; American Indians, 0.2 percent; blacks, 1.1 percent; and Hispanics, 2.5 percent. The disparity in recipients by gender is particularly great in these fields. For example, in 1988 only 881 women received doctorates in physical sciences (16.6 percent), only 285 in engineering (6.8 percent) and only 2,260 in life sciences (36.8 percent).

The increase in the number of foreign doctoral recipients is particularly striking in areas of national need. In 1960, about 87 percent of the physical science doctorates and 77 percent of the engineering doctorates awarded in that year were conferred on U.S. citizens. In 1988, the U.S. citizen percentages were 65 and 46, respectively. Half of the 1988 mathematics doctorates were awarded to non-U.S. citizens.

The Commission on Higher Education has recently reported disparate dropout rates for minority students seeking master's and doctoral degrees as well. While the dropout rates for all ethnic groups are staggering, those for blacks (45 percent) and Hispanics (52 percent) are even worse than those for whites (41 percent).

The Nation is currently facing another problem that is related to the distressing situation described above. There is a reported shortage of postsecondary education faculty, particularly in the sciences, mathematics, business and computer science fields, and particularly with respect to women and underrepresented minorities. Furthermore, these shortages are expected to worsen in the next five years.

The Patricia Roberts Harris Graduate Fellowships program helps financially disadvantaged minorities and women gain access to graduate and professional education in areas of national need. The substantially increased funding proposed by the President would further help direct financial assistance to underrepresented groups, and would assist in improving educational achievement

---

1991 Budget Proposal -- Continued

in areas of national need. An estimated 1,147 students would be assisted under the increased funding in 1991, compared with 1,034 under the 1990 appropriation--an 11-percent increase. This increase would result in an increase of traditionally underrepresented doctoral recipients, many of them in areas of national need. It would help ensure an increased supply of academically qualified minority faculty at postsecondary institutions. It would also strengthen the United States' position as a world leader by ensuring a highly skilled workforce that can meet the demands of an increasingly technological society.

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$3,277,000	$1,189,000	-$2,088,000

Purpose and Method of Operation

Patricia Roberts Harris Public Service Fellowships grants are awarded to institutions of higher education on a competitive basis to support fellowships for graduate and professional students who demonstrate financial need and who plan to pursue a career in public service at any level of government or in non-profit community services organizations. Public Service Education Fellowships are intended to provide post-baccalaureate opportunities for qualified students, particularly individuals from minority groups that are traditionally underrepresented in the field of public service. Fellows are granted waivers of institutional tuition and mandatory fees and receive an annual stipend of up to $10,000. In addition, a $6,000 educational allowance is provided to the institution for each fellow to help cover the fellow's tuition and other expenses.

A fellow who maintains satisfactory progress in his or her course of study may have the fellowship renewed annually, subject to the availability of funds, for a period of up to 36 months. Institutions do not need to compete for grants to fund these continuation awards.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

Funds were first appropriated for this program in 1975 in the amount of $4 million. Institutional grants (for improving faculty, expanding graduate public service programs, strengthening administrative operations, cooperative agreements with other institutions, and renting or purchasing equipement) were awarded to 58 schools, and 263 fellows at 52 institutions received fellowships averaging $6,464. The appropriations remained level through 1980, with less funds allocated to institutional grants and more to fellowships. This supported an increase in the numbers of students at more institutions receiving larger awards. The authority for institutional grants was repealed in 1981, and only $2 million was appropriated for fellowships in that year.

Accomplishments — Continued

Since that time, appropriations have generally increased, with a maximum appropriation of $3.320 million in 1989. In more recent years, the number of fellowships has dropped substantially (for example, from 309 in 1985 to 218 in 1989), while the average fellowship has greatly increased (from $8,091 in 1985 to $15,229 in 1989). The number of institutions attended has ranged from 49 to 87 in the 1985-89 period.

The Education Amendments of 1986 introduced greater emphasis on serving those from traditionally underrepresented backgrounds. Fiscal year 1989 funds were awarded to the following ethnic/racial groups: blacks (40%), Hispanics (17%), Asian Americans (5%), Native Americans (5%), and whites (33% — 29% female and 4% male). A breakout of 1989 funds by academic discipline is not available. However data from prior years suggest most fellows pursue master's degrees in public administration or closely-related fields.

1991 Budget Proposal

For Patricia Roberts Harris Public Service Education Fellowships, $1.189 million is requested. This is $2.088 million less than the fiscal year 1990 appropriation.

The President proposes to eliminate Federal support for this program after 1991. This would enable 1990 fellows to complete their 2-year programs under non-competing continuation awards. Reliance on market forces is more effective and appropriate than Federal intervention in meeting manpower needs in public service fields. There is no shortage of qualified individuals for employment in the field of public service. In 1985-86, over 5,100 masters degrees were awarded in public administration and public policy studies. Over 100 doctoral degrees were awarded in those subjects in the same year. In addition, many institutions currently offer high-quality graduate programs in public administration, thus suggesting little need for Federal financial support in this area of study. Needy graduate students in public service fields who are unable to secure institutional or private support are eligible for assistance under the Department's Guaranteed Student Loan, Perkins Loan, Work-Study, and other student aid programs.

5. Aid for students: c. Scholarships and fellowships: (6) Jacob K. Javits fellowships
(Higher Education Act of 1965, Title IX, Part C)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$7,896,000	$5,424,000	-$2,472,000

Purpose and Method of Operation

The Jacob K. Javits Fellowships program provides fellowships to students of superior ability in doctoral programs in the arts, humanities, and social sciences. In accordance with statutory requirements, a Fellowship Board establishes program policies, oversees program operations, annually selects fields of study in which fellowships are to be awarded, determines the number of fellowships to be awarded in each designated field, and appoints panels to select fellows. The Fellowship Board guidelines for fellowship distribution for 1990 are as follows: 40 percent in the humanities, 25 percent in the social sciences, and 15 percent in the arts, with the remaining 20 percent to be allocated by decision of a Board-appointed National Review Panel.

Javits fellows are selected by means of a national competition on the basis of demonstrated achievement and exceptional promise. They may pursue doctoral study at any participating institution of their choice. Fellowships are disbursed by the Department to institutions. The institutions then pay fellows stipends that may not exceed the lesser of $10,000 or demonstrated need and retain institutional allowances of $6,000 to help cover each fellow's tuition and other expenses. Fellowships are normally awarded for a period of one year. They are renewed annually, subject to the availability of funds, for up to four years of study.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

Funds were first appropriated for this program in 1985 in the amount of $2.5 million. With the exception of a slight decrease in funding in 1986, appropriations have increased substantially since 1985. The 1990 appropriation of $7.896 million represents a 216 percent increase over the 1985 appropriation. The number of grants awarded to institutions and the number of fellowships have also increased, from 37 institutional awards and 82 fellows in 1985, to 165 institutional awards and 579 fellows in 1989. The average award has ranged from $11,341 to $14,373. Approximately 60 percent of

Accomplishments — Continued

the awards to date have been made to men, and 40 percent have been made to women. Data on other characteristics of recipients are not collected.

The statute stipulates that fellows must study in one of the following fields: the arts, humanities or social sciences. However, the percentage of fellows in each area has varied from one year to the next based on the Fellowship Board's annual guidelines. In 1989, the fellowships were distributed as follows: 20 percent in the arts; 30 percent in the social sciences; and 50 percent in the humanities.

1991 Budget Proposal

For Jacob K. Javits Fellowships, $5.424 million is requested. This is $2.472 million less than the fiscal year 1990 appropriation. The President proposes to phase out Federal support for this program over a three-year period, during which time non-competing continuation awards will enable 1990 fellows to complete their education.

The Jacob K. Javits program is geared neither towards assisting disadvantaged persons, nor towards study in high priority academic disciplines. Furthermore, there are a wide variety of other Federal and non-Federal sources of financial support available for graduate and professional study in the arts, humanities and social sciences. These include Federal student aid, including Guaranteed Student Loans, Perkins Loans and Work-Study awards as well as aid funded by the National Endowment for the Humanities, and support from postsecondary institutions, foundations, and other private sources. In sum, the Jacob K. Javits program does not support important national goals, and it duplicates other forms of Federal and non-Federal financial aid for graduate study. It is an unnecessary taxpayer expense.

5. Aid for students: c. Scholarships and fellowships:
   (7) Minority participation in graduate education
   (Higher Education Act of 1965, Title IX, Part A)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$3,547,000	$6,094,000	+$2,547,000

Purpose and Method of Operation

Minority Participation in Graduate Education provides fellowship aid for talented undergraduate students who demonstrate financial need and are from minority groups underrepresented in graduate education. The purpose of the program is to provide these undergraduate students with effective preparation for graduate study by means of summer research internships, seminars and other educational experiences.

Institutions of higher education compete annually for grants under this program. The project period lasts between six weeks and one year. Institutions are responsible for identifying, recruiting and making available fellowship aid to eligible students, and providing such students with effective preparation for graduate study. All funds received under this program must be used for direct fellowship aid and can cover the costs of need-based stipends, room and board, transportation and tuition.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

Accomplishments

Fiscal year 1989 was the second year in which funds were appropriated for this program. Grants were awarded to 45 institutions to fund graduate school preparation activities of an estimated 998 undergraduates.

1991 Budget Proposal

For Minority Participation in Graduate Education, $6.094 million is requested, which is $2.547 million more than the 1990 appropriation. The President's request would help address the following major goals: helping students who are financially needy; expanding graduate educational opportunity for minorities; improving educational achievement; and increasing the supply of qualified minority faculty.

1991 Budget Proposal — Continued

Among U.S. citizens, several minority groups receive a disproportionately low number of doctorates relative to their proportions in the general population. The 1980 census indicated that whites were 83 percent of the population, Asians were 2 percent, American Indians were 1 percent, blacks were 12 percent and Hispanics were 6 percent. In contrast, in 1988 whites received 90.8 percent of the doctorates, Asians 2.7 percent, American Indians 0.4 percent, blacks 3.5 percent and Hispanics 2.6 percent. In addition, while the American Indian and Hispanic Ph.D. populations have, in general, been slowly growing over the last decade, their numbers decreased in 1988 compared with 1987. Furthermore, the black Ph.D. population has declined 14 percent since 1978: in 1978 1,106 blacks received 4.4 percent of the doctorates awarded to U.S. citizens; in 1988, 805 blacks received 3.5 percent. The number of women receiving doctorates increased in 1988, as it has every year since NSF surveying began. However, women still accounted for only 35.2 percent of all doctorates (11,790 doctorates to women compared with 21,666 doctorates to men).

The Commission on Higher Education has recently reported disparate dropout rates for minority students seeking master's and doctoral degrees. While the dropout rates for all ethnic groups are staggering, those for Blacks (45 percent) and Hispanics (52 percent) are even worse than those for whites (41 percent).

The Nation is currently facing another problem that is related to the distressing situation described above: there is a reported shortage of minority elementary, secondary, and postsecondary education teachers. Furthermore, these shortages are expected to worsen in the next 5 years.

The Minority Participation in Graduate Education program helps improve the accessibility of graduate education to financially disadvantaged minorities by providing them with effective preparation for graduate school. The substantially increased funding proposed by the President would further expand efforts to ensure the success of needy minority students as they pursue graduate degrees. An estimated 1,741 students would be assisted under the increased funding in 1991, compared with 1,013 under the 1990 appropriation—a 72 percent increase. It is expected that this increase would eventually contribute towards greater availability of minority faculty at postsecondary institutions as more and more minority students complete their graduate training.

Impact Data	1989	1990	1991
Number of grants	45	45	60
Average grant	$77,244	$78,822	$101,567
Number of fellows	998	1,013	1,741
Average fellowship	$3,483	$3,500	$3,500
Budget authority	$3,476,000	$3,547,000	$6,094,000

5. Aid for students: c. Scholarships and fellowships: (8) Graduate assistance in areas of national need
(Higher Education Act of 1965, Title IX, Part D)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$15,793,000	$25,483,000	+$9,690,000

Purpose and Method of Operation

Graduate Assistance in Areas of National Need provides fellowships to assist financially needy graduate students of superior ability studying in areas of national need. These areas of national need are designated by the Secretary in consultation with the National Science Foundation, the National Academy of Sciences, the National Endowments for the Arts and the Humanities, and other appropriate Federal and nonprofit agencies and organizations. In fiscal year 1990 the designated areas of need are chemistry, engineering, mathematics and physics.

Graduate degree-granting academic departments and programs of institutions of higher education and such departments and programs in consortium with non-degree-granting institutions that support doctoral dissertation research are eligible to compete annually for awards under this program. The project period is up to three years in length. Institutions need not compete for second- and third-year continuation awards. Institutions must match 25 percent of the grant amount. Sixty percent of the grant must be used for stipends not to exceed $10,000 per year or the demonstrated level of need, whichever is less. Forty percent of the grant may be awarded to fellowship recipients to pay their tuition and fees and other costs of education. Grant funds may not be used for the academic department or program's general operational overhead.

Fellowship recipients must be graduate students, have financial need, have excellent academic records, plan teaching or research careers, and plan to pursue the highest degree available in their field. In addition, institutions must provide assurances in their applications for grants that they will seek students from traditionally underrepresented backgrounds. Graduate students may receive assistance for no more than five years.

This is a current-funded program for which funds are available for obligation from October 1 to September 30.

Higher Education

5. Aid for students: c. Scholarships and fellowships: (8) Graduate assistance in areas of national need

---

Accomplishments

Funds were first appropriated for this program in 1988 in the amount of $7.659 million. Appropriations increased to $12.844 million in 1989 and to $15.793 million in 1990 to accomodate additional cohorts of first-time fellows. The number of fellows increased from approximately 598 in 1988 to 1,003 in 1989, assuming an estimated $16,000 average award. The designated areas of national need in both 1988 and 1989 were chemistry, engineering, mathematics and physics. In both years, approximately one quarter of the available funds were awarded in each area.

1991 Budget Proposal

For Graduate Assistance in Areas of National Need, $25.483 million is requested. This is $9.690 million more than the 1990 appropriation. This significant increase would help meet several major goals. It would help expand educational opportunity for minorities, improve educational achievement, strengthen the national workforce, and increase the supply of qualified faculty in critical fields.

The number of doctorates awarded in fields identified as areas of national need have shown differing trends. Doctorates in the life sciences peaked in the early 1970's, declined slightly, peaked again in the early 1980's, and once more in 1988. However, much of the 1980's increase has been confined to the health sciences, particularly nursing. The number of doctorates in the physical sciences and engineering fields peaked in the early 1970's, declined in the latter part of that decade, and began climbing again in the 1980's. However, the number of physical science degrees in 1988--5,309--is still 430 degrees less than the peak set in 1971. Doctoral degrees in mathematics totaled only 749 in 1988 compared with 933 in 1977.

The decrease in the number of U.S. citizen doctoral degree recipients is particularly striking in areas of national need. In 1960, about 87 percent of the physical science doctorates and 77 percent of the engineering doctorates were awarded to U.S. citizens. In 1988, the U.S. citizens percentages were 65 and 46 respectively. Half of the 1987 mathematics doctorates were awarded to non-U.S. citizens.

Low percentages of minority doctoral recipients in 1988 in the life sciences, physical sciences and engineering are highly disturbing. In the life sciences, 93.1 percent of the 1988 Ph.D.s awarded to U.S. citizens were awarded to whites; 3.0 percent to Asians; 0.4 percent to American Indians; 1.6 percent to blacks; and 1.9 percent to Hispanics. In the physical sciences, 92.9 percent of the Ph.D.s went to whites; 3.5 percent went to

---

1991 Budget Proposal — Continued

Asians; 0.4 percent went to American Indians; 1.0 percent went to blacks; 2.2 percent went to Hispanics. Percentages for engineering Ph.D.s were whites, 88.1 percent; Asians, 7.1 percent; American Indians, 0.2 percent; blacks, 1.3 percent; Hispanics, 25 percent. The disparity in recepients by gender, is particularly great in these fields. For example, in 1988 only 881 women received doctorates in physical sciences (16.6 percent), only 285 in engineering (6.8 percent) and only 2,260 in the life sciences (36.8 percent).

The Nation is currently facing another problem that is related to the distressing situation described above: there is a projected shortage of postsecondary education faculty, particularly in the sciences, mathematics, business and computer science fields.

The Graduate Assistance in Areas of National Need program is an ideal mechanism to help meet the goals listed above. The program is specifically directed toward needy students who are studying in areas of national need and are from groups that have traditionally been underrepresented. Such students must have as their career goals either research or teaching.

The substantially increased funding proposed by the President would help direct financial assistance to underrepresented groups and would assist in improving educational achievement in areas of national need. An estimated 1,991 students would be assisted under the request for 1991, compared with 1,234 under the 1990 appropriation—a 61 percent increase. This increase would result in an increase of traditionally underrepresented doctoral recipients in areas of high national need. It would also help provide the United States with an increase in academically qualified minority faculty, as well as with the talented scientists, mathematicians, and engineers needed to enable the United States to remain competitive in today's technologically-oriented world markets.

Higher Education Facilities Loans

Language Analysis

Language Provision	Explanation
For the fiscal year [1990] 1991, no new commitments for loans may be made from the fund established pursuant to title VII, section 733 of the Higher Education Act, as amended (20 U.S.C. 1132d-2).	This language continues the current prohibition on new loan commitments, thereby directing available resources of the revolving fund only toward payment of mandatory program operating costs.

HIGHER EDUCATION FACILITIES LOANS

The Secretary is hereby authorized to make such expenditures, within the limits of funds available under this heading and in accord with law, and to make such contracts and commitments without regard to fiscal year limitation, as provided by section 104 of the Government Corporation Control Act (31 U.S.C. 9104), as may be necessary in carrying out the program for the current fiscal year. For the fiscal year [1990] 1991, no new commitments for loans may be made from the fund established pursuant to title VII, section 733 of the Higher Education Act, as amended (20 U.S.C. 1132d-2). (Department of Education Appropriations Act, 1990.)

Purpose and Method of Operation

The Higher Education Facilities Loans program is designed to support financing for the construction, reconstruction, renovation, and equipping of higher education academic facilities. This financing is intended to help States, local communities, and individual higher education institutions in: building, renovating, and maintaining academic and research facilities and equipment; providing facilities for advanced skill training programs related to emerging technologies; accommodating unusual increases or programmatic shifts in enrollment; meeting various Federal, State, and local facilities requirements with regard to access for the handicapped, health and safety, environmental protection, and hazardous waste disposal; removing asbestos hazards in existing facilities; and preserving significant architecture.

Direct, interest subsidized loans were made from the revolving fund to institutions of higher education and higher education building agencies prior to 1982. Currently, however, the program simply manages and services the existing portfolio of prior year loans. This includes carrying out loan collections and property disposition activities, the prepayment discount program, loan sales, and resolution of defaulted loans. The revolving loan fund receives revenue from principal repayments and interest on prior year loans and from loan sales and discounted prepayments. In years when these offsetting collections are insufficient to finance the program's operating costs, direct appropriations are required to cover the difference.

Funds flow from the revolving loan fund for interest expenses on Treasury-provided loan capital and loan sale fees and commissions. These expenses are met from fund resources derived through loan repayments, interest revenue, loan sales, discounted prepayments and other income. The interest rate paid by borrowers for loans financed with appropriated capital (averaging about 4 percent) is less than the interest rate which must be paid by the

Higher Education Facilities Loans

1. Higher education facilities loans

Purpose and Method of Operation — Continued

Department to Treasury on the outstanding balance amount (9.375 percent in 1988, 9.125 percent in 1989 and 8.125 percent in 1990). In the past, the resulting differential has been met with appropriated dollars (under an annual, definite authority). For 1991, operating income, including revenue from discounted loan prepayments, is expected to be sufficient to finance all expenses.

Accomplishments

During the period of substantial higher education growth in the 1960s, this program was created to help finance the construction of new academic facilities for the Nation's campuses, and also to help renovate existing facilities. Over a period of 11 years (fiscal years 1965-75), the program's revolving fund supported hundreds of direct, subsidized, long-term loans to institutions of higher education and higher education building agencies. Primarily, this institutional assistance was provided to help accommodate unusual increases in enrollment and to help maintain and expand research facilities. Also, at the direction of the Congress, several more recent loans (two each in 1978 and 1981) to specified institutions were made from the unobligated balance then available in the revolving fund. In total, since the program's inception, over $520 million in loans has been awarded to over 660 institutions.

Sale of Certificates of Beneficial Interest. In 1989, the Department began to negotiate the sale of its certificates of beneficial interest. These certificates, owned as a result of loan sales in 1987 and 1988, provided the Department with residual cash flow payments on a semi-annual basis. The payments were sent to the Department through the loan trusts created in 1987 and 1988 as a result of the sale of loan obligations. The sale of the certificates was completed on December 5, 1989; this marked the first time the Government had successfully sold such residual cash flow interests. Net proceeds from the sale were $26.3 million for this account and the College Housing Loans account, combined. The proceeds represented the market value of the certificates. The discount rate offered by the buyers was within the 12 to 14 percent range presented by the Department and approved by OMB and the Treasury. Proceeds were approximately 25 percent of the par value at the time of sale. Approximately $2.6 million of the proceeds was credited to this account.

Higher Education Facilities Loans

1. Higher education facilities loans

Credit Management Improvements. The Department continued to pursue the collection of debt payments for institutions in default. These efforts, which have centered on negotiating prepayment and discount payment options for institutions in chronic default, continue to reduce the outstanding defaulted debt held by the Department.

1991 Budget Proposal

For Higher Education Facilities Loans, no appropriation and no authorization to make new loan commitments are requested, which is the same as the fiscal year 1990 appropriation action. Resources of the fund (derived through loan repayments, interest revenue, loan sales, discounted prepayments, and other income) are expected to be sufficient to finance all program operating costs in 1991.

The statutory prohibition on the sale of both College Housing Loans and Higher Education Facilities Loans after fiscal year 1988 is proposed to be repealed. Loan sales should be authorized to the extent to which the Government's financial interests are best served. The return of funds to the Treasury to repay the existing debt will reduce interest payments each year, and thereby reduce the largest expense in the account. By repealing this prohibition on sales, the Government expects to achieve in fiscal year 1991 $23.4 million in loan sale revenue from this portfolio and another $213.1 million from the College Housing Loans portfolio. This will reduce the loan principal balance and interest payments to the Treasury and also help reduce the Federal deficit.

Higher Education Facilities Loans

To carry out the statutory provisions governing the financing of new and old loans under Title VII, Part F of the Higher Education Act, two budget accounts have been established in the Treasury: the College Housing and Academic Facilities Loans account and the College Housing Loans account. The College Housing and Academic Facilities Loans account finances loans made after 1986 under the new requirements of Title VII, Part F. The College Housing Loans account finances activities related to the management of loans made prior to 1987 under Title IV of the Housing Act of 1950. Because the 1986 statutory amendments changed the terms under which the Secretary of Education acquires capital for new loans, separate accounts are needed to ensure compliance with the new financial requirements of the law.

Purpose and Method of Operation

The College Housing and Academic Facilities Loans (CHAFL) account, authorized under Title VII, Part F of the Higher Education Act of 1986, supports financing for the reconstruction, renovation, and construction of undergraduate academic facilities, housing and other postsecondary educational facilities for students and faculty. The priority is on renovation and reconstruction of older academic facilities and undergraduate academic facilities that have gone without major renovation or reconstruction for an extended period. Institutions receive direct, interest-subsidized loans made from a general fund. This financing is intended to help higher education institutions finance reconstruction and renovation activities on more favorable terms than has been otherwise available through the private sector.

Purpose and Method of Operation — Continued

Eligible applicants are undergraduate postsecondary institutions, certain technical or vocational institutions, teaching hospitals, and public and private nonprofit college housing corporations and agencies. Currently, loans may be made for amounts from $250,000 to $3.0 million at an interest rate of 1/4 percent above the rate paid by the Department to borrow capital from Treasury, up to a maximum of 5.5 percent, and with a repayment period of up to 30 years.

The Department implemented the statutory provisions governing new loan activity authorized in the Higher Education Amendments of 1986 for Title VII, Part F by creating the College Housing and Academic Facilities Loans account to make resources available to support new loan activity beginning in fiscal year 1987. Additionally, the statute allows for the College Housing Loans account to continue for old loan activity--receipts of principal and interest repayments, loan asset sales, and meeting the debt obligation with the Treasury on loans made prior to 1987.

The Department borrows the authorized loan amount at an interest rate determined by the average current yield on outstanding obligations of United States comparable maturities in the month preceding the month in which the loan note is signed. For fiscal year 1989, the rate charged to borrow $29.6 million was 8.9 percent.

This account is only partially self-financing since the amount of interest paid by borrowers is lower than the amount the Department must pay Treasury for capital borrowed to finance the loans. To meet the required repayment of interest and principal each year to Treasury, the Department must request an annual appropriation to cover this interest shortfall. Unless interest on long-term Treasury securities falls below 5.75 percent for an extended period, repayments by colleges and universities will not be at a level that will enable the Department to repay Treasury the scheduled interest and principal repayments without appropriations.

Competition for the loans is based on the facilities renovation, reconstruction or housing needs, fiscal integrity and financial need of applicant institutions and agencies. Commitments for new loans are generally made in one fiscal year for disbursement in succeeding fiscal years during the construction, renovation, or acquisition phase of the projects.

College Housing and Academic Facilities Loans

1. College housing and academic facilities loans

Purpose and Method of Operation - Continued

Collections of principal and interest from borrowers are used to repay principal and interest owed to Treasury in accordance with notes issued to secure loan capital. Collections are not used for new loans. Borrowers do not begin paying principal and interest until after the loans are fully disbursed.

This is a current-funded program for which funds are available from October 1 to September 30. Funding for the annual appropriation is mandatory in that the level of funding is determined by the Department's legal obligation for interest payments to Treasury.

Accomplishments

In fiscal year 1989, $29.6 million in new loan commitments was awarded in support of renovation, reconstruction, and construction projects. In prior years, the Department has awarded 25 loans for $60 million in 1987 and 30 loans for $62.2 million in 1988. In 1989, loans were made to 15 institutions at an average loan of $1.9 million. Of the 15, 8 were renovation and reconstruction loans for academic facilities and 7 were for housing construction. To finance these new loan commitments in 1989, the Department borrowed $29.6 million at 8.9 percent interest from Treasury.

1991 Budget Proposal

For College Housing and Academic Facilities Loans, $13,449,000 is requested, $8,449,000 under the annual appropriation to pay for the interest shortfall from prior year loan commitments and $5,000,000 for new loan commitments for academic facilities.

The loan assistance provided through this program has a low budgetary priority for the Department and is viewed as a non-essential Federal expenditure. For the following more specific reasons, the Department believes that loans should be curtailed under this program:

- Limited Federal role - The Department believes that the Federal Government should not assume responsibility for financing the capital outlay needed to generally maintain the physical plant of institutions of higher education--especially while attempting to restrain spending.

1991 Budget Proposal — Continued

Responsibility for this type of fundamental institutional support lies with colleges and universities themselves, State and local governments, taxpayers at those levels, private sector users and beneficiaries of higher education services.

The Federal role in support of facilities serving research and development needs can be carried out by research and development agencies such as the National Science Foundation (NSF). For 1991, the President has requested $20 million for the NSF academic facilities program.

- College Construction Loan Insurance Association - The College Construction Loan Insurance Association (Connie Lee), created by the Higher Education Amendments of 1986, assists colleges and universities in obtaining insurance and reinsurance in the financing of construction or renovation of academic facilities, housing and associated furniture and equipment. Educational institutions receive assistance in the form of default insurance or reinsurance on privately secured loans, bonds, and other construction debt instruments. This insurance improves an institution's credit rating, allowing it to borrow at better rates and ultimately help it finance its construction needs.

  The construction needs of less creditworthy institutions can be met through the private financial support offered by Connie Lee. This source of support (insuring private obligations) is less expensive to the Government and more efficient than providing direct loans through the heavily subsidized College Housing and Academic Facilities Loans program. Those institutions that have difficulty in obtaining adequate issue ratings to finance construction costs can improve those ratings through guarantees or insurance from Connie Lee. The Association is required by law to devote a substantial portion of its business to financially needy schools.

- Excessively expensive subsidy cost - When the terms for new loans under this program are compared with a 10-year commercial loan, the Federal subsidy is calculated at over 35 percent of the loan value as applied to the loan commitment amounts of $29.6 million for fiscal year 1989, and $30 million for 1990.

COLLEGE HOUSING LOANS

Pursuant to title VII, part F of the Higher Education Act, as amended, for necessary expenses of the college housing loans program, previously carried out under title IV of the Housing Act of 1950, the Secretary shall make expenditures and enter into contracts without regard to fiscal year limitation using loan repayments and other resources available to this account. Any unobligated balances becoming available from fixed fees paid into this account pursuant to 12 U.S.C. 1749d, relating to payment of costs for inspections and site visits, shall be available for the operating expenses of this account. (Department of Education Appropriations Act, 1990.)

College Housing Loans

Language Analysis

Language Provision	Explanation
Pursuant to title VII, part F of the Higher Education Act, as amended, for necessary expenses of the college housing loans program, previously carried out under title IV of the Housing Act of 1950, the Secretary shall make expenditures and enter into contracts without regard to fiscal year limitation using loan repayments and other resources available to this account.	This language authorizes the Secretary to use loan repayments and other collections to pay mandatory operating costs of this account.
Any unobligated balances becoming available from fixed fees paid into this account pursuant to 12 U.S.C. 1749d, relating to payment of costs for inspections and site visits, shall be available for the operating expenses of this account.	This language permits previously collected and earned audit and inspection fees to be used for other program operating costs. Costs of audits and inspections have been paid since 1987 with Program Administration account funds.

1/ Repayment of Treasury borrowings.

To carry out the statutory provisions governing the financing of new and old loans under Title VII, Part F of the Higher Education Act, two budget accounts have been established in the Treasury: the College Housing and Academic Facilities Loans account and the College Housing Loans account. The College Housing and Academic Facilities Loans account finances loans made after 1986 under the new requirements of Title VII, Part F. The College Housing Loans account finances activities related to the management of loans made prior to 1987 under Title IV of the Housing Act of 1950. Because the 1986 statutory amendments changed the terms under which the Secretary of Education acquires capital for new loans, separate accounts are needed to ensure compliance with the new financial requirements of the law.

Purpose and Method of Operation

This account supports the management of loans made prior to 1987 for the construction, reconstruction and renovation of student and faculty housing. Direct, subsidized loans were made from a revolving fund to undergraduate postsecondary institutions, certain technical or vocational institutions, teaching hospitals, and public and private nonprofit college housing corporations and agencies. Currently, however, the program simply manages and services the existing portfolio of prior-year loans. It does not support new loan activity. The activity includes carrying out loan collections and property disposition activities, the prepayment discount program, loan sales, and resolution of defaulted loans. The revolving loan fund is made up of the following: funds borrowed from the Treasury to finance loans and to pay for program operating costs (approximately $711 million is currently outstanding); principal repayments and interest revenue on prior year loans; proceeds from discounted prepayments and loan sales to the public.

College Housing Loans

1. College housing loans

Purpose and Method of Operation — Continued

Funds from the revolving fund are used for: interest expenses on borrowed Treasury funds used to make prior year loans; facilities management expenses incurred in administering the program's loan portfolio; and loan sale fees and commissions to cover costs incurred in selling to the public portions of the outstanding college housing loans portfolio. For 1991, operating income is expected to be sufficient to finance all expenses.

The proceeds from the sale of loans are returned to the Treasury to reduce the Department's debt obligation under a note that comes due in 1991 that bears 2.75 percent annual interest. Since a new interest rate will be negotiated on the note in January 1991 and is projected to be 7 percent, the sale of loan obligations will significantly reduce the total expenses associated with annual Treasury interest payments in future years. In 1989, the Treasury debt obligation was reduced by $183 million to $711 million through the return of $177,046,000 in available cash and through the write-off of discounted debt. All resources of the revolving fund not required to finance expenses are returned to the Treasury to reduce the debt obligation.

Accomplishments

Since the inception of this program in 1950, over $3.89 billion in loans was awarded to institutions of higher education and eligible housing agencies, with about $704 million outstanding at the close of fiscal year 1989. Authority for and administrative control of the program were transferred to the Department of Education from the Department of Housing and Urban Development in 1980. In the six succeeding fiscal years, $285.6 million in new loan commitments was awarded in support of 177 projects.

A credit management improvement plan for this program, including dollar targets and initiatives for the collection of outstanding loan receivables (including delinquent receivables), was developed and first implemented in 1982. Under this continuing plan, $77,693,000 was collected in fiscal year 1989. Principal and interest collections are expected to be $52,286,000 in fiscal year 1990 and $52,424,000 in fiscal year 1991.

Sale of Certificates of Beneficial Interest. In 1989, the Department began to negotiate the sale of its certificates of beneficial interest. These certificates, owned as a result of loan sales in 1987 and 1988, provided the Department with residual cash flow payments on a semi-annual basis. The payments were sent to the Department through the loan trusts created in 1987

College Housing Loans

1. College housing loans

Accomplishments — Continued

and 1988 as a result of the sale of loan obligations. The sale of the certificates was completed on December 5, 1989; this marked the first time the Government had successfully sold such residual cash flow interests. Net proceeds from the sale were $26.3 million for this account and the Higher Education Facilities Loans account, combined. The proceeds represented the market value of the certificates. The discount rate offered by the buyers was within the 12 to 14 percent range presented by the Department and approved by OMB and the Treasury. Proceeds were approximately 25 percent of the par value at the time of sale. Approximately $23.7 million of the proceeds was credited to this account.

Monitoring Loan Repayments. The Department is continuing the loan management practices implemented in fiscal years 1988 and 1989. The practices have assisted us in improving monitoring activities and alerting us to potential problem loans. By contacting schools within 30 days of their delinquency on loan repayments, the Department has headed off repayment problems. Second, audited financial statements are being collected annually. Third, the annual review of reserve funds ensures these funds are available and is a means of monitoring the schools' financial health.

1991 Budget Proposal

For College Housing Loans, no funds are requested to pay for program operating costs. This is the same request as the 1990 appropriation action. Principal repayments and interest revenue on prior year loans will be adequate to pay for program operating costs in 1991.

The Department proposes to repeal the statutory requirement that the Secretary not sell College Housing Loans after September 30, 1988. Loan sales should be authorized in fiscal year 1991 to the extent to which the Government's financial interests are best served. The return of funds to the Treasury to repay the debt obligation of $711 million will reduce the cost of loan interest payments in 1992 and future years. Prior to the 1987 loan sale, interest costs ranged from $67 million to $71 million each year (on an outstanding debt of $2.5 billion). The 1987 and 1988 loan sales reduced the debt obligation interest expense by about two-thirds. However, the Treasury will renegotiate the debt note in 1991 regarding interest payments. The current agreement requires the Department to pay interest on the outstanding cash balance at 2.75 percent annually. A new note will be signed raising the interest payments to approximately 7 percent on outstanding balances. Repeal

College Housing Loans

1. College housing loans

1991 Budget Proposal — Continued

of the prohibition on sales will allow the Government to achieve approximately $213.1 million in 1991 in loan sale proceeds from this portfolio and another $23.4 million from the Higher Education Facilities Loans portfolio. This will reduce the outstanding balance and interest payments to the Treasury and also reduce the overall Federal deficit.

VOCATIONAL AND ADULT EDUCATION

WITNESSES

BETSY BRAND, ASSISTANT SECRETARY FOR VOCATIONAL AND ADULT EDUCATION

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

THOMAS M. CORWIN, DIRECTOR, DIVISION OF ELEMENTARY, SECONDARY AND VOCATIONAL ANALYSIS, OFFICE OF PLANNING, BUDGET AND EVALUATION

OPENING REMARKS

Mr. NATCHER. At this time, we take up the budget request for the fiscal year 1991 for vocational and adult education. We have before the committee Betsy Brand, the Assistant Secretary for Vocational and Adult Education. It is a pleasure to have you before the committee at this time, Ms. Brand. Before you give us your statement, tell us who you have with you at the table.

Ms. BRAND. Thank you.

I have Tom Corwin with the Office of Planning, Budget and Evaluation; and Sally Christensen, Director, Budget Service, Office of Planning, Budget and Evaluation.

Mr. NATCHER. Thank you, Ms. Brand. We are delighted to have you before the committee, as I have just said. I, along with other members of the subcommittee, want to wish you the best of everything with your new assignment. I believe this is your first time with our subcommittee, but you have had considerable experience that will hold you in good stead as far as your present assignment.

Ms. BRAND. Thank you very much.

OPENING STATEMENT

Mr. NATCHER. We will be pleased to hear from you at this time.

Ms. BRAND. Thank you.

Mr. Chairman, I have a complete statement that I will summarize and ask that it be included in the record.

Our budget request for the Office of Vocational Education includes $929,700,000 for vocational education programs, the same level as the 1990 appropriation. Funds would be used to support vocational education under the Department's proposed reauthorization legislation for the Perkins Act, which was submitted to Congress last year.

Among the major concerns addressed in this proposal are increasing accountability in vocational education, substantially reducing the complexities of existing law, maintaining emphasis on equity and program improvement, and strengthening the links between vocational programs and the labor market. Since the new structure of the Perkins Act is subject to further Congressional action, specific amounts requested for individual activities will be submitted to Congress as soon as the new legislation is enacted.

ADULT EDUCATION

Improving the level of literacy for adults is one of our national education goals. A total of $238,700,000 is being requested for adult education programs to assist in this effort, that is $46,000,000 more and a 23.8-percent increase over the 1990 level.

We believe this increase demonstrates the concern of this Administration about our Nation's problem of illiteracy and takes a major step in providing needed leadership at the Federal level through coordination of programs and dissemination of effective practices and programs to the front-line service providers in the field. Our proposal for an adult literacy clearinghouse, which I will discuss later, will help to meet the increased demands placed upon our adult education programs.

Included in this request is a total of $200,000,000 for the adult education State grant program, a $42,200,000 increase over the 1990 appropriation and the highest level ever requested for this program. This increase in funding will allow the States to pursue more extensive adult education and literacy projects and to serve an estimated 660,000 additional Americans.

This request reflects the Administration's strong commitment toward eliminating adult illiteracy, improving work force productivity through basic skills education, and addressing the special needs of non-English-speaking immigrants.

With funding at this level, we expect that approximately 4,000,000 adults would be served under the adult education State programs. With the matching requirements specified in the Act, increases in Federal funding translate into even greater State and local support for adult education.

Currently, support from the State and local levels and the private sector accounts for approximately three-fourths of all adult education spending. With the strong leadership of the President and Mrs. Bush, we expect voluntary and private efforts to increase and the number of individuals we help to continue to grow.

We are requesting a total of $8,000,000 for national programs, an increase of $6,000,000 over the 1990 appropriation. Of this total, approximately $2,000,000 will be used to continue funding for the ongoing National Study of Adult Education Programs, which will provide data on adult education programs and participants prior to the next reauthorization.

Another $1,000,000 will be used to continue support for an interagency effort among the Department of Education and the Departments of Labor, and Health and Human Services to provide technical assistance to the States in implementing the new JOBS program, and to begin a study of the Literacy Training for Homeless Adults program.

NATIONAL ADULT EDUCATION CLEARINGHOUSE

The remaining $5,000,000 will be used to fund a national adult education clearinghouse. In carrying out its functions, the clearinghouse will provide leadership and coordination to the field of adult literacy and education. The clearinghouse will be a comprehensive resource center for information that can be used by Federal, State and local agencies, national organizations, policy-makers, researchers, and practitioners to establish, improve or expand adult literacy programs.

This project will provide leadership and direct support for an integrated program of research and development, identification and dissemination of best practices in adult education, and technical assistance to the adult education field.

With the establishment of this clearinghouse, there will be, for the first time, a focal point for research and information on adult education and literacy programs. The establishment of this national clearinghouse represents a major new Federal commitment to addressing the many problems facing the States and localities as they attempt to provide high-quality adult education and literacy services.

LITERACY TRAINING FOR HOMELESS ADULTS

A total of $10,000,000 is requested for Literacy Training for Homeless Adults, authorized under the Stewart B. McKinney Homeless Assistance Act, which would fund this program at its fully authorized level as promised by the President. This request represents an increase of $2,600,000 over the 1990 appropriation.

These funds would be used to continue programs begun in 1989 and 1990 designed to assist States in developing and implementing programs of literacy training, basic skills remediation for homeless adults, counseling, child care, and transportation.

We feel this program is important, since it serves an exceptionally disadvantaged population and it seeks to solve the problems of the homeless by allowing a comprehensive approach to the provision of education and support services.

LITERACY PARTNERSHIPS AND GRANTS

Our request includes $19,700,000 for Workplace Literacy Partnerships, the same level as the 1990 appropriation. This grant program, which supports literacy efforts by the business community, has generated a tremendous interest in the field. Funding at this level will allow the Department to make approximately 70 discretionary grants to partnerships involving business, labor and educational agencies to demonstrate methods of providing literacy training to meet work force needs. That is the first time that we have requested funds for that program. We believe it is a very effective program.

Finally, a total of $1,000,000 is requested for English Literacy Grants. This represents a decrease of $4,800,000 below the 1990 appropriation level for this activity. In 1991, we are eliminating the English Literacy State Grants program since it duplicates services provided under the Adult Education State Grants.

Limited English-Proficient adults are being served in substantial number under the basic State grants program. We will focus our efforts on funding a few carefully designed demonstration programs to develop and disseminate information on the most effective ways to provide English literacy training to the limited English-proficient. The clearinghouse on education for individuals of limited English proficiency, which is supported with these national demonstration funds, will be continued.

TECHNOLOGY EDUCATION DEMONSTRATIONS

We are requesting a total of $988,000 for the Technology Education Demonstration program authorized under the Omnibus Trade and Competitiveness Act of 1988. This represents level funding for this program, which was funded for the first time in 1990. The requested funds will be used to provide grants to local educational agencies, State educational agencies, consortia of public and private agencies, organizations and institutions, and institutions of higher education for the development of model demonstration programs in technology education for secondary schools, vocational education centers, and community colleges.

At this time, Mr. Chairman, my colleagues and I will be happy to respond to any questions you may have concerning our budget request for vocational and adult education.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

Betsy Brand
Assistant Secretary for
Vocational and Adult Education

on

Vocational and Adult Education

Mr. Chairman and Members of the Subcommittee:

It is a pleasure to appear before you today to discuss the 1991 budget request for vocational and adult education. When combined with State, local, and private efforts to prepare a skilled and literate work force, these programs contribute significantly to our country's economic growth and industrial competitiveness.

I am pleased to submit to you today a budget for vocational and adult education that totals almost $1.2 billion. This represents an increase of approximately $45.9 million over the 1990 appropriation.

Vocational Education

The budget request includes $929.7 million for vocational education programs, the same level as the 1990 appropriation. Funds would be used to support vocational education under the Department's proposed reauthorization legislation for the Perkins Act, which was submitted to Congress last year. Among the major concerns addressed in this proposal are increasing accountability in vocational education, substantially reducing the complexities of existing law, maintaining emphasis on equity and program improvement, and strengthening the links between vocational programs and the labor market. Since the new structure of the Perkins Act is subject to further congressional action, specific amounts requested for individual activities will be submitted to Congress as soon as the new legislation is enacted.

Adult Education

Improving the level of literacy for adults is one of our national education goals. A total of $238.7 million is being requested for adult education programs to assist in this effort a 23.8 percent increase over the 1990 level. We believe this increase demonstrates the concern of this Administration about our Nation's problem of illiteracy and takes a major step in providing needed leadership at the

Federal level through coordination of programs and dissemination of effective practices and programs to the front-line service providers in the field. Our proposal for an adult literacy clearinghouse, which I will discuss later, will help to meet the increased demands placed upon our adult education programs.

Included in this request is a total of $200 million for the adult education State grant program, a $42.2 million increase over the 1990 appropriation and the highest level ever requested for this program. This increase in funding will allow the States to pursue more extensive adult education and literacy projects and to serve an estimated 660,000 additional Americans. This request reflects the Administration's strong commitment toward eliminating adult illiteracy, improving workforce productivity through basic skills education, and addressing the special needs of non-English speaking immigrants.

With funding at this level, we expect that approximately 4 million adults would be served under the adult education State programs. With the matching requirements specified in the Act, increases in Federal funding translate into even greater State and local support for adult education. Currently, support from the State and local levels and the private sector accounts for approximately three-fourths of all adult education spending. With the strong leadership of the President and Mrs. Bush, we expect voluntary and private efforts to increase and the number of individuals we help to continue to grow.

We are requesting a total of $8 million for National Programs, an increase of $6 million over the 1990 appropriation. Of this total, approximately $2 million will be used to continue funding for the ongoing National Study of Adult Education Programs, which will provide data on adult education programs and participants prior to the next reauthorization. Another $1 million will be used to continue support for an interagency effort among the Department of Education and the Departments of Labor, and Health and Human Services to provide technical assistance to the States in implementing the new JOBS program, and to begin a study of the Literacy Training for Homeless Adults program.

The remaining $5 million will be used to fund a national adult education clearinghouse. In carrying out its functions, the clearinghouse will provide leadership and coordination to the field of adult literacy and education. The clearinghouse will be a comprehensive resource center for information that can be used by Federal, State, and local agencies, national organizations, policymakers, researchers, and practitioners to establish, improve or expand adult literacy programs. This project will provide leadership and direct support for an integrated program of research and development, identification and dissemination of best practices in adult education, and technical assistance to the adult education field. With the establishment of this clearinghouse, there will be, for the first time, a focal point for research and information on adult education and literacy programs. The establishment of this national clearinghouse represents a major new Federal commitment to addressing the many problems facing the States and localities as they attempt to provide high quality adult education and literacy services.

A total of $10 million is requested for Literacy Training for Homeless Adults, authorized under the Stewart B. McKinney Homeless Assistance Act, which would fund this program at its fully authorized level as promised by the President. This request represents an increase of $2.6 million over the 1990 appropriation. These funds would be used to continue programs begun in 1989 and 1990 designed to assist States in developing and implementing programs of literacy training, basic skills remediation for homeless adults, counseling, child care, and transportation. We feel this program is important since serves an exceptionally disadvantaged population and it seeks to solve the problems of the homeless by allowing a comprehensive approach to the provision of education and support services.

Our request includes $19.7 million for Workplace Literacy Partnerships, the same level as the 1990 appropriation. This grant program, which supports literacy efforts by the business community, has generated a tremendous interest in the field. Funding at this level will allow the Department to make approximately 70 discretionary grants to partnerships involving business, labor, and educational agencies to demonstrate methods of providing literacy training to meet workforce needs.

Finally, a total of $1 million is requested for English Literacy Grants. This represents a decrease of $4.8 million below the 1990 appropriation level for this activity. In 1991, we are eliminating the English Literacy State grants program since it duplicates services provided under the Adult Education State Grants. Limited-English proficient adults are being served in substantial number under the basic State grants program. We will focus our efforts on funding a few carefully designed demonstration programs to develop and disseminate information on the most effective ways to provide English literacy training to the limited English proficient. The clearinghouse on education for individuals of limited English proficiency, which is supported with these national demonstration funds, will be continued.

Technology Education

We are requesting a total of $988 thousand for the Technology Education Demonstration program authorized under the Omnibus Trade and Competitiveness Act of 1988. This represents level funding for this program, which was funded for the first time in 1990. The requested funds will be used to provide grants to local educational agencies, State educational agencies, consortia of public and private agencies, organizations and institutions, and institutions of higher education for the development of model demonstration programs in technology education for secondary schools, vocational education centers, and community colleges.

At this time, Mr. Chairman, my colleagues and I will be happy to respond to any questions you may have concerning our budget request for vocational and adult education.

DEPARTMENT OF EDUCATION

Office of Vocational and Adult Education

Biographical Sketch

NAME : Betsy Brand

POSITION : Assistant Secretary for Vocational and Adult Education

BIRTHPLACE AND DATE : Plainfield, New Jersey, July 20, 1954

EDUCATION : Dickinson, College, Pennsylvania, 1976, B.A.
University of Pittsburgh, junior year abroad in Rouen, France,
1974-75.

EXPERIENCE

11/89 - Present: Assistant Secretary for Vocational and Adult Education, Department of Education

05/89 - 11/89 : Acting Deputy Assistant Secretary for Vocational and Adult Education, Department of Education

03/89 - 05/89 : Acting Director, Division of Adult Education, Office of Vocational and Adult Education, Department of Education

01/86 - 02/89 : Professional Staff Member for former Senator Dan Quayle, U.S. Senate Labor and Human Resources Committee

03/85 - 01/86 : Staff Director, U.S. Senate Subcommittee on Employment and Productivity

11/83 - 03/85 : Legislative Assistant to former U.S. Senator Dan Quayle Regional Conferences on Voluntarism

02/81 - 11/83 : Minority Legislative Associate, U.S. House of Representatives Subcommittee on Postsecondary Education

09/77 - 02/81 : Legislative Assistant and Office Manager to U.S. Representative E. Thomas Coleman

NATIONAL ASSESSMENT OF VOCATIONAL EDUCATION

Mr. **NATCHER**. Thank you very much, Ms. Brand.

Now, if you will, tell us who conducted the national assessment of vocational education, which was released last July, and further, what was its cost.

Ms. **BRAND**. The national assessment cost approximately $5,200,000. It was conducted by an independent office housed within the Office of Planning, Budget and Evaluation. We hired a researcher in the field, John Wirt, and I believe he had three staff people, but I believe they were an independent office in the Department.

Mr. **NATCHER**. This report was very critical of the current program. The executive summary includes the following statement:

> "We conclude that in its current form, the Perkins Act is a weak mechanism for achieving its goals. Little has been done in the implementation process to convert goals into effective guidelines for States and localities. Little additional direction has been forthcoming or targeted for Federal funds for services to the disadvantaged or handicapped.

ACCOUNTABILITY

Ms. Brand, do you agree with this evaluation, and if so, what can be done to address this problem?

Ms. **BRAND**. We do agree to some extent with that assessment. I believe the reauthorization will take care of the targeting problem. As you know, the House has passed a bill that would target funds under the Perkins Vocational Education Act for the disadvantaged and handicapped. I believe the Senate is also moving in that direction.

We feel the reauthorized legislation will give us a big push in that area, and we will be able to work more closely with the States to be sure the funds are targeted.

On the issue of accountability, I believe not enough has been done to work with the States to develop measures of accountability. We believe, and offered in our reauthorization proposal, that there be much stronger measures of accountability both at the Federal and the State level.

We hope that the finished bill will include stronger accountability measures so you can look at vocational education and decide whether it has resulted in increased basic skills attainment, job placement and further education.

I would also say our Division of Vocational Education has taken on a project to work with the States in the area of accountability. We plan to site-visit every State in the next couple of years to determine what accountability measures they have in place, learn from those measures and develop a model accountability program which we can then disseminate.

PERKINS ACT REAUTHORIZATION

Mr. **NATCHER**. What is the current status of the reauthorization of the Perkins Act?

Ms. **BRAND**. As you probably know, the House has passed its version of reauthorization. I believe they passed it last March. The

Senate bill is awaiting floor action. I believe the bill in the Senate will be on the floor in the near future.

Mr. **Natcher**. What are the principal changes which appear likely to be made in the Perkins law?

Ms. **Brand**. From both bills, I think there will be more targeting of funds. I think there will be increased accountability. Those are the two items I just mentioned. I think you will see stronger links between vocational education and the private sector and economic plans within the community so vocational education will be tied more tightly to the needs of a community.

Mr. **Natcher**. The President's budget for vocational education is proposed for later transmittal. When will we receive a formal request, do you have any idea?

Ms. **Brand**. I can't tell for certain, but as soon as the bill is signed by the President, we will be back up to talk to you and your staff. My best guess is that the bill will be signed by May.

Mr. **Natcher**. The justifications do not include any distribution for a vocational education program which you propose to fund at the 1990 level of $930,000,000. Can you tell us at this time whether you are likely to recommend significant changes from the 1990 distribution when your proposal is transmitted?

Ms. **Brand**. Again, it may be premature to answer that question, because I think some of the changes in the reauthorization will be fairly significant. I would prefer to wait to see the final bill before I comment on how we will distribute the funding.

Mr. **Corwin**. I might say, there are a good number of differences between the House and Senate bills and how they would structure the program. In the past, the Administration has preferred to keep the bulk of the money in the basic grants where there is flexibility for the States to use it to meet their needs. I imagine we will continue with that policy.

Mr. **Natcher**. Please place in the record a short summary for the vocational education evaluation, including a funding history.

[The information follows:]

NATIONAL ASSESSMENT OF VOCATIONAL EDUCATION

Because funds were not appropriated for the National Assessment of Vocational Education (NAVE) until 1988, and results were needed by early 1989, work began in 1986 using funds from a variety of sources that could be used to support this effort. The following table shows how NAVE was funded.

Source of Funds	Total
Perkins Act	$2,531,771
Women's Educational Equity Act	259,513
Chapter 1	700,000
Program Admininistration Planning and Evaluation Funds	160,976
Vocational Education National Programs Recoveries from prior year obligations	1,532,906
	5,185,166

The NAVE final report was sent to Congress early in 1989 and provided detailed information on how the Perkins Act has been implemented, as well as data on secondary and postsecondary vocational education. NAVE's findings about the implementation of the Perkins Act include the following:

- Overall, about 40 percent of Perkins Act funds have been spent at the postsecondary level, but the rates at which States allocated Perkins Act funds among secondary and postsecondary sectors varied greatly. Postsecondary allocations ranged from 8 to 100 percent. In addition, separate area vocational school districts appeared to receive a disproportionate share of the Federal funds that flowed to secondary education.

- At the secondary level, NAVE found some evidence that Basic Grant funds are targeted to school districts with higher rates of poverty, but the amount of targeting has not increased as a result of the introduction of an intrastate formula or other provisions in the Perkins Act. There is no evidence of comparable targeting at the postsecondary level.

- Most school districts received awards that were too small to mount new initiatives of any size. Half of all school districts received $7,910 or less, and three-quarters of the districts received $25,000 or less. Such resources are insufficient to pay for even one full-time teaching position. By contrast, separate area vocational school districts and postsecondary institutions received median grants exceeding $90,000.

- At both secondary and postsecondary levels, most program improvement funds were used to purchase equipment. Equipment purchases appeared to be about equally divided between computers (and related software and printers) and technical equipment for specific vocational programs. In the few States that forbade the use of the funds for equipment, funds were used for a wide range of activities including adoption of the "Principles of Technology" curriculum, support of student organizations, and in-service training. Few program improvement funds were spent for programs or services for special populations.

The NAVE staff also analyzed data on 182 high school graduates and made the following findings related to secondary vocational education enrollments:

- In 1982, credits earned by students planning to attend postsecondary vocational institutions or college accounted for nearly three-quarters of all vocational credits taken by high school graduates.

- Students planning to work after high school took an average of 6.06 credits of vocational education during high school. Students who aspired to attend a postsecondary vocational-technical institution averaged 5.81 credits; students planning to attend some college averaged 4.55 credits; and students who planned to graduate from college averaged 3.17 credits.

- Work-bound students were 18.2 percent of high school graduates and took 25.2 percent of all vocational credits. Students planning to attend postsecondary vocational-technical institutions or college were 82 percent of graduates and took 26.5 percent and 47.9 percent of all vocational credits, respectively.

- Total vocational enrollments (average: 4.21 credits) exceeded enrollments in any other subject area, including English, the largest academic subject (average: 4.02 credits).

The NAVE findings about the access of special populations to high-quality vocational education were mixed:

- Academically disadvantaged students and students with handicaps clearly take more vocational education than do other students. For students with handicaps, the vocational education they take is also likely to be "mainstreamed" (81.7 percent of credits); that is, the credits are earned in regular as opposed to self-contained classrooms. In contrast, only 59.6 percent of the academic credits of handicapped students are earned in regular classrooms.

- Problems of participation in high-quality vocational education are serious for female handicapped and academically disadvantaged students. Approximately half of all the vocational credits earned by handicapped and disadvantaged females are in low-level service occupation courses or consumer and homemaking education. Otherwise, handicapped and disadvantaged students take the same proportion of occupationally specific vocational education as other students; the same or more credits, on average, in area vocational schools; and about the same amount of cooperative and other forms of work-based education. (Work-based education has been found helpful to students in gaining employment after leaving school.)

o There are major differences in the quality of vocational education between schools with high and low concentrations of academically and economically disadvantaged students as measured by the breadth and depth of courses offered. Students in schools with high concentrations of disadvantaged students take large amounts of vocational education and have the most limited range of vocational offerings from which to choose.

The NAVE findings related to postsecondary education include the following:

- There are a total of 4.3 million "vocational" students at community colleges, two-year technical colleges, public vocational technical schools, and proprietary schools. Three-fourths of all students at these institutions major in vocational subjects, and over the past two decades the percentage of postsecondary students enrolled in vocational education has grown substantially.

- The major problem facing postsecondary vocational education is that many students do not stay in school long enough to receive in-depth training. Low rates of program completion and a limited number of courses taken are common for all students regardless of race, gender, economic status, or ability. The problem is most serious however, among minorities, economically disadvantaged students, and the growing number of high school "vocational" students who pursue postsecondary training. Minorities and disadvantaged students average substantially fewer credits and leave postsecondary institutions without earning a degree or certificate more frequently than do other students.

- For student who accumulate substantial amounts of vocational credits or who complete programs, postsecondary vocational education pays off in economic terms. Students who obtain degrees or certificates, or who may otherwise take a substantial amount of vocational training in their major field, are more likely to be employed and more likely to get a job in their field of training than are students who take small amounts of vocational training. Students who take more training and are employed in their field also earn higher wages than do other students.

INSUFFICENT GRANT SIZE

Mr. **Natcher**. Ms. Brand, one of the principal concerns about these programs was that individual grants are too small to allow new initiatives, as you know. Can anything be done to address this particular problem?

Ms. **Brand**. Under current law, we really don't have the authority to set minimum grants. In our reauthorization proposal, we suggested that grants be of a magnitude to cause significant change or performance, and the Senate bill includes a minimum grant of $25,000, which we are very supportive of, and we hope that will end up in the final bill.

DATA NEEDS

Mr. **Natcher.** As you know, this committee expressed concern last year about the quality of vocational education data. What actions have been taken to address this concern?

Ms. **Brand.** It is a serious concern. We have done a number of different things. Internally, we have gotten together several of the offices in the Department to decide the best way to go about collecting this data.

We are working with the National Center on Education Statistics to be sure that vocational education data is collected along with other data on elementary and secondary schools. We are beginning our own management information system in my office. We are working very closely with the States to find out what information is currently available and what other types of information we can collect from them without too much trouble.

At that point, we will put it into our internal computer so that we can use it for our purposes and hopefully, make it available to the Congress also.

INCREASE FOR ADULT EDUCATION

Mr. **Natcher.** The budget includes a $42,000,000 increase for adult education up to a total of $200,000,000. The justifications indicate that this will provide an average of $50 each to over 4,000,000 clients. What are the principal services which we are buying with this money?

Ms. **Brand.** We are buying quite a few things. I don't know that I would break it out as $50 per client, because generally that money pays for the teachers and the administrators who work on the programs and it pays for books and materials.

That provides funding for classroom space, teachers, administrators, computers when computers are available. It is a general education program.

EXTENT OF ILLITERACY

Mr. **Natcher.** The President and the Secretary have both pledged to reduce the level of functional illiteracy in this country. What can you tell us about the extent of this problem?

Ms. **Brand.** That it is an extensive problem and that we don't have good numbers on it. We are conducting a survey now that will be completed in 1993. Hopefully, I will have some good, hard data on the number of illiterates and functional illiterates in this country.

Based on three or four studies completed up through the early eighties, I think you can say anywhere between 20,000,000 to 30,000,000 Americans are functionally illiterate.

Mr. **Natcher.** The Department testified last year that a very small portion of adult Americans are illiterate as defined by the Census Bureau. What level of skills are necessary to qualify as functionally illiterate?

Ms. **Brand.** Mr. Chairman, I think that is a question that is difficult to answer, because we don't know what functional illiteracy is. I think it changes depending on the job that you hold or the skills that are demanded of you, based on your workplace setting.

If you are at home, you may not need as many skills as you do in a complicated job, so a functional definition is very hard to put your finger on. It would also be difficult to tie it to a grade level.

WORKPLACE LITERACY

Mr. NATCHER. What is the average size of workplace illiteracy grants, and who receives the grants?

Ms. BRAND. Under the Workplace Literacy program, we make grants averaging $280,000, to partnerships that consist of a school or an institution of higher education, and a private sector partner, which could be a business group or labor organization.

The grants are used by this partnership to provide workplace-based education and training.

Mr. NATCHER. Can workplace literacy programs be funded under the basic adult education program?

Ms. BRAND. Yes, they can be, although what is unique about the workplace literacy program is that it requires a partnership between the education institution and the business. That is not a requirement under the Basic State Grant program.

So, while it could be provided, we feel that the partnership aspect is really essential to making that program work.

Mr. NATCHER. Are matching funds required?

Ms. BRAND. Yes, they are under the Workplace Literacy program.

ENGLISH LITERACY GRANTS

Mr. NATCHER. Would you explain to the committee why you are proposing to eliminate funding for English literacy State grants?

Ms. BRAND. We are proposing to reduce the funding for that program from $5,000,000 to $1,000,000. The money that is used for the State Grant program will be transferred to the Basic State Grant program, the $200,000,000 program. The English Literacy Grant program is a State grant program, and the money goes to the State agency just as it does under the other program.

We feel it is duplicative and those functions can be carried out under the State program. The $1,000,000 we are asking for would be used to fund demonstrations and developing curriculum in teaching limited English-proficient adults and also it would fund the National Clearinghouse on Limited English-Proficient Adults.

Mr. CORWIN. This activity was specifically authorized to provide services to immigrants, refugees, et cetera. Yet, those individuals have always been a prime component of the population served under the Adult Education Basic Grant program, so we feel there is a great deal of duplication.

CLEARINGHOUSE

Mr. NATCHER. The budget includes $5,000,000 for a new clearinghouse for adult education. Will this be a direct Federal program or will it be done by a grant or contract?

Ms. BRAND. As we have envisioned it, Mr. Chairman, we would operate that clearinghouse through OERI. We would work very closely with the existing functions of OERI. There would at times be grants made for particular research or particular technical assistance to States and localities, but most of that money would be controlled by the Department of Education.

Mr. NATCHER. How did you come up with the $5,000,000 estimate for the cost of the clearinghouse?

Ms. BRAND. I think we looked at a number of different activities that we would like to fund. Certainly, a clearinghouse funded at $1,000,000 or $2,000,000 to reach programs nationwide, I think, is appropriate. We also envisioned that it would conduct more technical assistance, perhaps conferences with States and localities, and also that it would provide some applied research.

So, we felt to do all those activities, $5,000,000 would be appropriate.

Mr. NATCHER. When you get the transcript back now, take a good look at this, and give us a full statement in the record on this question of the $5,000,000.

[The information follows:]

ADULT LITERACY CLEARINGHOUSE

In planning for our proposed Adult Literacy Clearinghouse, the Department envisions a center or institute that would go far beyond traditional clearinghouse activities. In addition to establishing a comprehensive resource center for the adult education and literacy field, we want to create an entity that can provide leadership and direct support for an integrated program of research and development, dissemination of information on effective practices, and technical assistance. The proposed institute will represent a major Federal commitment to addressing two national educational priorities—the functional literacy of adult Americans and the level of training necessary to guarantee a competitive workforce. It will also indirectly influence two others—the readiness of children to start school, and the reduction of the dropout rate and improvement of academic performance among at-risk students.

In terms of the scope of its activities, the new center would resemble the National Center for Research in Vocational Education, which receives approximately $6 million per year. Unlike the NCRVE, however, the center would be administered as a Federal activity, with grants and contracts employed as necessary, rather than through a single grant to an outside organization. The $5 million made available from the Department of Education would be supplemented by additional funds from other Federal agencies and from other public and private sources.

LITERACY TRAINING FOR HOMELESS ADULTS

Mr. NATCHER. The program for literacy training for the homeless is now in its second year. Given the transient nature of this population and their problems, what success do you expect from this program?

Ms. BRAND. This is a new program, and we are beginning to do evaluations of it. We hope we can help individuals become less transient and increase their basic skills so they can find a job and become homeowners, if possible.

We are hoping that with increased basic skills and job skills, they will be able to locate permanent employment and find their way to purchase or rent housing.

Mr. CORWIN. We have a very difficult population to serve here that is not often likely to find its way into adult education programs. We have established projects in the shelters and other places where the homeless are living, and have been able to reach them that way.

EQUIPMENT PURCHASES

Mr. **Natcher**. The national assessment found that more than half of the program improvement funds under vocational education was spent on equipment. Is this appropriate use of these funds?

Ms. **Brand**. I am not so sure that using half of those funds is appropriate. We feel that program improvement money should be used for the purpose of equipment as well as curriculum development and training of teachers. We would prefer to see a little more money put into those two other areas.

I would also question the use of a great deal of money for equipment if that equipment is quickly outdated or is not used by a large number of students at the school. So, we would like to monitor that fairly carefully.

Mr. **Natcher**. Thank you very much, Ms. Brand. This has been a good hearing. We want to thank you and your associates for appearing before our committee at this time on behalf of your budget request. Mr. Conte?

Mr. **Conte**. Ms. Brand, we want to welcome you before the committee. As a former staffer on higher education issues with the Education and Labor Committee, I am sure you know we are simply a conduit for whatever the authorizing committee wants us to do.

I was looking at your background. I was wondering who this guy is, former U.S. Senator Dan Quayle, doesn't he have a tie with former U.S. Representative George Bush?

Where is vocational education on the list of national education goals recently announced by the President and the Governors? Are we about to become a nation of rocket scientists?

GOALS FOR VOCATIONAL EDUCATION

Ms. **Brand**. I don't think we are going to be rocket scientists right away, but it is clear that we have to prepare all the students who graduate from high school to hold down employment or go on to further education. I think vocational education can really make a difference in the lives of a lot of disadvantaged students and students turned off by the system. Vocational education has a bright future.

We know what makes it work. To me, there is nothing more important than ensuring that kids who go through 12 years of high school not only have the basic academic skills they need, but also job skills they need to be productive workers.

As you know, one of the national goals is to have a literate population as well as one that can compete economically. I think vocational education can play a role in that.

COORDINATION WITH JOBS PROGRAM

Mr. **Conte**. Tell us how vocational education and the new JOBS program fit together.

Ms. **Brand**. We are doing a lot of work with Labor and HHS in those two areas. They all service different populations to some extent. We are trying to find ways that the programs can fit more closely together and that there can be a better transition from one program to another, and also to learn from each other.

There is a lot of experience JTPA people have in performance standards and accountability. I think we can learn from that. We have experience integrating academic education into the curriculum. I think the people in JTPA can learn about that.

JOBS covers the board, practically speaking. We are working in lots of different ways, working on common definitions, performance standards, common outcomes and goals, as well as looking at the delivery systems and trying to bring those delivery systems closer together and making it easier for the individual to track through the system.

COORDINATION WITH JTPA

Mr. CONTE. In reality, do they work together?

Ms. BRAND. They work pretty well in a lot of places, but not everywhere. I think you will find in the 8-percent set-aside under the JTPA for education linkages some sterling examples and some really crummy examples. It is a matter of getting people together to talk about breaking down the barriers.

We have some very, very good programs with JTPA and vocational education, but it is not happening everywhere.

REQUEST FOR VOCATIONAL EDUCATION

Mr. CONTE. There is another place where vocational education doesn't make the priority list. That is in funding. I know you are waiting for the vocational education reauthorization bill to fall in place. But why aren't you waiting for it by requesting at least a slight inflation increase in funding?

Ms. BRAND. Well, we still do have problems with our budget deficit, Mr. Conte. It was the decision of the Administration that since the vocational education bill was being reauthorized, that we would wait for that reauthorization to be complete before returning to you with our revisions.

REWARDS FOR EXEMPLARY PROGRAMS

Mr. CONTE. Last fall, I participated in the dedication of a magnificent new vocational-technical high school in my district, $32,000,000. By far, it is the newest and most sophisticated school in the area. What are we doing to reward localities that invest in vocational education? Are we doing anything special to increase those kinds of effort? Awards? Commendations?

Ms. BRAND. We have a Secretary's award program given to outstanding projects. I think you are right, however, we need to find ways to provide incentives. I am hopeful the new legislation will include more flexibility to allow us to recognize schools that are doing a good job.

ALLOCATION BETWEEN SECONDARY AND POSTSECONDARY

Mr. CONTE. Good. We will talk about that. My Massachusetts people were in. They are very interested in seeing the split between high school and postsecondary funding remain a State decision. How do you feel about that? Are you doing anything to make that stick?

Ms. **Brand**. Our position is that we oppose set-asides, and we also oppose the set-asides for secondary and postsecondary programs. We have expressed that opinion to the Senate. It is included in our Statement of Administration Position on S. 1109.

Mr. **Corwin**. The national assessment on vocational education found that States were using anywhere from 8 percent to 100 percent of their money for postsecondary, reflecting the variations in the way vocational education is provided across the States.

That struck us as appropriate, that the States would make that decision.

NOICC

Mr. **Conte**. I noticed on page 46 of your justifications, that the NOICC through the SOICCS are funding the OIS and CIDs. When you get through with that Campbell's soup, what do you say about that?

Mr. **Corwin**. They are good at NOICC at creating new acronyms, but they do other good things, too. Their purpose is to bring the supply and demand data into focus so that an administrator on the local level, thinking about setting up a vocational program, will know what the demand is in different areas.

Then students who are thinking of going into different areas will have on-line computerized information on what the job demands are and what the market will be for the labor force.

They have given grants to the States and developed the CIDS, et cetera. We put a consultant on this a year ago. Their first draft makes it look like NOICC is doing a pretty good job.

We will have a final report shortly.

TEACHER TRAINING

Mr. **Conte**. Under national programs research, you indicate that $500,000 in 1989 discretionary funds is spent on a project to improve pre-service training of vocational education teachers. Is that a one-time project?

Mr. **Corwin**. It was a one-time project. I would note, however, that both the House and Senate reauthorization bills would expand the personnel development activities of the Department in this area.

Mr. **Conte**. I asked the question because at the AVA National Convention, they said there was little attention being paid to training vocational education teachers. Is this an area in need of some attention?

Ms. **Brand**. Some work is being done through the National Center for Research in Vocational Education, which is where the bulk of our research dollars go. They have some projects in that area also, and we can supply information on the record.

[The information follows:]

Teacher Training

The National Center for Research in Vocational Education is currently promoting the training of vocational education teachers through three major activities.

An Advanced Study Center for Leadership Development is stimulating new and improved leadership development activities for graduate students, especially doctoral students, in institutions of higher education.

A Leadership Development project is identifying the leadership capacities associated with successful vocational education administrators in order to propose instructional sequences that prepare persons to function as successful administrators.

A series of in-service education activities are focused on vocational education teachers. One planned activity is a national workshop on the development of secondary/postsecondary "Tech Prep" programs. Another activity is a collaborative effort with the Southern Regional Education Board—Vocational Education Consortium in a project to strengthen basic competencies of vocational education students.

DEMONSTRATIONS

Mr. CONTE. Under national programs demonstration, it looks as if there has been a complete change in the program from 1989, when high tech projects and dropout prevention continuations were funded and 1990, when 10 national training centers are to be funded. The House and Senate said that not less than $4,000,000 was to go this activity.

Your justifications seems to indicate that almost all the money, $9,600,000, will be used for this activity. Can you provide an explanation of what your plans are here?

Ms. BRAND. Yes. May we provide that for the record?

Mr. CONTE. Surely.

[The information follows:]

DEMONSTRATION ACTIVITIES

In 1988 and 1989, in response to congressional directives, the Department funded high technology and dropout prevention demonstration projects. In 1990, again in response to congressional directives, we are planning to use at least $4,000,000 of the $9,617,000 appropriated for cooperative demonstration programs to fund model regional skills training demonstration centers in the masonry trade. The remainder of the funds will be used for model regional centers in other building trades. We believe that limiting the focus of the centers to training in the building trades will provide for an effective, efficient, and coherent use of program funds.

NATIONAL ASSESSMENT OF VOCATIONAL EDUCATION

Mr. CONTE. Can you tell me whether the third volume of the National Assessment of Vocation Education dealing with vocational education and secondary schools was ever completed?

Mr. CORWIN. I believe all the records of the national assessment are out. We will check on that, and if it is available, we will provide it for you.

Mr. CONTE. Can you tell us how much money was spent on the third volume?

Mr. CORWIN. For the national assessment as a whole, it was about $5,200,000. I don't know if we have a budget breakout volume by volume, but we can see.

Ms. BRAND. Excuse me, that volume is not finished yet.

Mr. CONTE. Why not?

Ms. BRAND. I know that the office that was working on it has disbanded. I think we are relying on internal staff right now to try to put it together.

Mr. CONTE. What is the status of that volume?

Ms. BRAND. I think all the research is completed. The individual who was working on it moved to Wisconsin, and he is finishing it up out there. Supposedly it will be done by the end of the month.

Mr. CORWIN. One problem that we had through the life of the national assessment was that they got their mandate in 1984, but they did not get all their funding until a few years later so they were always kind of behind the eight-ball in trying to get their work done.

I think we will get a reauthorization for the national assessment, because the House and Senate bills call for one. We are hoping to get one funded at the beginning and not the end, and then we shouldn't be late with the reports.

Mr. NATCHER. Mr. Early.

Mr. EARLY. Ms. Brand, it is good to see someone with your type of resume in that job.

Ms. BRAND. Thank you.

MODEL SKILLS TRAINING CENTERS

Mr. EARLY. The House assisted in the recommendation for the model regional program for skilled people like masons and bricklayers. How much does the Department plan to allocate for that in 1990?

Ms. BRAND. The plans are approximately $4,000,000. We have gotten direction from both the House and Senate committees in that area, and we will be carrying it out.

Mr. EARLY. How do you plan to implement that?

Ms. BRAND. We will be announcing a grant competition on that and have competitive reviews of those projects.

Mr. EARLY. What steps have been taken? Do we have a time table for the first RFP?

Ms. BRAND. I think that is probably going to be out by late summer. It will be ready to go soon.

Mr. EARLY. For the record, provide what the schedule will be and when you plan to make the awards.

Ms. BRAND. Yes, sir.

[The information follows:]

SCHEDULE FOR DEMONSTRATIONS AWARDS

We expect to publish an application notice for grants for regional skills training center demonstrations in August 1990. The closing date for this competition would be in October. Awards would be made by February 1991, or shortly thereafter.

MODEL SKILL TRAINING CENTERS

Mr. EARLY. Do you wait until you see how many responses you get before you decide the amount of the awards?

Ms. BRAND. We generally decided on a ball park figure of several hundred thousand dollars so we can give some guidance to the field, but it will depend on the quality of the applications and what they ask for.

If we have a quality application coming in at $1,000,000 and it ranks the highest, we will fund it, even though we generally look at smaller grants, usually of $200,000 to $400,000.

TRAINING FOR EXISTING JOBS

Mr. EARLY. Vocational education in my city cannot survive without the help they get from you. What specific steps does the Department have in mind to avoid the frequently cited problem that occurs when young people are trained for jobs that don't exist?

Ms. **Brand**. We recommended in our reauthorization proposal that vocational education programs only be funded after they have consulted with the local community to determine where the jobs are. In that case, Federal funds would not be used to support programs if there were not jobs in the community for it.

I think both the House bill and the Senate bill have picked up on that concept, but they don't go quite as far as our original proposal went.

We feel that vocational education should be tied to economic development in the community and to the extent that we have the authority to do so, we will try to ensure that that is the case.

HIGH TECHNOLOGY TRAINING

Mr. **Early**. Mr. Conte's comment about the high-tech, we are not just disbanding that, though, are we?

Ms. **Brand**. No, we are not.

Mr. **Early**. The traditional jobs like plumbers and electricians?

Ms. **Brand**. We are not focusing on just a few areas. We want to train people for the emerging industries in those communities. When we review applications, we look to see whether they are training people for jobs and needs that exist or not.

Mr. **Early**. So we are implementing from studies that we have done?

Ms. **Brand**. We try to give information to our field readers on our emerging industries and labor markets. A lot of that should be included in the application. Normally, when you read an application, you can tell whether the applicant has been in touch with the Chamber of Commerce.

Mr. **Corwin**. The States are required every three years to do an analysis of the labor market needs in the State and of the vocational improvement needs, and to distribute their funds consistent with what is found in that analysis.

DISSEMINATION

Mr. **Early**. So, you are satisfied that there is coordination to disseminate this information to the States and the local communities to assist in the development of the curriculum?

Mr. **Corwin**. We have a lot of things going on in that area. Our National Research Center does considerable dissemination to the States. We have six curriculum coordination centers which work on a regional basis to ensure there is no duplication; if one State develops a project it can be used in another State. The groups we were talking with Mr. Conte about, NOICC and SOICC, are involved in that area as well. I think there is sufficient activity going on.

COORDINATION WITH LABOR DEPARTMENT

Mr. **Early**. When Secretary Dole was here last year, we discussed how retraining and the need to continually upgrade skills was an ongoing process. In what way does the Education Department and the Labor Department work together?

Ms. **Brand**. I think we work pretty closely together. It seems like I see my counterparts at Labor almost every day. We have a number of projects we are undertaking together. One is the School to Work Transition Project where we are looking at improving the systems to get a high school student into a job, to include counseling, career planning, education and work place training.

We hope to undertake that as a long-term project with the Department of Labor.

Mr. **Early**. It doesn't always work that way, and it should work that way.

Ms. **Brand**. We also do a lot of work with the Department of Labor on legislation and regulations. Since I have been at Education we have been sending our legislation back and forth so that we get a chance to review the JTPA legislation and Labor gets a chance to review our adult education and vocational education bills to be sure they are consistent. We will do the same when we develop the vocational education regulations for the new law and I suspect if JTPA is passed this year, Labor will have us review their regulations.

LOCAL IMPLEMENTATION

Mr. **Early**. Are you satisfied that the local governments have enough input in directing our resources to where they are need to go?

Ms. **Brand**. Yes, I think probably they do. My perspective generally is to allow the States to have the flexibility to decide where the money should go.

Mr. **Early**. A lot of times when you have a three-year study, by the time you need that particular vocational education, it has gone by.

Ms. **Brand**. I think enough flexibility should be built in so they can respond to the major changes in the economics of the community. I think we should be able to give them flexibility as long as we require accountability at the end of that period.

Mr. **Corwin**. There is provision in the law for them to amend the application during the three-year period if it needs change.

Mr. **Early**. They just come up short on money.

Thank you, Mr. Chairman.

Mr. **Natcher**. Ms. Brand, again we want to thank you for your appearance before our committee and we wish to thank you for all your cooperation.

Ms. **Brand**. Thank you.

[The following questions were submitted to be answered for the record:]

HOME HEALTH AIDES AND NURSES AIDES

Mr. Roybal: How many high schools within the United States provide vocational education credits for classes dealing with training of home health aides and nurses aides?

Ms. Brand: The Department does not collect data on the specific course offerings of high schools.

Mr. Roybal: What has been the Federal funding levels since FY 1984 for training home health aides and nurses aides in the high school vocational education programs? Of these amounts, what percentage of funding was set aside for minority students?

Ms. Brand: Federal funds are not specifically targetted on training home health aides and nurses aides in vocational education programs. We do not collect data on the amount of Federal funding used for such programs, or on the percentage of those funds used to serve minority students.

Mr. Roybal: Given the high need for training entry level health care workers, would you be supportive of establishing Federal/State demonstration projects to train home health aides and nurses aides at the secondary level?

Ms. Brand: Although training in this area is certainly a worthy use of vocational education basic grants, we are not at all certain that training of home health aides and nurses aides should be identified as a national priority or as a focus of limited Perkins Act demonstration funds.

Mr. Roybal: How many community colleges and technical institutes offer training programs for home health aides and nurse aides? What has been the federal funding levels since fiscal year 1984 for these programs? Of these amounts, what percentage of funding was set aside for minority students?

Ms. Brand: Again, we do not collect data that address this question.

Mr. Roybal: Given the high need for training entry level health care workers, would you be supportive of establishing Federal/State demonstration projects to train home health aides and nurses aides at the community college and technical institutes?

Ms. Brand: As stated above, we have not seen evidence to indicate that there is a clear national need for demonstration projects in this area.

Mr. Roybal: Has the Consumer and Homemaker Education program established home health aide and nurses aide training for its participants? What has been the Federal funding level for this program?

Ms. Brand: Homemaker/home health aide programs have been established in many States as a cooperative effort between occupational homemaking and health occupation education. We do not have specific data on enrollments or funding levels.

CORRECTIONS EDUCATION

Mr. Stokes: To what degree are criminal offenders in correctional institutions being served by vocational and adult education programs? How successful have these institutional programs been?

Ms. Brand: Under the Carl D. Perkins Vocational Education Act, States must use 1 percent of their vocational education basic State grants to serve individuals in correctional institutions. However, the Perkins Act is being reauthorized this year, and treatment of corrections programs in the final reauthorization bill is as yet unclear.

In fiscal year 1988, a total of 70,765 criminal offenders were served, according to State performance reports. Of this total, 30,862 individuals were served at the secondary level, 1,401 in mainstream programs and 29,461 in separate programs. At the postsecondary level, a total of 39,908 individuals were served, 4,995 in mainstream programs and 34,908 in separate programs.

We believe that the programs have generally been valuable, although there have been no Federal evaluations of these programs. Numerous States have developed exemplary programs. For example, in Massachusetts a Construction Maintenance project provided intensive skills training in carpentry to adult men incarcerated in the Hampshire County House of Correction. The goal of this project was to help participants become eligible for employment in the high-demand field of construction maintenance upon release. Another example is Project Heading Out, in Vermont, designed to provide offenders incarcerated at the Chittenden Community Correctional Center and the St. Johnsbury Community Correctional Center with opportunities for growth, development, and change by addressing their career, vocational, and educational options.

The Adult Education Act requires that at least 10 percent of the State grant be used for educational purposes for criminal offenders in corrections institutions and for other institutionalized adults. Adult education programs in corrections institutions may include adult basic education and literacy, English as a second language, and adult secondary education.

It has been difficult to collect data on adult education students and educational staff in State, Federal, and local correctional institutions. State education agencies vary widely in the way they define, classify, and collect data on this population. Several other Federal funding sources are made available for corrections education, including Chapter 1 funds and Perkins Act funds. State agencies must report the number of students benefiting from the programs but specific information for each source is not broken out.

Beginning in 1990, States will be required to provide separate reports for correctional services and for other institutional services supported by adult education funds. In addition, the National Center for Education Statistics, in cooperation with OVAE, has initiated a project to develop or adopt survey forms and procedures that will permit the acquisition of statistical data on the numbers of persons in correctional institutions who participate in education programs, and the extent to which such participation is supported by the various programs of the Federal Government.

POSTSECONDARY VOCATIONAL EDUCATION DROPOUTS

Mr. Stokes: What is the drop-out rate for postsecondary vocational education programs?

Ms. Brand: We do not have precise data on postsecondary vocational education dropouts, partially because of the difficulty in determining who is a vocational education student. Many students at community colleges take both vocational and academic coursework. However, the National Assessment of Vocational Education (NAVE) examined this issue and found that only 19 percent of all high school graduates who enter community colleges shortly after leaving high school complete a certificate or associate degree within four years of completing high school. NAVE also found that one-third of all postsecondary "vocational" students take less than 12 credits in vocational subjects and that 50 percent of vocational students earn less than 24 vocational credits. Typically, 30 total credits in academic and vocational subjects are required for a certificate and 60 credits are needed for an associate degree.

Mr. Stokes: Is the drop-out problem more serious among minorities?

Ms. Brand: Yes, NAVE found that while low rates of program completion and a limited number of courses taken are common for all students, the problem is most serious among minorities, economically disadvantaged students, and the growing number of high school "vocational" students who pursue postsecondary training. Minorities and disadvantaged students average substantially fewer credits and leave postsecondary institutions without earning a degree or certificate more frequently than do other students. At community colleges, black students earn 30 percent fewer credits than white students, and black students fail to earn a degree or certificate at a rate 20 percent higher than white students.

Mr. Stokes: How is the Department addressing the drop-out issue?

Ms. Brand: This is a very serious problem that deserves more attention. Special Programs for the Disadvantaged, commonly called the TRIO programs and funded under the Higher Education Account, provides funds for six different activities targetted to assist disadvantaged students in pursuing and completing postsecondary education. For fiscal year 1991, the Department is requesting $270 million for these programs, a $28 million increase over the 1990 appropriation.

WORKPLACE LITERACY PARTNERSHIPS

Mr. Stokes: You are proposing to level fund the Workplace Literacy Partnership program at $19.7 million. Yet, in your opening statement, you noted that this program has generated a tremendous interest in the field. How many grants will you fund in FY 1990? How many applications for funding did you receive for the FY 1990 cycle?

Ms. Brand: For the fiscal year 1989 competition, a total of 236 applications were received and approximately 40 workplace literacy partnership grants are expected to be awarded in late March 1990. Fiscal year 1990 funds will enable us to fund at least 70 grant awards.

FUNCTIONAL ILLITERACY

Mr. Stokes: You state in your justification there is another category of people that are not truly illiterate, but they cannot function in our technological society. How many people do you estimate are in this category and what specific effort is the Department taking to address their needs?

Ms. Brand: Experts differ about exactly how many adults have deficiencies in basic skills and what degree of deficiency classifies them as functionally illiterate. Estimates of functional illiteracy and marginal literacy depend on a number of factors, including the definition of literacy used, the population surveyed, and the way that population is assessed.

The Department is currently using an estimate that the number of functionally illiterate adults in the United States is between 23 and 28 million. The Adult Education State grant, for which we are requesting a 27 percent increase, serves these individuals. These individuals could be served in adult basic education and literacy programs where the basic reading, writing, and computation instruction ranges from the lowest level to between a sixth- and eighth-grade equivalency level if a school grade reference is used.

For those whose levels of reading, writing, and computation are higher but not proficient enough for them to function well in today's society or workplace, the more advanced adult basic education instruction -- 4th through 8th grade -- and the adult secondary education instruction -- 9th through 12th grade -- are available depending on their proficiency. This population is sometimes referred to as "marginally literate."

Those individuals whose basic skills need upgrading or updating as a result of changes in workplace requirements, technology, products, or processes are being assisted through the Workplace Literacy Partnership program, which supports demonstration grants for job-related programs of literacy and basic skills.

ADULT EDUCATION FUNDING

Mr. Conte: If the budget request for adult education State grants of $200 million is agreed to, funding will have increased by $64 million in 2 years. Will the States have any problem absorbing that large increase in funding in such a short period?

Ms. Brand: We believe that the States will have no problem absorbing the increase in funding. The demand for services exceeds the capacity of programs in most areas. Program capacity is limited by, among other factors, inadequate staffing. An increase in the number of teachers, volunteer trainers, and administrative assistants would greatly enhance the ability of programs to build capacity and to shorten waiting lists where they exist. Funding increases would allow for additional staff and programmatic expansion in such areas as outreach, materials, and staff training.

WAITING LISTS

Mr. Conte: I know the statistics about the need for adult literacy training, and it is tremendous. But what about the demand for the programs? Are there waiting lists and other indications of need the way there are for instance in drug treatment facilities? Is this a priority instituted from the top on down?

Ms. Brand: There is great demand for services. We understand that waiting lists exist for enrollment in many adult education and literacy programs, especially in large metropolitan areas and inner cities with a large number of Hispanics and blacks.

Adult illiteracy may also be a cause of related social problems, including unemployment, underemployment, reliance on public assistance, crime, and drop-out rates. The prevalence of these problems in some areas indicates the need for additional literacy services.

In rural areas, although long waiting lists may not exist, many adults who wish to enter programs cannot do so because they are unable to travel easily to the site of instruction many miles away. In these areas, there is a need to establish satellite centers, supported by the central adult education program in a community college or school. Where this has been done, a local library or community center serves as the satellite center and is staffed by a local coordinator or trained volunteers. Programs generally have not been able to address the need for this type of rural center under current funding.

Literacy initiatives generally are grassroots movements. Local public awareness, recruitment, and program outreach have brought students into programs and carried the message of the need for services to States and the Federal Government.

STATE AND LOCAL MATCHING

Mr. Conte: In Elementary and Secondary Education, and even in Vocational Education, we constantly hear that the Federal role is small, vastly overwhelmed by the contribution of State and local revenues. What about in Adult Education? What's the non-Federal share in Adult Education, and how much of a match is required in this block grant?

Ms. Brand: State and local expenditures under the Adult Education Act rose from $174 million in 1980 to $645 million in 1988, an increase of 271 percent. By contrast, Federal expenditures over this period rose 34 percent, from $100 million to $134 million.

The State and local share jumped from 43 percent to 79 percent of total expenditures in those eight years. The median State match or share is now 54 percent. The minimum State match required by the Adult Education Act is 20 percent in 1991, but we expect that most States will continue to overmatch these Federal funds.

CLEARINGHOUSES

Mr. Conte: Under English literacy grants, you want to bring that program to a close and let it be handled under the State block grant, except for continuing the $1 million clearinghouse on Literacy Education for the Limited English Proficient. Why do we need two clearinghouses here? Shouldn't that be incorporated in your new clearinghouse?

Ms. Brand: The proposed clearinghouse for adult education and literacy would encompass activities of existing clearinghouses by establishing a coordinated and comprehensive data base and referral system. The Literacy Education for the Limited English Proficient Clearinghouse is one of many smaller, single-purpose clearinghouses that offer resources and information to practitioners and policymakers in one area of literacy. Other clearinghouses are located in various Federal agencies or run through national organizations or associations, and each provides information on a specific target population or literacy issue. Our proposed clearinghouse would serve as a coordinating mechanism for the broad array of existing literacy resource centers and clearinghouses, in addition to compiling information on effective practices and programs.

A clearinghouse function is just one aspect of our proposed adult education and literacy center. It would also provide technical assistance and training, basic and applied research and development, information on best practices and effective programs, and leadership in coordination of Federal efforts.

NUMBER OF LITERACY PROGRAMS

Mr. Conte: How many different literacy programs are there in the Department and throughout the Federal Government?

Ms. Brand: The Department of Education administers twelve different programs that support literacy, such as Library Literacy, Even Start, and a research center now being competed by OERI. There are several more Federal programs outside the Department that support literacy, including JTPA, State Legalization Impact Assistance Grants, and the new JOBS program. We have a project going on now to create an inventory of all these programs and make recommendations to improve coordination between the programs.

NEW LITERACY LEGISLATION

Mr. Conte: The Senate has passed a new literacy bill, which among other things calls for a Cabinet-level council to orchestrate Federal literacy efforts. What is the impact of that proposal on the programs you run?

Ms. Brand: We strongly support the goal of increasing literacy in America that is set forth in S. 1310. However, we object to the mandated Cabinet council on literacy, which we see as an inappropriate intrusion on the Executive prerogative to manage the literacy policy process. Last year the President established a working group of the Domestic Policy Council to explore national literacy strategies and coordinate literacy programs. The proposed Cabinet council would duplicate this on-going effort.

Mr. Conte: It also authorizes a number of new programs including State literacy resource centers. Are there any good ideas in the Senate bill that you would like to see implemented?

Ms. Brand: We believe there is a role for regional resource centers to assist local service providers and States with evaluation and accountability planning and procedures. This is a critical need among adult literacy providers. The increased funding we have proposed demands increased accountability from the States, particularly as literacy and basic skills programs begin to coordinate their services. Regional Resource Centers could offer valuable assistance in this area and in providing teacher training and volunteer training at the local level.

Unfortunately, many of the other programs authorized in S. 1310 would duplicate current authorities and funding. However, I would like to see an increase in the set-aside under the basic State grant from 10 percent to 15 percent to permit more training of teachers. The adult education teaching force is largely part-time and composed of many teachers trained in elementary and secondary education. Teaching adult learners is far different from teaching school-age children and few educators are trained in this area.

Mr. Conte: What do we know about prospects for a House literacy bill?

Ms. Brand: It appears likely that the House will approve a literacy bill this session. One bill that has been introduced in the House, H.R. 3123, has some support, and we are working with the authorizing committee to fashion a bill we could accept.

VOCATIONAL AND ADULT EDUCATION

For carrying out, to the extent not otherwise provided, [the Carl D. Perkins Vocational Education Act,]1/ the Adult Education Act, [and] the Stewart B. McKinney Homeless Assistance Act, and the Omnibus Trade and Competitiveness Act of 1988,2/ [$1,138,040,000] $239,714,000 which shall become available for obligation on July 1, [1990,] 1991, and shall remain available until September 30, [1991,] 1992, of which [$23,333,000 shall be for national programs under title IV of the Carl D. Perkins Vocational Education Act including $7,083,000 for research, $11,250,000 for demonstrations, and $5,000,000 for data collection3/ and of which] $1,000,000 shall be available only for demonstration programs authorized under section 372(d) of the Adult Education Act,4/ [$2,000,000] $3,000,000 shall be for national programs under section 383,5/ and $5,000,000 shall be for section 3846/ of the Adult Education Act and of which $988,000 shall be for technology education demonstrations under title VI, subtitle B, chapter 2 of the Omnibus Trade and Competitiveness Act of 1988.7/ (Department of Education Appropriations Act, 1990.)

Explanation of Language Changes

1/ Reference to the Carl D. Perkins Vocational Education Act has been deleted because funding for the Act is proposed for later transmittal under proposed legislation.

2/ Reference to the Omnibus Trade and Competitiveness Act of 1988 is included, because funding for the Technology Education Demonstrations program, provided under the School Improvement Programs account in 1990, is requested under this account in 1991.

3/ This language has been deleted because funding for the Carl D. Perkins Vocational Education Act is proposed for later transmittal under proposed legislation.

VOCATIONAL AND ADULT EDUCATION

Explanation of Language Changes -- Continued

4/ This language specifies that $1 million will be used only for English Literacy national demonstration activities. Funds are not requested for the English Literacy State grant program, since it duplicates the Adult Education State grant program. However, $1 million is requested for English Literacy national programs to support model demonstration programs and a national clearinghouse on English literacy training for limited English proficient adults.

5/ This language has been added to specify that $3 million of the amount for Adult Education National programs shall be for State program assistance and policy studies programs authorized by section 383 of part D of the Adult Education Act.

6/ This language has been added to specify that $5 million of the amount for Adult Education National programs shall be used for a clearinghouse on adult literacy authorized by section 384 of the Adult Education Act.

7/ This language has been added to provide funding for Technology Education demonstrations; funds for this program were provided in 1990 in the School Improvement Programs account.

Vocational and Adult Education

Language Analysis

Language Provision	Explanation
...$239,714,000 which shall become available for obligation on July 1, [1990,] 1991, and shall remain available until September 30, [1991,] 1992,...	This provision specifies that funds be appropriated on a forward-funded basis.
...of which [$23,333,000 shall be for national programs under title IV of the Carl D. Perkins Vocational Education Act including $7,083,000 for research, $11,250,000 for demonstrations, and $5,000,000 for data collection...	This provision specifies amounts for national programs under the Carl D. Perkins Vocational Education Act. The earmarking language overrides minimum funding levels for each of these programs specified in the Perkins Act.
...$1,000,000 shall be available only for demonstration programs authorized under section 372(d) of the Adult Education Act,	This provision specifies that $1,000,000 provided for English Literacy grants shall be available only for national demonstration programs.
...[$2,000,000] $3,000,000 shall be for national programs under section 383,...	This provision specifies that $3,000,000 appropriated for Adult Education national programs shall be for State program assistance and policy studies activities authorized by section 383 of the Adult Education Act. Failure to earmark these funds for this activitiy would result in the use of these funds for several other lower priority activities mentioned in the authorizing statute.
...and $5,000,000 shall be for section 384 of the Adult Education Act...	This provision specifies that $5,000,000 appropriated for Adult Education national programs shall be for the adult literacy clearinghouse and related activities authorized by section 384 of the Adult Education Act. This provision overrides the authorizing statute, which limits funds for national programs to $3,000,000.

Note.—Excludes permanent appropriation of $7,161,000 for fiscal years 1981-84 and $7,148,000 for fiscal years 1985-91. Excludes sequester amount of $307,000 for fiscal year 1986 and $100,000 for fiscal year 1990 associated with the permanent appropriation.

---

[1] Reflects enacted supplementals, rescissions, and reappropriations in amounts appropriated prior to fiscal year 1985.

[2] Revised 1982 request submitted in September 1981.

[3] Senate Committee action.

[4] Includes $942,239,000 for Vocational education that was proposed for later transmittal under proposed legislation.

[5] Includes $929,675,000 for Vocational education that is proposed for later transmittal under pending legislation.

Vocational and Adult Education

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report	
Program Effectiveness Data	
The Committee expects the Secretary to ensure that Vocational Education witnesses at future hearings are able to relate more dependable, accurate data on the effectiveness of Vocational Education programs, specifically, quantitative program outcomes.	The Department is actively seeking to improve available data on vocational education. A Departmental working group was formed in early 1989 to make recommendations for improvement of Data on Vocational Education (DOVE), the Department's system for collecting and analyzing data on vocational education. This working group's three major recommendations were to add questions relevant to vocational education to other education survey instruments, to undertake more focused analyses of existing data that can be brought to bear on vocational education issues, and to undertake, in some instances, new data collection initiatives. These recommendations are being acted upon, and better information on vocational education can be expected in the future.
Regional Skills Training Centers	
The Committee specifies that funds are included within the national programs funding for development of a model regional approach for training skilled tradesmen. The Committee specifies that the masonry and bricklaying trade is one that would benefit from a regional approach.	The Department will use approximately $10 million provided for cooperative demonstration programs for regional skills training centers. An invitational priority for projects addressing the masonry and bricklaying trades should ensure that at least $4 million of these funds are used as the committees direct.

Vocational and Adult Education

Significant Items in Congressional Appropriations Reports — Continued

Item	Action taken or to be taken
1990 Senate Report	
Regional Skills Training Centers	
The Committee directs that not less than $4 million of the amount provided for demonstrations be used to support model regional training centers that will supplement local training activities in the masonry trade. These centers may included a national training center.	The Department will use approximately $10 million provided for cooperative demonstration programs for regional skills training centers. An invitational priority for projects addressing the masonry and bricklaying trades should ensure that at least $4 million of these funds are used as the Committees direct.
National Center for Research on Vocational Education (NCRVE)	
The Committee requests that the Secretary report at the earliest possible time on the feasibility of having NCRVE conduct the statistics-gathering and reporting activities on vocational education currently conducted by NCES. The Committee believes that NCRVE may be better suited to execute this function and that such a transfer of responsibilities might free up personnel and resources for other activities within NCES.	The Department is reviewing the suggested transfer and will report to Congress very soon. However, it is advantageous to maintain the vocational education statistics gathering function within NCES where vocational education data can be collected and analyzed in the context of information on the balance of the education enterprise.
Corrections Education	
The Committee strongly recommends that the Vocational Education and Adult Education set-asides for corrections education be used to provide criminal offenders in correctional institutions with basic literacy and training in a marketable job skill. This is particularly important for first-and second-time offenders, as well as juveniles.	Under the Perkins Act, each State must use 1 percent of its Basic State grant allocation for programs for criminal offenders who are serving in correctional institutions. Under the Adult Education Act each State must use at least 10 percent of its State grant for literacy programs for institutionalized individuals (including individuals in institutions other than corrections facilities) and corrections education. The Department will provide guidance to State Directors of Vocational Education and Adult Education on permissible uses of these funds and to alert them to this congressional concern.

1/ Excludes amounts available in each year from the permanent (Smith-Hughes) appropriation.

2/ Amounts for Vocational Education in 1991 are proposed for later transmittal under proposed legislation.

Vocational and Adult Education

Account Summary — Continued

The Vocational and Adult Education appropriation supports programs designed to train a skilled and literate workforce. These funds are used by State and local administrators to expand and improve vocational education programs, ensure equal opportunity in vocational education to traditionally underserved populations, enable functionally illiterate adults to acquire basic skills, and assist adults in acquiring a high school diploma or its equivalent.

The Federal vocational education programs are authorized by the Carl D. Perkins Vocational Education Act, which expires September 30, 1990. Under the Perkins Act, States may use up to 7 percent of their basic grant funds for State administration. Fifty-seven percent of the remainder must be used for support of vocational education services targeted on six groups: the handicapped; the disadvantaged; adults in need of training or retraining; single parents and homemakers; participants in programs to eliminate sex bias and stereotyping; and criminal offenders in correctional institutions. The remaining 43 percent must be used for vocational education program improvement, innovation, and expansion, and may not be used merely to maintain regular vocational education programs.

The Adult Education Act authorizes programs that assist educationally disadvantaged adults in developing basic skills and in obtaining a high school diploma or equivalency certificate. State directors estimated that 3 million adults participated in the State programs in 1988. Each State must use at least 80 percent of its Federal grant for adult basic education; remaining funds may be used for high school equivalency programs. The Adult Education Act also authorizes a variety of national programs to support and disseminate research to increase our understanding of the problem of illiteracy and effective means to combat it, and two categorical programs to support literacy training.

The overall budget request for vocational and adult education is $1,169,389,000, an increase of $45,931,000 over the 1990 appropriation. This amount reflects level funding for vocational education programs and an increase of $45,931,000 for adult education programs. The request for vocational education is proposed for later transmittal pending enactment of reauthorizing legislation.

In May 1989, the Administration proposed the Vocational Education Excellence Act of 1989 to reauthorize the Perkins Act. This proposal would make substantial improvements to current law, especially in requiring new accountability for States' use of Federal vocational education funds. The House-passed reauthorization bill, H.R. 7, and the Senate Committee-passed bill, S. 1109, both contain provisions that reflect the Administration's proposal. The Perkins Act is expected to be reauthorized early in 1990. A detailed budget proposal for vocational education will be provided after enactment of the new legislation.

Vocational and Adult Education

Account Summary — Continued

Programs to combat adult illiteracy are one of this Administration's highest priorities, and this emphasis is reflected in the major increases proposed for 1991. Funding for adult education programs would be increased in 1991 to $238,726,000, the highest level ever. As the centerpiece of Federal efforts to improve adult literacy, the State programs grant would be funded at $200,000,000, an increase of $42,189,000, or 27 percent, over the amount available for 1990. The increased matching requirements for States under the reauthorized Adult Education Act will ensure that this large increase in funding results in even greater State and local support for adult education.

Funds also are included for Adult Education National programs, to continue the Department's program of research, evaluation and development to increase national understanding of how best to combat illiteracy, and to start a national clearinghouse on adult literacy to develop and disseminate information on best practices in the adult education field.

The Department is requesting $29,726,000 for literacy programs, including $10,000,000 for the Literacy Training for Homeless Adults program, to fulfill the President's commitment to full funding for all programs authorized by the Stewart B. McKinney Homeless Assistance Act. Funds are also provided for Workplace Literacy Partnerships, to supplement Adult Education State programs grant activities and for national demonstration activities under the English literacy grants program to develop and disseminate information on the most effective ways to provide English literacy training to the limited English proficient. No funds are requested for English Literacy State grants, which duplicate the Adult Education State programs grant.

Finally, $988,000 is requested for Technology Education Demonstrations. This would provide level funding for this new program, for which funds were provided for the first time in 1990 in the School Improvement Programs account.

Vocational and Adult Education

---

1. Vocational education: a. Basic grants: (1) Basic State grants (Carl D. Perkins Vocational Education Act, Title II)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation 2/	1991 Request 3/	Increase or Decrease
$837,628,000	---	---

1/ The GEPA extension expires September 30, 1990. New authorizing legislation is pending.

2/ Excludes amounts available from the permanent (Smith-Hughes) appropriation.

4/ After reauthorizing legislation is enacted, specific requests for individual activities will be made.

Purpose and Method of Operation

The purpose of the Basic State Grants program is to assist States and Outlying Areas to expand and improve their programs of vocational education and provide equal opportunity in vocational education to historically underserved populations. The populations assisted by Basic Grants range from secondary students in prevocational courses through adults who need retraining to adapt to changing technological and labor market conditions.

Under the Carl D. Perkins Vocational Education Act, funds are allocated to the States and Outlying Areas according to a formula based on State per capita incomes for the three most recent fiscal years, and on State populations in three age cohorts (15-19, 20-24, and 25-65) in the preceding fiscal year. Each State must receive at least its fiscal year 1985 formula allocation. If additional funds are available after this "hold-harmless" requirement has been met, no State may receive less than 0.5 percent of the total amount available for allocation. However, no State may, as a result of this last provision, receive more than 150 percent of what it received in the previous fiscal year. No Outlying Area may receive less than a total of $200,000 for all programs authorized by Title II and Parts A, B, C, D, and E of Title III.

Of the funds a State receives for Basic State grants:

- Up to 7 percent may be used for State administration.

Vocational and Adult Education

1. Vocational education: a. Basic grants: (1) Basic State grants

---

Purpose and Method of Operation — Continued

- 57 percent of the remainder is for Part A, vocational education opportunities, and must be used as follows:
  - 10 percent for the handicapped;
  - 22 percent for the disadvantaged, including the limited English proficient;
  - 12 percent for adult training and retraining;
  - 8.5 percent for single parents and homemakers;
  - 3.5 percent for programs to eliminate sex bias and stereotyping; and
  - 1 percent for programs in correctional institutions.
- The remaining 43 percent is for Part B, vocational education improvement, innovation, and expansion, of which:
  - No funds may be used merely to maintain existing programs;
  - Some funds must be used for personnel development; and
  - Support for guidance and counseling must be maintained at least at the 1984 level.

The Perkins Act is currently being reauthorized. On May 9, 1989, the House passed H.R. 7, the Applied Technology Education Amendments of 1989. The Senate Labor and Human Resources Committee approved its own amendments to the Perkins Act, S. 1109, on November 1, 1989. Both H.R. 7 and S. 1109 would make substantial changes to current law.

Highlights of H.R. 7 changes to the Basic grant program include the following:

- Twenty percent of basic State grant funds would be reserved for State administration (5 percent), sex equity (3 percent) and displaced homemakers programs (7 percent), and other State leadership activities.
- Remaining funds would be distributed to LEAs according to an intra-State formula based on Chapter 1 basic grant allocations, handicapped enrollments, and enrollment in vocational education programs; funds would be distributed to postsecondary institutions based on numbers of Pell grant and BIA recipients, vocational rehabilitation enrollments, and the institutions' relative shares of all (or all vocational) students.
- The 57 percent/43 percent split of basic State grant funds between services to special populations and program improvement activities would be eliminated.
- States would be required to develop and implement a system of standards and measures of performance for applied technology education programs, but would not be required to apply the system to funding decisions.

Vocational and Adult Education

1. Vocational education: a. Basic grants: (1) Basic State grants

---

Purpose and Method of Operation — Continued

Highlights of S. 1109 include the following:

- Twenty percent of the basic State grant funds would be reserved for State administration (5 percent), sex equity (4 percent), and other leadership activities.

- States would be required to distribute 65-75 percent of remaining funds to LEAs primarily on the basis of Chapter 1 allocations; the remaining 25-35 percent would be distributed to postsecondary and adult vocational programs.

- The 57 percent/43 percent split of basic State grant funds between services to special populations and program improvement would be eliminated.

- States would be required to develop measurable objective criteria for the quality of programs and to take action to improve local programs that continue to be ineffective after two years.

Congress is expected to complete the reauthorization of the Perkins Act in early 1990.

This is a forward-funded program. Fiscal year 1990 funds will become available on July 1, 1990, and remain available for obligation until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The National Assessment of Vocational Education (NAVE) final report was sent to Congress early in 1989, and provided detailed information on how the Perkins Act has been implemented, as well as data on secondary and postsecondary vocational education. NAVE's findings about the implementation of the Perkins Act include the following:

- Overall, about 40 percent of Perkins Act funds have been spent at the postsecondary level, but the rates at which States allocated Perkins Act funds among secondary and postsecondary sectors varied greatly. Postsecondary allocations ranged from 8 to 100 percent. In addition, separate area vocational school districts appeared to receive a disproportionate share of the Federal funds that flowed to secondary education. Area vocational school districts and postsecondary institutions received larger per-pupil grants than regular school districts.

Accomplishments — Continued

- At the secondary level, NAVE found some evidence that Basic Grant funds are targeted to school districts with higher rates of poverty, but the amount of targeting has not increased as a result of the introduction of an instrastate formula or other provisions in the Perkins Act. There is no evidence of comparable targeting at the postsecondary level.

- Most school districts received awards that were too small to mount new initiatives of any size. Half of all school districts received $7,910 or less, and three-quarters of the districts received $25,000 or less. Such resources are insufficient to pay for even one full-time teaching position. By contrast, separate area vocational school districts and postsecondary institutions received median grants exceeding $90,000.

- For the disadvantaged set-aside alone, school districts with the highest poverty rates had a greater likelihood of receiving an award, and their per-student disadvantaged (and handicapped) set-aside awards were larger than those in other districts. Within districts, however, case studies were unable to uncover any systematic means for funds distribution or service provision based on student or programmatic characteristics. Many districts did not know how many students were eligible for services, and some did not know how many were actually served. The only systematic distribution mechanism uncovered was a tendency to locate services in facilities other than comprehensive high schools--such as area vocational facilities, vocational high schools, and alternative schools.

- Districts that received funds under the disadvantaged set-aside were more likely than those without funds to indicate that they provided vocational assessments to academically disadvantaged students. Student assessments may do little, however, to determine or upgrade the vocational programs in which secondary students enroll. Districts with set-aside funds were no more likely than districts without such funds to provide other services such as academic remediation, summer jobs, alternative schools, and curriculum modification.

- Services under the handicapped set-aside have gone to students with individualized education plans (IEPs) at the secondary level and to students with cognitive or physical impairments at the postsecondary level. Perkins Act resources under the handicapped set-aside are used primarily to help pay for the instructional costs of vocational education for students with handicaps (e.g., extra aides in classrooms) in both mainstreamed and separate settings, and to provide assessments and other forms of guidance. Instructional spending was divided between mainstreamed and separate classes at rates of about 1.5 to 1 in school districts and 2 to 1 in area vocational districts.

Accomplishments -- Continued

- Sex equity grants are small and spread among a substantial number of activities. At the secondary level, common uses included in-service training, recruitment, and counseling. Area vocational schools had similar patterns but somewhat less support for in-service education and more for instructional salaries. Postsecondary institutions had spending patterns similar to those of area vocational schools. Case studies revealed a small amount for direct economic assistance at the postsecondary level.

- At the secondary level, most funds under the single-parent and homemaker set-aside have flowed to a small number of school districts and a larger number of area vocational districts. From the case studies it appears that most of these funds were used in programs for teenage parents, particularly for counseling. Only a subset of districts used funds for instructional services. School districts receiving funds had lower poverty rates than districts without funds.

- Case studies indicated that, in a number of the community college sites, single parent/homemaker funds have supported a portion of the costs of centers for displaced homemakers. Services have included recruitment, counseling, courses or group sessions aimed at building assertiveness and self-esteem, referral to child care and other social services, referral for student aid, referral to training and, in a small number of sites, instructional services or direct financial support.

- It appears that the adult and corrections set-asides pay for general operating support of educational offerings. Few States have established priorities for the funds. The set-aside for adults helps support vocational programs in school districts (including area vocational schools) and postsecondary institutions. In the case studies, community colleges were more likely to identify a specific use of adult set-aside funds, but overall, few specific purposes were identified.

- Slightly over one half of program improvement funds traced to the local level were spent by postsecondary institutions. A little over a quarter of school districts and about half of area vocational school districts and postsecondary institutions also spent these funds. Median expenditures in separate area vocational districts were 2.5 times, and in postsecondary institutions 5.1 times, the size of those in school districts.

Vocational and Adult Education

1. Vocational education: a. Basic grants: (1) Basic State grants

---

Accomplishments — Continued

- At both secondary and postsecondary levels, most program improvement funds were used to purchase equipment. Equipment purchases described in the case studies appeared to be about equally divided between computers (and related software and printers) and technical equipment for specific vocational programs. In the few States that forbade the use of the funds for the equipment, funds were used for a wide range of activities including adoption of the "Principles of Technology" curriculum, support of student organizations, and in-service training. Few program improvement funds were spent for programs or services for special populations.

- A small share of sex equity, adult, and single-parent set-aside funds and a substantial share of program improvement funds were retained for statewide activities. Most statewide projects involved assistance to secondary vocational education. In States where case studies were conducted, the amount of program improvement funds retained ranged from less than 10 to as much as 40 percent.

- In the nine States where case studies were conducted, funds retained at the State level were most commonly used for curriculum development. Other uses included establishing and maintaining regional resource centers for vocational education and in-service and pre-service staff development. A few States used federal resources to develop curricula and stimulate change aimed for teaching general vocational skills or for curriculum and model program development for vocational-academic integration.

The NAVE staff also analyzed data on 1982 high school graduates and made the following findings related to secondary vocational education enrollments:

- In 1982, credits earned by students planning to attend postsecondary vocational institutions or college accounted for nearly three-quarters of all vocational credits taken by high school graduates.

- Students planning to work after high school took an average of 6.06 credits of vocational education during high school. Students who aspired to attend a postsecondary vocational-technical institution average 5.81 credits; students planning to attend some college averaged 4.55 credits; and students who planned to graduate from college averaged 3.17 credits.

- Work-bound students were 18.2 percent of high school graduates and took 25.2 percent of all vocational credits. Students planning to attend postsecondary vocational-technical institutions or college were 82 percent of graduates and took 26.5 percent and 47.9 percent of all vocational credits, respectively.

Accomplishments — Continued

- Total vocational enrollments (average: 4.21 credits) exceeded enrollments in any other subject area, including English, the largest academic subject (average: 4.02 credits).

The NAVE findings about the access of special populations to high-quality vocational education were mixed:

- Academically disadvantaged students and students with handicaps clearly take more vocational education than do other students. For students with handicaps, the vocational education they take is also likely to be "mainstreamed" (81.7 percent of credits), that is, the credits are earned in regular as opposed to self-contained classrooms. In contrast, only 59.6 percent of the academic credits of handicapped students are earned in regular classrooms.

- Problems of participation in high-quality vocational education are serious for female handicapped and academically disadvantaged students. Approximately half of all the vocational credits earned by handicapped and disadvantaged females are in low-level service occupation courses or consumer and homemaking education. Otherwise, handicapped and disadvantaged students take the same proportion of occupationally specific vocational education as other students; the same or more credits, on average, in area vocational schools; and about the same amount of cooperative and other forms of work-based education. (Work-based education has been found helpful to students in gaining employment after leaving school.)

- There are major differences in the quality of vocational education between schools with high and low concentrations of academically and economically disadvantaged students at measured by the breadth and depth of courses offered. Students in schools with high concentrations of disadvantaged students take large amounts of vocational education and have the most limited range of vocational offerings from which to choose.

The NAVE findings related to postsecondary education include the following:

- There are a total of 4.3 million "vocational" students at community colleges, two-year technical colleges, public vocational technical schools, and proprietary schools. Three-fourths of all students at these institutions major in vocational subjects and over the past two decades the percentage of postsecondary students enrolled in vocational education has grown substantially.

Vocational and Adult Education

1. Vocational education: a. Basic grants: (1) Basic State grants

---

Accomplishments — Continued

- The major problem facing postsecondary vocational education is that many students do not stay in school long enough to receive in-depth training. Low rates of program completion and a limited number of courses taken are common for all students regardless of race, gender, economic status, or ability. The problem is most serious, however, among minorities, economically disadvantaged students, and the growing number of high school "vocational" students who pursue postsecondary training. Minorities and disadvantaged students average substantially fewer credits and leave postsecondary institutions without earning a degree or certificate more frequently than do other students.

- For students who accumulate substantial amounts of vocational credits or complete programs, postsecondary vocational education pays off in economic terms. Students who obtain degrees or certificates, or who otherwise take a substantial amount of vocational training in their major field, are more likely to be employed and more likely to get a job in their field of training than are students who take small amounts of vocational training. Students who take more training and are employed in their field also earn higher wages than students who take less training or are not employed in the field in which they trained.

1991 Budget Proposal

As soon as new authorizing legislation is enacted, a budget request in the amount of $929,675,000 for Vocational Education will be submitted to Congress. Specific amounts requested for individual activities will be determined at that time.

Vocational and Adult Education

---

1. Vocational education: a. Basic grants: (2) Indian and Hawaiian natives set-aside
(Carl D. Perkins Vocational Education Act, Title I, Section 103)

1991 Authorization: To be determined 1/

Budget Authority:

1990 2/ Appropriation	1991 3/ Request	Increase or Decrease
$13,106,000	---	---

1/ The GEPA extension expires September 30, 1990. New authorizing legislation is pending.

2/ Excludes $106,000 available for Indian and Hawaiian natives programs from the permanent (Smith-Hughes) appropriations.

3/ After reauthorizing legislation is enacted, specific requests for individual activities will be made.

Purpose and Method of Operation

Under the Perkins Act, 1.5 percent of the combined appropriations for Titles I (other than Section 112), II, and IV (other than Part E) is set aside for Indian and Hawaiian natives programs. Of this amount, 0.25 percent is used to serve Hawaiian natives and 1.25 percent is used to fund the Indian program.

Grants under the Indian program are awarded on a nationally competitive basis to federally recognized Indian tribes or tribal organizations for services that are in addition to services Indians are eligible to receive under other provisions of the Perkins Act. The Perkins Act requires that the Bureau of Indian Affairs match these expenditures, but this provision has been overridden every year in the appropriations act for the Department of the Interior.

Under the Hawaiian natives program, grants also are awarded competitively to organizations primarily serving and representing Hawaiian natives. Recipient organizations must be recognized by the Governor of Hawaii. Since the Governor has recognized only one organization -- Alu Like, Inc. in Honolulu -- only one grant has been awarded in each year of the program.

Purpose and Method of Operation -- Continued

The reauthorization of the Perkins Act may alter the size of the Indian and Hawaiian natives programs. While H.R. 7 would make no change to these programs, S. 1109 would increase the set-aside for Indian and Hawaiian natives to 2 percent of the amounts for the Basic State grant and parts A, B, and C of National programs. Of this amount, 1-2/3 percent would be for the Indian program and 1/3 percent would be for the Hawaiian natives program.

These are forward-funded programs. Fiscal year 1990 funds will become available on July 1, 1990, and remain available for obligation until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Fiscal year 1989 funds from the Department of Education are supporting 38 grants to Indian tribal organizations, including 2 new awards and 36 continuation grants for ongoing projects. Fiscal year 1990 funds will be used for 25 new awards and to continue 14 current projects. Funded projects must be coordinated with tribal economic development plans and must demonstrate a placement rate of at least 65 percent, but many of the Indian vocational education projects have much higher placement rates. Several projects have demonstrated exceptional success in training and placing participants in jobs. The Maricopa-Pima Tribe in Arizona reported a 100 percent placement rate for the 1988-89 project year. The Arizona Cocop Tribe reported a 95 percent placement rate, and Salish Kootenai College on the Flathead Reservation reported an 85 percent placement rate.

Under the Hawaiian natives program considerable work has been done to identify the special vocational education needs of native Hawaiians. Some data suggests that while native Hawaiians enroll heavily in high school vocational programs, these individuals have trouble making the transition to and persisting in postsecondary vocational education. As a result, fiscal year 1989 funds are being used by Alu Like for a variety of projects designed to increase the aspirations and achievement levels of native Hawaiians related to vocational education and employment. Major projects being funded this year include:

- The Hana Kupono Project, to improve the basic skills of native Hawaiian students in the intermediate grades in order to increase their potential for success in high school and beyond;

- The Career Education Demonstration Project, to improve student academic achievement in mathematics through career education infusion techniques;

Accomplishments — Continued

- The Senior Career Intern Project, to assist native Hawaiian high school seniors who are interested in careers in business management to gain exposure to the business world;

- The University of Hawaii Community Colleges Native Hawaiian Vocational Education Project, to analyze and modify institutional procedures and provide student support services in order to increase the retention and completion rates of native Hawaiians in postsecondary vocational education.

- The Hawaii Computer Training Center, to generate private financial support for training native Hawaiian adults in computer skills;

- The Native Hawaiian Business Development Center Entrepreneurial Training Project, to assist native Hawaiian adults in developing skills, attitudes, and techniques necessary to start and support successful business enterprises.

1991 Budget Proposal

As soon as new authorizing legislation is enacted, a budget request in the amount of $929,675,000 for Vocational Education will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

2/ Specific amounts for individual activities will be determined after reauthorizing legislation is enacted.

---

1. Vocational education: b. Community-based organizations
(Carl D. Perkins Vocational Education Act, Title III, Part A)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or Decrease
$10,850,000	---	---

1/ The GEPA extension expires September 30, 1990. New authorizing legislation is pending.

2/ The amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

Title III, Part A of the Perkins Act authorizes States to provide financial assistance to joint programs of eligible recipients and community-based organizations (CBOs) within the State for the conduct of the following vocational education services and activities:

- Outreach programs to facilitate the entrance of youth into a program of transitional services and subsequent entrance into vocational education, employment, or other education and training;
- Transitional services such as attitudinal and motivational prevocational training programs;
- Prevocational educational preparation and basic skills development conducted in cooperation with business concerns;
- Special prevocational preparation programs targeted to inner-city youth, non-English speaking youth, Appalachian youth, and the youth of other urban and rural areas having a high density of poverty;
- Career intern programs;
- Assessment of students' needs in relation to vocational education and jobs; and
- Guidance and counseling to assist students with occupational choices and with the selection of a vocational education program.

Both H.R. 7 and S. 1109 would retain the current authority for community-based organizations programs.

Purpose and Method of Operation — Continued

Funds are distributed to States and Outlying Areas under the same formula as that used for Basic State Grants, except that the 1985 "hold harmless" provision does not apply. This is a forward-funded program. Fiscal year 1990 funds become available on July 1, 1990, and remain available until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The State grants for this program tend to be relatively small, averaging only $156,000 in 1989. Each State uses its award to fund a handful of joint projects between CBO's and eligible recipients. Some of these projects are now in their fourth year of operation and provide a variety of services to disadvantaged youth and adults as well as handicapped individuals. Individual projects usually target a specific population, such as dropouts, substance abusers, teenage parents, or immigrants with limited skills. Services reported by projects include assessment and counselling services, vocational and prevocational training (including basic skills training, self-esteem improvement, career exploration and employability skills development), placement, and other services. Because the individual project grants are generally quite small, the projects serve only a limited number of participants, and in some instances, only supplement services funded from other sources.

In 1989, the Department initiated a study of the community-based organization program in nine states to examine how services are provided and the extent of coordination between CBO projects and other vocational education services. The preliminary findings of that study suggest that in most cases, little coordination occurs because the participants served by the CBO's generally are not served by the more mainstream vocational education delivery system. The study also found little objective project-level evaluation data to support conclusions about the effectiveness of services.

1991 Budget Proposal

As soon as new authorizing legislation is enacted, a budget request in the amount of $929,675,000 for Vocational Educaton will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

Impact Data	1989	1990	1991 1/
Number of grants.................	57	57	—
Average grant....................	$156,000	$190,000	—

1/ Specific amounts for individual activities will be determined after re-authorizing legislation is enacted.

Vocational and Adult Education

---

1. **Vocational education: c. Consumer and homemaking education (Carl D. Perkins Vocational Education Act, Title III, Part B)**

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or Decrease
$34,176,000	---	---

1/ The GEPA extension expires September 30, 1990. New authorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The Consumer and Homemaking Education program supports grants to the States and Outlying Areas to supplement State and local efforts to prepare youths and adults for the occupation of homemaker.

Grants are allocated to States and Outlying Areas under the same formula used for Basic State Grants. These funds can be used for instruction in the areas of food and nutrition, consumer education, family living and parenthood education, child development and guidance, housing, home management (including resource management), and clothing and textiles. States are also encouraged to use funds to serve special-needs populations, to eliminate sex bias and stereotyping, and to provide ancillary services (including outreach) to ensure the quality and effectiveness of consumer and homemaking programs.

One-third of each State's allotment must be used in economically depressed areas or areas with high rates of unemployment. Up to 6 percent may be used for State administration.

Both H.R. 7 and S. 1109 would retain the authority for Consumer and Homemaking Education, although each would alter slightly the list of authorized activities.

This is a forward-funded program. Fiscal year 1990 funds become available on July 1, 1990, and remain available for obligation until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Vocational and Adult Education

1. Vocational education: c. Consumer and homemaking education

Accomplishments

Federal funds for consumer and homemaking education are generally used by the States to supplement State and local funds for these programs in secondary and postsecondary schools. The vast majority of funds for these programs are generated at the State and local levels -- over 20 State and local dollars are reported to match every Federal dollar.

According to the Department's High School and Beyond Study, among vocational education students, females account for 80 percent of the enrollments in consumer and homemaking courses, taking on average the equivalent of 1.2 years of courses. Females in the general education curriculum take an average of 1.4 years, while general curriculum males take less than half a year of consumer and homemaking courses. In the academic curriculum, males and females combined take less than half a year, although females account for twice the number of enrollments as males.

High School and Beyond data also show that of all secondary school students participating in occupationally specific vocational programs, only 8 percent participated in occupational home economics, and of these students, 85 percent took only one year in the discipline.

1991 Budget Proposal

As soon as new authorizing legislation is enacted, a budget request in the amount of $929,675,000 for Vocational Education will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

Impact Data	1989	1990	1991 1/
Number of grants..........	57	57	---
Average grant.............	$581,018	$599,596	---

1/ Specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

1. Vocational education: d. State councils
(Carl D. Perkins Vocational Education Act, Section 112)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or Decrease
$7,942,000	---	---

1/ The GEPA extension expires September 30, 1990. New authorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

Under the Carl D. Perkins Vocational Education Act, States and Outlying Areas are required to establish State councils in order to receive Federal vocational education funds. The councils assist in the development and evaluation of State vocational education plans and policies.

Each Outlying Area receives $50,000. For the States, the District of Columbia, and Puerto Rico, funds are allocated to the councils under the same formula as that used for Basic State Grants, except that the 1985 "hold harmless" provision in the Basic State Grant formula does not apply. No State may receive less than $120,000 nor more than $225,000.

Each council is made up of 13 members, 7 of whom represent the private sector and 6 of whom represent secondary and postsecondary vocational education, career guidance and counseling organizations, and persons who have special knowledge of the educational needs of the handicapped, the disadvantaged, women, the limited English proficient, and minorities. Each council is required to review and comment on the State plan, analyze and report on the allocation of funds and the availability of vocational education programs in the State, complete a biennial evaluation of the State's programs, and conduct a number of other activities.

Under the provisions of H.R. 7, the State Councils on Vocational Education would be merged into a State Human Investment Council that would provide coordinated oversight of adult education, vocational education, job training, and rehabilitation programs. S. 1109 would retain the current structure of the State councils on Vocational Education with stronger private sector involvement.

Purpose and Method of Operation — Continued

This is a forward-funded program. Fiscal year 1990 funds will become available on July 1, 1990, and remain available for obligation until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In independently reviewing and commenting on the State plans, the State councils provide the States with advice on improving vocational education programs and allow business-sector input into vocational education program planning. The Councils argue that the independent judgments they provide on the quality of State vocational education programs make an important contribution to educational improvement. However, while the average Federal grant for the State councils is small, few States provide additional State funds to support this activity.

1991 Budget Proposal

As soon as new authorizing legislation is enacted, a budget request in the amount of $929,675,000 for Vocational Education will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

Impact Data	1989	1990	1991 1/
Number of grants.................	57	57	---
Average grant....................	$138,667	$139,383	---

1/ Specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Vocational and Adult Education

1. Vocational education: e. National programs: (1) Research (Carl D. Perkins Vocational Educaton Act, Title IV, Part A)

1991 Authorization: To be determined 1/

Budget Authority:

1990 2/ Appropriation	1991 3/ Request	Increase or Decrease
$6,965,000	---	---

1/ The GEPA extension expires September 30, 1990. New authorizing legislation is pending.

2/ Excludes amounts available from the permanent (Smith-Hughes) appropriation.

3/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The Carl D. Perkins Vocational Education Act authorizes the conduct and dissemination of research that contributes to improving the access of special populations to vocational education, is readily applicable to the vocational setting, and is of practical application to vocational education administrators, counselors, and instructors.

Within Part A, at least $6,000,000 is to be made available each year for the National Center for Research in Vocational Education (NCRVE). The Center is authorized to carry out short-term and multi-year projects in applied research and development, leadership development, dissemination, development of information for planning and policy development, technical assistance, and evaluation.

Part A also required the Department to undertake a national assessment of vocational education programs carried out under the Act. This assessment addressed the services and activities provided (including services to special-needs individuals), the impact of the Act in modernizing the Nation's vocational education system, and the coordination of vocational education with employment training and economic development activities in the States.

In addition to NCRVE and the national assessment, Part A also authorizes the Department to undertake special research projects as part of a coordinated effort to improve the quality of vocational education. Under this authority, the Department supports six regional curriculum coordination centers.

Purpose and Method of Operation — Continued

Both H.R. 7 and S. 1109 would significantly change the current authority for vocational education research. H.R. 7 would authorize another National Assessment, to be conducted by the Office of Educational Research and Improvement, and would require NCRVE to study methods for enhancing basic and advanced academic skills in applied technology education programs. H.R. 7 also adds new priorities for discretionary research, including research to assist States and local schools in implementing performance standards and research on integrating academic and vocational education.

S. 1109 would also authorize a new National Assessment, with an authorization level of $3,000,000 in each of fiscal years 1991 and 1992. S. 1109 would mandate that the Office of Educational Research and Improvement administer three or more vocational education research centers, including a research center devoted to Native Americans. S. 1109 also would require a study of the Perkins Act State allocation formula.

Funds for National Programs are appropriated on a forward-funded basis. Fiscal year 1990 funds will, therefore, become available on July 1, 1990, and will remain available for obligation until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Under the Research authority, the Department currently supports the National Center for Research in Vocational Education, six regional Curriculum Coordination Centers, and discretionary research projects. The National Assessment of Vocational Education, which was partially funded under this activity, was completed in early 1989. Its findings are included in the discussion of the Basic State grant program.

National Center for Research in Vocational Education (NCRVE) -- NCRVE is administered as a five-year grant award, and in 1988 the most recent five-year award was made to the University of California at Berkeley. Berkeley made sub-awards to the University of Illinois, the University of Minnesota, Virginia Polytechnic Institute and State University, Teacher's College at Columbia University, and the Rand Corporation, in order to take advantage of the special expertise each of these organizations has in specific areas of vocational education research.

NCRVE researchers are developing practical information on vocational education for use by State and local policy makers. Special areas of research include tailoring local programs to serve a changing workforce, dropout prevention, and the use of new technologies in vocational education. NCRVE also continues to study ways to serve better the special populations identified in the Perkins Act; provide inservice training for teachers and

---

Accomplishments -- Continued

administrators; develop local program planning and evaluation materials; provide a clearinghouse for information about vocational education research, training, grants, and contracts; promote private sector partnerships with public schools; and develop curricula for basic academic skills and new technologies. An area of special focus for NCRVE has been the collection and analysis of data sets related to vocational education and providing technical assistance and advice to members of the research community who use these data sets.

During 1989, NCRVE published a number of papers addressing issues in vocational education, including the following:

- Exemplary Urban Career-Oriented Secondary School Programs;
- New limits to Growth: Economic Transformation and Occupational Education;
- Participation of Special Education Students in High School Vocational Education: The Influence of School Characteristics;
- Performance-Based Policy Options for Postsecondary Vocational Education and Employment Training Programs;
- Separating the Wheat from the Chaff: The Role of Vocational Education in Economic Development;
- On Becoming a Teacher: Vocational Education and the Induction Process;
- Reforming Education for Work: A Cognitive Science Perspective;
- National Data Needs for Vocational Education;
- Innovation Versus Turf: Coordination Between Vocational Education and JTPA Programs;
- Increasing Vocational Options for Students with Learning Handicaps: A Practical Guide; and
- Resources to Facilitate the Transition of Learners from School-to-Work or Postsecondary Education.

NCRVE staff have also conducted several in-service training projects at sites around the country for vocational education administrators, counsellors, supervisors and teachers.

Vocational and Adult Education

1. Vocational education: e. National programs: (1) Research

Accomplishments — Continued

Curriculum Coordination Centers (CCCs) — Since 1972, the Department of Education has provided support for the operation of a national network for curriculum coordination in vocational and technical education. This discretionary program includes six regional Curriculum Coordination Centers and a network of State liaison representatives, whose time is donated by State departments of vocational education to participate in network activities. The broad purpose of the program is to provide a mechanism for sharing information on vocational curriculum development activities, increase the transportability of curriculum materials, and enhance the quality of State and local curriculum development efforts. The centers provide a service to vocational educators, introducing efficiency by eliminating duplication in curriculum development.

A study, conducted for the Department by Advanced Technology, Inc. and Policy Studies Associates, Inc. in 1983-84, analyzed the operations, management, and impact of the network in addressing its purpose. The study found that a chief benefit of the program has been the creation of a nationwide communications network that helps spread curriculum materials and resources, as well as new instructional approaches and technologies, to vocational educators at the State and local level. The study also found that Federal investment in the program has leveraged a considerable amount of State support for the Centers and network, including State funds and resources for individual Centers and the donation of staff time for conduct of network activities.

Discretionary Research -- Funds for discretionary research activities were available in 1989 for the first time in several years. These funds will be used for a project to improve the preservice training of vocational education teachers. A contract will be awarded in March 1990 to design and develop curriculum modules that integrate basic skills concepts into preservice vocational personnel development. The modules will then be disseminated to universities and teachers' colleges to be used to improve the preparation of future vocational education teachers and counsellors.

No final decision has yet been made on the use of discretionary research funds for fiscal year 1990. Among options being considered is support for the JOBS Technical Assistance project being jointly supported by the Departments of Labor, Health and Human Services, and Education. This project will orient State and local officials to the new JOBS program authorized by the Family Support Act of 1988, and help them to coordinate education and training programs to serve JOBS participants.

1991 Budget Proposal

As soon as new authorizing legislation in enacted a budget request in the amount of $929,675,000 for Vocational Education will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

Vocational and Adult Education

Vocational and Adult Education

1. Vocational education: e. National programs: (2) Demonstrations (Carl D. Perkins Vocational Educaton Act, Title IV, Part B)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or Decrease
$11,096,000	---	---

1/ The GEPA extension expires September 30, 1990. New authorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

Title IV, Part B, of the Carl D. Perkins Vocational Education Act authorizes the Secretary of Education to conduct model demonstration programs in vocational education. Within this authority, model programs may be of the following types:

- Demonstration programs that improve access to vocational education for the special populations, model cooperative programs between public and private vocational education enterprises, and programs designed to overcome national skill shortages;
- Competitive grants to States to operate equipment pools involving the loan of high-technology, "state-of-the-art" equipment to eligible recipients for use in local vocational education programs;
- Grants or contracts to establish demonstration centers for the retraining of dislocated workers;
- Competitive grants to establish and operate model centers to focus greater attention on the special vocational education needs of older individuals and to promote employment opportunities for those individuals.

Section 451 of the Perkins Act requires that of the funds appropriated for Title IV, 35 percent must be allocated for demonstration programs under Part B. However, other provisions of Section 451 and annual appropriations language generally have made it impossible to follow this percentage set-aside.

While H.R. 7 would generally maintain and slightly broaden the authority for demonstrations under current law, S. 1109 would make more substantial changes. Demonstration programs that would be authorized by S. 1109 are:

Purpose and Method of Operation — Continued

- Projects for the integration of vocational and academic learning;
- Business and industry partnerships;
- Model programs of regional training for skilled trades;
- "Blue ribbon" vocational education programs;
- Materials development in telecommunications;
- Professional development;
- Educational programs for Federal correctional institutions;
- Vocational education "lighthouse" schools; and
- Career and guidance counseling programs.

Accomplishments

Fiscal year 1989 funds appropriated for cooperative demonstration projects are being used to make continuation grants for vocational education dropout demonstration projects begun in 1988 and to support new awards for high-technology partnerships in vocational education. One displaced worker retraining project was also funded using funds appropriated for that purpose.

Approximately 30 new awards were made for projects in late 1989 to demonstrate high-technology partnerships in vocational education. Final project reports for similar projects funded in 1988 are not due until late 1990. The Department plans to use approximately $500,000 from funds available for high-technology partnerships in 1989 for an evaluation of the program. The evaluation will describe the projects' activities, staffing, costs, and participants, identify promising approaches, and evaluate the impact of the projects on local schools and the business community.

Ten awards for the first year of the vocational education dropout prevention and reentry program were made in the summer of 1989, for the first eighteen months of three-year projects. Funds appropriated for 1989 for dropout demonstrations will be used for continuation awards to be made in late summer of 1990. Many of these projects are attempting to replicate Project Coffey, a dropout prevention model that has achieved success in Oxford, Massachusetts. The Department is using approximately $500,000 from funds available for this program in each year to evaluate the effectiveness of the dropout prevention and reentry techniques demonstrated through these projects so that the most successful models can be disseminated to other communities. The evaluation will use random assignment or a matched-pairs design to generate conclusions about the effectiveness of various treatments used in the dropout prevention models. The first interim report of this evaluation is due in December 1990, with the final report following in February 1991.

Vocational and Adult Education

1. Vocational education: e. National programs: (2) Demonstrations

Accomplishments — Continued

While funds earmarked by Congress for the displaced worker retraining demonstrations provide funding for one project in each year, several projects are currently underway. A project at the Roxbury Community College in Roxbury, Massachusetts, is providing English-as-a-Second Language training to limited English proficient adults who have been displaced from the garment industry. Another project undertaken by the Center for Occupational Research and Development is operated at the Lorraine County Community College in Ohio. This project offers high-technology training opportunities for unemployed auto workers and other displaced workers. Funds made available in the 1989 appropriation will fund a new project recently awarded to Joliet Junior College in Joliet, Illinois. This project will broker funds provided under the Job Training Partnership Act and provide supplemental services for dislocated workers from various industries in the area.

The fiscal year 1990 appropriation provided funds to continue the dislocated workers demonstration program and to support regional skills training centers under the cooperative demonstration authority. In response to congressional report language, some of these regional skills training centers will be devoted to the masonry trades. The remainder will address other construction trades.

1991 Budget Proposal

As soon as new authorizing legislation is enacted, a budget request in the amount of $929,675,000 for Vocational Education will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

1. Vocational education: e. National programs: (3) Data systems (Carl D. Perkins Vocational Educaton Act, Title IV, Part C)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or Decrease
$4,932,000	---	---

1/ The GEPA extension expires September 30, 1990. New authorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

Title IV, Part C of the Carl D. Perkins Vocational Education Act authorizes a National Occupational Information Coordinating Committee (NOICC) and a national vocational information data reporting and accounting system. Section 451 of the Perkins Act requires that 30 percent of the funds appropriated for Title IV be allocated to data systems under Part C.

NOICC -- NOICC has been funded jointly with the Department of Labor since fiscal year 1978. The Perkins Act sets minimum annual funding from the Department of Education for NOICC at $3,500,000.

The Committee is composed of subcabinet officials of the Departments of Education, Labor, Agriculture, Commerce, and Defense. NOICC and its affiliated State Occupational Information Coordinating Committees (SOICCs) assist students, educators, and vocational education program planners in assessing current and future labor market conditions by assembling and disseminating job information. Its activities include: attempting to improve the use of employment data by vocational educators, guidance counselors, students, employment training administrators, and other users; developing and implementing an occupational information system to meet the common information needs of vocational education and employment training planners; and conducting studies on the effects of technological change on new and existing occupational areas. NOICC also provides funding to SOICCs, which operate occupational information systems in the States.

Both H.R. 7 and S. 1109 would mandate a new longitudinal occupational information demonstration program, to be conducted by NOICC.

Purpose and Method of Operation — Continued

Data on Vocational Education (DOVE) — To meet the need for information on vocational education in the United States, the Department has developed a derivative data system, called DOVE, to collect and compile selected data relevant to vocational education from other surveys and studies conducted by the Department, including the National Assessment of Educational Progress (NAEP) transcript study, the Integrated Postsecondary Education Data System (IPEDS), the National Educational Longitudinal Study of 1988 (NELS88), and the Schools and Staffing Surveys of the Elementary and Secondary Integrated Data System (ESIDS). Funds for DOVE are provided entirely from the Research and Statistics Account.

Accomplishments

NOICC -- Over the past several years, NOICC's primary objective has been to maintain basic assistance grants to States in support of their program planning and career information systems. Approximately three-quarters of NOICC's annual funding, including both the Education and Labor Department allocations, is made available to the States to support the activities of the SOICCs. The remaining funds are used for information systems development and delivery, communication and coordination activities, and administration. The SOICCs use their grants for a wide variety of activities to improve the dissemination and use of data in career counselling and employment policy planning.

The two key activities supported by NOICC through the SOICCs are Occupational Information Systems, which assemble and disseminate labor market information from State and local sources for use by State and local planners and administrators, and Career Information Development Systems (CIDS), which make available career-related information for use by individuals in making job-search and education decisions. CIDS data are generally available at institutions of higher education, employment service offices, vocational rehabilitation agencies, libraries, correctional institutions, and community-based organizations.

The Department initiated a study of NOICC and the SOICCs in 1989, that included data collection and site visits to five SOICCs. Preliminary data from this study indicate that NOICC grants to the SOICCs in program year 1987 accounted for over 60 percent of SOICC funding. However, the State match varied widely by State. Some States provide as much as 85 percent of their SOICC's support, while at least one State provided as little as 14 percent.

Accomplishments -- Continued

The study team contacted a non-representative sample of CIDS users in each of the five States that operate a CIDS, to learn their opinions of the systems. The respondents generally indicated that the data are accurate and of high quality, but that similar data are available from other sources. However, in those States studied, CIDS is the only comprehensive source of such data.

DOVE -- Funding for DOVE is provided entirely from the Education Research and Statistics account. Since the system relies primarily on "derived" data, progress depends upon the completion of other studies. However, one great advantage of this approach is that data on vocational education can be analyzed in the context of similar data on the balance of the education enterprise. The completion of some surveys in the past few years, including the NAEP transcript study and the IPEDS 1987 Survey of Fall Enrollment in Occupationally Specific Programs has made available for analysis several important data sets related to vocational education. As a result, the National Center for Education Statistics published several new reports in 1988 and 1989:

- Vocational Education: Statistical Data Plans and Programs of NCES;
- Enrollment and Age Status of Postsecondary Vocational Students Who Were High School Graduates in 1972;
- Entry and Persistence of Postsecondary Vocational Students Who Were High School Graduates in 1972;
- Enrollment, Completion, Attrition, and Vocational Course-Taking Patterns in Postsecondary Education: A Comparison of 1972 and 1980 High School Graduates Entering Two-Year Institutions; and
- The Postsecondary Vocational Education of 1980 High School Seniors: The Two-Year Associate of Arts Degree.

In response to criticism from Congress and the vocational education field about the lack of information on vocational education, the Department formed a working group on vocational education data in 1989. This group has identified three strategies for improving DOVE: 1) doing a better job of bringing existing data to bear on current policy issues by means of focused analyses and reports; 2) making on-going data surveys more relevant to vocational education by adding appropriate questions or refining questions; and 3) in areas where there is little information to build on, conducting additional surveys. As a result of the working group's efforts, some

Vocational and Adult Education

1. Vocational education: e. National programs: (3) Data systems

---

Accomplishments — Continued

progress has been made, and improved data on vocational education can be anticipated. In fiscal year 1990, NCES will publish several new reports. The Condition of Education, expected in October 1990, will include some indicators of the "condition of vocational education." Vocational Education Course Taking Patterns will examine trends in secondary vocational education course taking patterns based on transcript surveys for the High School and Beyond class of 1982 and the NAEP class of 1987. An analysis of Schools and Staffing Survey data will be done in order to report on Vocational and Non-Vocational Teachers. Finally a publication is planned, the Condition of Vocational Education, which will synthesize all available data collected recently on vocational education.

1991 Budget Proposal

As soon as new authorizing legislation is enacted, a budget request in the amount of $929,675,000 for Vocational Education will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

1. Vocational education: f. Bilingual vocational training
(Carl D. Perkins Vocational Education Act, Title IV, Part E)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or Decrease
$2,959,000	---	---

1/ The GEPA extension expires September 30, 1990. New authorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

Under the Bilingual Vocational Training (BVT) program, funds are awarded to State and local educational agencies, institutions of higher education, public and private nonprofit organizations, and private for-profit organizations as follows:

- Of the total funds available, 75 percent are used for Bilingual Vocational Education at the postsecondary level to train limited English proficient persons for jobs. The training must include instruction in English.
- 15 percent of the total funds are used for the Instructor Training program to train instructors for bilingual vocational training programs.
- The remaining 10 percent of the funds are used for the development of instructional materials, methods, or techniques, and for research in bilingual vocational training.

Both H.R. 7 and S. 1109 would maintain the current authority for Bilingual Vocational Training programs.

This is a forward-funded program. Funds appropriated for fiscal year 1990 will become available July 1, 1990, and remain available until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Vocational and Adult Education

1. Vocational education: f. Bilingual vocational training

Accomplishments

The Bilingual Vocational Training program emphasizes increasing the capacities of States to serve limited English proficient students through the use of State funds. Fiscal year 1989 funds are supporting 11 training projects begun with fiscal year 1988 funds to demonstrate effective curricula and techniques for training limited English proficient adults in vocational skills and work-related language skills. These projects expect to serve approximately 800 participants in each year of the two-year project period.

In recent years, the Department has sought to improve the long-term placement rate for the participants of these projects. For the 1986-87 program year, the projects reported that 65 percent of project participants were placed in jobs related to their training, or pursued further education or training, as of 90 days after the project's completion. However, most project reports do not include in the placement rate calculation the number of project participants that drop out of the training prior to completion. Inclusion of these dropouts in the calculation would lead to somewhat lower placement rates. The Department is actively encouraging projects to pursue a more comprehensive evaluation design that would include longer-term follow-up of participants.

Bilingual vocational instructor training has, in the past, been used for pre-service training for postsecondary students. However, many of these students never went to work in bilingual vocational training programs. Discussions with bilingual vocational training directors indicate that the shortage of well-trained personnel in these programs could be addressed better through high-quality in-service training for instructors. Therefore, fiscal year 1988 and 1989 funds are being used for in-service training programs that will attempt to increase States' capacity to serve the limited English proficient adult population. Two awards were made from fiscal year 1988 funds in September 1989, and three additional awards were made from fiscal year 1989 funds in December 1989 for innovative projects that will address regional, State-wide or national needs for bilingual vocational instructor training. These projects will work with community colleges, schools that provide adult education and training, refugee programs, and other service providers to improve teacher training and curriculum materials and modify current practices to increase the capacity of the service delivery system for limited English proficient adult training.

Funds designated for development of materials, methods, and techniques, have in recent years been used for a variety of activities designed to increase States' capacity to provide bilingual vocational training services to the limited English proficient.

Vocational and Adult Education

1. Vocational education: f. Bilingual vocational training

Accomplishments -- Continued

These activities have included efforts to work with States to improve the planning and coordination of BVT programs for the limited English proficient population, and to provide technical assistance to local BVT programs to help them adopt or adapt successful features of a BVT model program to improve their own programs without direct Federal grants. Fiscal year 1989 materials and methods funds are being used to provide technical assistance to nine education and business partnerships working with large groups of limited English proficient employees to improve existing training programs. Fiscal year 1990 funds will support a project to work with the American Association of Community and Junior Colleges to provide training on a regional basis to community college administrators and teachers, in order to modify service delivery and improve services to limited English proficient adults throughout the country.

1991 Budget Proposal

As soon as new authorizing legislation is enacted, a budget request in the amount of $929,675,000 for Vocational Education will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

Impact Data	1989	1990	1991 1/
Bilingual vocational education	$2,828,250	$2,219,250	---
Number of projects	11	10	---
Average award	$257,114	$221,925	---
Instructor training	$565,650	$443,850	---
Number of projects	3	3	---
Materials development	$377,100	$295,900	---
Number of projects	1	1	---

1/ Specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

2. Adult education: a. State programs (Adult Education Act, Part B)

1991 Authorization: Indefinite 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$157,811,000	$200,000,000	+$42,189,000

1/ Under the Adult Education Act, the Secretary may reserve up to $3,000,000 for National programs if the overall appropriation exceeds $108,000,000. The remainder is available for State programs.

Purpose and Method of Operation

The Adult Education Act authorizes grants to the States and Outlying Areas to support programs that assist educationally disadvantaged adults in developing basic skills, including literacy, and in achieving certification of high school equivalency.

Funds are allocated on the following basis: (1) each State first receives $250,000 and each Outlying Area receives $100,000; (2) any remaining funds are distributed under a formula based on the number of persons aged 16 and over in a State who do not have high school diplomas and who are not required to be enrolled in school.

In fiscal year 1991, Federal funds may support up to 80 percent of each State's program and up to 100 percent of the programs in Outlying Areas. Each State must use at least 80 percent of its funds to help adults achieve basic skills, including literacy. No more than 20 percent may be used for high school equivalency programs. Within this framework, a State must use at least 10 percent of its funds for corrections education and education for other institutionalized individuals, must use at least 10 percent for experimental demonstrations and teacher training projects, and must give special attention to the needs of persons of limited English-speaking ability. Beginning in fiscal year 1990, a State may use no more than 5 percent or $50,000 of its grant, whichever is greater, for administration.

This is a forward-funded program. Fiscal year 1990 funds will become available on July 1, 1990, and remain available for obligation until September 30, 1991. The level of funding is dependent on the availability of appropriations.

Accomplishments

State performance reports indicate that about 3 million persons received services under the Adult Education Act basic State programs grant in 1987-88. About 65 percent of these participants received instruction in basic skills or English as a second language. The remaining 35 percent received instruction leading to high school equivalency. Of these participants, 30 percent were limited English proficient and 7 percent were institutionalized adults. According to fiscal year 1988 annual reports received from States, over 22,000 participants left the welfare roles in 1987-88, over 114,000 participants obtained jobs, and another 69,000 participants received job promotions that they attributed to their additional education. Nearly 70,000 participants obtained a high school diploma or equivalency certificate.

Over the last fifteen years, State and local, as well as private sector, support for adult education has increased dramatically. The proportion of funding attributable to non-Federal sources rose from an estimated 25 percent in 1969-70 to 76 percent in 1986-87, according to latest available State financial reports. Because the reauthorized Adult Education Act requires States to increase the match for Federal funds to 25 percent by 1992, non-Federal support for adult education is expected to increase even more rapidly.

Services are now provided not only through the public schools but through community-based organizations, community colleges, private businesses, churches, and labor unions. In recent years, business involvement has increased dramatically, as employers have begun to see tangible benefits for productivity in workplace adult education programs. Hundreds of businesses now support adult literacy activities.

Within the Department, the Division of Adult and Literacy Education serves as a focal point for Federal adult education and literacy activities and provides leadership to the adult education community. During 1989, the Division was active in several initiatives. The Department jointly sponsored, with the Department of Labor, and a variety of business, industry, and labor organizations, a conference on workplace literacy, to promote workplace literacy projects throughout the country. The Department has also participated with the Commission for the Bicentennial of the Constitution in developing a model adult education program to address the Constitution. The Department is also working closely with the Departments of Labor and Health and Human Services to support the implementation of the new JOBS program, authorized by the Family Support Act of 1988.

In spite of these efforts, adult illiteracy is still a pressing problem. Analysis by the Department of Education of data from the Census Bureau's 1982 English Language Proficiency Survey showed that:

Accomplishments — Continued

- The number of illiterate adults, aged 20 and over, is between 17 and 21 million;
- 1/3 of these adults were born abroad and nearly all of these speak a non-English language at home;
- 1/3 of these adults are age 60 and over; and
- Of the native English-speaking adults who are classified as illiterate, 70 percent are school dropouts.

While younger adults may not display profound illiteracy, they often lack higher-level skills needed to perform more technically complex work. In 1986, the National Assessment of Educational Progress (NAEP) released a report on literacy levels of 21- to 25-year olds. This report revealed that while most of this population of young adults cannot be classified as "illiterate," neither are they fully "literate" for a technologically advanced society. NAEP developed "literacy scales," representing distinct aspects of literacy, including prose literacy, document literacy, and quantitative literacy. Most young adults adequately perform tasks at the lower levels on each of the three scales, but only a small percentage can perform at levels required for more complex and challenging tasks.

1991 Budget Proposal

In response to the need for additional services described above, the request for Adult Education State programs is $200,000,000. This request represents a $42,189,000, or 27 percent, increase over the 1990 level. Increasing adult literacy and improving workforce productivity through basic skills education is one of the Administration's highest priorities for education. The Adult Education State grant is the primary vehicle for Federal assistance to the States and localities in this effort. This increase in funding would allow States to pursue more extensive literacy projects, and would demonstrate Federal commitment to this high priority effort.

Impact Data	1989	1990	1991
Number of grants	57	57	57
Average grant	$2,392,000	$2,769,000	$3,509,000
Total participants (estimated)	3,000,000	3,300,000	3,960,000
Basic (Grades 0-8) and ESL	2,100,000	2,300,000	2,760,000
Secondary (Grades 9-12)	700,000	1,000,000	1,200,000

2. Adult education: b. National programs
(Adult Education Act, Part D)

1991 Authorization: Indefinite 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$1,973,000	$8,000,000	+$6,027,000

1/ Under the Adult Education Act, the Secretary may reserve up to $3,000,000 for National programs if the overall appropriation exceeds $108,000,000. The remainder is available for State programs.

Purpose and Method of Operation

Amendments to the Adult Education Act, enacted through P.L. 100-297, substantially revised the authority for Adult Education National programs. The new Act authorizes activities that include:

- Grants to States and local eligible recipients for adult education programs for migrant farmworkers and immigrants;
- Grants to States and local eligible recipients for programs to train adult volunteer tutors;
- A broad program of assistance to States in evaluating the status and effectiveness of adult education programs, as well as recurring reports on the extent of adult illiteracy in the Nation;
- A program of applied research, development, dissemination, evaluation, and related activities to contribute to the improvement and expansion of adult education; and
- Research on the special needs of persons requiring adult education, including a study of the magnitude and nature of the needs of adults with learning disabilities who are eligible for participation in adult education programs.

The reauthorized Adult Education Act specifies that if at least $108,000,000 is appropriated for adult education, up to $3,000,000 may be used for National programs. This program is forward-funded. Fiscal year 1990 funds will become available July 1, 1990, and remain available until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

2. Adult education: b. National programs

Accomplishments

Prior to 1988, no funds had been appropriated for many years for national-level programs to support literacy and adult education activities in the field. The appropriation of funds for this purpose beginning in 1988 allowed the Department to initiate an ambitious program of research, evaluation, and dissemination that includes the following activities:

- The National Assessment of Adult Literacy, mandated by P.L. 100-297, is using a survey methodology to produce estimates of the literacy of the adult population based on a nationally representative sample of adults. Adult Education Act funds were used to launch this new data series; beginning in 1990, funds are provided from the Research, Statistics, and Improvement of Practice account. The first data from the survey will be produced in 1993;
- Secondary analysis of existing data bases created by past studies including the NAEP Young Adult Literacy Survey, to gain greater understanding of the information available in these data bases;
- Case studies of promising adult education programs to gather information on how programs work and identify effective approaches;
- A study of adult education curriculum materials and instructional strategies;
- A mandated study of federally-supported programs that provide adult education services, funded and administered jointly with the Departments of Labor and Health and Human Services, to be completed late in 1990;
- A project to develop a resource base available to adult education teachers and administrators planning programs for migrant farmworkers;
- An Adult Basic Education (ABE)/English as a Second Language (ESL) teacher training project to review current practice in ABE and ESL instructor training, including volunteer training, and to identify and disseminate information on promising inservice and preservice training programs;
- Two field-initiated projects to develop technology that will assist adult education;
- A project, jointly supported with the Departments of Labor and Health and Human Services, to provide technical assistance to the States in administering the new JOBS program, authorized by the Family Support Act of 1988;

Accomplishments -- Continued

- A review of the Workplace Literacy program, to collect and assess data available from the projects that may yield information on effective workplace literacy approaches, to be completed in 1991;
- An Adult Education Program Effectiveness Literature review and design study, to lay the groundwork for a large scale, multi-year study of the effectiveness of programs supported under the Adult Education Act, and to provide recommendations for program improvements to inform the next reauthorization; and
- A multi-year study of a nationally representative sample of adult education programs, that will investigate seasonal and geographic patterns of participation, client characteristics, causes of client attrition, learning gains, and costs and outcomes, to be completed in 1992.

1991 Budget Proposal

For 1991, $8,000,000 is requested for Adult Education National programs. Of this amount $3,000,000 would be used to continue the ambitious research, development, and evaluation agenda already underway. This agenda will substantially increase and improve the data available on adult education in order to support policy analysis for the Adult Education Act reauthorization in 1993, provide technical assistance to adult education practitioners, and support Federal policy development. Approximately $2,000,000 of this amount is needed to continue funding for the National Study of Adult Education Programs, if results are to be made available in time for the next reauthorization. The Department will also use these funds to continue support for the JOBS Technical Assistance project, and to begin a study of the Literacy Training for Homeless Adults program.

The remaining $5,000,000 will be used to initiate a National Adult Education Clearinghouse, authorized by section 384 of the Adult Education Act. This project will go beyond the traditional activities of collecting and disseminating information to provide leadership and direct support for an integrated program of research and development, identification and dissemination of best practices in adult education and to provide technical assistance to the adult education field. This project will provide a comprehensive resource center for information which can be used by Federal, State and local agencies, national organizations, policymakers, researchers and practitioners to establish, improve or expand adult literacy programs. The center will be administered within the Office of Educational Research and Improvement (OERI) and will be guided by an advisory group of literacy experts. A national center of this type will provide, for the first time, a focal point for research and information on adult education and literacy programs, and represents a major new Federal commitment to directly address literacy education.

2. Adult education: c. Literacy training for homeless adults
(Stewart B. McKinney Homeless Assistance Act, Title VII, Subtitle A)

1991 Authorization: $10,000,000 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$7,397,000	$10,000,000	+$2,603,000

1/ The GEPA extension expires September 30, 1991.

Purpose and Method of Operation

Section 702 of the McKinney Homeless Assistance Act authorizes grants to States to develop and implement programs of literacy training and basic skills remediation for homeless adults. Beginning in 1989, funds have been allocated as discretionary grants to States and Outlying Areas, on the basis of State applications. States may carry out program activities either directly or through grants or contracts with local recipients. In order to take part in the program, States are required to file an application with the Department.

This is a forward-funded program. Fiscal year 1990 funds will become available July 1, 1990, and remain available until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Funds for this program were appropriated for the first time in the 1987 Supplemental Appropriations Act and were awarded in July 1988. Fiscal year 1988 funds were awarded soon after, and the fiscal year 1989 funds were awarded on a discretionary basis in November 1989. States have only recently completed the first year of operating this program and final reports have not yet been submitted. States are using their grants primarily to contract with LEAs and shelter operators to provide literacy training in the shelters. Most States are awarding funds to a few projects in municipalities with high concentrations of homeless.

2. Adult education: c. Literacy for homeless adults

1991 Budget Proposal

For fiscal year 1991, $10,000,000 is requested for Literacy Training for Homeless Adults. This would provide full funding for this program which serves an exceptionally disadvantaged population who may otherwise not be served by regular adult education programs. This program also helps to draw State and local attention and resources to the problems of the homeless.

Impact Data	1989	1990	1991
Number of awards	30	30	30
Average grant...............	$236,467	$246,567	$333,333

2. Adult education: d. Workplace literacy partnerships (Adult Education Act, Part C, Section 371)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$19,726,000	$19,726,000	---

Purpose and Method of Operation

This program provides discretionary grants for demonstrations to provide literacy training to meet workplace needs. These demonstration projects must be designed and operated by partnerships between business, industry, labor organizations, or private industry councils and SEAs, LEAs, IHEs, or schools. Employment and training agencies and community-based organizations are also eligible for grants. Services provided may include: adult secondary education; literacy training for limited English proficient adults; updating basic skills to meet the changing needs of the workplace; improving the competency of adult workers in speaking, listening, reading, and problem-solving; and educational counseling, transportation, and child-care services. Grant recipients are required to provide 30 percent of program costs.

This is a forward-funded program. Funds for fiscal year 1990 become available July 1, 1990, and remain available until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Funds for this program first became available in December 1987 on a current-year basis for fiscal year 1988. The first awards were made in September 1988 for projects in 26 States and the District of Columbia. As these initial projects are just now finishing, final reports are not yet available. Approximately 43 new awards will be made in March 1990 from funds appropriated in 1989. Workplace literacy projects are generally of two types. Some projects provide basic skills training for workers who must master new technology in order to retain their jobs. Other projects provide English-as-a-second-language training for limited English proficient workers.

The Department has been active in providing leadership and promoting workplace literacy models as an avenue for the business community to become involved in the literacy movement. In November 1989, the Department jointly sponsored, with the Department of Labor and several business, industry, and labor organizations, a conference to promote workplace literacy programs.

Vocational and Adult Education

2. Adult education: d. Workplace literacy partnerships

1991 Budget Proposal

For fiscal year 1991, $19,727,000 is requested for workplace literacy partnerships. This will provide level funding for this activity, which supports literacy efforts by the business community. This program has generated tremendous interest in the field; over 300 applications were received for funding under the initial competition. The program complements the activities supported under the Adult Education State Grant program.

Impact Data	1989	1990	1991
Number of grants...........	43	70	70
Average award..............	$275,721	$281,800	$281,800

---

2. Adult education: e. English literacy grants (Adult Education Act, Part C, Section 372)

1991 Authorization: $29,000,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$5,888,000	$1,000,000	-$4,888,000

Purpose and Method of Operation

Section 372 of the Adult Education Act authorizes grants to States to establish, operate, and improve English literacy programs for individuals of limited English proficiency. Funds may be used to provide services to program participants, including child care and transportation. Each State must use at least 50 percent of its grant to fund programs operated by community-based organizations with demonstrated capability to administer English proficiency programs.

Since the authorizing statute does not specify a formula for the distribution of these funds to the States, the Department published regulations that include such a formula. Funds are allocated to States according to the relative numbers of individuals 18 or older who are limited English proficient, except that no State may receive less than $25,000. Puerto Rico receives $25,000, and each Outlying Area except the Republic of Palau receives $10,000. The Republic of Palau receives a portion of $10,000 proportionate to its share of the total population aged 18 or older of the Trust Territory as formerly constituted.

The Secretary is authorized to use up to 10 percent of funds available for this program to carry out a national demonstration program consisting of: (1) the development of innovative approaches and methods of literacy education for individuals of limited English proficiency utilizing new instructional methods and technologies, and (2) a national clearinghouse on literacy education for the limited English proficient to collect and disseminate information concerning effective approaches and methods.

This is a forward-funded program. Funds appropriated for fiscal year 1990 will become available July 1, 1990, and remain available until September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Funds for this program were first appropriated for fiscal year 1989, and became available on July 1, 1989. Initial grants to States were made in the fall of 1989. To fulfill the mandate for a clearinghouse, an award was made

Vocational and Adult Education

2. Adult education: e. English literacy grants

Accomplishments — Continued

for an adjunct ERIC Clearinghouse on Literacy Education for the Limited English Proficient. As specified in the authorizing legislation, the clearinghouse is being operated by the Center for Applied Linguistics, in Washington, D.C. Remaining funds for the national demonstration program are being used for a project to develop a handbook of effective practices in literacy education for limited English proficient adults.

1991 Budget Proposal

For fiscal year 1991, $1,000,000 is requested for English Literacy grants, all of which would be used for national demonstration activities authorized under section 372(d) of the Adult Education Act. No funds are requested for the English literacy State grant program. Limited English proficient adults who are in need of literacy services can be served through the basic Adult Education State grant program. English-as-a-Second Language programs are the fastest growing sector of services provided under the State grant program, and comprise approximately one-third of all activities under that program. There is no need for a second formula grant for services to this population. The Department can better assist this population by sponsoring carefully designed and evaluated demonstrations that determine the most effective approaches under varying conditions. The clearinghouse on literacy education for the limited English proficient would be continued under this request.

3. Technology education demonstrations
(Omnibus Trade and Competitiveness Act of 1988, Title VI, Subtitle B, Chapter 2, Section 6112)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$988,000	$988,000	---

Purpose and Method of Operation

This program provides grants to LEAs, SEAs, consortia of public and private agencies, organizations and institutions, and IHEs, for not more than ten demonstration programs in technology education for secondary schools, vocational education centers, and community colleges.

Projects are to address as many of the following components as possible:

- Educational course content based on an organized set of concepts, processes, and systems that is uniquely technological and relevant to the changing needs of the workplace, and fundamental knowledge about the development of technology and its effect on people, the environment, and culture;

- Instructional content drawn from the fields of communication, construction, manufacturing, or transportation;

- Assisting students in developing insight, understanding, and application of technological concepts, processes, and systems;

- Educating students in the safe and efficient use of tools, materials, machines, processes, and technical concepts;

- Developing student skills, creative abilities, confidence, and individual potential in using technology;

- Preparing students for lifelong learning in a technological society;

- Activity-oriented laboratory instruction that reinforces abstract concepts with concrete experiences;

- An institute for developing teacher capability in the area of technology education;

Purpose and Method of Operation — Continued

- Research and development of curriculum materials for use in technology education programs;
- Multidisciplinary teacher workshops for the "interfacing" of mathematics, science, and technology education;
- Employment of a curriculum specialist to provide technical assistance for the program;
- Stressing basic remedial skills in conjunction with training and automation literacy, robotics, computer-aided design, and other areas of computer-integrated manufacturing technology;
- A combined emphasis on "know-how" and "ability-to-do" in carrying out technological work.

Federal assistance may not exceed 65 percent of a project's costs. At least 10 percent of these costs must be provided by the private sector.

Funds for this program were appropriated in fiscal year 1990 in the School Improvement Programs account on a current-funded basis, and will remain available until September 30, 1990. Fiscal year 1991 funds are requested on a forward-funded basis, to become available July 1, 1991, and remain available until September 30, 1992.

Accomplishments

Since funds for this program were appropriated for the first time in November 1990, awards have not yet been made. The Department plans to make awards as quickly as possible.

1991 Budget Proposal

For fiscal year 1991, $988,000 is requested for Technology Education Demonstrations. This will provide level funding for this new program while the Department begins to assess its impact.

1/ Under the amended Carl D. Perkins Vocational Education Act, State Allocations for Titles II and III are made by using the estimated State products of: (1) the State allotment ratios, based on inverse per capita income, with limits of 0.60 and 0.40; and (2) the States' population ages 15-19, 20-24, and 25-65. No State may receive less than its allocation for fiscal year 1985. If additional funds are available, no State, the District of Columbia or Puerto Rico may receive less than 0.5 percent of the total amount available, but no State may receive more than 150 percent of its previous year's allocation as a result of this provision. State totals are then divided into Basic Grant (Title II), Community-Based Organizations (Title III), and Consumer and Homemaking (Title III) allocations. No Outlying Area may receive less than $200,000 for the combination of all programs.

2/ Amounts for Vocational Education in 1991 are proposed for later transmittal under pending legislation. After reauthorizing legislation is enacted, amounts for individual activities will be specified.

[1] Under the amended Carl D. Perkins Vocational Education Act, $50,000 each is alloted to the 5 Outlying Areas. Then, funds are allocated to States by using the estimated State products of: (1) the State allotment ratios, based on inverse per capita income, with limits of 0.60 and 0.40; and (2) the State's population ages 15-19, 20-24, and 25-65, except that no State may be allotted less than $120,000 nor more than $225,000.

[2] Amounts for Vocational Education in 1991 are proposed for later transmittal under pending legislation. After reauthorizing legislation is enacted, amounts for individual activities will be specified.

HOWARD UNIVERSITY

WITNESSES

CARLTON P. ALEXIS, INTERIM PRESIDENT

MELVIN W. JONES, VICE PRESIDENT FOR BUSINESS AND FISCAL AFFAIRS

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

ROBERT H. DAVIDSON, DIRECTOR, POSTSECONDARY ANALYSIS DIVISION, OFFICE OF PLANNING, BUDGET AND EVALUATION

DR. FRANKLYN G. JENIFER, PRESIDENT-ELECT

DR. RUSSELL L. MILLER, VICE PRESIDENT OF HEALTH AFFAIRS

Mr. NATCHER. At this time we take up the fiscal year 1991 budget request for Howard University. We have before the committee at this time Dr. Carlton Alexis.

Dr. Alexis, it is always a pleasure to have you before our committee. Before we take up your statement, tell us who you have with you at the table.

Dr. ALEXIS. Thank you, Mr. Chairman.

To my extreme left, I would like to introduce to the committee Dr. Franklyn Jenifer, who will assume the presidency of Howard on the first of April. He comes to us, incidentally, from Massachusetts.

That has no significance. Next to him is Dr. Russell Miller, the Vice President for Health Care, to my left, Melvin Jones, Vice President for Business and Fiscal Affairs. I think you know the two people from the Department, Mr. Davidson and Ms. Christensen.

Mr. NATCHER. Yes. We want to thank you for your introduction of the people at the table. Dr. Jenifer, it is a pleasure to have you here as President of the Howard University. There are no two finer Members in the House than my friends, Silvio Conte and Joe Early.

You will find that being from Massachusetts won't hurt you a bit. We are glad to have you.

Mr. JENIFER. Thank you very much. I am pleased to be here.

Mr. NATCHER. Dr. Alexis, we will be pleased to hear from you at this time.

Dr. ALEXIS. Thank you, Mr. Chairman. I have a brief statement I would like to read.

Mr. NATCHER. Go right ahead.

OPENING STATEMENT

Dr. ALEXIS. Mr. Chairman and Members of the Committee, on behalf of the Howard University community and the Administration, I am pleased to appear before you to present the Federal appropriation request for Howard University for fiscal year 1991.

The Administration is requesting, on behalf of the University, a Federal appropriation of $185,446,000 for fiscal year 1991, which provides an increase of $3,000,000 or 1.6 percent over the appropriation for fiscal year 1990. The increase is in support of the matching endowment program.

A Federal appropriation of $155,300,000 is requested for the academic programs, a level that is equal to the fiscal year 1990 appropriation. These funds, along with those ultimately realized from currently anticipated non-Federal revenue, will be used to maintain obligatory expenditures for fiscal year 1991. In fiscal year 1991, the University will continue to focus on management improvements, accreditation deficiencies, enhancement of the physical plant and academic program, and support for student services. Beginning in academic year 1990 to 1991, the university will implement the first phase of a 3-year plan to add a surcharge to the tuition rate for international students.

A $3,000,000 increase over the fiscal year 1990 appropriation level will allow the University to continue its effort to build its endowment by increasing the Federal matching component of the program.

In recognition of the need to increase non-Federal revenue sources, the University will accelerate its efforts to identify new sources of financial support.

The University's research appropriation request is $4,730,000, which is the same as the fiscal year 1990 appropriation. These research funds will support the continued progress of our graduate and professional programs.

The fiscal year 1991 request for Howard University Hospital is $20,900,000, which is the same as the 1990 appropriation.

I express the deep appreciation of the Howard University community to the committee for its support in the past years and our desire for your continuing support in the future.

I will be happy to answer questions that you or Members of the committee may have concerning our request.

[The statement follows:]

DEPARTMENT OF EDUCATION

Statement by

Carlton P. Alexis
Interim President of Howard University

Mr. Chairman and Members of the Committee:

On behalf of the Howard University community and the Administration, I am pleased to appear before you to present the Federal appropriation request for Howard University for fiscal year 1991.

The Administration is requesting, on behalf of the University, a Federal appropriation of $185.4 million for fiscal year 1991, which provides an increase of $3.0 million or 1.6 percent over the appropriation for fiscal year 1990. The increase is in support of the matching endowment program.

Academic Programs

A Federal appropriation of $155.3 million is requested for the academic programs, a level that is equal to the fiscal year 1990 appropriation. These funds, along with those ultimately realized from currently anticipated non-Federal revenue, will be used to maintain obligatory expenditures for fiscal year 1991. In FY 1991, the university will continue to focus on management improvements, accreditation deficiencies, enhancement of the physical plant and academic program, and support for student services. Beginning in academic year 1990-91, the University will implement the first phase of a 3-year plan to add a surcharge to the tuition rate for international students.

Endowment Program

A $3 million increase over the fiscal year 1990 appropriation level will allow the university to continue its effort to build its endowment by increasing the Federal matching component of the program.

In recognition of the need to increase non-Federal revenue sources, the University will accelerate its efforts to identify new sources of financial support.

Research

The University's research appropriation request is $4.73 million, which is the same as the fiscal year 1990 appropriation. These research funds will support the continued progress of our graduate and professional programs.

Howard University Hospital

The fiscal year 1991 request for Howard University Hospital is $20.9 million, which is the same as the 1990 appropriation.

I express the deep appreciation of the Howard University community to the Committee for its support in the past years and our desire for your continuing support in the future.

I will be happy to answer questions that you or members of the Committee may have concerning our request.

HOWARD UNIVERSITY

Biographical Sketch

NAME : Carlton P. Alexis

POSITION : Executive Vice President, Howard University

BIRTHPLACE AND DATE : Port of Spain, Trinidad, West Indies, June 29, 1929

EDUCATION : New York University, 1953, B.A.
Howard University, 1957, M.D.
Residency (Internal Medicine) Tripler Army Hospital, 1958-1959
Residency (Internal Medicine), Bronx Veterans Administration Hospital, 1961-1963
Fellowship in Endocrinology, Georgetown University Hospital, 1963-1964

EXPERIENCE

Present : Interim President, Howard University
1988 - 1989 : Executive Vice President, Howard University
1969 - 1987 : Vice President for Health Affairs, Howard University
1970 : Professor of Medicine, Howard University
1969 : Associate Professor of Medicine, Howard University
1965 - 1968 : Assistant Professor of Medicine, Howard University
1964 - 1965 : Instructor, Department of Medicine, Howard University

ASSOCIATION MEMBERSHIP

Board of Directors/ Trustee : D.C. General Hospital Governing Commission
: D.C. Commission on Budget & Financial Priorities
: American Association for Academic Health Centers
: District of Columbia Hospital Association
: Representative of the D.C. Medical Community,
: Department of Human Resources
: Health Sciences Consortium of D.C.
: Dominion National Bank of D.C.
: Howard University
: Washington Urban League, Inc.
: Sight Savers International

Memberships : American College of Physicians - Fellow
: American Medical Association
: American Society of Internal Medicine
: Association for Academic Health Centers
: D.C. Federation of Clinical Research
: Medico-Chirurgical Society
: Medical Society of the District of Columbia
: National Medical Association
: American Association for Higher Education

HONORS AND RECOGNITIONS : Docteur Honoris Causa, University of Haiti, 1972
Doctor of Science, Georgetown University, School of Medicine, 1980
Alpha Omega Alpha Honor Medical Society, 1957

CERTIFICATION : American Board of Internal Medicine, 1964

MILITARY SERVICE : 25th Medical Battalion, 25th Infantry Division, 1956-1961 (Discharged with rank of Captain)

FEDERAL REVENUE SUPPORT

Mr. NATCHER. Thank you, Dr. Alexis. The 1990 appropriation of $182,000,000 is expected to cover about 65 percent of the operating budget for Howard, as you know. If you count Federal student aid and grant funds, what portion of Howard's total revenue is expected to be deferred from Federal sources in the fiscal year 1990?

Mr. ALEXIS. When one adds to the Federal appropriation funds for student financial aid and grants, total Federal support will be in excess of 75 percent. We have not made a specific calculation. I would be glad to do that and provide it for the record.

HOSPITALS FURLOUGHS

Mr. NATCHER. We understand the university has announced involuntary furloughs and layoffs for its hospital employees. What can you tell us about this situation? Go right ahead, Dr. Alexis.

Mr. ALEXIS. I will be brief in responding today. The Howard University Hospital attempts to combine a teaching function with that of a public general hospital, which is in itself some may argue, an impossible feat.

The problems of the urban areas have not bypassed the Howard University Hospital. The net effects are is the problems of the boarder babies, the problems of the crack cocaine epidemic, the problems of the long stay elderly patients called by some the elderly boarders, and the crisis with the AIDS problem facing this Nation coupled and incredibly increased over the past few years with the utilization of our emergency services have combined to leave the hospital with almost half of its gross revenue as uncollectible.

The net result is that the hospital ended the last fiscal year with an operating deficit and faces pretty much the same situation for the current fiscal year.

[The following additional date was supplied for the record:]

HOWARD UNIVERSITY HOSPITAL

Mr. Chairman, Howard University Hospital is faced with an unrelenting volume of extremely ill patients who lack health insurance coverage or for whom Federal health insurance programs do not provide sufficient coverage. Fifty-five percent (55%) of the Hospital's patients are covered by medicare or medicaid, and seventeen percent (17%) are uninsured. Medicare and medicaid payments are both fixed at less than actual cost. Consequently, the Hospital cannot look to increased patient charges for additional revenue. Unlike most hospitals, our patient census is very high. As a result of the financial problem this situation presents, the Hospital's administrators must attempt to lower the cost of medical care at the Hospital while providing quality care to these patients with fewer human resources, due to budgetary constraints.

In 1989, the Hospital's cost to provide medical care greatly exceeded the payment it received for the provision of that care. The Hospital's cost to provide medical care continues to exceed receipts during the first 7 months of fiscal year 1990. Despite aggressive austerity measures by the Howard University Hospital, the medical needs of its patient population will overwhelm its financial ability to continue to provide medical services without additional assistance from the Federal government.

Howard University Hospital needs relief from the effects of a Federal health policy built on a national average payment. The consequences of a national debate between cost, medical necessity, and individual patient care fall on the poor, the medically indigent, and the aged rather than the healthy and economically sound members of our society.

Federal health policy has focused on the curtailment of Federal expenditures to hospitals. It has encouraged the use of ambulatory care for the treatment of more and more medical conditions. If a patient's condition warrants inpatient care for which payment is denied by medicare/medicaid, Howard University Hospital bears the burden; it is a choice of non-compensation or contributing to the possible loss of life. This situation is only exacerbated when you consider providing care to expectant mothers who are addicted to drugs. It is very easy to trace the increase in drug-related births to the elimination of local government funding for abortion in the District of Columbia by the Federal Government. Now the community must prepare to care for thousands of babies for the next sixty (60) to seventy (70) years who have been born with drug additions. While a few hundred dollars are saved on abortions, the community will have to care for the medical problems of these children for the remainder of their lives. Far too many of these children are born with malformed organs and brain stem injuries. This narrow application of a Federal policy unjustly hurts the District of Columbia and Howard University Hospital.

As I mentioned earlier, boarder babies are a problem at Howard University Hospital. Boarder babies are infants abandoned by their mothers, many of whom are drug addicted. These babies are abandoned in that their mothers leave the hospital without providing valid information regarding their address or telephone number, and without ever seeing their babies. Many of these infants are addicted to drugs, possess low birth weights, and manifest drug withdrawal symptoms within thirteen (13) days of birth; a small percentage are HIV positive.

In an effort to provide medical care and establish the legal guardianship and/or custody of these infants, Howard University Hospital has cared for some of these babies for their first one hundred and twenty (120) to five hundred and forty-five (545) days of life. During the first four (4) to eighteen (18) months of care in a hospital, such care costs nearly $200,000 per child; medicaid only reimburses $6,100 of this cost. In fiscal year 1989, Howard University Hospital spent approximately $7 million for the treatment and care of sixty (60) boarder babies. The Hospital was reimbursed only $500,000 for these services.

Howard University Hospital houses more boarder babies than any other hospital in Washington, D.C. Howard is the delivery hospital of choice by these expectant mothers. They know that the Hospital has the medical facilities and skill to care for them and their babies, and that Howard University Hospital will not refuse medical service but provide the care they require. The financial burden of these women becomes that of the Hospital once they are patients. No other medical facility in Washington, D.C., has rushed to assume this burden. Despite the Howard University Hospital's pleas and efforts to distribute the medical responsibility for these patients, no other facility is "competing" for a share of this market. The forces of "competition" want no part of this high cost, low payment business.

Howard University Hospital is licensed to provide care for thirty-five (35) infant beds. For almost 2 years, the Hospital's census has not been less than one hundred and fifty percent (150%) or fifty-two (52) infants. On many occasions the Hospital has provided medical care to seventy (70) to seventy-five (75) babies. Of this number, seventeen (17) to twenty (20) were babies abandoned by their families. The Hospital must care for these infants until the District of Columbia assumes custody of them and places them in a home setting. This process is extremely slow. While the legal and administrative details are negotiated and addressed, the Hospital is uncompensated.

With regard to the boarder elderly, existing medicare policy does not provide reimbursement for hospital care to adult patients who remain in acute care facilities beyond a preapproved number of days. There is a severe shortage of skilled nursing care beds in the Washington, D.C., metropolitan area. An elderly patient requiring skilled care, although a bed is unavailable, either remains in the hospital or is discharged without proper care. Since the latter is an unacceptable proposition, Howard University Hospital patients remain in our hospital and receive care. Medicare precludes the Hospital from billing the patient or medicaid, hence, the Hospital is uncompensated for the medical service. In fiscal year 1990, the Hospital will lose $9 million through providing care to these forgotten patients. Unfortunately, Federal health policy seeks to apply an average standard length of stay in a hospital to individuals who can control neither the availability of skilled nursing care beds nor their need for continued medical care. Regrettably, Howard cannot afford to continue to provide needed medical care for these patients in its acute hospital.

UNIVERSITY FINANCIAL CONDITION

Mr. **Natcher.** Thank you.

Dr. Alexis, how would you and the university auditors characterize the overall financial condition of the university as the new president takes over? Just generally speaking, what would you say?

Dr. **Alexis.** The auditors, as of June 30, 1989, have still not rendered an opinion but preliminary data would reveal that the institution ended the fiscal year with a balanced budget and that the past deficits of the last 25 or 30 years have been eradicated.

As Dr. Jenifer comes into his position, he should find the institution operating in the black. The danger that looms on the horizon (so that Dr. Jenifer does not feel too comfortable) is the problem of the Howard University Hospital and the possible hemorrhage it creates for the University in terms of its financial resources.

That is one of the major problems that he faces as he assumes the presidency.

Mr. **Natcher.** Dr. Alexis, speaking for myself as a member of this subcommittee and I think I speak for all of the Members of the subcommittee as well as the Members of the full Committee on Appropriations all down through the years, we have believed that Howard University is one of the great universities in this country.

We understand at times that Howard, like Western Kentucky University in my home town and other universities have problems. They all have problems. But I have served here now with a number of presidents of Howard University. I think the university is an outstanding university. If you had to list your achievements, Dr. Alexis, with all the other universities, you would be right high on the list from the standpoint of graduates and from the standpoint of achievements of a university generally.

That is how we feel on this committee about Howard University. I wanted to tell you that because I am going to ask you now a few questions with regard to a matter that you know about, I presume, and matters that I have been requested to inquire about.

PREVIOUS PRESIDENT'S RETIREMENT

Dr. Alexis, I have had a request asking the subcommittee to review the retirement package that was negotiated with the last president. The details of this arrangement were described in a recent *Common Cause* article entitled, "Executive Privilege". I have in my hand a copy of *Common Cause*, the edition that carries the executive privilege article concerning the matter that I want to discuss with you.

Would you review for us the terms of this package including the value of the annual pension that the outgoing president will receive and the arrangements concerning the president's house?

Dr. **Alexis.** Okay.

Let me attempt, Mr. Chairman, to provide the information that I have. Let me start by reviewing a little bit of history. James Cheek came to Howard University as its president in 1969, at a time of great turmoil in American higher education and indeed a time when our campuses were ablaze, literally.

Also, one should recall that the predicted survival of presidencies in the late 1960's probably averaged between 3 and 5 years. With that background and with the turmoil that I know some members of this committee recall faced the Howard University community in 1967–1968, Dr. Cheek was recruited from the presidency of Shaw University where he did an outstanding job, to come and lead Howard into the perilous 1970's.

Let me add that the board of trustees that recruited Dr. Cheek to Howard University and made arrangements for his compensation is no longer our board of trustees. So the current board of trustees inherited what a board had done 20 years previously. The board of trustees in recruiting Dr. Cheek in 1969 provided, as I understand it, a per annum retirement benefit. I would imagine, at the time when survival did not exceed 5 years or so, that this was no vision, if you wish, but certainly very few people guessed that Dr. Cheek would be president for 20 years.

Well as you know, Mr. Chairman, Dr. Cheek came to Howard and indeed changed the Howard landscape, not just the physical facilities but certainly the program offerings. One should note that in Dr. Cheek's 20 years at the helm there were more Howard graduates than in the preceding 100 years prior to the arrival of Dr. Cheek.

Dr. Cheek stayed as president for 20 years and executed, if you wish, the contract that had been signed by the Howard board of trustees 20 years earlier which provided for the retirement, which has been well heralded and for his purchase of the home where he currently resides.

It is my understanding that the terms, the sale at the 1969 price and the rate of interest for both first and second trusts were matters that were negotiated in the climate of 1969 where a house costing $115,000 could not have struck anyone's imagination as having a value four times that twenty years later. In a nutshell, arrangements were made in one financial and social environment and the deal was finally consummated in an entirely different one.

I suppose with hindsight the trustees may have offered a different arrangement but that was not the contract Dr. Cheek entered into.

Mr. Natcher. Dr. Alexis, what is the annual retirement income under this contract at this time and will it increase in the future years? What is the amount at the present time?

Dr. Alexis. I think it is $190,000. I know that there are no provisions for increases.

Mr. Jones. That is correct.

Mr. Natcher. The present retirement income now on into the future is $190,000 a year.

Mr. Jones. Yes, sir.

Mr. Natcher. What was the gift value of the transfer of the president's house for tax purposes?

Mr. Jones. Mr. Chairman, that was $500,000.

Mr. Natcher. The purchase price for the house was what?

Mr. Jones. I don't know the exact amount. I believe it was $115,000.

Dr. Alexis. It was $115,000.

Mr. Natcher. I understand some of the details as you pointed out were negotiated years ago. The board of trustees increased the value last year when the retirement decision was made. Were there any increases or changes if you recall last year by the board at that time?

Mr. JONES. As part of the final retirement package, Mr. Chairman, there were some increases, the specifics of which we can provide for the record. But they were part of the final retirement package for the president.

Mr. NATCHER. Was the money used for the purchase of the home borrowed from Howard University?

Mr. JONES. Yes, sir.

Mr. NATCHER. That is $150,000 or $145,000, whatever the house was sold for?

Mr. JONES. That is correct.

Mr. NATCHER. Can you tell us what the rate of interest was on the money borrowed?

Mr. JONES. The rate of interest on the entire amount was 5 percent.

NEW PRESIDENT'S HOUSE

Mr. NATCHER. We understand you have acquired another house for the new president. If you will, tell us what this house cost and how you are financing the house and what are the terms of its ownership?

Dr. ALEXIS. Mr. Chairman, I have appropriately not been in the loop on that part of it, so Mr. Jones can answer.

Mr. JONES. The value of the house, I believe, is $1,100,000, Mr. Chairman.

The University placed a mortgage on that property for 20 years. I believe the interest rate on that mortgage was 10 percent.

Mr. NATCHER. Mr. Conte.

Mr. CONTE. Thank you Mr. Chairman. I want to welcome to our committee, Dr. Alexis. I thank you for joining us. I understand you are stepping down next month.

Dr. ALEXIS. Yes, sir.

Mr. CONTE. I want you to know how much I appreciate the valuable service that you have provided. I look forward to working with my dear friend Dr. Jenifer, from the great Bay State of Massachusetts.

HOWARD UNIVERSITY UNIQUE CHARACTERISTICS

Dr. Alexis, what are the unique qualities and characteristics of Howard University that differentiate it from other institutions?

Dr. ALEXIS. Mr. Conte, one can start with the predominant racial characteristics both of its management and its target population. That is a simple characteristic. Within the arena of research-oriented universities, when one looks at the range of program offerings, indeed when one even looks at the peer institutions Dr. Cheek selected 18 years ago as Howard's peer group, one has difficulty in finding an institution with as broad an array of educational opportunities for young people.

Finally, if one looks at black leadership in this country and indeed black leadership in the world, one reads a list of hospitals who have Howard graduates. We think in the 125 years of our existence, we have been uniquely placed to influence higher education in this country, to provide educational opportunities and their attendant social, political, and economic opportunities for minority populations.

We think with the changing social tide that our institution is needed as much today as it was in 1867. We know that with the problems facing urban populations and I alluded earlier to the problems at the hospital, that our medical center is as critical an asset in this community and the national community today as it ever has been.

Mr. CONTE. The hospital, you say, is going to be a problem for Dr. Jenifer.

Dr. ALEXIS. Yes, sir.

Mr. CONTE. The District of Columbia uses the hospital a great deal, don't they?

Dr. ALEXIS. Yes, sir.

Mr. CONTE. What kind of a working relation do you have with the District of Columbia? Aren't you guys supporting that hospital?

Mr. ALEXIS. Yes, we have as smooth a one as one can expect, working relationships with the hospital and the medical care community, that is, the public sector.

The problems with the city hospital, D.C. General Hospital, are pretty much the same problems that we encounter. In some strange manner, however, although they are the public general hospital and we are not, very often we are harder hit on some of the problems than they are.

A case in point, when I reviewed the data in terms of cocaine babies abandoned in the city for calendar 1989, there were 101 such babies. Our institution took care of 41 of them. D.C. General took care of 15.

I have no easy explanation for that disparity other than to inform you that it is accurate. A big problem that this Congress can do something about is the problem of the uninsured or the underinsured. My information is that in this country there are currently 47,000,000 Americans uninsured or underinsured and having the predictable problems with reference to access to health care.

In this city with a total population of some 700,000 citizens, I understand that in excess of 100,000 residents of the District of Columbia are uninsured or underinsured.

I reviewed recently our gross revenue data for fiscal year 1989, only to discover that 23 percent of our gross revenue came from uninsured or underinsured patients, a group of patients for whom we are lucky when we can collect 50 percent of our billings. Stated in terms of numbers, a dollar drain in excess of $50,000,000.

When one adds to that the extended care given to patients with AIDS and also an emergency room visit load in excess of 90,000, when one realizes that 70 percent of our in-patients enter our hospital by way of our emergency room, one gets the grim picture of a health care system not only at Howard University but this city and elsewhere, certainly under siege with the real possibility of having a serious collapse.

Mr. CONTE. The other problem you had a few years ago was with the hotel. Has that been straightened out?

Dr. ALEXIS. I don't know if I would use the word "straightened out".

Mr. **Conte**. Is it operating in the black?

Dr. **Alexis**. Mr. Jones can tell us the figure but it is considerably less than in prior operating years.

Mr. **Conte**. Tell us about it.

Mr. **Jones**. The hotel as you know, Mr. Conte, suffers from its location. The hotel is a unique laboratory, however, for our hotel management school. That particular program has been moving along quite smoothly. The hotel, over the last 4 years, has seen a decrease in its overall deficit and for the period ending June 30, 1989, I believe that it is down to $100,000.

Dr. **Alexis**. I would add that if one prorated the educational costs as part of the hotel accounting, it probably could be shown to be operating as a break-even activity.

ENDOWMENT FUNDS

Mr. **Conte**. You are asking for a $3,000,000 increase in the endowment funds. How much money do you now have in the endowment?

Dr. **Alexis**. To this point roughly $9,000,000 has been appropriated. We have matched roughly $8,000,000. So there is a reduction of $1,000,000.

FUNDRAISING

Mr. **Conte**. Do you have any other sources of financial support?

Dr. **Alexis**. The quick answer is not enough. Mr. Conte, one of the charges that has been given to our incoming president, is the matter of private sector fundraising. We have had a new direction fund over the last decade. The board of trustees has recruited membership with business backgrounds and hopefully access to private sector board rooms and, therefore, private sector giving. It is my understanding that Dr. Jenifer, fortified by such new additions to our board of trustees and hopefully with new staff will spend a great deal of his time in garnering private funds.

Mr. **Conte**. Thank you.

Mr. **Natcher**. Mr. Early.

Mr. **Early**. That won't be any different from any other president, every one of them is basically a fundraiser. Is Dr. Jenifer going to spend 90 percent of his time fundraising like other college presidents?

Dr. **Alexis**. I have a problem with saying what percentage and I would prefer him to answer. But certainly considerably more than Howard has expended in the past.

Mr. **Early**. I think there is money out there for Howard on a national level.

HOWARD UNIVERSITY HOSPITAL

On the 50-percent uncollectibles, looking at it as a city hospital, or similar to a city hospital, it is a hospital that deals with poor people.

Dr. **Alexis**. Yes.

Mr. **Early**. How much is reimbursed by the D.C. government? If the hospital takes in a poor person from D.C. I would think the hospital would request the D.C. government to reimburse Howard University.

Dr. **Alexis.** I would have no problem with that conduit.

Mr. **Early.** Don't we do that?

Dr. **Alexis.** No. We get funded under the medicaid program as does every other hospital in the city. We also get funded from a medical charities program also run by the city. There are no other provisions for channeling funds to Howard University in recognition of the unique quasi-public general hospital function that it serves.

Mr. **Early.** Do any of the operating costs of the Howard University Hospital come out of your endowments? You say no and that is fine, but Children's Hospital in Boston, which is on the verge of going bankrupt, one of the finest hospitals in the world, is operating on endowment money. When you talk about financial problems that plague Howard University, they are not problems unique to Howard.

Dr. **Alexis.** I did not mean to say that. I think we are dealing with a national catastrophe that I think is on the verge of occurring.

Mr. **Early.** I don't think that 70 percent entering through emergency is excessively high.

Dr. **Alexis.** I would differ. I would suspect it would be a lot less, typically.

Ms. **Christensen.** Mr. Early, may I explain for the record the budget request the Department has in for the hospital? The 1967 law that transferred Freedman's Hospital over to Howard provided that over a period of time it become less dependent. What this and prior managers have done is to maintain level funding and that way gradually decrease it. We certainly recognize the terrible overall problem but I think the whole thing has to be looked at in the context of other resources and the larger problems that you are addressing now.

SICKLE CELL CENTER

Mr. **Early.** All right. My friend, Mr. Stokes, has done more for Howard than anyone I know. We hear continually about sickle cell anemia. Doesn't Howard have a sickle cell center?

Dr. **Alexis.** Yes, sir.

Mr. **Early.** Why aren't you making more progress on that disease?

Dr. **Alexis.** Sickle cell disease, the problem of S hemoglobin, sometimes one gets the feeling that it is a new disease and it certainly is not. Our institution unfortunately, in its sickle cell center, has been almost 100 percent service and treatment oriented.

Mr. **Early.** I hate to hear that.

Dr. **Alexis.** That is factual. We have not been involved in a great deal of bench or basic research.

Mr. **Early.** Is it because you don't have the people or the money to recruit researchers?

Dr. **Alexis.** A combination. We have 2 or 3 of what I would consider top line hematologists and that may not be enough of a critical mass given the volume of service delivery with which they are saddled. When you consider the frequency of the S hemoglobin in the black populations and recognize that fundamentally that is our entire patient population, the rate at which we see patients with the complications of the S hemoglobin opathy, you see that the staff that would be required is in excess of what we have.

Mr. EARLY. Then would you identify it as a treatment facility as opposed to a research facility?

Dr. ALEXIS. If I can speak for Dr. Scott, who is our director, I hope that when you give up on an interest in basic research and decide that all you prefer to be is a treatment facility, the ability to recruit good medical scholars to your institution diminishes and the quality of services that you deliver will diminish also.

So I think we should attempt to do both.

Mr. EARLY. President Jenifer is going to be a good president if he recruits good people. If he does not recruit good people, he will not be a good president. It is as simple as that.

As a medical scholar, I certainly would not be interested in Howard if all you are doing is treating patients and not doing any research on sickle cell anemia. How about low birth rates in minorities. Is Howard also just a treatment facility rather than a research facility for this problem?

LOW BIRTH RATES

Dr. ALEXIS. I will ask Dr. Miller.

Dr. MILLER. We are doing research in neonatology. We have found there are several recent findings, some are ours and some are not. In terms of low birth rate we always assumed that was related to socioeconomic circumstances.

Mr. EARLY. This Member thinks it is not a minority problem, it is an economic problem.

Dr. ALEXIS. This has been further complicated by the recent drug epidemics that we have seen. Our efforts and our attention are now turning not to the causes but how to get at those causes and measure outcomes.

FACULTY RECRUITMENT

Mr. EARLY. The question is how well do you recruit. Are you recruiting where you can compete with the Harvards and the other 127 medical schools? You know, you have a uniqueness in that you have Afro-Americans who might rather go to Howard and do research.

Dr. ALEXIS. We have young individuals on our faculty who are being developed to take those kinds of leadership roles and who are becoming nationally known.

Mr. EARLY. Are you satisfied that you have the autonomy to recruit, the salary structure and all the other things?

Dr. ALEXIS. That is the restraint, the salary structure.

Mr. EARLY. Do you do what the others do, give them a salary but they get something else for this and something else for that?

Dr. ALEXIS. We have to, too, sir.

NEW PRESIDENT'S HOUSE

Mr. **Early**. I hope so, otherwise you would be different. I think President Jenifer should move toward more basic research. On the president's house, I think probably they should have a house. We are going to pay $1,100,000 for the new president's house? What causes it to be $1,100,000? Is the house on campus?

Mr. **Jones**. No, it is not.

Mr. **Early**. How far off campus?

Mr. **Jones**. The house is located in the northwest part of Washington.

Mr. **Early**. We commented about the hotel, about some of its loss of revenues because of its location. Why not build a facility right on campus? I think each university should have a president's house, but it should be close to the campus. How far is this house, and why aren't we building the house on campus?

Mr. **Jones**. Well, the decision to purchase a home for the president was one made by the board of trustees.

Mr. **Early**. The 1969 board that we are blaming for the other problems?

Mr. **Jones**. No, it was made by the current board. A lot of factors were looked into. As you know, the housing costs in the Washington, D.C. area are quite steep. To identify a home that would satisfy the requirements of the new president's responsibilities, this particular home in the northwest was identified.

Mr. **Early**. Do you think Mr. Jenifer should stay accustomed to what he had in Massachusetts? He would not need $1,100,000 if he was staying on that track. Would you expand for the record why we are spending $1,100,000 and not building our own facility?

Mr. **Jenifer**. I feel a little awkward in answering—not officially taking the position until April 1 but you almost answered the question earlier when you raised the question and concern that Howard University needs to be about the very, very serious business of raising more private funds.

You talked about the president working 90 percent of the time raising funds. To raise those funds, as you well know, one has to have a facility and a locale in which he or she can entertain and attract people to that local facility for a variety of kinds of events. If you look at that locality, there are at least three other presidents in that locale.

They are in that locale. They are all in the same financial category. If you visit presidents' homes around the country, they are off campus. That is a growing trend. They are all homes that have an adequate facility to entertain. I assure you, if you look at the package of 20 years ago, I wish I was 20 years younger. I can assure you that is an investment for Howard University which I will be using for the period of time in which I am performing the functions.

I believe you will find that that kind of a facility will allow me to do the job in a better fashion that I would if I had to attract people to another area.

Mr. **Early**. If that is the trend, I would have to disagree with it. I would rather see you build a $1,100,000 facility on the Howard campus. That facility would stand out and attract people with money to the university. The houses I am thinking about back in Massachusetts, they are not that far off campus. College presidents don't raise their money on campus. They raise their money all over the country chasing contributors.

HOWARD UNIVERSITY HOSPITAL OUTREACH

One final question Mr. Jones. On the hospital, how much outreach are you doing with poor patients in regards to mammogram testing?

Dr. **Miller.** We have held several programs for that kind of outreach, not only mammograms but sickle cell and a number of them. With regard to mammograms, last year, they were offered at a reduced rate.

Mr. **Early.** Will you provide for the record what happened, when these test were provided, and what the cost was?

Dr. **Miller.** It was $25, the lowest rate in town. This year you might have seen one of the ads that was run in the *Post*. We encouraged the community to give your loved one a mammogram instead of roses because they thought that would have been a better gift given the circumstances and the cancer rate in Washington.

We have held a number of programs to educate the community, to inform them and to try to encourage them to have this procedure done.

Mr. **Early.** I think that is very worthwhile. I really believe that is what you should be doing. That is the first I've ever heard of anyone suggest giving a mammogram rather than giving flowers. I don't think that minorities need to have more cancer. I think that minorities—those who are poorer—who don't have the mammogram test—don't receive an early warning. If you would like to expand on that, I would appreciate it.

Thank you.

Mr. **Natcher.** Now, Dr. Alexis, before going into additional questions, let me say to you that I think you have been good for Howard University. I say that to you on the record and quite frankly. I have known you for a number of years now. I think you have been good for Howard. Let me say to the new president, Dr. Cheek had the ability and the knack for selecting people who were able, well qualified people and people who knew how to spell the word "loyal". The word loyalty meant a lot to him. That means a lot at the university.

Dr. Alexis, you and several others of you gentlemen sitting here in the room, I can name all of you, you have been good for Howard University. I want you to know as one Member of Congress, I appreciate your service.

Dr. **Alexis.** Thank you.

PEER INSTITUTIONS

Mr. **Natcher.** As you know the Department has recently submitted some preliminary data comparing various expenditures at Howard with those at similar institutions. This study will be inserted in the record at this point.

[The information follows:]

COMPARATIVE FISCAL ANALYSIS OF HOWARD UNIVERSITY

The study comparing Howard University to peer institutions is too lengthy to be inserted in the record and is, therefore, provided separately to the committee. An executive summary of the study follows:

HOWARD UNIVERSITY: A COMPARATIVE FISCAL ANALYSIS

EXECUTIVE SUMMARY

The United States Congress requested the U.S. Department of Education to conduct an evaluation of Howard University. This report responds to part of that request by analyzing: (1) general education revenues; (2) education and general expenditures; and (3) faculty salaries. To complete this mandate, the Department plans to do further analyses of Howard University including examining student characteristics and outcomes and an overall management review.

The analyses in this report compare Howard University to four different groups of higher education institutions. The four groups identified for this report are:

- Selected private institutions with hospitals--institutions chosen by Howard University as its peers because they are private institutions that offer similar curricula and degrees at the undergraduate, graduate and professional levels;
- Public universities with hospitals--research universities that, like Howard University, receive a large share of revenue from government appropriations;
- Competitor institutions--institutions that students who declined admittance to Howard University chose to attend; and
- Historically Black Colleges and Universities (HBCUs)--institutions, like Howard University, that serve predominantly black student populations.

Each of these groups provides a different perspective from which to assess the operation of Howard University as a major higher education institution in the country.

Analyses of expenditure and revenue data indicate that Howard University's revenues are largely generated from the same sources as public institutions, i.e., governmental, but its expenditures resemble those of large private institutions. Although an HBCU, Howard's fiscal data reveal more striking similarities with the private and public institutions with hospitals than with HBCUs or competitor institutions. With respect to revenues, comparisons of Howard University and the comparison groups reveal the following:

- Although a private university, Howard University received relatively small revenue shares from many of the principal revenue sources of other private universities. Tuition and fees, grants and contracts (Federal, state and private), and endowment income are examples of revenue sources from which Howard University received less than half as many funds as the selected private universities with hospitals.

- Both Howard University and public institutions with hospitals received over 50 percent of their revenue from government appropriations and less than 20 percent from tuition and fees. The main difference is that Federal funds supported Howard University, whereas the public institutions with hospitals received state appropriations.

- Howard University received three times more revenue per student than the group of HBCUs. Howard University also received twice as much revenue per student as the competitor institutions.

Some key findings concerning Howard University's expenditures are as follows:

- In terms of total expenditures per FTE, Howard University spent $22,843; this placed Howard University squarely between the public schools with hospitals at $15,067 and the selected private universities with hospitals at $30,648. Howard University's expenditures were significantly above the competitor institutions ($8,844 per FTE) and HBCUs ($7,822 per FTE) groups.

- When research is removed from total expenditures, Howard University's expenditures more closely resemble those of the selected private universities with hospitals. Excluding research, the difference between the two is less than $2,000 per FTE.

- Howard University did not spend as much on research as did the selected private institutions with hospitals or public institutions with hospitals. Indeed, Howard University spent only six percent ($1,332) of its per-FTE expenditures on research, compared to 24 percent ($7,305) dedicated to research among the private institutions with hospitals, and 16 percent ($2,454) among public institutions with hospitals. The competitor institutions and HBCUs spent 12 percent ($1,229) and four percent ($301) on research, respectively.

- In terms of dollars spent on academic expenditures ($9,579 per FTE), Howard University ranked below the selected private institutions with hospitals but above all other comparison groups. The average competitor institution spent a similar budget share on academic expenses (46 percent of total expenditures less research, compared to 44.5 percent at Howard) though less than half the dollar amount per FTE ($4,029).

- Howard University spent substantially more for total administrative expenses than any other type of institution. Howard University spent $5,981 (28 percent) per FTE on administrative costs; the selected private institutions with hospitals ranked second in total dollars spent on administration at $4,642 (20 percent). All other comparison groups spent less than half as much money on administrative expenditures as Howard University.

- Howard University also spent significantly more for plant operation and maintenance (14 percent) than any of the comparison groups. At $3,092, Howard University spent 1.2 times more than its selected private institutions with hospitals and more than twice as much as each of the other groups on plant operation and maintenance.

Of Howard University's full-time faculty, 78 percent had Ph.Ds. This is the same percentage as for the public institutions with hospitals group. The only comparison group with a higher proportion of full-time faculty was the selected private institutions with hospitals. Moreover, the ratio of students to full-time faculty was lower at Howard University (8.2 to one) than at any comparison group. Howard University also had a substantially larger percentage of part-time faculty (37 percent) than any comparison group.

With respect to faculty salaries and benefits, Howard University paid its faculty considerably less than the selected private institutions with hospitals, particularly in the upper ranks. Its salaries and benefits were fairly comparable, however, to the public institutions with hospitals.

PEER INSTITUTIONS

Mr. NATCHER. Tell us briefly which schools Howard selected to include as its peer group and how these were chosen. How did this come about?

Dr. ALEXIS. Mr. Chairman, let me state for the record that we were provided with an outline as to how the study would be conducted.

We were given an opportunity to respond by the 15th of February. After I had consulted with my colleagues on the Howard campus and with Dr. Jenifer by telephone and in writing, we formulated a response that expressed some of our concerns about the format. Such correspondence was delivered to the Department on the 15th.

We, however, on the 16th received the data that you have, stated differently. The data did not reflect, as I can understand it, the concerns that we had expressed in writing. Having said that, we are looking at 1985-1986 data which I suggest needs updating to as recent fiscal or academic year as possible.

That is one. Two, there are a couple of categories for comparison that I would consider invalid, number one, HBCUs. Their enrollments in many instances are one-tenth or one-fifth of Howard's enrollment.

Finally, the mixed group which is a mixture of some public schools, some State schools, and some HBCUs provided a potpourri of data that I do not consider meaningful. With those parenthetical remarks, let me say from the cursory review that we have done the data reflects what we have been saying a long time, namely that we are indeed a very unique institution in that in one category or another we are like the so-called peer institutions and in another category we are like the HBCUs and in the other instance we are like a mixture of HBCUs, State schools, and some public schools.

Mr. NATCHER. Dr. Alexis, can you tell us which institutions Howard selected for a comparison, to be compared with other institutions? Which ones were selected?

Dr. ALEXIS. I will probably need some help from my colleague, but in 1971, Dr. Cheek, then president of the University, selected locally Georgetown University, Johns Hopkins in Baltimore, Yale University, University of Chicago, Emory, Vanderbilt, Tulane, Rochester, Case Western Reserve. Those schools were selected because of their enrollment numbers, the breadth of their enrollment, the disciplines in which they were making Ph.D.'s available, and in most instances, the ownership of a university hospital.

EXPENDITURES PER STUDENT

Mr. NATCHER. Now, Dr. Alexis, the study I believe indicates, excluding research, Howard's overall spending per student is similar to other schools like Duke and Stanford, but Howard spends considerably less on academics and student aid and considerably more on overall administrative costs. Is this correct?

Dr. ALEXIS. Those are the numbers in that study, Mr. Natcher.

Mr. NATCHER. I understand.

Dr. ALEXIS. If we compare institutions, the ones I just listed, with Howard University in terms of the number of programs offered, whereas at Howard there are 18 schools and colleges and at Georgetown there are no more than 8, at Hopkins a handful and down the line, as one sets up administrative units to offer educational programs there is a built-in increase in administrative costs.

Having said that, Mr. Natcher, we need to analyze the data at Howard. We unfortunately have not as yet had an opportunity to look at the data with that kind of close scrutiny, one, or to engage in dialogue with our partners at the Department of Education to see how they got to those numbers.

I would hope to be given an opportunity to hold such discussions.

Mr. NATCHER. Mr. Conte.

Mr. CONTE. I will submit the rest of my questions.

Mr. NATCHER. Mr. Early.

ADMINISTRATIVE COSTS

Mr. EARLY. I will submit some questions for the record. But you certainly have done enough studies at Howard that you should be able to implement from what you have studied in the past.

The question as far as why your administrative costs are up that high, I cannot recall in my 16 years on this committee that we have not studied something at Howard University, haven't we studied that specific situation.

Dr. ALEXIS. It is a comparison set of circumstances we have to look at. We can answer Howard's questions, but I need to look at how Yale or Stanford arrived at its data before I can say whether the comparisons are valid or not.

Mr. EARLY. This Member would be more interested in how much you are spending on administrative costs versus what you are spending on academics.

Mr. JONES. Mr. Early, about 6 years ago a study was conducted on the administrative costs. I believe it was conducted by GAO. They found that administrative costs were comparable to other universities in the country.

Mr. EARLY. Why don't you finalize that then and stop studying this issue?

Mr. JONES. That was a request that came down last year.

Mr. EARLY. Will you submit that particular study for the record, the one that you mentioned?

Mr. JONES. Yes, sir.

DIVISION

March 12, 1982

B-206672

The Honorable William Proxmire
Ranking Minority Member
Subcommittee on Labor, Health
and Human Services and Education
Committee on Appropriations
United States Senate

Dear Senator Proxmire:

Subject: Use of Federally Appropriated Funds by Howard University for Administrative Expenses (HRD-82-50)

Pursuant to your October 20, 1981, letter, we reviewed Howard University's use of federally appropriated funds for administrative expenses. Data provided to you by the National Center for Educational Statistics (NCES) indicated that Howard's 1978-80 institutional or administrative expenses as a percentage of educational and general expenditures were generally four to five times higher than other similar universities. According to NCES data, Howard's administrative expenses in recent years have averaged about 23 percent of its educational and general expenditures.

For fiscal year 1981, Howard received appropriations of $133,983,000 including $101,637,000 for academic programs, $22,106,000 for its hospital, and $10,240,000 for construction. The remainder of its total budget of about $247 million was obtained from student fees and tuition and other revenue sources. Howard initially reported that about $29.3 million of its total expenses were used for administrative expenses. The administrative expenses reported by Howard to NCES, however, were overstated because expenses amounting to about $15 million were erroneously classified. After adjusting for the errors, Howard's administrative expenses for fiscal year 1981 were about 10 percent of its educational and general expenditures, a percentage more comparable to other similar universities.

(104526)

Enclosure I discusses the results of our review in more detail.

We will not release this report for 30 days unless you approve its release or make its contents public. At that time, we will send copies to interested parties and make copies available to others upon request.

Sincerely yours,

Edward A. Densmore

for Gregory J. Ahart
Director

USE OF FEDERALLY APPROPRIATED FUNDS BY HOWARD UNIVERSITY FOR ADMINISTRATIVE EXPENSES

BACKGROUND

Howard University was established by an act of incorporation by the U.S. Congress on March 2, 1867, and began officially operating on May 1, 1867. In 1928 the Congress amended the original act of incorporation to authorize annual Federal appropriations to aid in the construction, development, improvement, and maintenance of Howard. The amendment prohibits the use of funds for religious purposes. Appropriations were authorized for Howard because the Congress believed the Federal Government had an obligation to help establish Howard as a top-rank university to compensate Black citizens for the inequitable cultural and educational opportunities afforded to them. In fiscal year 1/ 1981, Howard received $133,983,000 in Federal appropriations; over half of its 1981 total expenditures of $247 million. The remaining expenditures were covered by student fees and tuition, endowments, gifts, grants, and revenues generated from services and other functions provided by educational departments and auxiliary enterprises.

According to Howard, its goal is twofold. One goal is to provide students, irrespective of race, sex, creed, or national origin, the highest quality education at a reasonable cost. The other is to assist, through use of its research resources, in the development of solutions to human and social problems. Currently, Howard has 17 schools and colleges and offers master's degrees in over 85 areas and doctor of philosophy degrees in 23 fields. During the 1980-81 academic year Howard conferred 1,872 degrees. It also awarded 38 certificates in such areas as radiological technology, radiation therapy, and physician assistant.

The majority of Howard's student population are minority students, principally Blacks. During the 1980-81 academic year, Howard's student population totaled 12,294. Black students comprised about 79 percent of the student population. About 17 percent of the remaining students were nonresident aliens and about 4 percent were American Indians, Asians, Hispanics, and Caucasians. Howard's foreign student population represents between 15 and 20 percent of the student body with about half of these students coming from African countries.

Howard is directed by a Board of Trustees and a president as shown by the organizational chart in enclosure II. It is divided into six major organizational areas with each area being assigned to a vice president who reports to the president. About 6,029 persons are employed by Howard, including about 1,955 involved in

---

1/Howard's fiscal year extends from July 1 to June 30.

teaching, about 2,519 involved in the University's hospital activities, and the remainder employed generally in administrative and institutional support staff positions.

SCOPE OF REVIEW

Our review of Howard's administrative expenses was limited primarily to the University's use of federally appropriated funds for fiscal year 1981 administrative expenses. We selected the 1981 expenses because they were most recently audited by Howard's certified public accountants. We confirmed that Howard's use of federally appropriated funds for fiscal year 1981 was typical of the way in which it used the funds in past years. Our analysis of expenses was based on Howard's annual expenditure reports which showed for each expense category the use of Federal and non-Federal funds. Our analysis of Howard's expenditures was directed to understanding the nature of the expenses and not to determining whether the expenses were justified or properly documented. We relied on the work of Howard's certified public accountants as to the integrity of the financial accounts. We also reviewed certified public accountants' annual audit reports of Howard's financial activities to ascertain whether they contained any exceptions concerning accounting for administrative expenses.

Our review was generally performed in accordance with GAO's current "Standards for Audits of Governmental Organizations, Programs, Activities, and Functions."

HOWARD'S REPORTED ADMINISTRATIVE EXPENSES OVERSTATED

The administrative expenses Howard reported to the National Center for Educational Statistics (NCES) were overstated by about $15 million for fiscal year 1981 primarily because they erroneously included certain employee fringe benefit and auxiliary enterprise expenses.

Each year Howard provides financial data to NCES as part of NCES' nationwide collection of financial statistics on colleges and universities. Howard annually reports to NCES its total educational and general expenditures consisting of expenditures for instruction, research, institutional or administrative support, academic support, public service, student services, operation and maintenance of plant, and scholarships and fellowships.

NCES suggests that colleges and universities report their financial data on the basis of the guidelines established by the National Association of College and University Business Officers (NACUBO) and the American Institute of Certified Public Accountants (AICPA). These guidelines define expenditure categories for universities and recommend the type of expenses to be charged to each.

According to the guidelines, expenses relating to a university's general executive and administrative offices should be charged to administrative support, and expenses relating to the university's instruction activities should be charged to the instruction expenditure category. The guidelines also state that, like salary expenses, employee fringe benefit expenses should be distributed among the appropriate expenditure categories.

Accordingly, an administrator's fringe benefits should be charged to the administrative expense category, and an instructor's fringe benefits should be charged to the instruction expenditure category. The guidelines recommend that universities allocate an appropriate portion of the administrative costs to auxiliary enterprises. Auxiliary enterprises are entities, such as residence halls, food service, intercollegiate athletics, and college unions, that exist to furnish goods or services to students and faculty.

Howard reported administrative expenses to NCES for fiscal year 1981 totaling $29.3 million, which represented about 20 percent of its educational and general expenditures. 1/ For fiscal year 1980, Howard reported administrative expenses totaling about $37.5 million representing about 23 percent of its educational and general expenditures. Howard's administrative expenses included costs for central executive level activities, fiscal operations, administrative data processing, space management, personnel records, logistic activities, support services to faculty and staff, public relations, and university development activities. Most of these expenses were charged to Howard's Federal appropriations. The distribution of Howard's administrative expenses for fiscal year 1981 between federally appropriated and university funds by office or function is shown in enclosure III.

We pointed out to Howard officials that Howard's administrative expenses as reported to NCES appeared to be higher than those reported by other similar universities. Howard asked its certified public accountants to look into this matter. The accountants discovered, and our review work corroborated the fact that, during the past several years, Howard included in the administrative expenses category reported to NCES some expenses which should not have been charged under this category. Howard charged all employee fringe benefit expenses to the administrative expense category, whereas only fringe benefit expenses for employees in administrative offices should have been charged to this category. The accountants made an adjustment of about $9.7 million to account for the improperly classified fringe benefits of nonadministrative staff and other improperly classified expenses.

1/Howard's educational and general expenditures for fiscal year 1981 were $143 million of the University's total expenditures--$247 million. The remaining expenditures were for the University's hospital and auxiliary enterprises.

Also, Howard did not allocate any administrative expenses to its auxiliary enterprises as provided for by NACUBO and AICPA guidelines; this required an adjustment of about $5.1 million. Consequently, the financial data which Howard reported to NCES overstated the amount of the University's administrative expenses.

After making the appropriate adjustments, Howard's administrative expenses for fiscal years 1980 and 1981 were about $16 million and about $14 million, respectively, representing about 11 percent and 10 percent of its educational and general expenditures. Howard submitted the adjusted amounts to NCES. Howard officials told us that Howard's administrative expenses were also overstated for the previous 2 fiscal years but that adjustments for those years will not be made.

HOWARD UNIVERSITY'S USE OF FEDERALLY APPROPRIATED AND UNIVERSITY FUNDS FOR ADMINISTRATIVE EXPENSES FISCAL YEAR 1981

Administrative office/function	University funds	Federally appropriated funds	Total expenses
Office of the President	$128,919.16	$235,749.22	$364,668.38

Total	$5,347,500.57	$14,241,599.10	d/$19,589,099.67
Less:			
Administrative overhead expenses for auxiliary enterprises	(e)	(e)	e/5,137,703.00
Actual expenses			$14,451,396.67

a/Generally includes unusual, nonrecurring expenses, such as cost overruns.

b/Funds for instructional deans to be reclassified at yearend. All administrative officers' and deans' salaries are charged to a combined account internally during the year with a reallocation to the respective department at yearend.

c/This amount reflects fringe benefit expenses for administrative staff only.

d/This amount represents Howards's total administrative expenses after reclassifying $9,731,279 in fringe benefits for nonadministrative staff and other expenses, but before allocating $5,137,703.00 in administrative overhead expenses for the operation of the University's auxiliary enterprises.

e/The amounts of Howard University and federally appropriated funds used for administrative overhead auxiliary enterprise expenses are not available.

Mr. **Early**. Thank you, Mr. Chairman.

NEW TUITION RATES

Mr. **Natcher**. According to the justifications, Dr. Alexis, Howard will realize a revenue increase of $16,000,000 over 2 years from increased tuition. What will the tuition charges be in 1991 and how do they compare to the 1989 and 1990 fiscal years?

Dr. **Alexis**. We are proposing for school year 1990–1991 an average increase in tuition of 9 percent. The undergraduate tuition at Howard then goes from $4,500 to $5,350. That compares 1989–1990 with 1990–1991. The graduate school is $5,600 to $6,100. The College of Dentistry from $6,900 to $7,550. The College of Medicine from $8,650 to $9,450. Those are the actual numbers.

Mr. **Natcher**. Dr. Alexis, I don't know if you have had an opportunity to look at the justifications concerning this particular matter. Do you agree with the figures set out there, that is a $16,000,000 increase over 2 years.

Is that accurate?

Dr. **Alexis**. We corrected those numbers 2 or 3 weeks ago.

Mr. **Jones**. Yes, we have corrected those. I will provide those for the record.

[The information follows:]

Tuition Revenue

The tuition revenue will not increase $16,000,000 over the next 2 years. Tuition revenue is expected to increase by $4.5 million for fiscal year 1991. We do not currently have a projection for fiscal year 1992.

RESEARCH APPROPRIATION

Mr. **Natcher**. The Congress, as you know, has appropriated about $4,700,000 in each of the last 5 or 6 years to enhance Howard's research programs. How has this investment impacted on your ability to compete for other research funds? If you will, tell us how does research spending this year compare to this project again.

Dr. **Alexis**. While Mr. Jones is gathering the numbers, let me say that we started from a level of research productivity that was quite low. Indeed it was a recurring criticism of several accrediting agencies that had visited not only the total University but certainly several programs at the University.

Because of what was initially a $5,000,000 appropriation for research, we were able in the first 3 to 4 years of that appropriation to do what needed to be done with reference to the infrastructure of the university for conducting reasonable and certainly good research. A lot of initial money therefore was spent on the purchasing of equipment and the renovation of laboratories and the giving of small grants to young investigators and to giving grants to investigators who wanted to change their career research objectives.

Mr. **Natcher**. Mr. Stokes, at this time, I yield to you.

Mr. **Stokes**. Thank you very much, Mr. Chairman. Let me express my appreciation to you, Mr. Chairman, for your indulgence while I had to take care of that matter on the Floor. I appreciate it very, very much.

Mr. **Natcher**. We are glad to do it, Mr. Stokes.

Mr. **Stokes**. Also, let me welcome Dr. Jenifer, the new President of this University, and say what a delight it is to welcome you here. We look forward next year to your presenting this budget to us.

Dr. **Jenifer**. Thank you, Mr. Stokes.

1991 BUDGET REQUEST

Mr. **Stokes**. Dr. Alexis, the budget request submitted by the Department for Howard University is essentially a level budget with no increase for inflation. The only increase recommended is an additional $3,000,000 for the endowment program. What was Howard's 1991 request to the Department?

I would like to get a breakdown by category—the academic program, endowment, research, construction, et cetera, if you have that.

Dr. **Alexis**. I have it. The request was for $13,500,000 for faculty and non-faculty salary increases. For increases in the academic program, $28,000,000. For increases in the endowment grant, $1,542,000. For the Howard University Hospital, $4,000,000; and for physical facility needs of the University, a total of $122,000,000.

Mr. **Stokes**. What is the current services level for the academic program, the research program and Howard University Hospital for fiscal year 1991.

Dr. **Alexis**. It turns out that 1991 is identical with 1990, Mr. Stokes. Those figures are, respectively, the academic program, $155,300,000; the research program, $4,730,000; and the Howard University Hospital, $20,900,000.

Mr. **Stokes**. What we actually want to get on the record would be the level required in 1991 in order to maintain your current level of services. Can you give us that?

Dr. **Alexis**. Yes. If we could revisit the data I just presented with reference to what our budget request was, sum required for faculty and non-faculty salary increases, which is a critical priority for maintaining services next year, $13,500,000. The sum of $5,000,000 for new funding for the Howard University Hospital in light of the data that I just presented, and beginning a revisiting of the category called construction, where a $10,000,000 base request, we think, would get us started in the right direction.

Mr. **Stokes**. I understand that during the period that I was not here a series of questions were asked of you relative to Howard University Hospital, and you are going to expand further on that in the record, I understand?

Dr. **Alexis**. Yes, sir.

STUDENT HOUSING

Mr. **Stokes**. Then I won't go into that at this time.

Now, it is my understanding that during the summer of 1989, the University undertook measures to address the concerns of the student body regarding the generally poor physical condition of the residence halls.

What exactly did the University do in this regard, and what remains to be done?

Dr. **Alexis**. Several things were done, Mr. Stokes. In the first instance, the Howard Plaza Apartments, some new construction was completed and they were indeed occupied by our students in the fall of 1989.

During the summer of 1989, we expended in excess of $3,000,000 in a massive renovation program to our older existing dormitories. Further, in the summer of 1989, we closed Cook Hall, one of our older dormitories. It is slated for a major renovation, modernization, rehabilitation, to start within the next month or two.

The University has outlined a program of residence halls renovation that would take the greater part, I am certain, of the next 5 to 7 years, so that all of the older dormitories could be brought into a state of respectability and comfort for our students.

Mr. **Stokes**. In terms of those renovations, do you have some priorities?

Dr. **Alexis**. This year, we intend to renovate Cook Hall. Earlier, we had planned to close a dormitory each year for the purpose of having it renovated. It is clear that that was an overly ambitious plan. My best guess at this time is that we will not be able to close any dormitories during the next school year, and it would be probably in 1991 that that program could be revisited with another dormitory being closed for a full, comprehensive renovation.

Mr. **Stokes**. Dr. Alexis, can you give us some idea of what level of funding is needed in order to try and do these types of things?

Dr. **Alexis**. Yes, I will be glad to. The best estimate that we have from our own physical facilities experts on campus is that it would take in excess of $60,000,000 to bring our dormitories into a state of respectability.

SCHOOL OF LAW

Mr. **Stokes**. Can you tell us, what other needs does the University have with regard to physical facilities? What are your priorities and what level of funding would be required for them?

Dr. **Alexis**. Mr. Stokes, I would like to start with a facility that has been much written about in the local press and elsewhere, namely we have been under a great deal of pressure from both the ABA, which accredits schools of law, and the American Association of Law Schools, with reference to the construction of a new facility for the School of Law.

It was the view of accrediting visitors that the School of Law, the building of the School of Law as currently configured, does not lend itself to a legal education. Some experts who have no vested interest in the position indeed visited the law school's campus and arrived at the same conclusion.

OTHER PHYSICAL FACILITIES NEEDS

That has a price tag of somewhere between $35,000,000 and $40,000,000. The University's science facilities for biology, chemistry particularly, are in a state of shambles, not truly representative of even a mediocre university, far less than a research university.

We would like to start in the very near future on planning for the construction of a comprehensive science facility where the requirements for those three disciplines I just named could be accommodated in the same building. The price tag, as I understand it, for that one is in the $60,000,000 to $70,000,000 range.

When the liaison committee, medical accreditation, visited our college a year ago, the college received accreditation for the maximum amount of time, 7 years. But there was a notation that the laboratory facilities were felt to be inadequate for a health sciences center the size of Howard University.

Dr. Cheek at that time made a commitment to have constructed on the Howard campus a learning resources center for the health-related professions.

Finally, in terms of urgent need is a facility for the University computing equipment and personnel and activities. The Health Sciences Learning Resources Center has about a $15,000,000 to $18,000,000 estimated cost, and a figure for the computing center is not much dissimilar.

CAMPUS SECURITY/FINANCIAL AID

Mr. STOKES. When the students came up here last year, a group of them met with me, and I posed some questions to you relative to some of their concerns. One of their concerns was security on the campus; another was the timeliness of their receipt of student aid.

I wonder if you have been able to attack these two problems and what you can tell us.

Dr. ALEXIS. Yes, Mr. Stokes. With reference to security, a part of the problem at the time of the student takeover, if you wish, of the administration building last March, was that the University was engaged in some prolonged and indeed testy negotiations with the union representing the security officers. Those negotiations concluded with a mutual acceptance of the terms of a new contract.

We believe that our salary ranges put us in a competitive position in the Washington, D.C., market. The Director of Security Services has moved very, very promptly to advertise and indeed recruit new individuals to the security force, and they are in the process of doing that.

Even as we say that, though, Mr. Stokes, we remind our students and ourselves that the matter of security and safety is the responsibility of the students, the staff, and the administration. We hope, with the spirit of cooperation that I sense, that all that can be done to reduce security and safety problems will be done.

The other matter, student aid, the students were properly agitated over the delay in receiving financial aid. This summer, we launched a real assault, if you will, on the problem. We enhanced our own staff and used liberally consultants from the outside.

I guess for the first time in my memory, the University, from the administration's point of view, has done what it can do with reference to the applications that were submitted. We are in the process now of having students return additional data as lending agencies request and require additional data.

It is our feeling that by spring, we shall have completed fiscal year 1989–1990's financial aid applications and will be able to start on the applications for the next school year. So we think we have made some strides there. Much is left to be done.

The administration and certainly the Board of Trustees will be responsive to the recommendations from our consultants.

FOREIGN STUDENT SURCHARGE

Mr. **Stokes**. As a result of last year's conference report, the Department of Education was required to work with the University in developing a plan to phase-in a tuition increase for foreign students. What is the status of this plan?

Dr. **Alexis**. In consultation with the Department of Education, we are instituting a three-year phase-in period. We agreed for the next school year period, year one of the process, that there will be a 10-percent surcharge with the surcharge going to 30 percent in year two, and 50 percent in year three.

Mr. Stokes, I would like to urge that when the University is able to develop data, that you take a look at it, because we have reason to believe that when one recognizes that our students, our international, Third World students, who are not attending our institution on grants from their own governments but are sending themselves to school, that the surcharge may be counterproductive and indeed, rather than yielding additional revenue, that it may not do so.

We hope to have such data available later this year, and will present it to you.

FOREIGN STUDENTS FROM THIRD WORLD

Mr. **Stokes**. You mentioned students coming from Third World countries. Give us an idea of the countries from which your students come.

Dr. **Alexis**. Unapologetically, I note that Trinidad is at the top. Nigeria, Jamaica, Cameroon, Iran, Canada, Ethiopia, Ghana, United Kingdom, Barbados. It is Africa and the Caribbean, really. They are all debtor nations.

Mr. **Stokes**. For any of those particular countries, have you had a decrease in enrollment?

Dr. **Alexis**. Most significantly from Nigeria. Over the last 4 to 5 years, there is an apparently 50-percent reduction in enrollment. It is continuing to decline from most of the other countries that I have just enumerated, all of which quite seriously are countries that are seriously debtor nations and countries with a great deal of difficulty in terms of adequate foreign exchange, in terms of being able to afford to send their students abroad to study.

FOREIGN STUDENT EMPLOYMENT

Mr. **Stokes**. When you present this data to us later, I would be interested in knowing what type of employment is available to these students, once they get here, to further their financial aid in the school. I notice I run into a lot of people from particularly African countries driving cabs in the city.

Many of them tell me they are students at Howard. I would be interested in knowing what type of employment opportunities they do have here.

Dr. **Alexis**. We will be glad to provide that for you, sir.

FOREIGN STUDENT EMPLOYMENT

During the first year at the University, foreign students are not permitted to work, according to the Immigration and Naturalization Service. After the first year, they may apply for part-time work. Our Department of International Student Services says that most foreign students, by choice, do not work. Those who work have part-time student jobs on campus in various locations.

FOREIGN STUDENT CONTRIBUTIONS

Mr. STOKES. I have a further question on the whole subject of international students. In thinking of the whole mission of Howard University, which I think all of us agree is different from that of other universities, is that mission in some manner furthered by the presence of international students or an international student community?

Dr. ALEXIS. Mr. Stokes, we have had a lot of emphasis placed in our discussions with the Department and indeed with Congressional staff on the fiscal impact of our surcharge. Not in any way minimizing the significance of the fiscal impact, to those of us on the campus an equally large concern, if not greater concern, has to do with the impact of a loss of international students on what I call the educational environment or the educational ambience, the presence of international students on the Howard is part of the Howard experience and Howard education.

I always reflect on the fact that your former colleague in the House, Mayor Andrew Young, during his days at the United Nations, reflected so very often that it was at Howard University where he came to know many individuals who were then leaders in several African nations.

The institution points with pride to its contributions to leadership in the Third World.

HIGHER EDUCATION ACT REAUTHORIZATION

Mr. STOKES. This past fall, the Department of Education held some hearings on the reauthorization of the Higher Education Act. One issue raised by the Department related to inclusion of authorizing language for the University within the Higher Education Act.

Now, I have been posing some questions to the Department of Education relative to this issue. Part of the answer I am getting back is that there is some confusion on your part in terms of what you thought they were actually doing. What did you understand was being done, and did the University in any way participate in those hearings and with what type of commentary?

Dr. ALEXIS. What our understanding was, Mr. Stokes, was the institution, Howard University, was being placed in the universe, if you wish, and therefore in a competitive mode with the HBCUs, undesirable to HBCUs and undesirable to Howard and negative implications to both of us. We have so stated in written testimony to the Department, and if you wish, I would be glad to provide for the record a copy of the testimony that we provided.

Mr. STOKES. I would appreciate your providing that for the Committee files.

Ms. CHRISTENSEN. Mr. Stokes, I would like to clarify, when the Secretary included comments on Howard for the reauthorization hearings, the written comments, his intent was that along with the higher education programs, would be looked at with a view toward enhancing and seeing how the Federal role could more effectively service those kinds of institutions along with all of the other higher education programs.

He has gone on record as saying there was no other reason for including Howard in that request for comment.

Mr. STOKES. I think you will recall earlier this afternoon or this morning, when we had the Assistant Secretary here, I posed some questions on this matter, and you also commented. The implication was given that there was some confusion on the part of the people at Howard in terms of not understanding the thrust of what you were doing.

Ms. CHRISTENSEN. Yes, I wanted to make it clear again. There was certainly no pre-decision on what the Department's position would be with regard to Howard. It was a look at the total Higher Education Act and all of the—not necessarily just the Act—but all the higher education programs supported by the Department and with a view toward improving or seeing what needed to be done with regard to their reauthorization.

Mr. DAVIDSON. Mr. Stokes, the proposal in the Register was whether the Howard legislation, which, as you know, is a separate legislation, should be simply housed in the Higher Education Act, not that it would be merged in any way with Title III or the HBCU legislation, but simply be housed in the Higher Education Act as it currently stands, so that it might be found on the same shelf, in the same volume if somebody is interested in seeing legislation relating to higher education, and so that the Administration can look at it all as a group.

Mr. STOKES. I appreciate your clarification. However, I think you can see why I wanted the record to also reflect how Howard University and the HBCUs interpreted your action.

Ms. CHRISTENSEN. We are sorry for any misunderstanding. I know the Secretary did not intend that.

Dr. ALEXIS. We will still submit our statement.

Mr. STOKES. Thank you. I would like to have it for the record.

FACULTY/NON-FACULTY SALARIES

Are the faculty and non-faculty salaries at Howard competitive for this geographic region?

Dr. ALEXIS. Unfortunately, Mr. Stokes, they are not. There was a period 4 or 5 years ago where our faculty and staff went 2 years, as I recall, without pay increases. Once having fallen behind the curve, the process of catching up and maintaining a state of comparability has been exceedingly difficult.

This past year, we gave faculty a 7-percent salary increase, and staff a 5-percent pay increase. There are no provisions in this budget request for faculty or non-faculty pay increases. We are currently looking at the internal University budget and hope to have a budget finished by June.

A top priority certainly for the Board of Trustees and our incoming CEO will be to continue all that can be done to get faculty salaries and non-faculty salaries at Howard at a level of comparability to universities in this area and elsewhere.

Mr. **Stokes**. What is necessary to bring these salaries to a comparable level?

Dr. **Alexis**. My calculation shows that a 10-percent increase over the next minimum of 3 years, because we are always aiming at a moving target; as we increase, Georgetown and American University increase and other schools in the area do the same, so we need to have an increase above and beyond their projected increases.

That process would take probably more like 5 years before we get there.

GIFTS AND GRANTS

Mr. **Stokes**. How successful were you in increasing the level of private sector gifts and grants during fiscal year 1989, and tell us how you expect to fare in fiscal year 1990?

Dr. **Alexis**. I don't think I have such data with me, Mr. Stokes. With your kind permission, we would like to provide that for the record, those precise numbers.

[The information follows:]

Gifts and Grants

The University raised a total of $9.2 million from the private sector in 1989. We currently project a small increase in that amount in fiscal year 1990.

Dr. **Alexis**. In terms of what we see in the future, as was stated earlier today, the new President has already been handed the serious responsibility of spending a great amount of his time cultivating and fundraising in the private sector. I have no estimates as to what those numbers would look like in calendar year 1990 and beyond.

AFRICAN AMERICANS IN HIGHER EDUCATION

Mr. **Stokes**. Lastly, Dr. Alexis, I wonder if you would talk a little bit about the role of historically black institutions in addressing what I think is a national crisis. We know that minorities are not participating fully in higher education in this country.

A report issued by the American Council on Education documented this. Also, it pointed out that participation by black males has slipped alarmingly since the mid-seventies. I was a little concerned this afternoon when an Assistant Secretary from the Department of Education, Dr. Haynes, testified here at this table that it was time, he thought, for HBCUs to start standing on their own.

I think we need to put into perspective the picture of education today as it relates to minorities and the role that HBCUs play. I am particularly concerned because this gentleman was educated at Southern University and had directed some programs related to black colleges. I was rather stunned by that testimony this afternoon.

I wonder if you would put into perspective what I am talking about.

Dr. **Alexis**. A couple of points, Mr. Stokes, I don't know of any evidence that historically white colleges or universities are standing on their own. So, I don't know that it is a reasonable burden to place on the HBCUs, so I start with that point.

When one examines the attrition rate for black students, K through 12, one is alarmed at the disparity between white high school graduations and black high school graduations. The data with reference to entry into college and completion of college gives no cause for relaxation.

When one looks at the data, doctoral recipients, one looks at how black Americans have done in terms of the receipts of doctoral degrees, there is a scary and precipitous drop between the years 1977 and 1987; literally a 50-percent decline in the number of black recipients.

Further, upon examining the schools from which doctoral degrees are received by black students, one is startled to find three or four black schools carrying a disproportionate share of the burden: Howard, Atlanta U, Texas Southern and probably Meharry Medical College.

It seems to me if one looks elsewhere, black graduates, for at least at predominately white institutions and predominately black institutions, there is a startling disparity if you can get the data. It seems to me that more than ever, more today than yesterday, there is a need for our HBCUs and a continuing urgency to support our HBCUs.

DEMOGRAPHY

Mr. Stokes. I appreciate that. I guess one of my major concerns is that we are not sufficiently alarmed about what all of the major reports are telling us is going to happen in 10 years, in the next century. WorkForce 2000 tells us that the American white population is shrinking. The minority population is increasing.

By the year 2000, one-third of the new entrants into the workplace in America will be minorities. By the year 2020, 39 percent of the work force itself will be minority. Twenty-five of our largest school systems in the country today are already majority minority. By the year 2020, over 50 percent of the school age population of the whole country will be minorities.

At the same time, we are not realizing that this is going to place a greater burden upon the historically black colleges and universities if the white universities are not taking black students into their universities.

The evidence is that there is a sufficient enrollment drop since the early eighties to show there is a very real problem there.

Dr. Alexis. Drop and transfer out.

Mr. Stokes. That is right, the revolving door concept. I was in some hearings this morning with the National Science Foundation. They have just put out a new report on women and minorities. One of the interesting phenomena they showed in science and engineering is that they have been able to increase participation of women. They have been able to more than double the number of women they are now recruiting into science and engineering, but they have not been able to do the same for minorities.

Of course, they have even a bigger problem, only 6 to 7 percent of all of the seniors in American schools are prepared to go to college in science and engineering. So, we have a problem with both the black and white population that no one seems to be seriously addressing.

Ms. CHRISTENSEN. Mr. Stokes, just one clarification.

Mr. STOKES. Sure.

SUPPORT FOR HBCU'S

Ms. CHRISTENSEN. When Leonard Haynes was addressing that issue this morning, in all fairness to him, he was really explaining the difference between our request for the institutional assistance program under Title B versus the endowment program, and that we had a much larger percentage increase for that.

I don't think that there was any intent to indicate that there was any kind of lessening support by the Administration for HBCUs; to the contrary, we are increasing that every year.

I think I gave some figures this morning that said what those increases are. There is also an Executive Order the President just put out that reemphasizes the importance of HBCUs. I want to make it clear that really was not what Dr. Haynes was emphasizing at that point. He was talking about or justifying the 200-percent increase this year for the endowments for HBCUs. It is a relatively small amount of money. I don't think anybody believes HBCUs would stand on their own feet with that amount of money, but it is a beginning to help them strengthen their endowment programs so that they can have more independence and more flexibility to do the kinds of things that they can do with it.

But it is not any kind of lessening of the Administration's support for the unique role that these institutions play.

Mr. STOKES. Ms. Christensen, I would be the last person in the world who would want to be unfair to any witness who testifies here, and I never want to misquote any witness. But you were here when I asked the witness about the set-aside for HBCUs. I asked specifically, why there was no increase here.

His answer to me—and you correct me if I am wrong—his answer was that we need to take a look and evaluate these HBCUs to see if they couldn't begin to stand on their own. If I am misquoting him, then I apologize to you and to him.

I think I am quoting the record.

Ms. CHRISTENSEN. I am sure you are. What I am saying is that I think that is the whole purpose of these endowment funds, to enable them to begin to stand on their feet. It is not that we are pulling the rug from under them right now. He was just saying that that was part of the Bush initiatives, in fact, that we wanted to start this year with a $5,000,000 program and increase it to $15,000,000 next year, which is a 200-percent increase.

That would give some small growth in that area to those institutions.

Mr. STOKES. That was the same area, if you will recall, that I asked about the legislation that this provision is dependent upon and whether it was true that if the legislation did not pass, HBCUs got nothing. Do you recall you made a response about the Senate having already passed this legislation and you are hoping you are going to pass it in the House?

Ms. **Christensen**. That is right, Mr. Stokes. But even if the legislation does not go through, we still have the program in effect this year, not strictly for HBCUs, but for all developing institutions, that they would all come in for that pot of money.

We just wanted a specific set-aside for HBCUs, because they have been a high priority for the Administration, whether it is endowments or what.

Mr. **Stokes**. The important thing would be the Administration's commitment to the HBCUs, with the realization that they are not yet ready to stand on their own.

Ms. **Christensen**. That is absolutely the fact.

Mr. **Stokes**. I appreciate that, Ms. Christensen.

Let me just take this opportunity to thank you for your testimony here today and to thank Dr. Alexis and Dr. Roger Estep, who I understand will not be with us in the future. I want to personally express to both of you how much I have enjoyed working with you and the rest of the members of your Administration.

The two of you are two of the finest administrators I have ever had the privilege of working with. You are professional. You are competent, and totally loyal to this University. We have all benefited from your service over the years. I thank you very much.

Dr. **Alexis**. Thank you, Mr. Stokes.

Mr. **Stokes** [presiding]. If there is nothing further, the hearing is adjourned until 2:00 tomorrow afternoon.

[The following questions were submitted to be answered for the record:]

RETIREMENT AGREEMENTS

Mr. Natcher: Are there retirement agreements similar to Dr. Cheek's negotiated for any other staff at Howard; that is, agreements which go outside Howard's normal pension system?

Mr. Alexis: There are no retirement agreements similar to Dr. Cheek's. There are deferred compensation agreements between the University and the Interim President and some Vice Presidents which were made prior to the changes brought about by the Tax Reform Act of 1986.

VICE PRESIDENT

Mr. Natcher: Last week the President of Gallaudet testified that he had streamlined his central administration and that he had reduced the number of Vice Presidents from 5 to 3. How many vice presidents are there at Howard?

Mr. Alexis: Currently, Howard University has seven Vice Presidents. They are:

Executive Vice President (vacant)
Vice President for Student Affairs
Vice President for Health Affairs
Vice President for Academic Affairs
Vice President for Business and Fiscal Affairs
Vice President for Administration
Vice President for Development and University Relations

The University's executive organizational structure is consistent with the structure of similar doctoral level institutions with medical centers, including the selected peer institutions.

TUITION

Mr. Natcher: How does Howard's tuition compare with your peer group schools? Would it be less than half?

Mr. Alexis: For the academic year 1989-90, Howard's tuition ($4,900) was less than half of its peer institutions:

Case Western	$12,000
University of Chicago	14,895
Duke	12,800
Emory	12,250
Georgetown	13,250
Johns Hopkins	14,000
University of Rochester	13,100
Stanford	13,500
Tulane	13,300
Vanderbilt	12,625
Yale	14,000

FUNDRAISING

Mr. Natcher: As you know, this Committee has also been very concerned about your ability to raise private funds. Last year you testified that you were making progress in this area. What can you tell us about 1989 fundraising and how this compares to 1988?

Mr. Alexis: The University raised a total of $9.2 million in 1989 from the private sector compared to $11 million in 1988. The difference in the aggregate amounts for the two years is that the University did not receive contributions from any individual(s) in excess of $1 million in 1989 as it had in 1988.

It would appear that in 1989, the University was the unfortunate victim of the national philanthropic trend of a reduction in private sector contributions in support of higher education. According to the American Association of Fund Raising Counsel's (AAFRC) Trust for Philanthropy, the decline in private contributions to education in 1988 was attributable to two factors: the Tax Reform Act of 1986; and the stock market plummet of October 1987. As previously mentioned and consistent with the AAFRC's annual report of national trends, contributions by individual donors at the University declined. It is also noteworthy that among the seven categories of philanthropic giving, education ranked fourth nationally.

Historically, annual revenue from the private sector has accounted for less than 3 percent of the University's operating budget. In addition, these funds are an unpredictable revenue source to largely predicate support for the operation of this, or any other institution. The University will continue, however, to identify major donors, motivate alumni to increase the amount of their contributions to the institution, as well as increase the number of alumni who contribute to the University, as it has in the past.

Mr. Natcher: According to Howard's financial report, gifts from alumni declined in 1989 by almost one third--from $1.8 million in 1988 to $1.4 million in 1989. Is this accurate?

Mr. Alexis: The decline in the amount of funding received from alumni, $1.8 million in 1988 and $1.4 million in 1989, is correct. The decline is attributable to a decrease in the size of contributions from donors, despite the fact that the number of donors increased from 3,452 in 1988 to 4,450 in 1989.

HOWARD UNIVERSITY HOSPITAL

Mr. Natcher: Are the staffing ratios and salaries at Howard Hospital comparable to those at other District hospitals?

Mr. Alexis: Yes, staffing ratios and salaries at Howard University Hospital are comparable.

Mr. Natcher: What is the current total operating budget for the hospital and how does this compare to last year?

Mr. Alexis: The current total operating budget for Howard University Hospital is $163,049,000. The fiscal year 1989 figure was $161,767,000.

FOREIGN STUDENTS

Mr. Natcher: What portion of the student body is foreign students and how has this changed in recent years?

Mr. Alexis: As of the 1988-89 academic year, our foreign student body represented 15.8 percent of the total student population. Last year's enrollment of foreign students was one of the lowest in the previous six years.

Mr. Natcher: Have you reached agreement with the Department on the phase-in of the tuition surcharge for foreign students?

Mr. Alexis: As directed by Congress, the Department of Education and the University has agreed on a three year implementation period for a 50 percent tuition surcharge for foreign students. The agreement will impose a 10 percent surcharge in academic year 1990-91, a 30 percent surcharge in the academic year 1991-92, and finally a 50 percent surcharge in academic year 1992-93 for all foreign students entering Howard University in or after the fall 1990 semester.

Mr. Natcher: The Department has indicated that once fully implemented this surcharge will generate an additional $5.5 million of tuition income. Do you agree with this estimate?

Mr. Alexis: Because the University anticipates that international student enrollment will decline as a result of the surcharge, any additional revenue is expected to be minimal.

LAW SCHOOL CONSTRUCTION

Mr. Natcher: Your budget documents indicate that you have initiated plans to build a new law school building. What will this cost and how will it be financed?

Mr. Alexis: Preliminary cost estimates for the new law school building total approximately $41 million. At this time, the University plans to finance the construction and related costs through the issuance of tax-exempt bonds.

Mr. Natcher: Insert in the record at this point updated history tables similar to those which appear on pages 1592, 1594, and 1598 of the FY 1990 hearings.

Mr. Alexis: The update history tables are provided below:

HOWARD UNIVERSITY
Comprehensive Table
For the Ten-Year Period 1980 to 1989

Year	(1) Total Enrollment	(2) Total Operating Budget	(3) Federal Appropriations	(4) % of Federal Approp vs Operating Budget	(5) Average Tuition and Fees	(6) Private Gifts (Academic Program)
1980	11,748	$157,077,098	$121,893,000	57.2%	$1,765	$ 3,834,632
1981	12,294	155,783,370	133,983,000	65.2%	1,965	3,264,933
1982	12,338	183,242,127	145,200,000	59.8%	2,265	4,510,199
1983	12,667	197,014,124	145,200,000	62.5%	2,515	4,298,592
1984	12,890	214,420,021	156,200,000	61.8%	2,715	5,348,749
1985	12,593	214,768,153	158,230,000	60.1%	3,045	5,401,394
1986	12,277	212,221,586	157,168,000	60.9%	3,365	4,573,971
1987	12,114	225,900,084	170,230,000	62.5%	3,915	5,957,860
1988	11,865	242,224,970	172,203,000	60.2%	4,345	10,529,357
1989	12,773	273,281,667	178,973,000	55.4%	5,005	11,585,752

(1) Total headcount excluding summer school
(2) Excludes Howard University Hospital
(3) Includes Howard University Hospital
(4) Federal Appropriations for academic program as a percentage of the operating budget
(5) Averages for the undergraduate school only (includes the following fees: University, student activity and health)

HOWARD UNIVERSITY
Schedule of Current Funds Revenues
Fiscal Years Ended June 30, 1985 Through 1989

Description	1985	1986	1987	1988	1989
Tuition & Fees	$ 36,457,295	$ 39,549,468	$ 45,820,904	$ 48,976,262	$60,484,990

ANALYSIS OF DEPARTMENT OF EDUCATION/HOWARD UNIVERSITY ENDOWMENT FUND
As of February 20, 1990

FISCAL YEAR (ENDING)	APPROPRIATION	CONTRIBUTIONS RAISED	APPROPRIATION DRAWDOWN	UNEARNED APPROPRIATION (BALANCE)
9/30/85	$2,000,000	$1,466,831	$1,400,000	$600,000
9/30/86	1,914,000	763,665	700,000	1,814,000
9/30/87	2,000,000	1,278,557	1,400,000	2,414,000
9/30/88	500,000	1,048,885	600,000	2,314,000
9/30/89	1,476,000	2,067,314	2,400,000	1,390,000
9/30/90	1,500,000	1,590,826	1,600,000	1,290,000*
Total	9,390,000	8,216,078	8,100,000*	

*estimates

Mr. Natcher: Also insert at this point an updated salary comparison table similar to the table on page 1595 of the 1990 hearings.

Mr. Alexis: A listing of average faculty salaries by academic rank as of October 1, 1989 follows:

Rank	Howard	Georgetown	George Washington
Professor	$55,192	$66,500	$59,200
Associate Professor	42,379	45,200	42,300
Assistant Professor	34,177	33,000	34,700
Instructor	27,959	26,700	24,100

	Division of Academic Affairs	Division of Health Affairs
Rank	Average	Average
Professor	$55,192	$71,980
Associate Professor	42,379	50,081
Assistant Professor	34,177	41,770
Instructor	27,959	38,617

Mr. Natcher: Insert in the record at this point a separate 5-year table, FY 1986-1990, for the hospital showing:

- total revenue
- total operating budget
- level of surplus or deficit
- $ value of uncompensated care
- total number of inpatient days provided
- total number of staff expressed as full-time-equivalents

Mr. Alexis: The 5-year table is presented below:

HOWARD UNIVERSITY HOSPITAL
Comprehensive Statistical Table
1986-1990

Year	Net Revenue (000's)	Total Operating Cost W/Educ (000's)	Surplus or (Deficit)	Value of Uncompensated Care	In-Patient Days	Number of Staff (FTE)
1986	$126,403	$147,101	$ (20,698)	$ 27,786	144,993	2,888
1987	131,383	157,357	(25,974)	32,339	149,490	2,872
1988	145,072	171,487	(26,415)	31,620	148,404	2,850
1989	164,620	190,327	(25,707)	50,190	159,848	2,900
1990	158,200	211,263	(53,063)	67,949	157,051	2,900

HOWARD STUDENT BODY

Mr. Natcher: Would you review for the Committee briefly the latest data on the number of students at Howard and also tell us a little about the demographics of who these students are?

Mr. Alexis: The total enrollment for 1988-89, excluding summer, was 12,773 of which 5,494 (43%) were males and 7,279 (57%) were females. Undergraduate enrollment for 1988-89 consisted of 9,787 (76.6%) students while graduate/professional enrollment was 2,986 (23.4%).

During the year 1988-89 (including Summer, 1988) the University served a total of 13,181 regular enrollees. There were 12,773 degree-seeking students enrolled for the 1988-89 academic year (excluding Summer 1988) of whom 10,246 were degree-seeking residents of the United States, and 2,020 were degree-seeking international students who came from 107 foreign countries and constituted 15.8 percent of the total enrollment. The general geographic distribution of the 10,246 enrollees from the United States and Territories is as follows: New England States, 182, Mid-Eastern States, 3,890; Great Lakes States, 767, Plains States, 629; South-Eastern, 49; Far-Western States, 767; Guam, 1; Puerto Rico, 10; and U.S. Virgin Islands, 76. The distribution of the 2,020 International students by geographical region is as follows: Africa and Vicinity, 770; Caribbean, 781; Central America, 8; South America, 61; Europe, 77; Far East and Pacific, 128; Near and Middle East, 91; Bermuda and Canada, 104.

Mr. Natcher: How does the average family income of Howard students compare to the national average for all American families and with the average family income of all freshman students?

Mr. Alexis: The data on estimated parental income of entering freshmen, fall 1989, follows:

ESTIMATED PARENTAL INCOME OF ENTERING FRESHMEN, FALL 1989

INCOME	HOWARD
$150,000 or more	3.2%
$100,000-$149,999	5.7%
$75,000-$99,999	10.0%
$60,000-$74,999	14.9%
$50,000-$59,999	8.8%
$40,000-$49,999	8.7%
$35,000-$39,999	7.8%
$30,000-$34,999	10.0%
$25,000-$29,999	8.5%
$20,000-$24,999	9.7%
$15,000-$19,999	5.2%
$10,000-$14,999	3.1%
$6.000-$9,999	1.5%
Less than $6,000	2.8%

Note: Howard was unable to obtain data on the national average. National level data will be available in the near future from the Department's NPSAS II Survey. Comparison data will be provided at that time.

BOND AUTHORITY

Mr. Natcher: Would you review for the Committee Howard's use of its bond authority for construction and tell us whether any additional bonded projects are anticipated in the future?

Mr. Alexis: The Howard University Bond Act of 1987 authorized the University to issue $112,000,000 in tax-exempt bonds. To date, the University has issued bonds totalling $67,500,000 against the authority to finance construction of the Howard Plaza Towers, an 800 unit student housing complex. Therefore, $44,500,000 remains for use under the original bond act.

The Tax Reform Act of 1986 placed a $150 million limit on the amount of tax exempt financing that can be undertaken by non-hospital, non-profit organizations. The University has applied for an additional $38 million in authority subject to this limitation. Thus, the University has $82,500,000 in tax-exempt bond authority available.

The University plans to use this authority as follows:

New School of Law	$41,000,000
New Undergraduate Dormitory #1	23,500,000
New Undergraduate Dormitory #2	18,000,000
	82,500,000

However, assuming debt financing of these facilities, the University will encounter difficulty in meeting debt service payments without a Federal appropriation for this purpose.

The Hospital is not subject to the $150 million limit. It plans to issue tax-exempt bonds totalling $19,000,000 to finance construction of an additional clinic and office space to the existing hospital facility.

Mr. Haynes: I would like to make a clarification for the record. Before bonds can be issued, an analysis of Howard University's ability to finance these bonds must have taken place, indicating that Howard was financially able to incur the debt without the need for additional Federal assistance.

SAT SCORES

Mr. Natcher: Insert in the record at this point a simple two column, 10-year table showing average SAT math and verbal tests for entering freshmen (aggregated for Howard as a whole).

Mr. Alexis: The 10-year table follows. For further clarification, I am providing a glossary of the schools and colleges.

AH	-	Allied Health
AP	-	Architecture and Planning
ED	-	Education
EG	-	Engineering
FA	-	Fine Arts

RETENTION

Mr. Natcher: According to the budget documents, Howard has initiated a new program to "enhance retention" at the school. How serious is this problem?

Mr. Alexis: The scope of the problem varies from school to school within the University. Retention rate defined as the proportion of students enrolled in one academic year who return the following year varies from about 77 percent in the College of Liberal Arts to 90 percent in the College of Medicine and School of Law. Among non-returning undergraduates in the College of Liberal Arts, half were in good academic standing and did not return due to financial or other personal problems.

On the other hand, if retention rate is defined as the proportion of students who eventually graduate from the program to which they were admitted, a different picture emerges. The most recent data using this definition was compiled in 1988 by the Academic Programs Work Group for the Middle States Self Study. Using as a case study all new entrants to the College of Liberal Arts for fall 1980, it was found that 40 percent had graduated by the spring semester, 1988, while 60 percent had not yet received a degree from Howard. It is not known how many have transferred to another school and graduated. The Self Study also showed that full time "underprepared" students (i.e. those who enrolled in academic support courses) had a graduation rate of 60 percent. This statistic appears to demonstrate the effectiveness of our academic support programs and suggests that the overall retention rate can be improved if these programs can be made available to more students. Full-time "prepared" students showed a graduation rate of 49 percent, which is better than the overall graduation rate, but lower than the graduation rate for "underprepared" students who enjoyed the benefits of both full-time status and Howard's academic support programs.

CONSTRUCTION

Mr. Natcher: Insert in the record at this point a summary table of Howard's construction needs identifying those which you consider the most compelling.

Mr. Alexis: The University construction needs are summarized as follows:

New Construction - $167,000,000

Comprehensive Sciences Center	$60,000,000
New Dormitories	44,000,000
Law School Center	41,000,000

	167,000,000

Mr. Natcher: Are any of the unfunded construction projects related to safety problems which you would characterize as serious?

Mr. Alexis: None of the construction projects relate to the safety of the existing physical environment. However, in addition to the construction needs, the University has deferred maintenance problems totalling approximately $50 million, many of which if not addressed will pose serious threats to the health and safety of the University community.

Mr. Natcher: Insert in the record at this point a history table of all construction funding since 1970 including construction financed with bonds.

Mr. Alexis: The history table is presented below:

HOWARD UNIVERSITY
Construction Funding 1970 - 1990

Year	Federal Appropriation	Bond Financed
1970	$30,410,000	-0-
1971	1,000,000	-0-
1972	2,490,000	-0-
1973	8,408,000	-0-
1974	-0-	-0-
1975	12,500,000	-0-
1976	10,000,000	-0-
1977	2,500,000	-0-
1978	3,925,000	-0-
1979	10,000,000	-0-
1980	10,000,000	-0-
1981	10,240,000	-0-
1982	13,500,000	-0-
1983	-0-	-0-

1990	-0-	
Total	116,463,000	67,500,000

STUDENT AID

Mr. Conte: How will the University's student body be affected by the Department's proposed FY 91 student aid budget?

Mr. Alexis: Federal student aid programs continue to serve as the mainstay of the financial aid program at Howard University. Of the $33,193,483 in aid awarded during the 1987/88 academic year, (the last year for which complete data are available) $19,223,983 or 58 percent was derived from federally supported programs, the balance provided through a combination of institutional funds and private donor contributions.

The Title IV aid programs are the primary sources of Federal aid available to assist students in financing postsecondary education. These programs include the College Work-Study, Supplemental Educational Opportunity Grants, Perkins Loan, and Stafford Loan programs, as well as the Parent Loan for Undergraduate Student and Supplemental Loan for Students programs. Ninety-six percent of the Federal aid dollars awarded to our students are from these sources. Aid in process for 1989-90 through Title IV programs is approximately $27.5 million dollars.

The Administration's proposals for student financial aid funding will cause a financial hardship on Howard's student body.

For many, a Howard education would not be affordable.

The funding level proposed for the Pell Grant program will result in the elimination of eligibility for students in all but the very lowest income categories. Approximately one-third of our Pell recipients may be so affected even though family income may be in the $20,000 range. Some 3,018 Pell grants totaling $5,157,900 are currently in process for the 89/90 school year.

By regulation the Pell grant serves as the floor award for receipt of other Title IV campus-based funds, (SEOG, CWS, and Perkins). Elimination of Pell eligibility for students who would ordinarily be priority candidates for campus-based aid packaging leaves little in the way of alternate funding to satisfy the demonstrated need of this group.

Proposed funding for the Stafford Loan program would prove extremely harmful to our aid population. For the 1989/90 academic year over 4,000 applications for loans are in process. The dollar value of these loans is in excess of $15.5 million. Some 57 percent of Federal aid recipients are assisted through this program with over half of the borrowers being graduate and professional level students. A reduction of 24 percent as proposed by the Administration would indeed be crippling.

Proposed funding for the Perkins loan program would mean no increase in the number of Perkins Loans awards or in the value of such awards since no Federal monies would be allocated. Awards to students would be possible only through recycling of repaid loan funds.

The State Student Incentive Grant program (SSIG) provides funding for approximately 350 students each academic year. The program is targeted to needy students and is funded through a match of Federal dollars by State program funds. Grants range in value from $600 to $2,400. No Federal dollars are being proposed for this program. It is unlikely that State programs will be able to fill the Federal dollar void.

Projected average costs for 1990/91 for on-campus undergraduate students are $12,379. With the maximum Pell award maintained at $2,300, the neediest aid recipients will need roughly $10,000 in additional resources to meet these costs. Funding must be increased in order for the University's mission to be maintained.

Mr. Haynes: I would like to clarify for the record the Department's FY 1991 proposals for student financial aid. The Administration has not proposed a reduction to the Pell Grant program, in either funding or recipients. The Administration has actually proposed to increase Pell Grants, resulting in an additional 175,000 recipients, as well as to level fund SEOG and Work-Study, and to zero fund Perkins Loan Federal Capital Contributions and SSIG.

Reductions in funding for the Guaranteed Student Loan programs in fiscal year 1991 are primarily the result of a decline in the interest subsidy payments to lenders based on the Administration's

Treasury bill rate projections. The decline in interest subsidies will not affect the amount of aid available to students. In fact, the Department projects an increase of $54 million in loan volume for the Guaranteed Student Loans in 1991.

LOAN DEFAULT RATE

Mr. Conte: You've had a good loan default rate in the past. What is the current loan default rate for your student body?

Mr. Alexis: The loan default rates at Howard University are listed below:

Stafford Loans (formerly Guaranteed Student Loans) and Supplemental Loans (SLS) Must be less than 20%	14.7%
Perkins Loans (loan program default rate must be less than 7.5%)	4.9%
*Medicine Loan Program	1.5%
*Dentistry Loan Program	3.5%
*Pharmacy Loan Program	0.8%
*Nursing Diploma Loan Program	0.0$
*Nursing baccalaureate Loan Program	2.9%

*Default rate must be less than 5%

DEFERRED MAINTENANCE

Mr. Conte: Deferred maintenance is an issue that frequently comes up. Last year Dr. Cheek submitted a priority list of deferred maintenance needs at the University. How has that list changed?

Mr. Alexis: Two items on last year's list have been funded by University sources. See revised schedule below:

Deferred Maintenance - $12,833,500

	FY 1990	FY 1991	FY 1992	Total
Roofs - Repair selected roofs	$300,000	---	---	$300,000
Power Plan Improvement	1,000,000	$2,000,000	$2,000,000	5,000,000
Elevator replacements (selected buildings)	500,000	1,000,000	1,000,000	2,500,000
Correct safety hazards (Select buildings)	250,000	500,000	---	750,000
Replace steam traps and condensate lines (main campus)	500,000	725,000	---	1,225,500
Repair of breeching	683,000	---	---	683,000
Replace A/C units (select buildings)	125,000	---	---	125,000
Window replacment - Phase I (campus-wide)	500,000	1,200,000	500,000	2,200,000
Dental Building - Replace vacuum system	50,000	---	---	50,000
Total	3,908,000	5,425,500	3,500,000	12,833,500

ACCREDITATION

Mr. Conte: Last year Howard worked to overcome several accreditation deficiencies. What is the status of this process? Are there any areas that still need attention? What recommendations did the accrediting group make?

Mr. Alexis: Last year, the most severe accreditation deficiency in the Academic Affairs Division was in the school of Law. The AALS/ABA had found the physical facilities housing the Law School to be inadequate and stipulated that the facilities must either be substantially renovated or new facilities built. Subsequently, the University secured the advice of consultants experienced in the law school facilities. Based upon their recommendation, the University has decided to build new facilities. A contract has been signed with an architect to design the building.

The accrediting agency for School of Engineering, had noted the lack of definite plans for repair, maintenance, and refurbishing of laboratories. In response, the school developed a five-year plan and has received appropriate recurring funding.

Last year, certain programs in the School of Business and the College of Fine Arts were under one year continuing review by the respective accrediting agencies. These programs have since been accredited for the full term. At this time, no programs are under continuing review or deferred review, but enjoy full accreditation by the respective specialized bodies.

In April 1989, the University was visited by the Middle States Association of Colleges and Schools, and as a result its accreditation was reaffirmed. The site visit team made a number of recommendations for the University to consider, but noted that most of these had already been noted by the Self Study Project. The recommendations related to situations which are common to similar complex universities, such as deferred maintenance and staff support. A Task Force has been appointed to monitor the implementation of over 200 recommendations made by the Self Study Project and the visiting team.

A survey team of this Liaison Committee on Medical Education (LCME) which represents the Association of American Medical Colleges and the Council on Medical Education of the American Medical Association conducted an accreditation site visit of the College of Medicine during the period November 16-19, 1987. The LCME voted to continue to full accreditation of the College of Medicine for the next seven (7) years with the next survey scheduled to occur during the 1994-95 academic year.

The College of Medicine has developed a plan to address its significant problems. Included among these are the concerns which were identified by the accrediting body. There have been some improvements in these areas as indicated below:

a. The leaking roofs in the experimental animal quarters and library have been repaired.

b. Better coordination of book requirements and schedules has resulted in improved bookstore service to students. This concern requires and will receive constant surveillance.

c. The University Student Health Service has established an appointment system through which more responsive service is provided to students. Hepatitis B vaccine is made available to students who desire it through the Student Health Service.

d. A plan for a learning resource center for the Division of Health Sciences has been developed and presented to the University administration.

e. All of the departmental chairmanships which were vacant and noted during the site survey have been filled.

f. Faculty salary increases have provided slight improvements in the salary of our faculty with respect to comparable salaries within the region. However, our salaries continue to be significantly lower. Additionally, funds are not adequate to increase faulty size so as to provide adequate sequestered time for faculty to conduct research activities.

RETENTION

Mr. Conte: What is the retention rate at Howard? What have you done to improve retention?

Mr. Alexis: Howard's retention rate for the undergraduate program averaged 77 percent. For the professional programs, 90 percent. The University has instituted programs to increase the retention rate. One of the programs is a counseling and tutorial assistance program, on the undergraduate and graduate level, that provides academic services in mathematics, English and proper study skills.

HIGH-ABILITY STUDENTS

Mr. Conte: What are you doing for your high-ability students?

Mr. Alexis: The University has provided trustee scholarships and fellowships for all of its schools and colleges. Also, there is an Honors program, a graduate student assistant remission of tuition program, and grants-in-aid for recruitment of high ability students.

DR. CHEEK

Mr. Conte: Dr. Cheek retired last year. What is the nature of his relationship with the University? How much compensation does he receive?

Mr. Alexis: Dr. Cheek serves as President Emeritus of the University. Dr. Cheek is provided office space on the University Campus. He does not receive compensation.

Howard University

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report	
The Committee requests that the Secretary of Education conduct a full audit of administrative costs total compensation of senior staff compared with other private and public universities, and to submit a report to the House and Senate Committee and to the Howard Trustees no later than February 15, 1990.	The report is in preparation; a preliminary briefing will be given to Committee staff by March 1, 1990.
The Committee recommends that a 50-percent tuition surcharge be imposed on all new foreign students accepted after October 1, 1989.	Howard University is developing a plan to implement the foreign student tuition surcharge over a 3-year period beginning in academic year 1990-1991.
The Committee requests that Howard include in its 1991 budget justification a review of the research funds received from all sources over the last few years and estimates for 1990 and 1991.	A detailed breakdown for 1985 through 1991 has been requested from Howard University and will be forwarded to the Committee as soon as it is received.
1990 Senate Report	
The Senate Committee concurs with the House on the imposition of a tuition surcharge for foreign students; however, the Senate directs that the Department and Howard University develop a plan for a multi-year phase-in of the surcharge.	Howard University is developing a plan to implement the foreign student tuition surcharge over a 3-year period beginning in academic year 1990-1991.

Howard University

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 Conference Report	
The Conference report provides for a 50-percent tuition surcharge to be phased in over a 3-year period. The Conference directs that the Secretary of Education and Howard University jointly develop procedures for implementing the surcharge and submit a report to the Senate and House Appropriations Committees by January 1, 1990.	Howard University is developing a plan to implement the foreign student surcharge over a 3-year period. The report is in preparation and will be submitted shortly.

Howard University

Account Summary

	1989 Appropriation	1990 Appropriation	1991 Request
1. Academic program........	$151,357,000	$155,306,000	$155,306,000
2. Endowment grant.........	1,482,000	1,500,000	4,500,000
3. Research................	4,730,000	4,730,000	4,730,000
4. Howard University Hospital............	20,910,000	20,910,000	20,910,000
Subtotal.........	178,479,000	182,446,000	185,446,000
Reappropriation for endowment grant.......	494,000	—	—
Total.............	178,973,000	182,446,000	185,446,000

For 1991, the Department requests $185,446,000 for Howard University, an increase of $3 million over the 1990 appropriation. The Department's long-term goal is to encourage Howard University's financial strength and stability and to reduce its dependence on the direct Federal appropriation; therefore, funding for endowment grants is requested to be increased by $3 million. All other programs are requested for level-funding at the 1990 level.

In fiscal year 1990, approximately 98 percent of Howard University's total enrollment is composed of minority students. The enrollment of minorities in postsecondary education is key to their personal economic success, to the growth of the American economy, and to promoting social justice in this country. The Department's support for Howard University reflects this Administration's continuing commitment to improving educational opportunities for minorities, as indicated in Executive Order 12320. The direct Federal appropriation to Howard University in 1989 accounted for approximately 65 percent of the University's educational and general (E&G) expenditures in that year.

Beginning in fiscal year 1990 and continuing into 1991, the Department will oversee a number of actions designed to increase accountability in Howard's use of Federal funds. The House Appropriations Committee has requested the Department to conduct a full audit of administrative costs at Howard, including total compensation of senior staff compared to other private and public universities and to report the finding to the Congress and Howard's Board of Trustees by March 1, 1990. The Department and Howard will assess the conclusions developed in that report and take necessary actions.

Howard University

Account Summary

In response to the Department's recommendation, the House Appropriations Committee in its FY 1990 report recommended that Howard adopt a tuition surcharge of 50 percent for all new foreign students accepted after October 1, 1989 (FY 1990). In FY 1989, the Federal subsidy per foreign student was $15,944. With approximately 16 percent of Howard's 1990 enrollment comprised of foreign students, once fully implemented this surcharge will raise an estimated $5.5 million in increased tuition revenue at Howard. The University is currently developing a plan to implement the surcharge in stages over a 3-year period beginning in academic year 1990-1991. For 1991, the Department will continue to support this policy and will work with Howard to ensure its implementation.

Howard University

1. Academic program
   (20 U.S.C. 123)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$155,306,000	$155,306,000	---

Purpose and Method of Operation

Howard University, located in Washington, D.C., has 18 schools and colleges. It maintains a comprehensive program in undergraduate liberal arts instruction and also offers programs at the undergraduate professional, graduate and graduate professional levels. Howard University offers the Master's degree in over 85 fields and the Doctor of Philosophy degree in 24 fields.

To support its academic programs, the University provides library services, administrative support, and research opportunities for approximately 13,000 students. These programs and services support the University's goal of expanding the opportunities of graduates, particularly minorities, in fields in which they are still underrepresented.

In fiscal year 1989, the direct Federal appropriation provided approximately 65 percent of the educational and general (E&G) costs of the University's programs. This percentage has decreased from 69 percent in 1988 because of Howard's increased expenses, including faculty salary raises and support for maintenance of dormitories and the Office of Research Administration.

In academic year 1988-1989, 59 percent of all full-time Howard University students received approximately $18.4 million through the Federal student aid programs, and the University received an additional $22.7 million through other Federal grant and research programs.

The Academic Program is a current-funded activity for which funds are available from October 1 to September 30.

Accomplishments

During the last year, Howard worked to remedy accreditation deficiencies in a number of key areas:

- The University-wide self-study required by the Middle States Association of Colleges and Schools as part of the reaffirmation of

---

Accomplishments -- Continued

the accreditation process was completed and submitted in the spring of 1989. Full accreditation for another 10 years was granted by the Association in December 1989. The report submitted by their site visit team identified many strengths of the University and cited no significant deficiencies. The University has established a task force to ensure implementation of the recommendations made in the site team report and in the self-study.

- Several schools received accreditation confirmation in 1989, including the School of Architecture, the School of Education, and the Department of Drama.

- To comply with an accrediting agency stipulation, the University is proceeding into the design phase of a new facility for the School of Law.

The University has also focused on enhancing its curricula, improving its facilities, and providing an enriched and supportive environment for students:

- The Center for Academic Reinforcement began a weekend program called "Gaining the Competitive Edge," designed to enhance student retention. The program includes counseling, tutoring, and small group instruction.

- The Department of Journalism inaugurated several new programs in advertising education.

- The School of Continuing Education sponsored a Magazine Publishing Procedures Institute.

- The School of Education formed a partnership with the J.C. Nalle Elementary School in the District of Columbia. The Partnership will provide educational counseling, staff development, and cultural enrichment for the staff, faculty, and students of J.C. Nalle Elementary School.

- The Graduate School of Arts and Sciences established a Primary Core Facilities Program to encourage more efficient, collaborative, and multidisciplinary use of basic research laboratories and equipment.

Grants from the Federal Government, industry, and private citizens have enabled Howard to offer support and enhanced academic programs to high ability students. A $2 million dollar grant from a private donor established an Undergraduate Honors Program in the School of Communications, and also made possible a Distinguished Visiting Professor Program in communications. The School of Law began a Minority Fellows Program in 1989, which provides significant financial assistance throughout the 3-year program for students with high scores on the LSAT.

Howard University

1. Academic program

1991 Budget Proposal

The 1991 request for Howard University's academic program is $155,306,000, the same as the 1990 appropriation. This maintained level of support would assist in continuing to eliminate accreditation deficiencies in the University and in helping Howard meet operating expenses.

The accrediting body for the School of Engineering noted that engineering faculty salaries have not kept pace with inflation or the market and recommended the addition of full-time faculty and decreasing reliance on visiting faculty. To decrease its reliance on loaned professors, the School of Engineering is now actively recruiting for new faculty. The undergraduate curriculum would continue to include social sciences and humanities courses as a response to a recommedation from the accrediting body.

The College of Medicine recently was granted the normal 7-year extension of accreditation based on progress in addressing current accreditation deficiencies. Among continued areas of concern are limitations on faculty research opportunities due to excessive teaching demands and limited financial resources to support faculty increases, ancillary activities, and research. To address excessive teaching demands, funds would be used to increase the size of basic science and clinical faculty, and to increase faculty salaries. Even though Federal support is proposed at the same level as in FY 1990, the University is estimating $6.9 million in increased revenue from sources other than the direct Federal appropriation. These additional "other" revenues will help to support additional faculty as well as faculty and non-faculty salary increases.

In FY 1991, Howard will continue to focus on management improvements, accreditation deficiencies, and support for student services. At the direction of the Congress, the Department in 1990 will conduct a full audit of administrative costs at Howard, including total compensation of senior staff compared to other private and public universities. In response to the results of this audit, the Department and Howard beginning in 1990 and continuing into 1991, will seek ways to decrease the University's administrative overhead.

2. Endowment grant
(P.L. 98-480)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$1,500,000	$4,500,000	+$3,000,000

1/ Additional authorizing legislation to be proposed.

Purpose and Method of Operation

Howard University's matching endowment grant program is designed to assist the University in meeting its future needs and to reduce long-term Federal funding requirements by stimulating private contributions to build the University's endowment. Howard receives these Federal funds as an endowment grant provided that it matches the grant through non-Federal contributions. The endowment fund generates income from low-risk investments which can be used to support operating programs, salaries, services, construction, or research. Up to 50 percent of the income earned each year can be withdrawn to meet University operating costs. Funds appropriated for this activity are available until expended.

Accomplishments

Of the $9,390,000 appropriated for the endowment fund between 1985 and 1990, the University has matched $6.5 million--$1.4 million in 1985, $700,000 in 1986, $1.1 million in 1987, $900,000 in 1988, and $2.4 million in 1989 ($1 million of which is from one donor).

In 1989, the University reported that there were approximately 51,500 Howard alumni but only 7 percent of these alumni contributed, with an average annual gift of $511. Howard University raised $1 million and $1.8 million from alumni in fiscal years 1987 and 1988 respectively. A portion of these funds went to the Endowment fund.

1991 Budget Proposal

The 1991 request for the endowment fund is $4.5 million, an increase of $3 million over the 1990 appropriation. As in the 1990 President's budget request, funds are requested to remain available until expended. The request for the endowment fund is intended to increase the non-Federal revenues of Howard University and decrease the University's dependence on the direct Federal appropriation.

Howard University

1. Endowment grant

1991 Budget Proposal — Continued

To provide incentives for increased non-Federal contributions to the Howard endowment, the Department will again recommend, as it did for 1989 and 1990, legislation supported by Howard University to provide for a two-to-one (Federal to non-Federal) rate of matching for all non-Federal endowment contributions in excess of $1 million each year and a three-to-one rate of matching for such contributions in excess of $2 million each year. In recognition of the need to increase non-Federal revenue sources, the University Board of Trustees has appointed a Comprehensive Fiscal Plan Committee that will have responsibility for identifying new sources of financial support for the University. The University is developing an active Board of Trustees who will play a major role in improved fundraising efforts, particularly organizing gifts from alumni.

Impact Data	1989	1990	1991
Endowment:			
Matching funds raised (est.)....................	$2,400,000	$2,300,000	$2,500,000
Percentage of total revenue from endowment income....................	.30%	.33%	.31%
End of fiscal year value of matching endowment fund......................	$13,173,000	$15,673,000	$18,000,000
End of fiscal year total value of endowment fund......................	$64,149,000	$66,149,000	$68,149,000
End of fiscal year total value of endowment fund (including funds not federally matched)..................	$77,322,000	$81,822,000	$86,730,000
Amount of revenue from endowment income..........	$744,000	$850,000	$850,000

3. Research
(20 U.S.C. 123)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,730,000	$4,730,000	—

Purpose and Method of Operation

Federal funding of research activities was first proposed in 1985 as a supplement to improve Howard's capacity to compete for and acquire research grants. The research activity funds post-doctoral fellowships, primarily in scientific disciplines, and laboratory equipment. Howard University's research activity is current funded; funds are available from October 1 to September 30.

Accomplishments

In fiscal year 1989, Howard University established an Office of Research Administration within the Office of the Executive Vice President to increase the research activity and productivity of the Howard faculty in all of the University's schools and colleges. The Office of Research Administration has responsibility for: (1) increasing the research activity in all of the University's academic programs by increasing the size and scope of research grants and contracts; (2) monitoring research performance on a University-wide basis; (3) providing assistance to faculty in preparing research proposals; and (4) recommending research priorities. In addition, this Office will enhance the pre- and post-award administration of the University's grants and contracts program by decreasing the length of time required to transmit grant and contract applications to external funding sources; expediting the acquisition of research equipment, supplies, and personnel; and securing services for the repair and renovation of research-related physical facilities.

Federal appropriations have provided Howard University with funds to purchase research equipment, renovate laboratories, and support multi-disciplinary research activities, including individual faculty research projects. These activities, in turn, have substantially increased Howard's capacity to compete for research grants.

Howard University

3. Research

1991 Budget Proposal

The 1991 budget request of $4,730,000 for Howard University research is the same as the 1990 appropriation level. The Department supports the use of a Federal appropriations for research to enable Howard University to compete successfully for research grants. Accreditation boards for the College of Medicine, Schools of Law and Engineering, and other Howard schools have identified deficiencies in research productivity and opportunities among faculty, as well as deficiencies in research facilities. Continued research support will assist in eliminating such shortcomings.

Impact Data	1989	1990	1991
Expenditures on research..........	$19,572,000	$24,302,000	$29,032,000
Expenditures on new equipment.....	1,700,000	2,000,000	2,100,000
Expenditures on renovation........	1,030,000	1,200,000	1,300,000
Revenues from restricted grants and contracts:			
Federal.......................	18,000,000	18,000,000	19,000,000
Non-Federal...................	12,100,000	12,800,000	13,500,000
Revenues from unrestricted grants and contracts:			
Federal.......................	4,730,000	4,730,000	4,730,000
Non-Federal...................	211,000	220,000	230,000

4. Howard University Hospital
(20 U.S.C. 128)

1991 Authorization: Indefinite

Budget Authority

1990 Appropriation	1991 Request	Increase or Decrease
$20,910,000	$20,910,000	---

Purpose and Method of Operation

Howard University Hospital serves as a major acute and ambulatory care center for the inner city of Washington, D.C. It is a 516-bed inpatient hospital with emergency facilities, and it operates 74 specialty clinics in its Ambulatory Care Department. It is a major teaching facility that trains physicians in 19 specialty areas. In addition, the Hospital serves as a laboratory for numerous nursing and other paramedical trainees from both Howard University and other training institutions. It continues to provide leadership in many areas, most notably in the fields of radiation therapy, organ transplant, and renal dialysis. Operations of the Hospital are partially financed by the Federal appropriation and by receipts from medical services rendered by group and individual hospitalization insurance policies, funds supplied by the Medicare program, and contractual agreements for patient care services with the District of Columbia government and other local jurisdictions.

Howard University Hospital is a current-funded activity for which funds are available from October 1 to September 30.

Accomplishments

The following are recent accomplishments of the Health Affairs Division:

- The Department of Physical Therapy, the Pediatric Residency Training Program in the Department of Pediatrics, the residency program in the Department of Dermatology, the Internal Medicine Program, and the College of Nursing received full accreditation in 1989.

- To reduce the attrition rate among entering students, the College of Allied Health Sciences instituted a new 5-year curriculum. Early indications are that the new curriculum has enabled 81 percent of students with academic difficulties to continue their studies.

- Seventy-one percent of students in the College of Nursing passed the State board licensing examination—a significant improvement over 1988's pass rate of 57 percent.

Howard University

4. Howard University Hospital

1991 Budget Proposal

The 1991 budget request for the Howard University Hospital is the same as the 1990 appropriation level. The 1991 request for level funding continues the policy of the Congress, stated in the law that transferred Freedman's Hospital to Howard University, that the Hospital facilities become progressively more self-supporting.

Impact Data	1989	1990	1991
Percentage of revenue from Federal appropriation....	14.8%	11.9%	9.0%
Percentage of revenue from other Federal sources (Net Medicare and Medicaid revenue)......................	31.2%	32.8%	33.0%
Percentage of revenue from patients.................	54.0%	55.3%	58.0%

WEDNESDAY, FEBRUARY 28, 1990.

RESEARCH, STATISTICS, AND IMPROVEMENT OF PRACTICE

WITNESSES

CHRISTOPHER T. CROSS, ASSISTANT SECRETARY FOR EDUCATIONAL RESEARCH AND IMPROVEMENT

MILTON GOLDBERG, DIRECTOR, OFFICE OF RESEARCH

EMERSON J. ELLIOTT, ACTING COMMISSIONER, NATIONAL CENTER FOR EDUCATION STATISTICS

NELSON C. SMITH, DIRECTOR, PROGRAMS FOR THE IMPROVEMENT OF PRACTICE

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

CAROL A. CICHOWSKI, DIRECTOR, SPECIAL EDUCATION, REHABILITATION AND RESEARCH ANALYSIS, BUDGET SERVICE

Mr. NATCHER. At this time we take up the budget request for the fiscal year 1991 for the Research, Statistics and Improvement of Practice account. We have before the committee Mr. Christopher Cross, the Assistant Secretary for Educational Research and Improvement.

Mr. Cross, before you give us your statement, tell us who you have with you there at the table.

Mr. CROSS. Yes, Mr. Chairman.

I am sorry if we gave you the impression that we were not going to show up. We were cutting things a little close. On my right are Carol Cichowski who heads the Budget Service Division that deals with our area and Sally Christensen, Director of the Budget Service. You know both of them. To my immediate left is Dr. Milton Goldberg, Director of the Office of Research. On Milt's left is Emerson Elliott, Acting Commissioner of the National Center for Education Statistics, and on the far left is Nelson Smith, the Director of Programs for the Improvement of Practice.

Mr. NATCHER. We are delighted to have all of you before the committee.

Now, Mr. Cross, we will be pleased to hear from you concerning your request.

Mr. CROSS. Thank you, Mr. Chairman.

We are pleased to be here today to talk about our request for 1991 for research and statistics. As you know, we are requesting an increase of nearly $80,000,000. This increase addresses a disparity between supply and demand. The education information coming out of the federal education R&D system is simply not satisfying the demand for it.

One reason is inadequate support. Of the $353,000,000,000 we are spending as a nation on education this year, only about .04 percent goes to education R&D. Compare that to American business, which annually invests some 2 percent of sales into R&D. "No single feature of the education system is more shocking to business leaders," says Xerox chairman David Kearns, "than low levels of education research spending." Or compare spending on education research with spending on medical research. The Nation devotes about 2 percent of total health care spending to medical research, more than 50 times, in terms of share of total expenditures, our spending on education research.

Since 1973, the decline in funding for education R&D supported by the Office of Educational Research and Improvement and its predecessor agency, the National Institute of Education, has been dramatic. Our appropriations for R&D have declined to only 41 percent of the fiscal year 1973 level while all spending in the United States for education has climbed to over 400 percent of the 1973 level. The attached chart graphically depicts the marked decline of education R&D funding contrasted with the steady growth of overall spending in education. During the 1980s, while federal support for education R&D declined—by 33 percent, in constant dollars, between 1980 and 1987 according to the General Accounting Office—education reform activity soared to a level unprecedented at any time in this nation's history. Thus, while our opportunity to learn from educational experiments rose, our capacity to learn from those changes fell.

Also during the 1980s, there was a tremendous increase in both the perceived usefulness of education R&D and in the demand for more of it. For instance, in the Governor's 1986 report, "Time for Results", Governor Clinton wrote that, "To restructure schools, we must use what we know from research about effective schools and effective leadership." Schools have indeed been using such research. The GAO reports that more than 40 percent of the nation's school districts have implemented some kind of effective schools program.

Other kinds of education research also have informed important policy decisions. California's Superintendent of Public Instruction, Bill Honig, led the revision of the State's new guidelines for selecting reading textbooks, guidelines that have received wide praise, guidelines that were, says Honig, "built * * * around the [reading] research." Honig is now using education research to alter student assessment fundamentally. Today, more than ever, policymakers consult and use education R&D as a basis for decisions.

Still, a common complaint is that R&D has made little difference at the classroom level. While it is true that, in the past, R&D has not made nearly enough of an impact on student and teacher performance, developments in recent years suggest that this is changing. Four of the Nation's largest school districts are returning decisionmaking authority to the school site; educators from California to Maine are scouring research and using its findings to "restructure" their schools; and nearly a dozen States are making or considering major changes in the ways they assess learning. However, a recent GAO report of the effects of education reform indicates that some districts improved, while others did not. Research into why and how reforms work is desperately needed. Thus, it is hardly surprising that calls for increases in education R&D are heard from virtually all quarters. Those who have called for such increases include leaders of both major teacher unions, governors and legislators, CEOs, college deans, scholars, journalists, various national councils and commissions, including the Council on Competitiveness and the Commission on Workforce Quality and Labor Market Efficiency, the "New Republic"—the list goes on.

The growth in demand for information from education R&D has accelerated to a feverish pace in the months since President Bush and the Governors set in motion a process for establishing national education goals. Those goals require various yardsticks for measuring progress toward them, yardsticks that are currently only partially in place. Mr. Chairman, the capacity of the current education R&D system to supply research findings and statistical data is nowhere near what the public wants or what the Nation requires if we are going to advance toward the new goals. That is why we are seeking a major increase in Federal support of education R&D. As the President and the Governors reaffirmed in Charlottesville, supporting research and development is a major component of the Federal role in education. We are anxious to carry out our responsibility.

Our 1991 plan sets forth the first step of a multi-year strategy for addressing the disparity between the supply of information coming out of the Federal education R&D system and the demand for it, and refocusing American education on performance and results. By providing such focus, through R&D, the Federal Government can encourage and enable States and communities across the country to discover what works to strengthen the educational performance of youngsters and adults. Our request is one that I believe has the bipartisan support of Governors, chief State school officers, State legislators, education leaders, business leaders, and others dedicated to improving American education. Let me outline it in four categories: statistics, assessment, research, and initiatives of the President.

Our $41,500,000 request for Statistics, an 83 percent increase over the 1990 level, would permit us to continue strengthening the Nation's answers to urgent questions such as: Who drops out of school and why? What are the characteristics of the U.S. teacher workforce? What are the various policies and practices in schools? What courses do students take? How many postsecondary degrees are being earned in science, engineering, and other critical disciplines? In addition, this request would support efforts to assist States in improving the comprehensiveness, comparability, and timeliness of State-level data—an improvement upon which the quality of data at the national level depends. Also, the budget would continue extension of the Nation's education data base into important areas where, today, scant, if any, data exist—early childhood education, international comparisons, adult out-of-school education, and other areas.

While the National Assessment of Educational Progress, NAEP, is the best available measure for gauging the Nation's progress toward performance goals in education, NAEP alone is not enough. Additional "pictures" of America's education performance are needed. For example, we intend to support design work and field testing for the first comprehensive adult literacy study in 15 years and the administration of two international studies of students and schooling, one of reading literacy across 37 countries and one of mathematics, science, and geography achievement across 21 nations. These adult literacy and international snapshots will supply critical pieces to the larger, overall picture of educational achievement in America. Our 1991 request also includes support for the census mapping project.

Secondly, our $18,900,000 request for Assessment, which is a $1,800,000 increase over the 1990 level, would support our ongoing contract for conduct of the 1990 and 1992 cycles of the National Assessment of Educational Progress, which as you know include the collection of State representative data for the first time. It would also support costs of the National Assessment Governing Board and the statutorily required validation and evaluation studies. In 1991, we hope to work with the Governing Board and other groups to begin to explore the feasibility of expanded and regular State testing of students in more subjects and at more grade levels, and toward broadening NAEP to measure student competence in thinking and problem solving. These improvements are vital to building a baseline that Americans can use to monitor progress toward national goals and to make mid-course corrections as we pursue those goals.

We are seeking a 10 percent increase over the 1990 appropriation for Research. Of the $61,300,000 we are requesting, a major portion would support the national R&D centers, regional laboratories, and ERIC. Seven currently funded national R&D centers will continue in 1991. Two major competitions will be announced very soon, one to establish 19 new national R&D centers, the other to award contracts for 10 regional education laboratories, including one devoted solely to serving the Pacific Basin. These new awards will begin in 1991. As in the past, the regional labs will carry out rural education activities. While plans are to continue research to improve the teaching and learning of math, science, and writing, new issues will also be addressed by national R&D centers, issues that include adult literacy; education in the inner cities; families, communities and young children's learning; and the organization and restructuring of schools. We are working with other Federal agencies, including the Departments of Labor and Health and Human Services and the National Endowment for the Arts, to arrange our joint support of some of the centers addressing new issues.

Another of our priorities in 1991 is to support the development of alternative approaches for assessing student learning, approaches more valid and useful than today's standardized tests, approaches that States, local school systems, and teachers may adapt and use to measure the thinking, problem solving, and other "higher order" competencies universally desired in American students, workers, and citizens. In 1991, we also hope to sponsor investigations, conferences, and publications that help people at the State and local level overcome chronic roadblocks to student learning. How can parent involvement be increased, for instance, particularly among hard-to-reach parents? What characteristics and conditions are essential to the effectiveness of teachers, and how can those be developed?

What are the obstacles to better performance in reading, writing, mathematics, science, history, and other core disciplines? These are a few of the questions we will address.

We also are seeking funding for four specific initiatives of the President, each of which responds to a major educational challenge. A $25,000,000 Principal Training initiative would improve the preparation of school principals by using excellent principals to train and mentor prospective ones. Mr. Chairman, as educational decisions continue to be shifted out of central offices and into the individual schools themselves, and as education systems increasingly seek to involve teachers in making those decisions, new and creative leadership will be needed in schools. Today's principals have not typically been trained to provide such leadership. Because principals are in a unique position to improve the performance of schools, we must provide outstanding educational leadership training.

The $5,000,000 Dropout Prevention initiative would be used to establish a national center and to conduct both long- and short-term research that enhances our understanding of how to increase student learning and to encourage students to stay in school and earn diplomas. These efforts would inform and build upon various other dropout prevention efforts currently underway, with the ultimate aim being to identify conditions essential to success in educating and keeping at-risk students in school. They would be designed to yield results that teachers, guidance counselors, principals, and others could use to make schools engaging places where students are motivated to learn.

The $3,000,000 Evaluation of Reform initiative would support up to a dozen evaluations of various reforms with which States and school districts have experimented these past few years. Aimed to identify elements critical to improving student learning, these evaluations would illuminate which reform approaches are capable of producing what particular changes.

We are requesting $20,000,000 for an Education Summit Follow-Up initiative, which would permit us to strengthen the usefulness of the Nation's education data base for tracking progress toward the national education goals. This will require that a number of gaps in data and research be closed. For instance, although a goal has been set with regard to school readiness—a worthy and, I believe, necessary goal—at this time, no adequate measures of school readiness exist. Nor do we have an understanding of the full range of activities by which parents can promote it. With regard to other goals, the Nation needs more precise data on minority dropouts and better procedures for ensuring the technical quality of international studies. We need a clearer sense of which kinds of business involvement actually promote student learning.

Mr. Chairman, let me mention an activity that cuts across our activities in statistics, assessment, research, and the President's initiatives: dissemination. Our 1991 plan will generate more and better information than ever about how to improve education. However, the real value of that information will not be realized unless we vastly improve our capacity to deliver such information and assistance to teachers, administrators, parents, business people, and others who can use it. Our efforts to disseminate information must involve more than merely supplying information. They must include the provision of technical assistance and whatever else it takes to see that research makes a measurable impact on student and adult learning, that it makes things happen in education.

We are developing a national strategy for dissemination, a strategy that will assure access to and availability of reliable information about education as well as assistance to diverse groups in making good use of that information. Once in place, this strategy will employ new approaches, and approaches that we have not been able to undertake on an adequate scale. It will include exhibits, demonstrations, and workshops across the country for policymakers and their staffs. It will include campaigns to reach practitioners, parents, community leaders, representatives of the private sector, and others—campaigns to share information about the latest research and how it can be used to reduce dropout rates, restructure schools, improve science teaching and learning, and address a host of other issues.

One of our 19 new national R&D centers will support that work. Its mission will be to furnish national leadership in making education R&D "user friendly" and to determine how R&D findings can be presented in formats or ways that increase their use and that actually lead to better educational decisions and behaviors on the part of teachers, students, parents, policymakers, and other potential beneficiaries of education R&D.

Our dissemination initiative will strengthen our own activities, and it will also involve other offices of the Department and other Federal agencies as well—the Department of Energy, the Department of Labor, the National Science Foundation, and others. Our goal is a Federal-wide effort to share information to improve teaching and learning in America. My aim is to open a number of information-and-assistance "channels" to serve parents, principals, teachers, business people, community leaders, and other decisionmakers in America's statehouses, schoolhouses, and homes.

We also intend to explore the uses of advanced information technologies in each of the four areas I have outlined today. Technology will be an important tool for delivering education information to teachers, parents, principals, and others directly responsible for improving student learning. For instance, Al Shanker recently proposed a national data base that might "list the materials and the technology available to help kids learn about the Declaration of Independence or interest rates or how thermometers work" or any other topic. "National data bases are available in almost every other field of endeavor," he pointed out, "why not one for teachers?"

Mr. Chairman, decisionmakers across the country want and need more information on education than ever before. Our request will help bring the supply in line with the demand. It will help States and communities advance toward the Nation's education goals. And it will help us as a Nation, as President Bush put it, "make an American education the best in the world."

I would also like to call your attention to the chart we have over here on the easel, which shows that since 1973 funding for education R&D at the Federal level has declined to less than 50 percent of what it was in 1973, while total spending on education has increased more than 400 percent. Over the years, as this chart shows very clearly, a substantial data gap has emerged. My colleagues and I stand ready to answer your questions.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

Christopher T. Cross
Assistant Secretary for
Educational Research and Improvement

on

Research, Statistics, and Improvement of Practice

Mr. Chairman and Members of the Committee:

I appreciate the opportunity to appear before you today to discuss the 1991 budget for research and statistics. This is an exciting time for education. The President's Education Summit with Governors has resulted in national goals in education and is generating tremendous momentum toward improving education. As the Joint Statement issued at the conclusion of the Summit indicates, there is an important role for the Federal Government in providing research and development for programs that work, good information on the real performance of students, schools, and States, and assistance in replicating successful State and local initiatives all across the United States.

Toward that end, our request of $174.7 million for research and statistics would enable us to make a significant contribution to the improvement of American education. However, before I provide more details about how these funds would help improve America's educational performance, let me set the stage with a brief explanation of why we are requesting an increase of almost $80 million. In simplest terms, it addresses a disparity between supply and demand. The education information coming out of the Federal education R&D system is simply not satisfying the demand for it.

One reason is inadequate support. Of the $353 billion we are spending as a Nation on education this year, only about .04 percent goes to education R&D. Compare that to American business, which annually invests some 2 percent of sales into R&D. Xerox, according to Chairman David Kearns, plows between 5 and 7 percent of yearly revenues into R&D. "No single feature of the education system is more shocking to business leaders," says Kearns, "than low levels of education research spending." Or compare spending on education research with spending on medical research. The Nation devotes about 2 percent of total health care spending to medical research, more than 50 times, in terms of share of total expenditures, our spending on education research.

Since 1973, the decline in funding for education R&D supported by the Office of Educational Research and Improvement and its predecessor agency, the National Institute of Education, has been dramatic. Our appropriations for R&D have declined to only 41 percent of the fiscal year 1973 level while all spending in the United States for education has climbed to over 400 percent of the 1973 level. The attached chart graphically depicts the marked decline of education R&D funding contrasted with the steady growth of overall spending in education. During the 1980s, while Federal support for education R&D declined--by 33 percent (in constant dollars) between 1980 and 1987, according to the General Accounting Office--education reform activity soared to a level unprecedented at any time in this Nation's history. Thus, while our opportunity to learn from educational experiments rose, our capacity to learn from those changes fell.

Also during the 1980s, there was a tremendous increase in both the perceived usefulness of education R&D and in the demand for more of it. For instance, in the Governors' 1986 report, Time for Results, Governor Clinton wrote that, "To restructure schools, we must use what we know from research about effective schools and effective leadership." Schools have indeed been using such research. GAO reports that more than 40 percent of the Nation's school districts have implemented some kind of effective schools program.

Other kinds of education research also have informed important policy decisions. California's Superintendent of Public Instruction, Bill Honig, led the revision of the State's new guidelines for selecting reading textbooks, guidelines that have received wide praise, guidelines that were, says Honig, "built...around the [reading] research." Honig is now using education research to alter student assessment fundamentally. Today, more than ever, policymakers consult and use education R&D as a basis for decisions.

Still, a common complaint is that R&D has made little difference at the classroom level. While it is true that, in the past, R&D has not made nearly enough of an impact on student and teacher performance, developments in recent years suggest that this is changing. Four of the Nation's largest school districts are returning decisionmaking authority to the school site; educators from California to Maine are scouring research and using its findings to "restructure" their schools; and nearly a dozen States are making or considering major changes in the ways they assess learning. However, a recent GAO report of the effects of education reform indicates that some districts improved, while others did not. Research into why and how reforms work is desperately needed. Thus, it is hardly surprising that calls for increases in education R&D are heard from virtually all quarters. Those who have called for such increases include leaders of both major teacher unions, Governors and legislators, CEOs, college deans, scholars, journalists, various national councils and commissions, including the Council on Competitiveness and the Commission on Workforce Quality and Labor Market Efficiency, The New Republic --the list goes on.

The growth in demand for information from education R&D has accelerated to a feverish pace in the months since President Bush and the Governors set in motion a process for establishing national education goals. Those goals require various yardsticks for measuring progress toward them, yardsticks that are currently only partially in place. Mr. Chairman, the capacity of the current education R&D system to supply research findings and statistical data is nowhere near what the public wants or what the Nation requires if we are going to advance toward the new goals. That is why we are seeking a major increase in Federal support of education R&D. As the President and the Governors reaffirmed in Charlottesville, supporting research and development is a major component of the Federal role in education. We are anxious to carry out our responsibility.

Our 1991 plan sets forth the first step of a multi-year strategy for addressing the disparity between the supply of information coming out of the Federal education R&D system and the demand for it, and refocusing American education on performance and results. By providing such focus, through R&D, the Federal Government can encourage and enable States and communities across the country to discover what works to strengthen the educational performance of youngsters and adults. Our request is one that I believe has the bipartisan support of Governors, chief State school officers, State legislators, education leaders, business leaders, and others dedicated to improving American education. Let me outline it in four categories: statistics, assessment, research, and initiatives of the President.

Statistics

Our $41.5 million request for Statistics, an 83 percent increase over the 1990 level, would permit us to continue strengthening the Nation's answers to urgent questions such as: Who drops out of school and why? What are the characteristics of the U.S. teacher workforce? What are the various policies and practices in schools? What courses do students take? How many postsecondary degrees are being earned in science, engineering, and other critical disciplines? In addition, this request would support efforts to assist States in improving the comprehensiveness, comparability, and timeliness of State-level data--an improvement upon which the quality of data at the national level depends. Also, the budget would continue extension of the Nation's education database into important areas where, today, scant, if any, data exist--early childhood education, international comparisons, adult out-of-school education, and other areas.

While the National Assessment of Educational Progress (NAEP) is the best available measure for gauging the Nation's progress toward performance goals in education, NAEP alone is not enough. Additional "pictures" of America's education performance are needed. For example, we intend to support design work and field testing for the first comprehensive adult literacy study in 15 years and the administration of two international studies of students and schooling, one of reading literacy across 37 countries and one of mathematics, science, and geography achievement across 21 nations.

Assessment

Our $18.9 million request for Assessment, which is a $1.8 million increase over the 1990 level, would support our ongoing contract for conduct of the 1990 and 1992 cycles of the National Assessment of Educational Progress, which as you know include the collection of State representative data for the first time. It would also support costs of the National Assessment Governing Board and the statutorily required validation and evaluation studies. In 1991, we hope to work with the Governing Board and other groups to begin to explore the feasibility of expanded and regular State testing of students in more subjects and at more grade levels, and toward broadening NAEP to measure student competence in thinking and problem solving. These improvements are vital to building a baseline that Americans can use to monitor progress toward national goals and to make mid-course corrections as we pursue those goals.

Research

We are seeking a 10 percent increase over the 1990 appropriation for Research. Of the $61.3 million we are requesting, a major portion would support the national R&D centers, regional laboratories, and ERIC. Seven currently funded national R&D centers will continue in 1991. Two major competitions will be announced very soon, one to establish 19 new national R&D centers, the other to award contracts for 10 regional education laboratories, including one devoted solely to serving the Pacific Basin. These new awards will begin in 1991. As in the past, the regional labs will carry out rural education activities. While plans are to continue research to improve the teaching and learning of math, science, and writing, new issues will also be addressed by national R&D centers, issues that include adult literacy; education in the inner cities; families, communities and young children's learning; and organization and restructuring of schools. We are working with other Federal agencies, including the Departments of Labor and Health and Human Services and the National Endowment for the Arts, to arrange our joint support of some of the centers addressing new issues.

Another of our priorities in 1991 is to support the development of alternative approaches for assessing student learning, approaches more valid and useful than today's standardized tests, approaches that States, local school systems, and teachers may adapt and use to measure the thinking, problem solving, and other "higher order" competencies universally desired in American students, workers, and citizens. In 1991, we also hope to sponsor investigations, conferences, and publications that help people at the State and local level overcome chronic roadblocks to student learning. How can parent involvement be increased, for instance, particularly among hard-to-reach parents? What characteristics and conditions are essential to the effectiveness of teachers, and how can those be developed? What are the obstacles to better performance in reading, writing, mathematics, science, history, and other core disciplines? These are a few of the questions we will address.

Presidential Initiatives

We also are seeking funding for four specific initiatives of the President, each of which responds to a major educational challenge. A $25 million Principal Training initiative would improve the preparation of school principals by using excellent principals to train and mentor prospective ones. Mr. Chairman, as educational decisions continue to be shifted out of central offices and into the individual schools themselves, and as education systems increasingly seek to involve teachers in making those decisions, new and creative leadership will be needed in schools. Today's principals have not typically been trained to provide such leadership. Because principals are in a unique position to improve the performance of schools, we must provide outstanding educational leadership training.

The $5 million Dropout Prevention initiative would be used to establish a national center and to conduct both long- and short-term research that enhances our understanding of how to increase student learning and to encourage students to stay in school and earn diplomas. These efforts would inform and build upon various other dropout prevention efforts currently underway, with the ultimate aim being to identify conditions essential to success in educating and keeping at-risk students in school. They would be designed to yield results that teachers, guidance counselors, principals, and others could use to make schools engaging places where students are motivated to learn.

The $3 million Evaluation of Reform initiative would support up to a dozen evaluations of various reforms with which States and school districts have experimented these past few years. Aimed to identify elements critical to improving student learning, these evaluations would illuminate which reform approaches are capable of producing what particular changes.

We are requesting $20 million for an Education Summit Follow-Up initiative, which would permit us to strengthen the usefulness of the Nation's education database for tracking progress toward the national education goals. This will require that a number of gaps in data and research be closed. For instance, although a goal has been set with regard to school readiness--a worthy and, I believe, necessary goal--at this time, no adequate measures of school readiness exist. Nor do we have an understanding of the full range of activities by which parents can promote it. With regard to other goals, the Nation needs more precise data on minority dropouts and better procedures for ensuring the technical quality of international studies. We need a clearer sense of which kinds of business involvement actually promote student learning.

Dissemination

Mr. Chairman, let me mention an activity that cuts across our activities in statistics, assessment, research, and the President's initiatives: dissemination. Our 1991 plan will generate more and better information than ever about how to improve education. However, the real value of that information will not be realized unless we vastly improve our capacity to deliver such information and assistance to teachers, administrators, parents, business people, and others who can use it. Our efforts to disseminate information must involve more than merely supplying information. They must include the provision of technical assistance and whatever else it takes to see that research makes a measurable impact on student and adult learning.

For these reasons, we are beginning development of a national strategy for dissemination that will assure access and availability of reliable information about education as well as assistance to diverse groups in making good use of that information. Once in place, this strategy will employ new approaches, and approaches that we have not been able to undertake on an adequate scale. It will include exhibits, demonstrations, and workshops across the country for policymakers and their staffs. It will include campaigns to reach practitioners, parents, community leaders, representatives of the private sector, and others--campaigns to share information about the latest research and how it can be used to reduce dropout rates, restructure schools, improve science teaching and learning, and address a host of other issues.

One of our 19 new national R&D centers will support our work. Its mission will be to furnish national leadership in making education R&D "user friendly" and to determine how R&D findings can be presented in formats or ways that increase their use and that actually lead to better educational decisions and behaviors on the part of teachers, students, parents, policymakers, and other potential beneficiaries of education R&D.

Our dissemination initiative will strengthen our own activities, and it will also involve other offices of the Department and other Federal agencies as well--the Department of Energy, the Department of Labor, the National Science Foundation, and others. Our goal is a Federal-wide effort to share information to improve teaching and learning in America. My aim is to open a number of information-and-assistance "channels" to serve parents, principals, teachers, business people, community leaders, and other decisionmakers in America's statehouses, schoolhouses, and homes.

We also intend to explore the uses of advanced information technologies in each of the four areas I have outlined today. Technology will be an important tool for delivering education information to teachers, parents, principals, and others directly responsible for improving student learning. For instance, Al Shanker recently proposed a national database that might "list the materials and the technology available to help kids learn about the Declaration of Independence or interest rates or how thermometers work" or any other topic. "National databases are available in almost every other field of endeavor," he pointed out, "why not one for teachers?"

Mr. Chairman, decisionmakers across the country want and need more information on education than ever before. Our request will help bring the supply in line with the demand. It will help States and communities advance toward the Nation's education goals. And it will help us as a Nation, as President Bush put it, "make an American education the best in the world."

My colleagues and I will be happy to respond to any questions you may have.

DEPARTMENT OF EDUCATION

Office of Educational Research and Improvement

Biographical Sketch

NAME : Christopher T. Cross

POSITION : Assistant Secretary for Educational Research and Improvement

BIRTHPLACE AND DATE : Lakewood, Ohio, May 30, 1940

EDUCATION : Whittier College, B.A., 1962
California State University, Los Angeles, M.A., 1970

EXPERIENCE

October 1989-Present : Assistant Secretary for Educational Research and Improvement
U.S. Deparment of Education

January-October 1989: Vice Chairman, Macro Systems, Inc., Silver Spring, Maryland

1983-1988 : President, 1985-1988, Executive Vice President, 1983-1985,
University Research Corporation, Center for Human Services,
Bethesda, Maryland

1980-1983 : Manager, Federal Systems, Westinghouse Information Services
Westinghouse Learning Corporation, Washington, D.C.

1978-1980 : Director, Washington Office Operations/Policy Analysis
Abt Associates, Inc., Washington, D.C.

1972-1978 : Republican Staff Director and Senior Education
Consultant

Committee on Education and Labor, United States House of Representatives,
Washington, D.C.

1970-1972 : Deputy Assistant Secretary for Legislation (Education)
U.S. Department of Health, Education, and Welfare
Washington, D.C.

PROFESSIONAL MEMBERSHIPS : Executive Committee, Professional Services Council, 1980-Present, Chair,

PROFESSIONAL MEMBERSHIPS (continued)

Secretary, Board of Trustees, Council for Excellence in Government, 1986-1989

Chair, Lab Review Panel, U.S. Department of Education, 1987-1989

National Research Council Panel of the National Academy of Sciences on Education Evaluation, 1979-1981

American Society of Training and Development, 1984-1989

U.S. Chamber of Commerce, Council on Procurement Policy, 1985-1989

OTHER PROFESSIONAL ACTIVITIES AND AWARDS:

Frequently testified before both Houses of Congress on issues of Federal education policy, education research policy and procurement, 1984-1989

The Secretary's Special Citation from HEW Secretary Elliot L. Richardson, 1973

Speaker or panelist at annual conference for a number of major associations

Numerous citations from Professional Services Council for industry leadership in areas related to Federal procurement

Team Captain, The Prune Book, Center for Excellence in Government, 1988, Madison Books

Numerous publications and presentations related to education research, policy, and procurement issues

[Recess.]

GROWTH IN RESEARCH ACCOUNT

Mr. Natcher. The committee will come to order.

Now, Mr. Cross, according to our records funding for the research account has already grown by 50 percent between fiscal year 1987 and fiscal year 1990 from $63,000,000 a year to over $96,000,000 a year.

The President's 1991 budget increases take it up another 48 percent up to a total of $175,000,000. Mr. Cross, about every hour during the evening, television networks carry a public service announcement featuring a national education leader who says to us, "Please, no more studies."

Maybe you have seen that Mr. Cross. Now if you will tell us why this increase should go here in your office rather than in to direct service programs like Chapter I. What about this, Mr. Cross?

Mr. Cross. Mr. Chairman, I think one of the problems that we have here is that this account is really inaccurately titled. It is an account that is more properly called Data Collection and School Improvement, because the major components of the account really focus on those areas.

You mentioned the growth in our budget between 1987 and the current year. Most of that growth has come because there has been a recognition by your committee and by the Senate and I think the whole education community that we do not have an adequate data base of information.

We don't have yet the kind of data we need to really assess what the problems are, to tell us where to target our resources, to tell us exactly what is happening out there in the country.

To give you an example, Mr. Chairman, one of the issues the President and the Governors have talked about and which has been of concern to many, many people is the whole math and science area. A report was done recently by the chief State school officers about teachers of math and science teaching out of their area of expertise. In other words, they were never qualified to teach math and science.

In one State, 44 percent of the science teachers were teaching out of their area. Having that data is very important to being able to structure a program and activities to improve that situation.

The increase we are requesting is, as you say, about $80,000,000. That will bring the total for this account up to less than half of the increase requested for Chapter I for this fiscal year. My point is that although the percentage increase may be large, the base is very small.

Therefore, anything we do in terms of adding money here is going to look rather large on a percentage basis, but the dollars are not large, and the investment is very important for enabling the policymakers of this country, as well as the parents and business leaders, to have information to know and understand better what is going on in the schools and how to make them better.

DEPARTMENT-WIDE R&D FUNDING

Mr. **Natcher**. How much is requested in other appropriation accounts for research projects, evaluations or special studies? Can you give us any information along that line?

Ms. **Cichowski**. Mr. Natcher, I think approximately $160,000,000 is being requested throughout the department for research and development activities.

Mr. **Natcher**. When you get the transcript back, put in a full description on those amounts and where they go.

Ms. **Cichowski**. Yes, sir.

[The information follows:]

Research, Development, and Evaluation Activities

The following table shows spending by the Department for research, development, and evaluation activities broken down by appropriation account.

	1989	1990	1991
Compensatory education for the disadvantaged	$4,900,000	$5,800,000	$9,400,000
School improvement programs	3,900,000	6,000,000	6,700,000
Bilingual and immigrant education	2,600,000	2,600,000	2,600,000
Education for the Handicapped	26,900,000	27,900,000	27,900,000
Rehabilitation services and handicapped research	54,500,000	58,100,000	56,600,000
Special institutions for the handicapped	4,600,000	5,100,000	5,800,000
Vocational and adult education	15,400,000	16,400,000	9,100,000
Higher education	1,900,000	2,400,000	2,500,000
Howard university	2,900,000	2,900,000	2,900,000
Research, statistics, and improvement of practice	27,700,000	32,700,000	39,100,000
Libraries	300,000	300,000	300,000
Program administration	22,500,000	29,800,000	38,200,000
Total	168,100,000	190,000,000	201,100,000

RESEARCH IN FOREIGN COUNTRIES

Mr. **Natcher**. Mr. Cross, can you give us some idea of how much other countries spend on government-sponsored education research, countries such as Japan and Germany. Can you give us any idea about what the countries are spending?

Mr. **Cross**. Mr. Chairman, we will provide for the record what information we can. We will need to go to OECD and a couple of other organizations to try to find that.

[The information follows:]

Government-Sponsored Research in Foreign Countries

The Department has not been able to identify comparable data on government spending by foreign countries for education research.

NEED FOR INVESTMENT IN R&D

Mr. **Cross**. Let me just add that in my former life back at HEW in the late 1960s and early 1970s, I was involved in the creation of what was then NIE. I remember the hearings that Chairman Brademas had with the Education and Labor Committee.

He did some research at that point on that issue. The other countries you mentioned were making significantly larger investments on education research. David Kerns, Chairman of the Xerox Corporation, has been one of the most articulate spokesmen for the need to have more research in education. He uses the analogy of a business like Xerox, or any other big business, that wants to stay competitive in the world today needing to make an investment in its future.

That investment is in how to change. Education can't stand still. In order for it to move ahead and be better, we have to have a base of information that helps us know what to do better.

That is what the investment in this account is all about, and that is why a company like Xerox invests in research. That is why I think the expenditure here is well warranted.

STATE SPENDING FOR RESEARCH

Mr. NATCHER. Your statement here indicates that the Governors support research. Can you tell us how much the States are spending on education research in 1990 and how this compares to last year? Do you have any figures on that?

Mr. CROSS. No, I don't, Mr. Chairman, but let me present you with what I think the problem is.

Research is not generally broken out as a research line item. For example, in something like a State department of education, if they have a reading program, they may have a small component that does evaluation or research, but the funding is not broken out separately, so you don't see it separately.

The other part of this is that Governors, State legislators, the chief State school officers and others have all come to the agreement, and certainly you can test this as you have public witnesses, that the proper role for the Federal Government is to do research.

If it is done at the local level or State level, you end up inventing the wheel in several different places. There is no reason why Massachusetts and Kentucky should be doing the same kind of research, coming from the same sources of information, if it can be done more effectively at the Federal level.

The Governors are very supportive of this area, and these other organizations I mentioned are as well. The public service announcement you mentioned earlier has been sponsored by the National Education Association. I am told that the NEA has a research department that is probably about as big as the research department in the Department of Education.

TIMELINESS OF RESEARCH

Mr. NATCHER. One of the most common criticisms of past research is that it is not done in a timely manner. An example of this, Mr. Cross, is the vocational educational assessment which costs $5,000,000 and was submitted after the House had already passed the vocational education reauthorization.

Is this a valid criticism?

Mr. CROSS. I think there is a problem with completing research in a timely manner. That is something that we are trying to take many steps to address and to be sure that it does, in fact, reach the Congress, the policymakers, and people in the field more quickly.

It is not only that it reach people more effectively and quickly, Mr. Chairman, but also that it is understandable to people and can be interpreted in a way that people can make use of it.

Mr. NATCHER. Mr. Conte, I yield to you.

Mr. CONTE. Thank you, Mr. Chairman.

Welcome back, Mr. Cross.

Mr. CROSS. Thank you.

FORMULA FOR R&D INVESTMENT

Mr. CONTE. As a person in charge of statistics, you have probably heard that nothing in education is as astonishing as the amount of facts that are accumulated. Mr. Cross, it is good to have you here today.

Mr. Cross, in your testimony you said that good businesses invest about 2 percent of their budgets in research and development, R&D, and that there are calls from all quarters for more R&D. Applying that formula to the education budget means research should cost $492,000,000. If research is so important and you have so much broad based support, why are you only requesting an $80,000,000 increase to $175,000,000?

Mr. CROSS. I think there is a problem of being able to handle an increase in an efficient and effective manner. Some of the increase that is in the request for next year is not, I should point out, just research, and it is not just statistics.

As I said earlier, this account is really not well titled because one-third, almost half, of the increase in the budget for next year is for special items like principal training, the drop out program, evaluation of experiments that are going on in the field, and the post-summit follow up. The principal training program is a $25,000,000 line item, almost one-third of the increase. That is a demonstration program aimed at improving the effectiveness of principals.

We think it will be very useful in that regard. Although I would hope over a period of time you entertain opportunities for us to get to $492,000,000, I think $80,000,000 in one year is about as much as we can absorb.

Mr. CONTE. You are in the business of collecting and disseminating information. What is the bottom line? Why is better information dissemination worth $175,000,000?

Mr. CROSS. Well, let me give you an example. You all know the Governors have just left town after their meeting. They met with the President and adopted their goals. You have seen, I am sure, the goals which were adopted by the Governors and the President. They are all couched in the year 2000. It is true almost beyond question that in the year 2000 not one Governor who sits today will be a Governor then.

Certainly George Bush will not be President then. Constitutionally, he cannot be. So, the issue is how do we hold the Nation accountable and concerned about these educational goals over the next 10 years? I believe that can only be done if you get information out to people so that they can hold the elected and appointed leadership of this country accountable. That means they have to get data they can use and understand; they have to know how their schools are doing. They have to know the quality of what happens when teachers teach out of field.

They need this information. If they have that, then I think we can begin to see the changes in education which this country needs.

SUMMIT FOLLOW-UP

Mr. CONTE. You pointed out the last decade featured an unprecedented amount of attention on education by Governors and State legislators. Last fall, Mr. Bush's summit brought many of the education problems to the forefront.

Your budget includes a one-time expenditure of $20,000,000 to do a summit follow up. How will the new money you are requesting, as well as existing programs, be used to support getting the outcomes set forth at the summit.

Mr. CROSS. We are developing a detailed plan on each of the goals enunciated by the President. It is not finished yet. Most of the information that we have related to the national goals is not State level data. In some areas, readiness for school, for example, information is virtually nonexistent.

One of the areas in which we have to make an investment over the next few years is getting data at the State level, so States can make use of it in bringing about their own reforms. So we will have more detailed information soon.

Mr. CONTE. How did you get $20,000,000? Did you sit around the table and draw it out of a hat?

Mr. CROSS. To be quite honest, it was a place holder in the budget. The budget cycle requires that the budget be put together before Christmas, and we did not know what the exact goals were that the President and Governors would agree to. So, $20,000,000 was included in the budget as a down payment, if you will, to getting the activity in place.

Mr. CONTE. Down payment?

Mr. CROSS. Yes, because over the years we will have to support expanded data collection efforts. In some cases we may collect data every two, three or four years. Systems have to be designed, and we have to think through questions such as what school readiness means and how one goes about getting information to assess it.

STATISTICS MANDATES

Mr. CONTE. Your $41,500,000 request for statistics is an 83 percent increase over fiscal year 1990. $18,000,000 can buy a lot of statistics. Will this cover all the mandates?

Mr. CROSS. Much of the increase in the budget relates to mandated data collection activities which are contained in the Hawkins-Stafford legislation.

We will be glad to provide at your request a table which shows each survey that the NCES is doing and the year to year changes. For example, one of the most valuable statistical collection activities is the Schools and Staffing Survey which tells us what staff looks like in the school, what their credentials are, and what is happening within the school.

In the current fiscal year, that work is costing us just under $1,200,000. Next year, when we are in the field engaging in a major data collection effort, that cost will go up to over $4,000,000. Another example is the adult literacy survey. This year we are doing the field test and the definitional work. This year the survey will cost us $900,000. Next year, when we move into full operation, it will cost us $3,500,000.

So, in answer to your question about why the big increase, much of it is related to mandated activities which we are required to do with another major portion being follow on costs to work which has been put into motion.

Mr. CONTE. Is that done in-house or by contract?

Mr. CROSS. Almost all of it is done by contract. Some is done through the Census Bureau but most by contract.

TYPES OF INFORMATION NEEDED

Mr. CONTE. Outside the work that has been mandated, what other type of information do we need in order to improve the education that we continue to have now?

Mr. CROSS. I think there is a great deal of information we need. For example, I mentioned State level information. The National Assessment, up to this point, has only been representative by regions of the country. It has had four regions and no State level data.

Field work is going on to collect State-level data on eighth grade mathematics. In 1992 we will expand that to include fourth grade mathematics and fourth grade reading.

We need to have more information available on school completion. We have information on dropouts, but the goal the President and Governors adopted is not a dropout goal. It is a school completion goal.

It implies that the issue is what percentage of students completes school by the normal course of time, in other words, receives a diploma by age 18 or 19.

Mr. CONTE. Can't you write the schools to request that information?

Mr. CROSS. The problem is that students move around.

USERS OF EDUCATION DATA

Mr. CONTE. Dr. Elliott, there is a lot of education data that is available, much through the Center for Education Statistics. Yet to get people to use the information that we have is a never ending problem. Who are the main users of this information from the center? Are there any particular groups that you think should use your data more often who don't?

Mr. ELLIOTT. We would like to have many more people use our data. Part of that is the question of the usefulness of the forms in which we put it out. Among the users are researchers who work in education and sociological and economic issues, policy analysts in the government, staff members, including congressional staff and CRS.

The educational media have been strong users of the reports we put out, like NAEP, but other reports as well. The racial composition of college student enrollment, for example, has been of great interest to the press.

Then, there are education-related industries, people who put out text books or publish tests or make class rings or year books. There are other people who could be users more frequently if we could do a better job addressing their questions—parents, school boards and principals—but also corporate and State planners. People interested in economic development within States want to know about education systems and where there are sources of well trained workers that they might tap.

There are many users but there could and should be more.

CHARGES FOR REPORTS

Mr. CONTE. Do you charge for those?

Mr. ELLIOTT. We make virtually all our reports available free if the requests are for individual copies. They are available from the Government Printing Office for a charge. In the case of the National Assessment, the reports are available from the Educational Testing Service.

Mr. CONTE. Free?

Mr. ELLIOTT. For a charge from the Educational Testing Service, but we do make individual copies available free of charge.

Mr. CONTE. Thank you.

Mr. NATCHER. Mr. Stokes.

Mr. STOKES. Mr. Cross, you are requesting about $5,000,000 for evaluation of dropout prevention, correct?

Mr. CROSS. Mr. Stokes, we are requesting these funds for a research center on dropout prevention and activities aimed at providing a clearinghouse function for successful dropout programs. The $5,000,000 encompasses several activities on dropout prevention.

EVALUATION OF DROPOUT PROGRAMS

Mr. STOKES. Have you previously done any evaluations in this area?

Mr. CROSS. There is currently an evaluation going on. You will recall there was a line item in the budget for dropout prevention demonstration projects two years ago. There is an evaluation of that program which will be available later this year.

Mr. STOKES. At this time, you have nothing that has been produced, is that right?

Mr. CROSS. Nothing in that area. We do have information on other dropout programs. The National Diffusion Network has a number of good examples of dropout prevention programs. We have a Center for Research on Effective Schooling for Disadvantaged Students at Johns-Hopkins in Baltimore, which has been doing work on dropouts.

They have published some material. In addition, we have a number of separate publications on this topic.

Mr. STOKES. What would differentiate this evaluation from the previous one?

Mr. CROSS. First of all, we would not be evaluating programs that the Federal Government has funded. We would be conducting research and evaluating programs that are funded by different sources. An organization from Columbia, Maryland, the National Committee for Citizens in Education, a group which you may have heard of, along with the Prudential Life Insurance Company in Baltimore, is funding a program aimed at dropout prevention in middle schools.

It is a very interesting program. They appear to be doing some excellent work. However, there is no evaluation component to it. So at this moment there is not the kind of information that would be required to validate that and make it available to others.

This is a good example of how this money would be used. We could go in and help document what is going on there and help to get information on a program like this out.

MINORITIES IN EDUCATIONAL RESEARCH

Mr. STOKES. Your written statement stresses the need for research and development because of the crucial role it plays in the development of effective educational policy.

You state that today, more than ever, policy makers consult and use education R&D as a basis for decisions.

Can you tell me to what degree minorities are represented in educational research?

Mr. CROSS. Do you mean in terms of who is doing the research?

Mr. STOKES. I would be specifically interested in how many minorities conducting research are holding administrative positions in your regional educational labs. I would be interested in knowing how many minorities are holding positions in the education and research development centers.

If you can give me information regarding the field, I would like to know that, too.

Mr. CROSS. Certainly. Obviously, I will have to supply that for the record, but we will get that information put together.

[The information follows:]

MINORITY STAFF IN LABS AND CENTERS

Forty-five of the professional staff members employed by the regional educational laboratories are minorities. Of those, 17 hold administrative positions. Total professional staff in the laboratories is 265.

In the national educational research and development centers, 85 of the total 532 professional staff are minorities.

MECHANISMS FOR DISSEMINATION

Mr. STOKES. What mechanisms do you use to disseminate research findings into the field? That is, how does a teacher in an inner city such as Cleveland, Ohio learn that this research office exists and how to extract data from it?

Mr. CROSS. There are a number of different mechanisms whereby teachers can learn about the research, but you have touched on an area where we need to do a lot more.

We need to make a better investment and do more in reaching practitioners in the field. We have not taken the kinds of pains there that we need to.

One of the things that we need to do is get more teachers involved in dissemination so that the research is better aimed at informing them. Currently, to answer your question, a teacher can use the National Diffusion Network to get information. A teacher or administrator directly or through the State facilitator makes known his or her interest in a particular area.

In addition, the ERIC system and its 16 clearinghouses provide information on a wide variety of education subjects. There are two toll-free 800 phone numbers that people can call. We answer about 1800 phone calls a month on one 800 number, and there is a separate 800 number for ERIC calls as well.

We provide responses and work through the NEA, the AFT, the school administrators, the specialized organizations like teachers of special education, teachers of the gifted, mathematics teachers, science teachers and others. We try to use their channels to get information out into the field. They all have journals, or some kind of information bulletin, and we try to highlight that so people who call us for information are aware of the publications and can obtain them.

USEFULNESS OF NAEP

Mr. STOKES. I note that the assessment line items in the research and statistics account will double from the fiscal year 1989 level, that is if the President's budget is appropriated. This would reflect a growth in the National Assessment of Educational Progress, NAEP, which is used to assess achievement of students in grades four, eight and 12 in a variety of subjects.

This year this committee reprogrammed funds into NAEP for fiscal year 1990. I have some concerns about NAEP.

Is the standardized test an accurate measure of educational performance, particularly for minority students? And how are disadvantaged students helped by this type of testing?

Mr. CROSS. I think you have a very good question in an area of concern not only to myself but to other people. NAEP does not just use multiple-choice tests. The writing assessment results we released a month ago were not based on standardized tests. They were based upon actual writing performance. Students were asked to write on two particular topics, and they were scored on that.

The reading results were largely based on multiple-choice items. One of the things our budget request for 1991 focuses on is to learn more about other ways to test so we can get better testing instruments, more testing of actual kinds of things which a student may do.

Connecticut is moving toward "performance" testing in science. I understand when they test a high school senior in chemistry, they have a small lab set up and have the student set up the test, mix the chemicals or do whatever the particular problem happens to require.

Mr. STOKES. Has there been an evaluation on NAEP?

Mr. CROSS. There is an evaluation ongoing. It was mandated in the Hawkins-Stafford Amendments. It is presently being conducted and will be available next year.

Mr. ELLIOTT. I would add a couple points.

One of the activities in the development of a national assessment is a check for bias in the test instruments. The National Assessment Governing Board has a responsibility to be sure the instruments do not have bias. It is a requirement of the contractor to report back any evidence in the scores that would indicate bias.

Secondly, in response to the question you asked about how these kinds of reports help disadvantaged students, one of the things that was learned in the reading assessment was that a remarkable improvement in scores among blacks has taken place from the late 1970s to 1988. There has been a dramatic improvement.

Mr. **Stokes**. In some areas?

Mr. **Elliott**. That is not something we are aware of from other tests. It is important for people making policy decisions in schools to know that.

Finally, I wanted to say there have been a number of reviews and evaluations of the national assessment, at least six between 1972 and 1988. They have been done periodically.

Finally, there is technical advice sought by the contractor on a continuing basis. That is in addition to the evaluations Mr. Cross mentioned.

Mr. **Stokes**. Thank you, Mr. Chairman.

Mr. Chairman, I have a number of other questions. I will be glad to submit them for the record.

Mr. **Natcher**. Fine.

Mr. Obey, I yield to you.

CHANGE IN PRESIDENT'S BUDGET

Mr. **Obey**. Frankly, I am not quite sure where I want to start but let me start with something I care the most about.

Mr. Cross, let me make clear before I start that I think you are one of the good guys in government. You have good representation. You worked around this town, on this Hill for a long time. I think you have a record that indicates that you understand everybody's varying institutional responsibilities.

Mr. **Cross**. Thank you.

Mr. **Obey**. I frankly don't get a chance to spend nearly as much time in this subcommittee as I would like. This is a subject I care a lot about, but since I am chairman of another subcommittee I am usually tied down listening to baloney I don't want to listen to.

Usually I trust the judgment of Mr. Natcher and Mr. Conte because 99 times out of 100, they will do what I would have done.

Sometimes when something happens to something I care about, I get very concerned. Do you know what is the most any Congress has been able to change any President's budget since 1946?

Mr. **Cross**. In percentage terms, two or three percent, I guess.

FUNDING FOR RURAL INITIATIVE

Mr. **Obey**. Two percent, that is right. That is why the Congress is so jealous of the limited ability that it has to influence the way money is spent.

The way I see the budget process, it is essentially this: The President can ask for the authority to spend money. He and his representatives get the authority to spend money based on the reasons to spend money when we provide the money. That is the power of the purse. It is the oldest power and it is written into the Constitution.

When it gets messed around with, I get more than a little irritated.

I have a little program. Most of the programs that government has are big dollar items. We throw $600,000,000 at the stealth bomber and don't notice it. But we have a little rural initiative program helped along by the regional labs. It has provided an ability for some of the smallest schools in my district, I am talking about little towns, towns of 300, up to 1300. I don't represent a city with more than 35,000 people, and I don't want to.

But it enables these schools to plug in to the school reform movement. So they don't get passed by. Without that ability to plug into the system, it is harder than hell to convince businessmen to locate in a small city because they won't believe they will have good educational opportunities for their kids.

I discussed this with the Secretary when he appeared before us last week. What I am concerned about is that it appears that you are misinterpreting report language which allowed you to carry over funds. It appears that you are interpreting that language which I expressed concern about originally when the Administration asked for it and which I acquiesced in because I was convinced that it was being done in good faith.

The staff told me I didn't have to worry about it. Now, I have to worry about it. When the Administration comes in and suggests they are increasing the budget for the regional labs and when I see that you are producing, in fact, as I understand it, $3,500,000 less than the fiscal year 1990 appropriation and yet you are claiming an increase, that seems to me to be a way to slip the fiscal years since the Secretary indicated this funding to the labs was not provided until the 11 month, third week of fiscal year 1989.

It seems to me this is one small area where the Congress indicated an interest and said this is something that should be funded. It seems to me we have the other branch of government saying, well, to hell with you, we are going to do our best to slip it so that your priorities get lost in the shuffle.

Can you convince me that I am wrong?

Mr. CROSS. I will certainly try, because I can assure you that that has not been what I have been engaged in at all.

Let's go to the seat of the problem. We are facing a recompetition of the regional labs which will be announced in a couple of weeks or so. The current contracts for the labs expire toward the end of this calendar year. The labs have money right now that they are operating on from the fiscal year 1989 appropriation. As you mentioned, that was awarded in September, 1989.

The $6,000,000, minus the sequester, that was provided for in the bill for fiscal year 1990 was split into two components. This was done because we do have a competition coming up and to have all the $6,000,000 minus the sequester spent before the current contracts expire would have compressed spending of these rural funds into a very short period of time and would have created a bulge in resources.

I think we also have a problem of confusing obligations and budget authority. Total obligations for the rural initiative and the core laboratories for next fiscal year will actually be somewhat higher than they are for the current fiscal year. The budget authority is, in fact, lower. Because this money was made available for longer than a normal 12-month period. I have here copies of the chronology of the lab rural funding and a chart that shows how the labs have been funded with the base money and the rural funding going back to 1986. I hope this will help to clarify the situation. It is very confusing.

It took me some time to understand what was going on with this as well. I want to assure you that it is not our intention to diminish the ability of the labs to spend money.

INCREASE FOR LABORATORIES

Mr. OBEY. You are saying in the budget that you have provided an increase for this fiscal year when, in fact, you provided for a budget authority decrease; correct?

Mr. CROSS. It is an authority decrease and an obligation increase; correct.

Mr. OBEY. What this committee appropriates is budget authority. The Administration determines the outlay results.

Mr. CROSS. If you will forgive me, comparing it to Chapter I, a forward-funded program.

Mr. OBEY. But this is not supposed to be a forward-funded program.

Mr. CROSS. We are in a situation where some of the money is spent on a current basis and some of it is similar to forward funding.

Mr. OBEY. I will tell you what I smell. I hope I am wrong, but I smell this: Obey comes in here at markup time and I sit down at the table and say I want to be sure we have the money in for rural initiative. I am told we don't need it because we have carry over. You tell me we have a budget authority reduction and I am supposedly boxed out because you have a carry over, which we permitted you to do out of courtesy, assuming that you would not gut a congressional initiative in the process.

Mr. CROSS. We are not gutting it. I want to assure you of that.

Mr. OBEY. I will, for the moment, take you at your word.

As I say, I will have my staff work with you and make sure that we, in fact, wind up having delivered what I told my constituents and what this committee was told was going to be delivered.

Mr. CROSS. I will be happy to work with you and your staff on that.

FUNDING OF TENTH LAB

Mr. OBEY. We have nine regional labs and you intend to add a tenth in the Pacific region; right?

Mr. CROSS. That is correct.

Mr. OBEY. The $20,000,000 request includes an assumption that that lab will receive $800,000 for the first year of operation.

Mr. CROSS. For the Pacific lab, right.

FUNDING OF EXISTING LABS

Mr. OBEY. How do you assure me that current labs such as north central regional lab in my area will not receive funding cutbacks?

Mr. CROSS. Well, because we are adding some money in budget obligations.

Mr. OBEY. But that is outlays.

Mr. CROSS. That is the real spending level that the labs will receive. In fact, the funds available for the next contract year will be up $1,300,000 for the lab program. That includes an increase to cover the establishment of the Pacific lab so that we are not taking money away from other labs to establish the Pacific lab.

DETAILED ACCOUNT OF RESEARCH REQUEST

Mr. OBEY. Well, again, I will have my staff talk further with you. Let me simply ask you if you would provide for the record a detailed account of each item in the line item for research in the educational research and statistic account that compares fiscal year 1989, 1990 and 1991 request for budget authority and outlay.

Mr. CROSS. Yes, we will be glad to.

[The information follows:]

BUDGET AUTHORITY AND OBLIGATIONS FOR RESEARCH

The following table shows new budget authority and obligations for 1989, 1990, and 1991 for the major items included in the Research portion of the Department's Research, Statistics, and Improvement of Practice account.

($ in thousands)

	1989		1990		1991	
	New B.A.	Oblig.	New B.A.	Oblig.	New B.A.	Oblig.
R&D Centers	$17,760	$17,760	$17,760	$17,760	$21,760	$21,760
Field-Initiated Research	500	500	739	739	1,000	1,000
Regional Labs	17,000	17,000[1]	17,543	17,543[2]	20,000	24,928[3]
Rural Initiative	5,138	5,138[4]	5,913	985[5]	---	---[6]
ERIC	5,700	5,700	6,554	6,554	6,690	6,690
Other	981	981	2,065	2,065	11,872	11,872
Total	47,079	47,079	50,574[7]	45,646	61,322	66,250

---

1. These funds were obligated for the laboratories' use during the period December 1, 1988 to November 30, 1989, except for one laboratory whose award cycle ran from October 1, 1988 through September 30, 1989.
2. These funds were obligated for use by the laboratories from December 1, 1989 through November 30, 1990, except for one laboratory whose performance period runs from October 1, 1988 through September 30, 1989.
3. Of this total, approximately $316,000 will be used to fund services in one laboratory region from October 1, 1990 through November 30, 1990. The contract for the laboratory currently serving that region expires on September 30, 1990, two months prior to the expiration of the other laboratory contracts. Approximately $251,000 will be used to fund an evaluation of the laboratory program. The balance of $24,361,000 includes $4,928,000 in rural funding to be carried over from fiscal year 1990. The total will be awarded for 10 new contracts for laboratory services during the period December 1, 1990 through November 30, 1991. Laboratories will be required to devote one-quarter of their effort to the needs of rural schools, and they will be required to account separately for funds used for that purpose.
4. These funds were obligated for laboratory work with rural schools during the period October 1, 1989 through September 30, 1990.
5. These funds will be obligated for use by the laboratories for rural school activities during the period from October 1, 1990 through November 30, 1990, which is the date their existing contracts expire.

6. See note 3 above. Approximately $6,000,000 will be devoted to rural school activity during the period from December 1, 1990 through November 30, 1991.

7. This total does not include $4,928,000 appropriated for the National Board for Professional Teaching Standards, pending the enactment of authorizing legislation.

BUDGET FOR MANDATED ACTIVITIES

Mr. OBEY. You know research is a funny thing. It is about the most sexless item in this budget but it is important and long-term, if, in fact, we wind up knowing what we think we know, there are six major activities mandated by the Congress, as I understand it: the center for educational statistics, the R and D centers, the regional lab network, the education information system, the field-initiated research program and NAEP.

Mr. Stokes was talking about that. How much budget authority are you appropriating for those core programs?

Mr. CROSS. It looks like it is about $91,000,000. I can give you an exact figure in the record. But in round figures, it is about $91,000,000.

Mr. OBEY. How much?

Mr. CROSS. Including NAEP, it is around $109,000,000.

Mr. OBEY. For the total of the six?

Mr. CROSS. The R and D centers are $21,800,000; the regional labs are $20,000,000; the ERIC system is $6,700,000; field-initiated is $1,000,000; NAEP is $18,900,000; and NCES is $41,500,000, for a total of $109,900,000.

INCREASE FOR RESEARCH CENTERS

Mr. OBEY. Are you providing an increase for the university-based R and D centers?

Mr. CROSS. Yes.

Mr. OBEY. How much money does it take to operate a research center during that five-year contract?

Mr. CROSS. Different centers cost different amounts of money.

Our expectation is that the smaller centers cost about $800,000 to $1,000,000 per year. We will be announcing the new competition on the centers within the next couple of weeks.

In fact, the announcement is going to the printer today. You will see when that announcement is made that we are setting some research priorities by funding some centers at greater amounts.

Mr. OBEY. How many centers will you fund?

Mr. CROSS. We will have 18 new centers. In addition, we will have seven centers that carry over from previous fiscal years.

CONSULTATION ON TOPICS

Mr. OBEY. How do you determine the research topics that those centers study?

Mr. CROSS. We went through a rather long and thorough process. We had a number of meetings around the country focused on topic areas. For example, we called together elementary people, secondary school people, and higher education people. We heard from the field about what they felt were pressing topics.

We published a notice in the Federal Register on September 12 listing what we thought at that time would be the 12 centers we would fund.

We received almost 400 letters in response to that. We analyzed those letters. I came into office in mid-October. At that time, I asked to review where we were in the process. In mid-December, we brought in a Blue Ribbon Panel, which was chaired by Governor Kean of New Jersey and which included a half dozen other people to help us think through those issues.

As a result of all this input, we arrived at the final list.

CONSULTATION WITH COMMITTEE STAFF

Mr. **Obey**. Have you ever had any consultations with this committee or its staff on topics for designation as national priorities?

Mr. **Cross**. National priorities?

Mr. **Obey**. Yes.

Mr. **Goldberg**. As a matter of fact, Mr. Obey, congressional staff participated in some of the planning meetings Mr. Cross just mentioned. They attended the meetings and participated.

Mr. **Obey**. This committee staff?

Mr. **Goldberg**. No, I believe it was the authorizing committee.

Mr. **Obey**. I will let the authorizing committee worry about their views.

Mr. **Goldberg**. I think we let staff know when the meetings were being held and indicated they were welcome to attend.

Mr. **Obey**. I happen to have some strong concerns about some of the staff concerns on the Senate side on this question, especially. I guess what I am getting at is this: At NIH, for instance, there is a great deal of consultation between this subcommittee and NIH about the direction of research. I think it would be useful if we had some of that same consultation between this subcommittee and you on this issue.

Mr. **Cross**. That is a point well taken.

Mr. **Obey**. Would you submit for the record the work scopes for those appropriated research centers?

Mr. **Cross**. Yes, sir.

Mr. **Obey**. I am not interested merely in the title. People can give you nice, fancy titles.

Mr. **Cross**. You want to know what they are going to do?

Mr. **Obey**. What kind of guidelines were you given by the Administration in terms of developing topics?

Mr. **Goldberg**. None at all.

Mr. **Cross**. This was entirely done within OERI.

Mr. **Obey**. Will you submit those for the record?

Mr. **Cross**. Yes.

[The information follows:]

Work Scopes for Research Centers

The application package containing the mission statements for the 18 national education research and development centers was provided to the Committee under separate cover.

INCREASE FOR NCES

Mr. **Obey**. You are proposing a very large increase in the center for educational statistics. Does that mean that you are actually going to do it, going to get it moving?

Mr. **Cross**. I certainly hope so. This committee has been very supportive of NCES. In the last few years, NCES has grown substantially.

Going back to as late as 1986, they had only a $12,300,000 appropriation. Our combination of activities with NAEP and NCES would bring us up to $60,000,000 for next year.

Mr. Obey. You are getting closer to the National Academy's estimates of a few years ago. It is about time. I am glad to see it.

Mr. Cross. Yes, thank you.

STAFFING OF NCES

Mr. Obey. How many staff people are employed at the National Center for Education Statistics?

Mr. Cross. About 130 currently.

Mr. Obey. That is this year? How many are going to be employed at the center under this budget?

Mr. Cross. Of course it would have to be determined, but OERI's, request for S and E next year has a 10 position increase.

Mr. Obey. I am concerned about the national center for education statistics alone.

Mr. Cross. The NCES staffing level would increase by a proportion of that 10.

Mr. Obey. What guarantee do we have that that will happen?

Mr. Cross. I am sure we will add a minimum of three or four positions to the Center.

Mr. Obey. In your best professional judgment, is that really enough, given the budget increases and the increased responsibility that they will have?

Mr. Cross. No, it is not.

Mr. Obey. I am kind of a statistical nut. The JEC committee on which I serve is very concerned about the quality of statistics.

A few years ago, Mr. Natcher and Mr. Conte will remember, we ballooned the dollars in NCI but we had very little by way of staffing increase of program officers to oversee that money. We had some very embarrassing results, including some people who went to jail because they ripped off Uncle Sam.

In your best professional judgment, what kind of staffing increases do you think would be needed to provide top shelf research coming out of that operation?

Mr. Cross. Well, I think I need some time to think through a total response to that because there are several different ways to assess that.

If you look back Mr. Obey, to 1986, when as I mentioned earlier we had a budget of $12,300,000, the staff level there was around 107 people.

So, we will have increased by about four times in total dollars, and the increase in work years was about 20 percent.

Mr. Obey. I happen to think that is goofy.

Ms. Christensen. One of the problems we have in the Departmental Management account each year is that there are reductions below our request. This year we have to absorb a pay raise of about $5,000,000, and we had the cut from the sequester which means we are starting with a $10,000,000 deficit at the start of the year.

Mr. Obey. I understand but there are other places I would rather cut than there. Isn't the staff work for this center supposed to be presented as a separate item?

Mr. **Cross**. I believe that in the Hawkins-Stafford legislation there is a separate authority for the Center's salaries and expenses. It has not been requested or appropriated in that manner.

S&E REQUEST FOR NCES

Mr. **Obey**. It is difficult to appropriate in that manner when the Administration does not request it.

Last year, I tried to get that done in the subcommittee. I was in essence, backed off of it because I was told, "come on, don't do it for this year, let's see how it works out."

I have been hearing that for two years. I don't want to listen to that anymore. As far as I am concerned, the Administration has the statutory obligation to present that to the Congress in a line item capacity. I think the Congress has an institutional obligation, if it has any self respect at all, to appropriate it as a separate line item if the Administration does not comply with the statute.

In the committee, I know very few chairmen who are as much a stickler for sticking with the authorization contents as Chairman Natcher is. I would hope the Administration would follow on through on its obligations. I know that is not your fault.

Could you indicate that you will supply for the record that information?

[The information follows:]

STAFFING FOR NCES

The responsibilities of the National Center for Education Statistics were expanded with the enactment of the Hawkins-Stafford Elementary and Secondary School Improvement Amendments of 1988, both with regard to mandates for new data collection programs and changes in the National Assessment of Educational Progress. The Center's workload is also likely to increase as additional data are desired to measure progress toward the national goals for education. However, any increase in staffing and requests for salaries and expenses funds must be approached in a responsible manner. The Department has also had a very significant number of new grant programs to implement since 1988, and needs to devote significant additional resources to the default initiative and to reducing abuses in the student aid programs. The Secretary has allocated an increase of 10 FTE for OERI in 1991.

COST OF NAEP

Mr. **Obey**. In the last three years the National Assessment for Education Progress has doubled in cost.

Mr. Stokes raised some questions about this. I want to talk about cost to the Feds versus cost to the States. How much is this project going to cost the Federal Government?

Mr. **Cross**. The budget request for 1991 is about $18,900,000 for NAEP. In the current fiscal year the amount available is about $17,000,000.

Mr. **Obey**. How much are the States paying?

Mr. **Cross**. I will ask Mr. Elliott to respond.

Mr. **Elliott**. We don't have a full estimate of what they are providing because the law allows them the option of using cash or using staff of the State and local education agencies. For the most part, the costs are being met "in kind."

We had an estimate at one point that the effective cost to a State would be between $100,000 and $140,000, for each of the 37 States participating, plus the District of Columbia and two territories.

Mr. **Obey**. One hundred and what?

Mr. **Elliott**. Between $100,000 and $140,000 for the State coordination and the local administration, both of which are required in the statute.

Could I supplement one additional set of numbers provided by Mr. Cross?

He gave you the total appropriations for 1990 and 1991. I wonder whether one aspect of your question was: What does the State piece cost?

Our figures, which are summed up from several different fiscal years——

Mr. **Obey**. I just wanted to know what the States were paying, that is all.

Mr. **Elliott**. Okay.

REPROGRAMMING

Mr. **Obey**. Mr. Cross, we reluctantly agreed to reprogram $2,300,000 out at the National Center for Education Statistics this year for NAEP as was indicated before.

Why is that program accounting like an entitlement program in eating up other major programs that this committee supports?

Mr. **Cross**. One of the factors here is that the legislation specifies that State participation in State level assessments is voluntary. When the budget estimates were completed for the current year, the assumption was only about half of the States would choose to participate. Actually about three-quarters of the States have done so.

The authorizing legislation left us no ability to say, when we got to a certain number that happened to equal the budget, "Well, sorry, we can't take any more."

Mr. **Obey**. You can't tell States that you have run out?

Mr. **Cross**. That is right.

Our attorneys tell us we have no authority to do that.

So that drove the cost, to give you the short answer.

Mr. **Obey**. What do you think is the best way to deal with that problem?

Mr. **Cross**. I think, number one, is recognizing that there is a lot more interest out there than there has been.

Mr. **Obey**. Haven't some of the States held back and tried to hold you up for a higher share of the cost sharing?

Mr. **Cross**. Not that I am aware of.

Mr. **Elliott**. No.

Mr. **Cross**. The way the legislation is written is that the States have to incur the costs of State coordination and local test administration. There is no negotiation between us and the States.

CHARGING STATES

Mr. **Obey**. How do we get a handle on this? Shouldn't we charge States something? They are getting information that they need. Shouldn't we charge them something?

Mr. **Cross**. Again, I think we have no authority to do that under the current law.

Mr. OBEY. But if we were to recommend changes in the law, what would you recommend?

Mr. CROSS. I would have to think about that and come back to you on it. We have had a State drop out this year because of the hurricane. South Carolina was originally in, and they dropped out because their schools were not accessible for sampling and testing.

COSTS OF GOVERNING BOARD

Mr. OBEY. We keep hearing about governing boards, that governing board that keeps talking about this program. How much does that governing board cost?

Mr. CROSS. Under the law, the Governing Board can get an amount equal to 10 percent of the total appropriation for NAEP, and in the current year and next year that would be the case.

Mr. OBEY. So every time the amount for NAEP gets increased the governing board eats up 10 percent of that?

Mr. CROSS. They are entitled to up to that amount. There is a problem in that the work of the Governing Board is often countercyclical to the level of assessment work reflected by the appropriation level for NAEP. Their big work goes on in the year before we go into the field.

So, I would recommend that there be a separate authorization for the Governing Board.

Mr. OBEY. I would agree with that.

Frankly, I don't care whether people on this governing board are liberals or conservatives. My impression is that they are usually the same types thinking they have all God's wisdom and they can pass out their ideas to the rest of the world, they don't have to worry about the regulations because when God makes regulations they usually fit their own needs.

I think we get taken for a ride on those costs. I hope you do whatever you can to keep them down.

Mr. CROSS. We will do that, but I think the longer-term issue is to have a separate authority for them.

DISCRETIONARY SPENDING

Mr. OBEY. How much of your budget is for your own discretionary program outside of the six mandated programs?

Mr. CROSS. Excluding the President's four initiatives for things like the Principal Training Program, we have about $11,000,000 in actual discretionary spending. That has to include many, many other activities which the office funds.

Mr. OBEY. How much money does the Office of Education Research and Improvement—how much money of that office does your office manage?

Mr. CROSS. My immediate office?

Mr. OBEY. Yes.

Mr. CROSS. Virtually none of it.

Mr. OBEY. How much money does the Office of Education Research and Improvement manage?

Mr. CROSS. In the current fiscal year, it is about $320,000,000.

Mr. OBEY. What other programs are part of OERI?

Mr. CROSS. There are the library programs and a number of programs under the School Improvement Programs account, something on the order of about one dozen, including the National Diffusion Network and the Fund for Innovation in Education.

Mr. OBEY. Would you provide for the record, so I don't take any more time than is necessary here, a breakdown of the budget and the FTE's that you have for the following three categories: giving me the actual fiscal year 1989 and 1990 numbers, the six mandated programs within your authorization, all of the discretionary programs that you are funding out of the Education Statistics and Research Act, and all other programs by program that you manage within OERI.

Mr. CROSS. We will be happy to.

[The information follows:]

PROGRAM BUDGET AND FTE FOR OERI UNITS

($000s)

	1989	1990
Office of Research		
Research Centers	$17,760	$17,760
Javits Gifted and Talented Center	1,500	---

Total FTE	428.26	443.00

NATIONAL BOARD FOR TEACHING STANDARDS

Mr. OBEY. Congress funded the National Board for Teaching Standards. What bothers me is that this money is going to be used to develop a process and a product that teachers pay to use. This money is supposed to be used to keep the authorization ongoing rather than going back to the Government.

This group is going to run their own research program outside the scrutiny that we expect you to be accountable for.

Have those problems been resolved?

Mr. CROSS. No, they have not. In fact, the Administration, and I personally, are very much opposed to there being an appropriation for this purpose. In addition the questions that you raised, I think that the field should be paying for this sort of work.

I think that one could also ask whether these standards should not be set through the professional association of English teachers or mathematic teachers, for example.

Basically, it amounts to a sole-source award to this designated organization, which is contrary to good management. We would, frankly, hope that the authorizing legislation for this award does not pass on that account.

Mr. OBEY. The Wisconsin Department of Public Instructions has the responsibility for determining certification standards for certain teachers. I am sure they would like to have a better way to examine the teachers before they get certified in the classroom.

Is there any way the product for this project is going to be free to the Wisconsin Department of Public Instruction?

Mr. CROSS. I cannot speak to that because this is a separate organization having nothing to do with the Department.

There is, in the President's budget for this year and next, an request for alternative Teacher Certification.

Mr. OBEY. But this product, you don't know whether they can get that free?

Mr. CROSS. No, I don't.

NAEP VALIDITY STUDY

Mr. OBEY. I have one other question on that subject. Then, let me ask you, have you started the validity study for the national assessment project?

Mr. ELLIOTT. The award has not been made as yet, but we are asking for best and final offers from the competitors. We expect to have it in the next couple of months.

Mr. OBEY. How much is there for the validity study in 1991?

Mr. ELLIOTT. The total will be $1,100,000, We had originally planned to have $600,000 for that project in the 1990 budget. But as a part of the reprogramming and deferrals for 1990, the costs were pushed into 1991.

Mr. OBEY. I thank you for your time.

Mr. NATCHER. Mr. Cross, we want to thank you and your associates for appearing before our committee on behalf of your budget request for the fiscal year 1991. It has been a good hearing.

[The following questions were submitted to be answered for the record:]

EDUCATION RESEARCHERS

Mr. Natcher: Mr. Cross, in general, who would do this education research? Would it be done directly by universities or would it be done principally by private think tanks and education consultants?

Mr. Cross: The research activities we have proposed represent a balanced research program open to individuals, universities, profit and non-profit organizations, local education agencies (LEAs), State education agencies (SEAs), and other groups willing and able to engage in important research work. The only exceptions are the national research and development centers, which as required by authorizing legislation must be awarded exclusively to university-based centers.

PROJECT LISTING

Mr. Natcher: The budget justifications make it difficult to follow exactly how this money will be spent. Would you insert in the record at this point a mechanism table showing the number and type of projects being proposed, including centers, and the amount within each area which is required for continuation costs versus new awards?

Mr. Cross: The table follows:

	Amount ($000s)	Projects
Evaluation of Educational Reform	$3,000 New	12 Contracts
Dropout Prevention	5,000 New	15-20 Contracts 1 Grant
Principal Training	25,000 New	
Summit Follow up	20,000 New	10 Contracts 60 Grants
National Assessment of Ed. Progress	18,866 Con't	2 Contracts 1 Grant
Statistics	41,538 Con't	80 Contracts 8 Interagency Agreements
National R&D Centers	21,760	
	(14,600 New)	17 Grants
	(7,200 Con't)	8 Grants
Field-initiated Research	1,000 New	20 Grants
Other Research Activities	6,479	
	(665 Con't)	10 Contracts
	(5,814 New)	50 Grants 20 Contracts
Regional Educational Laboratories	20,000 New	11 Contracts
Other Improvement of Practice	3,105	
	(500 Con't)	3 Contracts
	(2,605 New)	20 Contracts
Educational Resources Information Center (ERIC)	6,690 Con't	21 Contracts
Other Dissemination Activities	2,288	
	(593 Con't)	4 Contracts
	(1,695 New	11 Contracts
Total	$174,726	

DROPOUT RESEARCH CENTER

Mr. Natcher: The budget includes $5 million for a single center dealing with dropouts. Why do you need $5 million for one center? How was this figure developed?

Mr. Cross: Of the $5.0 million requested for dropout prevention, $1.5 to $2.0 million will be used for a National Research and Development Center for Improving High School Completion and Academic Performance Among Disadvantaged Secondary School Students. The center will create, identify, and disseminate effective strategies to improve high school completion and/or academic performance among disadvantaged students. The remaining $3.0 to $3.5 million will be used for a national grants competition designed to support an estimated 20-25 projects that will identify and document the effectiveness of specific approaches to improve high school completion rates and/or academic performance among disadvantaged students. The level of funding for the dropout center is consistent with the funding for the existing OERI education research and development centers, which are funded at around $1.0 to $1.3 million per year.

AUTHORIZING LEGISLATION FOR PRINCIPAL TRAINING

Mr. Natcher: The principal training program does not appear to be authorized under the General Education Provisions Act as you suggest. Have you submitted a proposal in this area to the authorizing committee?

Mr. Cross: We do believe that the Principal Training program we propose to support is authorized under section 405 of the General Education Provisions Act. We do not plan to submit additional authorizing legislation.

We intend to support a research-based training program as a demonstration effort. We intend to evaluate it carefully and, on the basis of our findings, disseminate useful information. We believe this type of activity is authorized by section 405.

FUNDING FOR NBPTS

Mr. Natcher: What are your current plans for funding of the National Board for Professional Teacher Standards in 1990?

Mr. Cross: The Department has no plans to fund the National Board for Professional Teaching Standards in fiscal year 1990 unless such an expenditure is appropriately authorized. Current authorizing legislation pending before the Congress, even if enacted, would not permit the Department to award the funds appropriated pursuant to section 405 of the General Education Provisions Act to the Board, because that legislation does not take the form of an amendment to section 405, but rather creates a distinct new authority. The fiscal year 1990 funds that the conferees indicated were intended for the Board remain available for obligation.

Mr. Natcher: If the Board is not authorized in 1990, will you propose a reprogramming or will you lapse this $5 million?

Mr. Cross: We will propose a reprogramming.

INVESTIGATOR-INITIATED RESEARCH

Mr. Natcher: Mr. Cross, how much of your $79 million increase are you proposing to put into investigator-initiated projects?

Mr. Cross: We are requesting $1,000,000 for field-initiated research, an increase of 35 percent over the fiscal year 1990 level. This increase will enable us to award a total of 18 grants for field-initiated research studies in 1991.

Mr. Natcher: It doesn't sound like investigator initiated projects are a high priority. Why not put a much larger amount of this money out for new researchers with new ideas?

Mr. Cross: Mr. Chairman, the field-initiated research program is a high priority. In fiscal year 1990, OERI has scarce resources yet will provide $739,000, an increase of $230,000 or 48 percent, for investigator-initiated projects. In fiscal year 1991, another increase of $261,000 or 34 percent is proposed. The field-initiated program will have doubled, from $500,000 in fiscal year 1989 to $1,000,000 in fiscal year 1991. Based on the number of quality proposals we have received under this program, we believe that the overall quality of the projects will remain high if the program grows at a steady, incremental rate.

CUT BACKS

Mr. Natcher: Mr. Cross, your budget has lots of increases, are you assuming any significant cut backs which this Committee is likely to hear about?

Mr. Cross: I am not sure I understand your question, but let me say that we are planning now for the full amount of our request. We strongly believe that supplying good information from research and development and statistics is one of the most important ways the Federal Government can help the Nation improve its education system and attain the national goals.

STUDENT ATTITUDES TOWARD SCIENCE

Mr. Stokes: One publication produced by your office is entitled, "Changes in the Science Attitudes of Urban Middle School Students." It examines the school and home variables influencing the science and math achievements of urban students in grades 6 through 8 in a major city. What variables were discovered?

Mr. Cross: The study you cited, "Changes in the Science Attitudes of Urban Middle School Students", is still in progress and should be completed later this spring. Conducted by Mary Atwater at the University of Georgia, the study is not designed to "discover" variables, but is instead designed to investigate selected home and school variables, influencing the science and mathematics achievement primarily of African-American urban students in grades 6 through 8 in a major southern city. We will be happy to forward a copy of the final report when the project is completed.

FIELD-INITIATED RESEARCH

Mr. Stokes: I see that you are proposing a significant increase for field-investigated research. How many field-initiated research grant applications did you receive in FY 1989 and how many were you able to fund?

Mr. Cross: We had $500,000 for field-initiated research in 1989. We received 202 eligible proposals, and we were able to fund nine, for an award rate of 4.5 percent.

Mr. Stokes: What do you expect the award rate to be for FY 1990?

Mr. Cross: We have $739,000 for 1990. We have received 245 eligible applications, and we expect to make 13 awards, for an award rate of 5.3 percent.

Mr. Stokes: What would you expect it to be under the President's budget?

Mr. Cross: We have requested $1.0 million for field-initiated research in 1991. We would expect to receive about 250 eligible proposals, and we would hope to make 18 awards. This would constitute an award rate of 7.2 percent.

PRINCIPAL TRAINING

Mr. Stokes: Among the initiatives proposed in the President's budget is a principal training program. $25 million is requested to provide 500 principal candidates with training at a residential summer institute, followed by a year-long mentorship in which the candidate would spend a full academic year observing and receiving on-the-job training from recognized experts. The cost per candidate works out to about $50,000. The justification states that there will be an unusually high turnover in incumbent principals in the next five to ten years. Can you quantify this problem?

Mr. Cross: The turnover of principals will be the result of the normal process of individuals aging and retiring. However, various professional associations (such as the National Association of Secondary School Principals) suggest that the turnover during the next decade will be unusually high, due to the retirement of large numbers of similar-age principals who began their careers during the 1960s. We have seen varying estimates, some suggesting, as was indicated in the justification, that up to half of those now in principalships may leave during the course of this decade.

Mr. Stokes: How much of the $50,000 cost per trainee would be for salary?

Mr. Cross: Our plans for this program are not yet complete, but the current plan calls for a summer training stipend of $6,000 per trainee, which would cover all personal costs, travel, and living expenses during the six- to eight-week summer training program. There would be no salary paid by the program to the intern-trainees, who would receive an internship fellowship of $10,000 during the year following their initial summer training, when they would be placed in schools as interns under the mentorship of exemplary principals. We expect that the schools and districts in which the interns receive their training and in which they will begin their careers as principals will also provide financial support. The Federal contribution is not a salary but a fellowship, intended to provide only a minimal level of support during the internship period.

SUPPORT FOR STUDIES

Mr. Early: Since 1982 over $605,083,000 has been appropriated for the research, statistics, and improvement of practice account. Even though we have spent so much money for the programs in this account, our educational system has been consistently deteriorating and has never been in worse shape. Now the administration is requesting $174,726,000 for FY '91, almost an 85 percent increase in funding over FY '90's appropriations of $95,21,000. What needs to be studied now that wasn't studied before? Isn't it time we spend more money on implementation and less on studies?

Mr. Cross: The State and local educational reforms of the past five years have substantially raised educational expectations. We expect more of students; we expect more of teachers; we expect more of schools. I believe that educational research has played an important role in raising these expectations and now has a continuing responsibility to inform teachers, schools, and policymakers on effective ways to meet these higher expectations.

Research has already made a substantial contribution to the improvement of education. For example, one of the many documented cases showing how research has contributed to the development of substantial, constructive education policies and practices throughout the country is the effective schools research.

The General Accounting Office (GAO) reports that the effective schools literature is markedly affecting State and local policies across the Nation. The GAO surveyed a representative sample of school districts, asking "...district officials whether any of their schools operated school improvement programs based on the finding of effective schools research. District responses indicate that about 41 percent or 6,500 of the Nation's school districts had effective schools programs in operation in approximately 38,000 elementary and secondary schools during school year 1987-88. An additional 17 percent or about 2,600 of the Nation's districts have plans to implement effective schools programs during school years 1988-89 or 1989-90." The effective schools research was first conceived, conducted, and disseminated by an OERI-supported research center, and according to the GAO the school effectiveness research findings were "rapidly adopted by schools, districts, and States as models for improvement programs during the 1980s." This example comes from a report entitled, "The Impact of Research on Education Policy," prepared by a member of my staff. This paper is in the final stages of preparation, and we plan to make copies of the report available by early April.

As policymakers face increasingly sophisticated issues, they are turning more and more to education research for guidance on these new developments. For example, Connecticut is building a set of teacher performance assessments that allow beginning teachers to demonstrate their knowledge and teaching ability. Pat Forgione of the Connecticut State Department of Education reports that these teacher assessments are based on the research conducted by the OERI-supported Center for the Study of Learning at the University of Pittsburgh. Florida recently developed a comprehensive State plan for teaching mathematics and science. To produce this plan, developers drew heavily from such research fields as learning theory, organization theories, and implementation studies.

Practical, constructive research can help in informing State and local policies that enhance effective learning and teaching. We will make this research available in forms which will be most useful to members of the education policy community so that it helps promote constructive reforms. I have already taken steps to make this happen. First, in our announcement of National Research and Development Centers, we are including -- for the first time -- a section that describes the "anticipated benefits" of the centers' work. In addition, we are competing a National Research and Development Center on Dissemination and Knowledge Utilization. These activities are designed to ensure that research findings are put to good use in the Nation's classrooms and help achieve the national goals.

RESEARCH AGENDA

Mr. Early: Could you give me any details on how the Department coordinates the research agenda on education and what follow up is done to make sure these studies are really needed and have not been done before, and that they meet minimum quality standards?

Mr. Cross: In the spring of 1989, OERI set out to identify the research agenda for the 1990s, to plan for the national research and development center competition, and to determine the kinds of research most likely to benefit learners. We solicited advice and guidance from individuals and organizations having different perspectives on the present status of education and how research and development could improve it. Parents, practitioners, policymakers, researchers, and representatives of various interest groups, including many educational organizations, provided written comments. Many of the recommendations OERI received called for substantially new initiatives. In previous years, recommendations generally had addressed how schools could improve on what they were already doing; during the most recent planning process, responses repeatedly suggested that "tinkering at the edges" and "business as usual" would not suffice. Through this public planning process, OERI has decided to support some existing lines of inquiry that warrant further investigation, redirect some current research activity, and offer fundamentally new research directions.

Each center is assigned a center liaison within the Office of Research. The center liaison is knowledgeable about issues and educational developments in the center's specific area of focus, as well as the broader picture of American education. These center liaisons work very closely with the centers to ensure that the research studies they undertake are really needed and do not needlessly repeat previous work. Center liaisons, with the help of practitioners and policymakers outside the Department, review the work of the centers to be sure that the research meets minimum quality standards and to make the studies useful to the needs of the diverse audiences served by the centers' activities. The centers engage in a wide range of activities whose purposes are to advance public knowledge about and understanding of educational practice, and to solve, alleviate, or illuminate education problems. The centers conduct and support basic and applied research, evaluations, and analyses of policies and practices in order to serve citizens, teachers, school administrators, and policymakers at the local, State, and Federal levels.

DROPOUT RESEARCH

Mr. Early: The administration is requesting $5,000,000 for dropout research. However, last year Ms. Hines touted as one of last year's great successes a booklet on dropout prevention. This booklet was produced by urban school superintendents who came together under the auspices of the OERI. Ms. Hines indicated that this booklet told us what does and doesn't work in dropout prevention. If we know how to prevent dropouts, do we still need to study who these dropouts are? If so, why did we spend the money to produce this other booklet?

Mr. Cross: The booklet Dealing with Dropouts presents the ideas of urban superintendents on promising strategies to reduce dropping out of school. The strategies are "offered not necessarily as solutions but as ideas" (p. viii) based on superintendents' extensive practical experience. The booklet explicitly states that evaluation research is needed on dropout prevention programs such as those recommended, including effects on student self-esteem, attendance, behavior, academic achievement, and how parents, teachers and students see the program (p. 11).

The booklet is important because it describes the dropout problem as seen by superintendents of large cities where the problem is severe. Their strategies may energize others to follow similar paths, and draw attention to major strategies and practices worthy of research and analysis to learn more about their effects.

NATIONAL ASSESSMENT

Mr. Early: As part of the National Assessment of Education Progress, the Department is conducting a State-representative assessment of 8th grade mathematics. What is the FY '90 cost for this part of the study? What will be the total cost for this part of the study?

Mr. Cross: The fiscal year 1990 cost of the State-representative assessment of 8th grade mathematics is about $8.5 million. The total cost for the State-representative portion of the 1990 assessment is about $13.9 million dollars.

Mr. Early: What preliminary information do we have so far from this study that we don't already know?

Mr. Cross: We are currently finishing the data collection phase of the study and do not have any results yet. However, when the data are analyzed and reported in 1991, we will have for the first time information based on a common standard that will allow States to compare their 8th grade students' math performance with that of all 8th grade students in the Nation. Also, we will be able to see how all the participating States' students performed compared to each other. States will be able to gauge relative strengths and weaknesses of 8th grade students in such areas as geometry, algebra, number and operations, measurement, probability and statistics. Never before have we had State-representative and national data on the same test. The information should assist State and local policymakers, curriculum planners, and teachers in making decisions about their instructional emphasis and help them question their practices on a more informed basis.

Mr. Early: A new contract was awarded for conduct of the 1990 and 1992 assessments. Who was this contract awarded to, and what criteria was used to award this contract?

Mr. Cross: A contract was awarded in 1989 to the Educational Testing Service for conduct of the 1990 and 1992 assessments. Westat and National Computer Systems are major subcontractors on the project. The criteria used to evaluate the proposals and award the contract were the following:

Criterion	Points
Quality and credibility of the general approach and statements of work sections	40
Creativity and technical approach	10
Qualifications of the proposed project director and staff	15
Soundness of the management plan and task/time commitments of staff	10
Corporate expertise and capability	25
	100

CENTER FOR DISADVANTAGED

Mr. Early: In January of 1989, Johns Hopkins was awarded funds to operate the Center for Educationally Disadvantaged Children. What is the current status of this center?

Mr. Cross: The Center for Research on Effective Schooling for Disadvantaged Students (CDS) has successfully completed the first year of its five-year research program. Most of the projects and activities planned by the Center are still underway or about to begin. While in operation only slightly more than a year, this Center has accomplished a great deal. The Center has begun to build a cohesive network of clients or "stakeholders" of research-based information on the education of disadvantaged children. The Center created a Research Partnership Network of Urban Schools, which presently includes the school districts of Baltimore, Philadelphia, Charleston, SC, New York City, San Diego, Indianapolis, and Lewiston, ME. The Center will continue to expand this network in succeeding years. In addition, the Center continues to work with OERI's Urban Superintendents Network, the Council of Great City Schools, and the Council of Chief State School Officers.

Also, a number of analyses were conducted during the Center's first year, and a series of reports and publications were released. The reports include efforts such as:

> "What Research Says about Solving the Problems of At-Risk Youth"
>
> "Defining Disadvantaged and At-Risk: Does It Matter in Practice?"

"The Role of Community Involvement in Fostering Investment Behavior in Low-Income Black Adolescents: A Theoretical Perspective"

"School-Family-Community Connections for Accelerating Student Progress in the Elementary and Middle Grades"

These reports are a sample of what the Center has accomplished to date. During the next few months CDS will complete a number of additional reports that address a range of issues (e.g. retention/promotion practices, promising practices in early childhood education, cooperative learning, etc.) pertaining to the improvement of educational outcomes for disadvantaged students.

CDS RESEARCH AREAS

Mr. Early: The center was to be working in four major areas of research: early and elementary education; middle grades and high school; language minority children; and school, family, and community connections. What progress has Johns Hopkins made in these areas of research?

Mr. Cross: The Johns Hopkins Center continues to work in each of the four areas of research. The vast majority of the work planned by the Center in each of these research areas is still in progress and proceeding as scheduled. For instance, as part of its Early and Elementary Education program, the Center is carrying out a longitudinal evaluation of its "Success for All" project. A descriptive study of Chapter 1 school-wide projects is progressing in Philadelphia. A study examining the effectiveness of developmental kindergarten is being conducted in collaboration with the Lebanon, Pennsylvania school district. A best-evidence synthesis of research on the effects of grade repetition and promotion is in progress.

In the Middle Grades and High School program, work is well underway that describes national practices and trends in middle grade schools and that identifies effective dropout prevention programs for disadvantaged students. Syntheses on effective programs for disadvantaged middle grade students and effective strategies for more responsive high school programs and a review of high school education-to-work programs are currently in progress. Data are being gathered from schools on practices and programs used as alternatives to tracking and retention. Experimental studies of alternatives to tracking and retention are being implemented.

Under the Language Minority program, cooperative learning strategies in bilingual education are being investigated in Texas and California. Research work is in progress to explore how language minority students' teachers and parents can work together to help guide teachers' design of classroom literacy activities. Also, an evaluation of "Success for All" with language minority children is progressing as planned.

The School, Family, and Community Connections program is progressing on schedule. Work continues to investigate and to analyze parent involvement in inner-city and rural schools and to develop preservice and inservice education models that improve and increase parent involvement practices of teachers. A database is being created, which will include information on practices and policies that influence at-risk student and community connections and practices and policies that influence school and community connections.

All of this represents only a portion of the progress that the Johns Hopkins Center has made to date.

DISSEMINATION OF CDS WORK

Mr. Early: Has any of this information been disseminated to the public?

Mr. Cross: The Center has responded to a large number of requests for information that cuts across its four basic areas of research. Nearly 5,000 clients were served directly by CDS during 1989. The Johns Hopkins Center has a strong dissemination and public information program. It tries to reach not only researchers, but also education practitioners and policymakers, students, and the general public. The general dissemination activities of the Center include: a Center Report Series; news releases for specific findings; interpretive articles for general education and association publications; a special Research on Disadvantaged Education Report (in progress); and a Dissemination Profile (in progress), which will detail the activities of a particular project and its results.

ACCESS ERIC

Mr. Early: In order to make the studies conducted by the Department more accessible to the public, the Department was to initiate this year a new component of ERIC called ACCESS ERIC. What is the status of this component?

Mr. Cross: A three-year contract to operate ACCESS ERIC was awarded to Aspen Systems Corporation on May 5, 1989. Work on this contract is progressing well. To date, ACCESS ERIC has established a national 800-number contact point for the entire ERIC system; developed comprehensive catalogs of ERIC and OERI publications; nearly completed the development of four new references and referral files--including a directory of educational information services around the world--which will be available both online and in printed form; and begun preparing a prototype quarterly publication--The ERIC Review --to bring critical new educational information to teachers, administrators, and policymakers.

Mr. Early: Have you received a favorable response from the public in regards to ACCESS ERIC?

Mr. Cross: Yes, we are receiving very favorable public response to ACCESS ERIC. It has begun to be a recognizable component of the ERIC system, as evidenced by an increase of over 40 percent in inquiries in the last month. We expect that inquiries will continue to increase at a steady rate.

Mr. Early: How many individuals have used ACCESS ERIC since its implementation?

Mr. Cross: Since ACCESS ERIC's implementation, nearly 1,200 individuals have "ACCESSed ERIC." ACCESS ERIC has provided over 6,500 responses for information, and has distributed nearly 19,000 ERIC system products free of charge. The demand for products has far exceeded available resources; for instance, we recently received a request for 25,000 copies of one set of publications, for which we were able to provide only 200 copies. However, many ERIC products are deliberately prepared to be easily reproduced, so that users can widely disseminate these materials.

Mr. Early: What is the cost to the Department to run ACCESS ERIC?

Mr. Cross: The fiscal year 1991 request includes $400,000 for ACCESS ERIC, which is the approximate annual cost.

Mr. Early: Can any nominal fee be charged to help offset this cost?

Mr. Cross: Yes, some services and products to be developed by ACCESS ERIC will be offered for sale. It is expected that sales proceeds will be reinvested in the development and production of additional services and products.

LAB AND CENTER COMPETITIONS

Mr. Early: Both the National Education Research and Development Centers and the Regional Education Laboratories are up for competition. What is the status of this competition?

Mr. Cross: The Education Research and Development Centers competition was announced in the Federal Register on March 8, 1990. The closing date for receipt of proposals is June 15, 1990, and awards are scheduled for the fall of 1990. As for the Regional Education Laboratories, OERI has collected extensive advice from the field about the future of the laboratory program and the conduct of the competition. A notice of pending issuance of the request for proposals (RFP) was published in the Commerce Business Daily on March 7, 1990. The notice stated that the issuance date would be on or about April 18; however, OERI is trying to have the RFP issued before that date, preferably at the end of March or in early April. Proposals will be due on June 18, 1990. New contracts in the ten laboratory regions will be effective December 1, 1990.

Mr. Early: Do centers and laboratories that are currently being funded have any advantage over proposed centers?

Mr. Cross: We hope not. This is an open competition. The evaluation criteria to be applied in the review of research and development center applications are clearly stated in the Research and Development Center regulations. The review process will be conducted with external reviewers exclusively and will adhere strictly to the criteria. In light of the possible advantages to incumbents in the laboratory competition, OERI has structured the competition to be as fair as possible for all applicants. We are providing all of the information we developed to assist us in planning the competition to incumbent and non-incumbent competitors alike. In addition, the statement of work avoids requirements that would clearly favor the present laboratories, i.e., requiring applicants to name members of proposed governing boards in their proposals. (The present laboratories already have such boards. The statement of work therefore prohibits competitors from naming board members in their proposals.)

PUBLIC INPUT

Mr. Early: The Department, in preparation for the upcoming competition for new research and development centers, solicited advice from a cross section of individuals in the field and held two research agenda planning conferences. What were some of the comments made by participating individuals, and what recommendations made by the participants will the Department use for this competition?

Mr. Cross: In the spring of 1989, OERI set out to identify the kinds of research most likely to benefit learners. Recommendations were solicited from organizations and individuals having different perspectives on the present status of education and on how research and development could improve it. Parents, practitioners, policymakers, researchers, and public officials participated in two planning meetings, and representatives of various interest groups, including many education organizations, provided written comments. As a result of this preliminary work, staff analyses, and consideration of present national needs and the limits on available funds, OERI originally decided to recommend funding 12 R&D Centers.

A notice soliciting public comments on the proposed Centers was published in the Federal Register on September 12, 1989. Many people responded to the notice, indicating substantial support for all 12 proposed Center topics. In December 1989, a Blue Ribbon Group of outside experts in education and education research, chaired by then-Governor Thomas Kean of New Jersey, convened to review and discuss specific questions the proposed Centers should address. Both the public response and the Blue Ribbon Group indicated that additional topics should be added to the original list of 12.

Many of the recommendations OERI received called for substantially new initiatives. In previous years, recommendations generally had addressed how schools could improve on what they were already doing; current responses repeatedly suggested that "tinkering at the edges" and "business as usual" would not suffice. OERI therefore concluded that 18 new R&D Centers should be established. The planned Centers will support existing lines of inquiry that warrant further investigation, redirect some current research activity, and offer fundamentally new research directions.

As a group, the 18 Centers are designed to reflect a comprehensive approach to education aimed at improving teaching and learning for students of all ages, languages, and cultures in all schools. The Centers' purpose is to find imaginative ways to create educated graduates, accountable teachers and schools, productive workers, and knowledgeable citizens--all of which are vital to our national well-being.

In addition to the 18 missions, OERI regards student and teacher motivation and the dissemination of research findings as issues deserving special attention by each Center. Each Center is being encouraged to explore how students and teachers can take an active part in the education process thus improving their motivation to actively pursue educational goals. The establishment of a Center for Research on Dissemination and Knowledge Utilization indicates the importance OERI attaches to the use of research to improve education. All Centers are expected to disseminate their findings widely to diverse audiences. OERI strongly believes that R&D Centers should work with existing associations and organizations. In many of the mission statements, OERI suggests that the Center might collaborate with particular organizations and groups. The organizations listed are merely illustrative, and applicants should identify and justify the collaborative organizing most appropriate to their Center's mission.

PRINCIPAL TRAINING

Mr. Early: The Administration is requesting $25,000,000 for principal training. The Department plans to improve preparation of school principals by utilizing exemplary principals to train prospective principals. What criteria does the Department plan on using to select these exemplary principals?

Mr. Cross: The "mentors" will be identified using a wide range of sources, including State and local education agency recommendations, OERI's recognition programs, and professional associations at the national, State, and local levels. Because it is easier to identify cases of exceptional, outstanding performance than it is to identify exceptional potential, we expect the selection of mentors to be less difficult though no less careful or rigorous than the process used to select trainees. A national institute for the development of school leaders will be established to design and implement a valid process for selecting mentors (as well as one to be used to select trainees).

Mr. Early: Has the Department decided where the six to eight week summer residential training institute will take place?

Mr. Cross: There has been no decision as to the location of the summer training program, except that we plan to have at least two, and perhaps as many as six separate sites, in order to provide trainees with choices, both of location and of curriculum. Some trainees may wish to attend a summer institute close to their homes. Others may wish to choose based on the curriculum design. Our intent is for the institute to develop at least two and as many as six outstanding, state-of-the-art school leadership development curricula, integrating current research knowledge from a variety of sources, but with one or another emphasis or feature.

Mr. Early: Funds from this program will support the cost of the summer program and salaries and related costs for the principals-to-be during the year they spend in residence at another school. What will be the cost of this part of the program?

Mr. Cross: We estimate that between 80 and 90 percent of the total--between $20.0 million and $22.5 million--will be used for these training costs. The remainder will be used to create and support the institute, which is charged with designing training curricula, selecting trainees and mentors, administering the training programs, evaluating results, and disseminating products. Although our figures are rough estimates, we believe that the total cost per trainee will be about $40,000.

This assumes that the summer training should cost about $10,000 per trainee, including the salaries of trainers, facilities costs, materials, etc. A summer travel and living stipend of $6,000 is added to this, along with costs of $4,000 per mentor (the exemplary principals will receive two weeks of training along with the trainees they will work with in internships, later on). The total expenditures per trainee during the summer training are estimated to be approximately $20,000.

The internship costs are estimated to be $15,000, including an intern fellowship of about $10,000 and about $5,000 for training costs during the nine months of the internship. Finally, during the internship year we would provide participating schools with $5,000 per mentor, to defray administrative costs and support the costs of the time the mentor spends working with the intern, coaching and guiding him or her. Thus, the total internship costs is estimated at $20,000 per intern.

Mr. Early: What will be the amount of the salary paid to the principals-to-be during their residence year?

Mr. Cross: Our plans for this program are not yet final, but we are currently considering a plan that would have the Federal Government, under this program, providing intern-trainees with internship fellowships in the amount of $10,000. We expect that the school districts in which the interns receive their training and in which they will begin their careers as principals will also provide financial support. The Federal contribution is not a salary but a fellowship, intended to provide a minimal level of support during the internship period.

DROPOUT DEMONSTRATIONS

Mr. Dwyer: The budget justification requests $5 million to evaluate the, as yet unauthorized, drop-out prevention program. Was an evaluation conducted of the last 2 year drop-out demonstration program? What were the results on this evaluation? Will the results of this evaluation be used as a development tool for the new program?

Mr. Cross: The $5 million request you are referring to will not be used to evaluate programs. The $5 million request will support a National Research and Development Center for Improving High School Completion and Academic Performance Among Disadvantaged Secondary School Students, funded at $1.5 to $2.0 million per year for 5 years, and a national grants competition, funded at $3.0 to $3.5 million, to support an estimated 20-25 projects that will identify and document the effectiveness of specific approaches to improve high school completion rates and/or academic performance among disadvantaged students. These activities are designed to help achieve the national goal on high school completion.

The budget also inlcudes a $45 million request for the Dropout Prevention Demonstration program under Title VI, Part A of the Elementary and Secondary Education Act of 1965. That program was reauthorized by the Congress in February and was signed by the President March 6, 1990. We plan to use up to $2 million per year of that $45 million to evaluate the new program. Under the previous authorization, the Department funded 89 projects for two years -- 1988 and 1989. Although the previous program will provide a basis for determining the range of dropout prevention and reentry projects currently in existence, the projects for the most part do not focus on funding comprehensive programs that provide basic skills instruction, counseling, employment preparation, parental involvement, and adult mentors. Research has suggested that comprehensive programs, involving several components, are most effective in preventing students from dropping out of school. Preliminary results of the evaluation from the 1988-1989 program will be used in choosing models for replication in the demonstration program proposed in the 1991 budget.

NCES INCREASE

Mr. Dwyer: OERI has requested an 83 percent increase for the National Center for Education Statistics. Despite this sizeable increase, the Center will be using the funds to expand current activities, and does not plan any new initiatives. Please explain to Members of the Subcommittee how a mere expansion of current programs warrants an 83 percent increase.

Mr. Cross: In 1988, Congress enacted the Hawkins-Stafford Elementary and Secondary School Improvement Amendments, which included many specific and new authorizations for collecting and reporting statistical information. Examples include longitudinal studies that follow individual students over time, dropout statistics, international comparisons, school district analysis of decennial census data, cooperative work with States to compile more comparable data, and an expanded national assessment of student achievement. These were added to Congressional authorizations enacted in 1986 calling for more data on teachers, including supply and demand, better education finance information, and a recurring study of student financial aid.

The 1991 budget for statistics continues the development of data collections and reporting to meet these statutory requirements. Of the $18.9 million increase we are requesting for Statistics, most of the increase ($13.1 million) is due to surveys moving from planning stages into more expensive pretests or full data collection. These include full scale collections for the Schools and Staffing Surveys, senior year follow-up of the National Education Longitudinal Study of the Eighth Grade Class of 1988, mapping of 1990 Census data to school districts, the International Reading Literacy Study, and the next cycle of the Recent College Graduates Survey; and pretests of the base year studies of Postsecondary Beginning Students, the High School and Beyond 4th Follow-up, and the Adult Literacy Study.

The remaining $5.8 million of the increase, also following Hawkins-Stafford mandates, will fund continued activities to help us upgrade the comparability and detail of basic data about schools, especially data on finance and dropouts; improvement in our technical assistance, statistical analysis and evaluation, and dissemination capabilities; and analysis and reporting of data from surveys, production of NCES annual publications, and ADP support.

RURAL INITIATIVE

Mr. Dwyer: I understand that the Department proposes to increase support for the regional educational laboratories. It is also my understanding that the Department delayed outlaying funds for the regional laboratories and now there is a mismatch of fiscal years and outlays. Because of this lag, the Department's request of $1.0 million in budget authority for the new rural initiative would only fund two months, not a full year. What efforts are being made to insure that the rural initiative does not run short of funding in fiscal year 1991?

Mr. Cross: No interruption or decrease in rural education services or funding will be experienced by the laboratory regions as a result of this action. The nine Regional Educational Laboratories have been funded at increasing levels since 1987 to carry out rural education activities. However, the laboratory contract performance dates do not coincide with government fiscal years. The performance period for the laboratories' work under their 1989 rural funding ($5.138 million) ends September 30, 1990. Their base five-year contracts expire November 30, 1990. (Legally, the laboratories' contracts cannot exceed five years without competition.) To maintain the level of effort over a twelve-month period consistent with the budget authority for previous rural funding, OERI is issuing awards to the laboratories totalling $985,500 for rural education activities during the two-month period from October through November 1990. This will bring total obligations for the 1990 laboratory year to $23.7 million. Consistent with last year's appropriation and report language, OERI intends to award the remainder of the FY 1990 rural funds ($4,927,500) through system-wide recompetition of the laboratory program, to result in ten new laboratory contracts, which will begin on December 1, 1990. OERI's fiscal year 1991 budget request of $20.0 million includes $1.0 million for rural education, which is intended to maintain the total amount annually available to the labs for rural education at approximately $6.0 million.

PLACEMENT OF PRINCIPAL TRAINING

Mr. Dwyer: The Principal Training program, which is currently unauthorized, would recruit persons, who do not have education backgrounds, as principals and pair them with a mentor principal. Why has this program been placed under this account? Shouldn't Principal Training be under the School Improvement program as the Mid-Career Teaching program was?

Mr. Cross: We are proposing to carry out our proposed Principal Training program under section 405 of the General Education Provisions Act, which provides the Department broad authority to carry out research and development, improvement, and dissemination activities. We intend to carry out a research-based principal training program on a demonstration basis, which we will carefully evaluate and on the basis of which we will disseminate a great deal of useful information. The Mid-Career Teacher Training program is separately authorized by title V of the Higher Education Act and thus is not included in this account, which is limited to activities to be conducted under sections 405 and 406 of the GEPA.

SUMMIT FOLLOW-UP

Mr. Dwyer: The Department is requesting $20 million in a separate account to finance research and data collection activities on the results of the Charlottesville meeting. Why can't these research and data collection activities be conducted under existing accounts?

Mr. Cross: We are not requesting a separate account for our summit follow-up activities. We will carry out those activities under our existing research and data collection authorities under section 405 and section 406 of the General Education Provisions Act. We separately identified an amount within our overall Research, Statistics, and Improvement of Practice account for Education Summit Follow-Up to highlight the fact that new activities will be needed to gauge the Nation's progress toward the national goals and to help the States and localities determine what changes are needed or what strategies are likely to be effective in yielding the outcomes envisioned in the goals. However, at the time the budget was developed, the goals had not been announced, so we were unable to determine what specific new statistics, research, and dissemination activities should be added to our request. Thus, we requested the summit follow-up item as a placeholder. We are working now to develop the specific plans needed, but it will take some time to complete the task, as this is a joint undertaking between the Federal Government and the States.

SUPPORT FOR RESTRUCTURING

Mr. Hoyer: As you may know, the Governor of Maryland initiated a program that was mentioned in the President's budget that establishes an assessment of all 1200 elementary and secondary schools in the State, establishes new curriculum-based achievement tests for students, and a system of financial incentives for successful schools and increased State control for those that do not succeed. I am concerned that the only proposal for increasing meaningful financial support for States that are undertaking massive restructuring programs is in research. Could you comment?

Mr. Cross: Yes, I'd like to speak to that. First, it appears that the primary requirement for the kind of restructuring that is beginning to sweep across education is not a massive infusion of new Federal money but better information for schools and communities to use in setting goals and expectations, and better tools for getting feedback on results. Finding ways to do more with available resources--and get better results from them--is the primary thrust of restructuring, as I see it.

Second, I think it is important to be realistic and acknowledge that restructuring does have costs--it is not free. For example, it requires the development of new ideas of leadership in States, districts, schools, and communities, and it requires substantial time for everyone involved to learn new ways and unlearn old ones, to reflect anew on the mission of their schools, to hammer out new goals, to decide upon and implement new approaches, to check the results and make necessary adjustments. However, it is not yet clear how these critical local actions can best be carried out--with or without outside support.

One of our major aims, across all of the programs funded under the Research, Statistics, and Improvement of Practice account is to find and demonstrate approaches that work to improve results, and then provide the best possible information and technical assistance to help get those findings into use.

In that regard, I'd like to emphasize that in addition to supporting research, OERI is providing a wide range of other types of assistance and support for restructuring. Many of the schools and districts across the country that are pioneering in educational restructuring contribute to and also receive help from our programs such as the regional laboratories, the research centers, the Leadership in Educational Administration Development Program (LEAD), ERIC, the National Diffusion Network (NDN), and others. A number of the State LEAD Center directors are collaborating to outline the kinds of special training and staff development that are needed by principals in schools undertaking local restructuring initiatives. That activity, supported also by the Institute for Educational Leadership and a grant from the KRAFT Corporation, is producing a practical handbook that will be made available in all States through the LEAD Centers and its associated National LEADership Network. The regional laboratories also have identified restructuring as an area for collaborative work, and the North Central Regional Laboratory, working with Public Broadcasting Corporation, is now providing an eight-program broadcast on restructuring for educators and policymakers nationwide. In the critical area of accountability, we are working with leaders from a number of States to examine appropriate and workable ways of assessing results where restructuring is occurring.

As we work with these OERI-sponsored programs, we will be looking for other sound ways that Federal resources can be used to strengthen State and local restructuring efforts, perhaps in ways similar to those now used under Chapters 1 and 2 to encourage and strengthen local efforts to implement programs based on the effective schools research that was sponsored by OERI and its predecessors over the past two decades.

Good research and information isn't all it will take for schools across the United States to succeed in restructuring. But it isn't a bad place to start, to ensure that the other kinds of help we and others provide will in fact enable schools to do a better job--to achieve better results--with the resources they have at their disposal already.

TECHNICAL ASSISTANCE

Mr. Hoyer: I am also very concerned that we may indeed have sufficient information in many instances with regard to good models and strategies for reform, but that the Federal Government could help much more by providing the technical assistance that States and localities need to implement strong reform programs. Could you comment?

Mr. Cross: OERI does provide a great deal of technical assistance to States and localities to implement reforms, particularly through its Programs for the Improvement of Practice. This program administers the most intense Federally-funded technical assistance effort for implementing such reforms--the Regional Educational Laboratory Program. In fiscal year 1989, the laboratories provided assistance in the use of research and development-based knowledge for improving schools to all of the States and Territories. All nine laboratories have been contributing to State and local policies related to school reform, and all are supporting school-based improvement models. A recent GAO study (September 1989) found that over 1,500 school districts that have implemented effective schools programs received help from a regional laboratory in developing its program.

The regionally representative governing boards of the laboratories, with the active involvement of the chief State school officers, identify significant regional priorities, which are then addressed by the laboratories in their technical assistance efforts. Such priorities include rural and urban education, early childhood education, issues of choice, school restructuring, higher order thinking skills, teacher preparation, applications of technology, and problems of students at-risk of dropping out of school.

Among the many examples of specific laboratory accomplishments through technical assistance are the following:

- Research for Better Schools Laboratory (RBS) is assisting the Maryland State education agency to design a statewide program that will implement the recommendations of the Commission on Students At-Risk and the Committee on School Performance. At this point, RBS is providing technical assistance to State staff on the development of statewide goals and standards.

- Appalachia Laboratory assisted Hart County, Kentucky in using an R&D-based process to design a school-community partnership model that dramatically increased parent involvement in the district's schools.

- North Central Laboratory conducted a rural project in Iowa that supported a statewide effort in school reform with a focus on improvement of teacher recruitment and performance.

- Mid-Continent Laboratory assisted five pilot communities in South Dakota to successfully restructure their high school curricula to focus on economic development of the community through creation of jobs and businesses for students. Efforts are being expanded to the other six States in the lab's region.

- Southwest Laboratory trained trainers in 30 demonstration sites throughout the region to utilize effective schools research for school improvement and provided major support to the Arkansas governor's office in developing a system of State indicators on the condition of education in Arkansas.

- Far West Laboratory provided the Nevada SEA with a follow-up study of schools that participated in the State's school improvement project, documenting the nature of improvement activities and providing recommendations to help direct future policy. The lab's evaluation was used by the Nevada legislature and by districts in expanding the program.

- Northeast Laboratory provides technical assistance through its At-Risk Youth Initiative at the school level, where an "action team" of educators and parents implement changes, and at the level of State educational agencies, where it assesses needs and resources required for implementing change.

- Northwest Laboratory has worked directly with about 40,000 educators in its regions (Northwest and Pacific) to provide training and technical assistance, particularly through its "Onward to Excellence" school improvement program. The lab produced hundreds of applied research and development reports, publications, and resources documents, based on approximately forty different projects funded by OERI.

- Southeast Laboratory has provided materials and services that have been cited in numerous regional reports as major or contributing factors in changes in educational policy or practice; examples include contributions to North Carolina's policies on teacher evaluation, salaries, and incentives, and to policies in Mississippi that led to legislation that raised teachers' salaries.

OERI's National Diffusion Network also provides technical assistance to local schools, both public and private, interested in solving problems and improving student performance. The programs are proven and cost-effective. The support necessary for the implementation of these validated programs is made available through a State facilitator located in each State, the District of Columbia, and the territories. The duty of the State facilitator is to provide the link between local school districts and the resources available in the NDN. Validated programs are funded as Developer Demonstrators to provide training and materials necessary for local schools to implement their programs. Continuing support and follow up is also provided.

NDN Programs are rigorously examined for their ability to prove effectiveness and their ability to be replicated. The credibility of NDN programs to accomplish what they say they will do is and has been a cornerstone of the network's success. In 1988-89 over 29,000 public and private schools in all 50 states, the District of Columbia, Puerto Rico, and the Virgin Islands adopted NDN programs providing inservice training to 82,600 educators and benefiting 4.1 million students.

RESISTANCE TO REFORM

Mr. Hoyer: Secretary Cavazos has said that there is tremendous resistance to reform at the local level, and I wondered if there is anything in this budget that will help overcome that type of obstacle to progress?

Mr. Cross: One of our proposals focuses on the evaluation of education reform. The Office of Research is going to document education reform activities taking place around the country at the local and State levels. These local reform efforts are attempts by local parties to deal in new and innovative ways with the problems of American education. No documentation and evaluation of such reform efforts exists, because localities have not tried such reforms in the past. The purpose of our activity is to document, as far as possible, the natural development of these efforts and to determine the advantages and disadvantages of the different reform attempts. We plan to make the findings available in forms useful to other localities, so that future reform efforts are informed by the lessons that others have learned.

Reform efforts are taking place in many States and in many local school districts. Examples of the kinds of activities we might document include a case with heavy involvement of local citizens. Chicago is beginning what some have called the most radical attempt in the United States to revamp a big-city school system. Each Chicago school will be run by a parent-led council using powers currently held by the Board of Education. This abrupt shift of power to the parents will give them the authority to approve budgets, make curriculum recommendations, and hire and fire principals. It is imperative that the Office of Research conduct field research to document the early stages of this revolution.

Another interesting case represents important involvement by a university. Recently Boston University's School of Education was asked by the school board of Chelsea (Massachusetts) to assume management authority for the district's public schools. This decision was seen as an alternative to the educational bankruptcy approaches adopted by New Jersey. It is imperative that the Office of Research conduct field research to document the early stages of this experiment.

There are other interesting cases that include substantial involvement by State agencies. New Jersey's recent educational bankruptcy initiative in the Jersey City schools gives the State authority to manage local school districts that are determined to be in a state of insuperable difficulty. This intervention by the State is being watched closely by other States where there is strong popular pressure for State-mandated and enforced educational accountability programs. OERI needs to be well informed about this attempt, which is widely regarded as a critical early experiment that may expand State powers to improve local schools.

Another local innovation that may hold important lessons for other localities involves restructuring of the local school apparatus. Dade County/Miami has nearly half of its schools engaged in a school-based decisionmaking initiative where the principal, teachers, and community share in decisions regarding the budget and operation of the school -- without central office dictate or interference. The Saturn School in St. Paul is a cooperative initiative to redesign the school from the ground up. Teachers and students are designing programs using innovative learning technologies to meet student learning needs. San Diego is working with secondary schools, which have been empowered to redesign curriculum and instruction in order to integrate fragmented disciplines in the humanities, mathematics, and the sciences.

Because many of these reform efforts are particularly innovative and could prove to be useful in a variety of local settings, it is important that OERI provide information that can inform other local improvement efforts. We believe that the dissemination of examples of successful local reforms will help alleviate local resistance. We believe that as people become more informed about local success, they will be anxious to emulate it.

NATIONAL BOARD FOR PROFESSIONAL TEACHER STANDARDS

Mr. Hoyer: The committee provided $5 million for FY 90 contingent upon enactment of an authorization for the NBPTS. What is the status of the appropriated funds and can you also update the committee on the status of the authorization?

Mr. Cross: The appropriated funds remain available for obligation. Authorizing legislation has been enacted by the Senate, but it does not authorize support for the Board under section 405 of the General Education Provisions Act, which is the authority for which the funds were appropriated. Authorizing legislation has not been acted upon by the House.

Mr. Hoyer: It was my impression that the Department has some genuine interest in this area, but that there are concerns within the Department that it should be very closely involved in the development and oversight of this effort to establish voluntary guidelines or standards by which systems and individuals may measure themselves against a national baseline. Could you comment on the NBPTS goals and how they may support the goals of education reform?

Mr. Cross: The Department supports the mission of the National Board for Professional Teaching Standards. Central to its mission is the creation of a system for the certification of experienced teachers. It will develop a process for conferring distinction upon those who meet high and rigorous standards, a process that is governed by the profession, that is national in scope, and that is voluntary. It is different from the State certification/licensure process, which regulates entry to practice for beginning teachers based on minimum standards, and is mandatory. The Board's goal of certification for experienced teachers aims at establishing advanced, high and rigorous standards that constitute a mark of distinction. Thus, Board standards are for accomplished practice, as determined by professional consensus. And, unlike State licensure, Board standards will not vary from State to State.

The Board potentially has a major contribution to make in the education reform efforts. By defining high and rigorous standards for teaching, and implementing those standards through a thorough and authentic assessment process, the professional status of teaching can be raised and the intellectual challenges of teaching will become more evident. A major outcome is expected to be increased attractiveness of the profession to highly qualified individuals. It may also be the case that school districts would choose to pay higher salaries to teachers who were nationally certified, as well as to provide them with leadership roles and responsibilities for mentoring other teachers. Furthermore, this assessment process may have an impact on how teachers are prepared in preservice programs, as well as on the nature of continuing professional development programs.

The Department's concerns are not those you have expressed in your question. On the contrary, it is the position of the Department that there should not be Federal involvement in setting standards for the profession. The Board has requested funds for research activities that would form the basis for its professional assessments. Were we to provide those funds, we would want involvement in how they are awarded. As it stands now, the proposal is for funds to go directly to the Board, which would in turn award contracts using its own peer review and evaluation system. This would circumvent the Department's existing system for review, evaluation, and monitoring of research awards.

RESEARCH CENTER SHIFT AWAY FROM HIGHER EDUCATION

Mr. Hoyer: The Department has been developing the mission areas for the new research and development centers. Can you provide an overview of the Department's activities in this area, including how many centers are funded in FY '90 and FY '91?

Mr. Cross: The Department is currently supporting 17 national Educational Research and Development Centers, 10 of which will expire this year. The Department has announced in the Federal Register competitions for 18 new Centers. The mission of each Center is based on individual priorities, or combinations of priorities, from the list in 34 CFR 706.3. The priorities that define the Centers' missions are listed in the Notice. An applicant for a Center grant or cooperative agreement must respond to the specific priorities established for that Center. The grant application package is intended to offer additional guidance to applicants about addressing the mission and priorities of each Center, not to impose any requirements other than those established by statute or regulations. In all cases, the Centers should have as their ultimate purpose the improvement of education for all learners. The 18 Centers are as follows:

Research on Dissemination and Knowledge Utilization. The Center will focus on the most effective ways to communicate education information and research findings.

Assessment, Evaluation, and Testing. The Center will focus on research into new and alternative assessments of student learning; assessment theories, models, and methods; and the effects of assessment practices.

Families, Communities, and Children's Learning. The Center will focus on research designed to help families and communities educate their young children.

Education in the Inner Cities. The Center will conduct research on the distinctive characteristics of inner-city education, taking into account the social, economic, cultural, and political conditions in which children and adolescents live and go to school.

Cultural Diversity and Second Language Learning. The Center will focus on issues related to the wide range of linguistic and cultural backgrounds represented in American Classrooms.

Writing and Literacy. The Center will focus on research needed to improve all student's writing skills.

Student Learning. The Center will conduct research on new approaches to teaching students how to become competent thinkers, learners, and problem solvers.

Learning to Teach. The Center will conduct research on how elementary and secondary teachers develop expertise over the course of their careers.

Postsecondary Learning, Teaching, and Assessment. The Center will focus on research to identify various institutions' objectives in undergraduate student learning, ways to enhance that learning, and effective and credible methods of assessing its quality and results.

Teacher Performance Evaluation and Educational Accountability. The Center will provide information to schools, school districts, and States to guide their evaluations of teachers, administrators, and schools.

Education Policies and Student Learning. The Center will focus on research to help education policymakers create policies that promote effective learning.

Adult Literacy. The Center will seek to strengthen and expand existing knowledge about adult literacy and subliteracy, skills training, and instructional programs and will be expected to improve the accessibility of the information in these areas.

Education Quality of the Workforce. The Center will conduct research on the educational requirements of jobs in various fields, and will determine the short- and long-term effects of school and college achievement.

Organization and Restructuring of Schools. The Center will focus on how school organization affects student performance by investigating alternative ideas and methods for organizing and restructuring schools.

Mathematics Teaching and Learning. The Center will focus on research into improving students' mathematical reasoning and thinking abilities from early childhood through high school.

Science Teaching and Learning. The Center will conduct research in the learning, instruction, and assessment of science education from kindergarten through grade 12.

Education Finance and Productivity. The Center will focus on the relationship between education quality and school finance from the elementary through postsecondary levels.

Literature Teaching and Learning. The Center will focus on ways to improve all students' critical thinking skills through teaching and learning literature effectively.

Awards for seven of the centers--Teacher Performance Evaluation and Educational Accountability; Adult Literacy; Education in the Inner Cities; Families, Communities, and

Children's Learning; Education Quality of the Workforce; Organization and Restructuring of Schools; and Science Teaching and Learning--will be made by September 30, 1990. However, only one, the Center on Teacher Performance Evaluation and Educational Accountability, will be awarded a full twelve months of funding by September 30. The others will receive additional funds after October 1, 1990, and awards for the remaining eleven centers will be made by December 1, 1990.

Mr. Hoyer: Is there a shift away from higher education concerns?

Mr. Cross: No. In previous competitions there were three higher education centers: the National Center for Postsecondary Governance and Finance; the National Center for Research to Improve Postsecondary Teaching and Learning; and the National Center on Education and Employment. These centers end on November 30, 1990. In the upcoming centers competition, we have three new centers that continue our focus on issues in higher education: Postsecondary Learning, Teaching, and Assessment; Education Quality of the Workforce; and Education Finance and Productivity.

Mr. Hoyer: Is there adequate provision for capitalizing on the work that has been done or is underway at these currently funded centers, and would you maintain your support for some of the older mission areas if you had additional resources?

Mr. Cross: Yes, we have and will continue to capitalize on the work of each currently funded center. The centers are carefully monitored by experienced staff in the Office of Research. Every year, through the continuation application process, the work of the centers is significantly reviewed before the next year's funds are awarded. Results of ongoing research and products are reviewed and disseminated to the field. Each center has a National Advisory Panel, which advises it on how best to disseminate its products. In addition, the Office of Research has recently employed an expert in dissemination who reports directly to the Director and is responsible for developing more creative mechanisms to enable us to more effectively capitalize on the research and products being developed by the centers.

We believe we have adequately addressed those higher education issues being explored by our existing centers that warrant continued examination by new centers to be established under the education research and development center competition.

TEACHER SALARIES

Mr. Hoyer: The Southeast Regional Laboratory has conducted a teacher wage comparability study which was the basis for adjustments in teacher salaries in some southeastern States. Does OERI have any data on the impact of increased teacher salaries or similar efforts on school improvement and student achievement?

Mr. Cross: An Analysis of the Comparability of Teacher Salaries to the Earnings of Other College Graduates in the Southeast: 1989 Update, by the Southeast Educational Improvement Laboratory, is based on data compiled from the U.S. Census Bureau's Current Population Survey (March 1989) and compares the average annual earnings of teachers to the average annual earnings of college graduates in full-time, salaried nonteaching positions in six Southeastern States. The report does not contain data on the impact of increased teacher salaries on school improvement or student achievement.

DATA ON DROPOUTS

Mr. Conte: As long as I can remember we've had school dropouts. And as long as I can remember we've had difficulty measuring them. There is conflicting information about how widespread the dropout crisis really is. The definitions of what a dropout is vary throughout the nation. Plus it's hard to keep track of dropouts. I suppose the figures depend on which side you're on in the grant writing process. Your longitudinal study of 1988 looks at the dropout issue. How big of a problem do we have with dropouts and the collection of data about them?

Mr. Cross: The first annual report on dropouts was submitted to Congress in September 1989. The report was based on national data from the Current Population Survey (CPS) and the NCES longitudinal survey which began in 1980, High School and Beyond (HS&B). Information was presented in the report pertaining to three different types of dropout rates -- event, status, and cohort. Each of the three types of dropout rates measures a different facet of dropping out.

- Event dropout rates measure the proportion of students who drop out in a single year without completing high school. Between October 1985 and October 1988, an average of 4.4 percent of all students in grades 10-12 dropped out of high school. Approximately 460,000 students in grades 10-12 dropped out between October 1987 and October 1988.

- Status dropout rates measures the proportion of the population who have not completed high school and are not enrolled at one point in time, regardless of when they dropped out. In October 1988, nearly 13 percent of all 16- to 24-year-olds, nearly 4.2 million young adults, were out of school and had not completed high school.

- Cohort rates measure what happens to a single group (or cohort) of students over a period of time. Among the sophomore class of 1980, 17 percent failed to graduate by June of 1982. Nearly half (46 percent) of those dropouts had completed high school by 1986, that is, within four years of the expected date of their graduation.

NCES has devoted considerable effort and resources over the past several years to improving the quantity and quality of dropout statistics. We have three new data collections, in the field or presently being field tested, which should considerably increase the accuracy and scope of data available on dropouts in the near future.

- National Education Longitudinal Study of 1988 (NELS:88). NELS:88 will provide even more extensive data about dropouts than High School and Beyond, including estimates of the extent of dropping out prior to 10th grade. Estimates of dropout rates between 8th and 10th grade will be available from NELS in 1991.

- Common Core of Data (CCD). A common definition of a dropout has been developed for use in collecting data on dropouts through CCD. It is currently being field tested. If the field test results are positive, this method of collecting dropout data would be implemented for the 1991-92 data collection, and dropout rates by race/ethnicity, sex, and grade (grades 7-12) would be available in December 1992 for every State and every school district.

- National Household Education Survey (NHES). The results of the fall 1989 pilot test of this new telephone survey of households are currently being analyzed. NHES may be a means of developing more precise estimates of dropout rates, especially for minority groups, while also collecting more extensive background information about dropouts (and nondropouts) and about factors related to dropping out of school.

Within the next few years NCES envisions a comprehensive system for collecting data on dropouts, which includes the existing data sources, the October supplement to CPS and HS&B; the new longitudinal survey (NELS:88); and as many as two additional components, CCD and NHES, depending upon the outcomes of the field tests. Once this comprehensive system is in place, the major problems of the past with regard to data availability on dropouts and dropout rates will have been addressed.

NETWORKS

Mr. Conte: Many folks are doing education research, most of them have computers. In addition many States and associations, such as those for the Governors, State Legislators and the Chief State School Officers, have databases. To what extent are you working to build networks between the various sources of information? What problems are there with doing this sort of thing?

Mr. Cross: NCES has taken several initial steps to explore the feasibility of creating a network of databases among the States and the Federal Government. These activities include:

- Support of survey conducted by the Council of Chief State School Officers to assess the computer capacity of each State;
- Joint sponsorship with Florida of an annual Management Information Systems Conference for States to share information on technical ADP developments;
- Support of a five-State pilot test to design and implement a student record transfer system to allow transmission of records within States, between States, and between State or local education agencies and institutions of higher education;
- Establishment of the Technology, Communication, and Dissemination Committee within the National Forum on Education Statistics to develop a blueprint for a national database network involving the States and the Federal Government;
- Support of the work of a team of ASA/NCES/NSF Fellows to design a customized national database for education statistics using the latest technology; and
- Development of a National Data Resource Center to provide an integrated database consisting of statistical data that may be accessed by a variety of users including States, education associations, and education researchers.

There are a number of problems associated with implementation of these activities. For example, only a few States have developed fully automated State databases that could be linked into a national network; fully uniform and comparable data element definitions do not yet exist; and some States do not have the financial resources to develop the capacity to participate in a national network.

The NCES is working toward solution of these problems and attainment of the networking goals through the National Cooperative Education Statistics System. However, full implementation of these networks will require several years of continued developmental work and the targeting of resources, both State and Federal, to the effort.

RESEARCH BUDGET

Mr. Conte: Mr. Cross, you're requesting $56 million for the research budget. Can you give us a breakout of the big ticket items in this request?

Mr. Cross: The fiscal year 1991 request for Research activities, exclusive of the President's initiatives, includes the following major items:

National Research and Development Centers....	$21,760,000
Regional Educational Laboratories............	20,000,000
Educational Resource Information Centers.....	6,690,000
Field-initiated Research Grants..............	1,000,000
Other Research activities....................	6,479,000
Other Improvement of Practice activities.....	3,105,000
Other Dissemination activities...............	2,288,000
Total................................	61,322,000

ASSESSMENT

Mr. Conte: Developing better tools for evaluating students, teachers and schools is important to the reform movement. At the President's meeting with the Governors last week the question surfaced about who should control the assessment process? What do you think about this issue?

Mr. Cross: A Press Release was issued by the White House following the discussions and decisions of the Governors' Winter Meeting in February, 1990. In that document there is mention of the issues surrounding "accurate, comparable, appropriate, and constructive" measurements of progress toward reaching the national education goals. Three essential points are made:

- "...appropriate, nationally-directed research, demonstration, data collection, and innovation should be maintained and recognized as a set of core responsibilities of the federal government in education."

- "The President and the Governors agree that...we do not need a new data-gathering agency...."

- "...we do need a bipartisan group to oversee the process of determining and developing appropriate measures and reporting on the progress toward meeting the goals."

OERI will continue to fulfill its mission in educational research, demonstration, and statistical data gathering and reporting for all education, in addition to any new activity brought about as a result of the establishment of national education goals. Thus far, OERI has already provided the White House and the Governors advice and assistance on data and assumes that role will continue to be an important and ongoing one as we move into the implementation and monitoring of the effort. Since many of our current surveys have been mentioned in various background documents surrounding the goals, e.g., the National Assessment of Educational Progress, it is clear that OERI will be heavily relied upon to collect much of the data that will be used for monitoring progress.

In addition, OERI would play a major role in providing its expertise to advise on and participate in the development of new assessment measures and methods of data collection.

As to the issue of establishing a bipartisan oversight group, much is yet to be decided about how such a group would be established, the precise role it would play, and how it would interact with OERI in implementing the group's decisions. However, given that OERI already has considerable experience with such advisory bodies--for example, the National Assessment Governing Board, the National Advisory Council on Educational Research and Improvement, and various "blue-ribbon" panels that have been established from time to time to advise OERI on the substance of its work--we anticipate that a professional and constructive relationship can be achieved.

EVALUATING REFORMS

Mr. Conte: You are requesting $3 million to conduct 12 studies of the education reform strategies which have been effectively used in the States. What do you want to find out from these studies? Isn't there a lot of this kind of stuff already out there?

Mr. Cross: The Office of Research is going to document education reform activities taking place around the country at the local and State levels. These local reform efforts are attempts by local parties to deal in new and innovative ways with the problems of American education. No documentation and evaluation of such reform efforts exists, because localities have not tried such reforms in the past. The purpose of our activity is to document as far as possible the natural development of these efforts and to determine the advantages and disadvantages of the different reform attempts. We plan to make the findings available in forms useful to other localities, so that future reform efforts are informed by the lessons that others have learned.

Reform efforts are taking place in many States and in many local school districts. Examples of the kinds of activities we might document include a case with heavy involvement of local citizens. Chicago is beginning what some have called the most radical attempt in the United States to revamp a big-city school system. Each Chicago school will be run by a parent-led council using powers currently held by the Board of Education. This abrupt shift of power to the parents will give them the authority to approve budgets, make curriculum recommendations, and hire and fire principals. It is imperative that the Office of Research conduct field research to document the early stage of this revolution.

Another interesting case represents important involvement by a university. Recently Boston University's School of Education was asked by the school board of Chelsea (Massachusetts) to assume management authority for the district's public schools. This decision was seen as an alternative to the educational bankruptcy approaches adopted by New Jersey. It is imperative that the Office of Research conduct field research to document the early stages of this experiment.

There are other interesting cases that include substantial involvement by State agencies. New Jersey's recent educational bankruptcy initiative in the Jersey City schools gives the State authority to manage local school districts that are determined to be in a state of insuperable difficulty. This intervention by the State is being watched closely by other States where there is strong popular pressure for State-mandated and enforced educational accountability programs. OERI needs to be well informed about this attempt, which is widely regarded as a critical early experiment that may expand State powers to improve local schools.

Another local innovation that may hold important lessons for other localities involves restructuring of the local school apparatus. Dade County/Miami has nearly half of its schools engaged in a school-based decisionmaking initiative where the principal, teachers, and community share in decisions regarding the budget and operation of the school -- without central office dictate or interference. The Saturn School in St. Paul is a cooperative initiative to redesign the school from the ground up. Teachers and students are designing programs using innovative learning technologies to meet student learning needs. San Diego is working with secondary schools, which have been empowered to redesign curriculum and instruction, in order to integrate fragmented disciplines in the humanities, mathematics, and the sciences.

Because many of these reform efforts are particularly innovative and could prove to be useful in a variety of local settings, it is important that OERI provide information that can inform other local improvement efforts. We believe that the dissemination of examples of successful local reforms will encourage the many communities that have yet to attempt change to begin.

PRINCIPAL TRAINING

Mr. Conte: I've long thought that the leadership provided by school principals is critical to the effectiveness of our schools. This will be especially true if there is more site based management in the future. You're requesting $25 million for a principal training project. How do you plan to select the principal candidates and mentors who will participate in this program?

Mr. Cross: A national institute for the development of school leaders will be established to design and oversee the process of identifying and selecting candidates, as well as planning and coordinating the program.

Trainee candidates are to be solicited from any and all sources, including national teacher and administrator associations, State and local associations of education professionals, business and industry, and public-sector organizations (the military, government, etc.). We plan to cast as wide a net as possible, to attract individuals with exceptional potential.

The selection process for trainees will be designed and run by the institute and will be based on the best current knowledge of human resource management. This means that among the selection procedures used will be the careful assessment of formal written applications, assessment of past experiences and qualifications, structured interviews, evaluation of references, and appropriately designed or identified tests, perhaps including an assessment center. An important early charge of the institute will be the formal development of a standard selection process.

Mentors will be identified from a wide range of sources, including State and local education agency recommendations, OERI's recognition programs, and professional associations at the national, State, and local levels. Because it is easier to identify cases of exceptional, outstanding performance, than it is to identify exceptional potential, we expect the selection of mentors to be less difficult--though not less careful or rigorous--than the process used to select trainees. The institute will be responsible for designing and implementing a valid, standard process for selecting mentors, as well as one for selecting trainees.

ALTERNATIVE CERTIFICATION

Mr. Conte: Does the proposed Principal Training Initiative duplicate any activities that might be supported by your proposed program for Alternative Certification of Teachers and Principals?

Mr. Cross: The two programs do not overlap and are not duplicative.

The Principal Training initiative is aimed at a broad spectrum of persons with high potential for becoming effective school leaders, and it is expected that many will be education professionals; the intent is not solely to provide a route for persons outside of education to enter the field of educational administration.

While both programs may involve training, the Alternative Certification program is administered at the State level and may or may not involve leadership training. Leadership training and development is, however, the central focus of the Principal Training initiative, which will be a national program developed and operated at the national level.

DROPOUT PROJECTS

Mr. Conte: What other dropout prevention projects do you want to fund?

Mr. Cross: Of the $5 million requested for dropout prevention, $3.0 to $3.5 million will be used for a national grants competition designed to support an estimated 20-25 projects that will identify and document the effectiveness of specific approaches to improve high school completion rates and/or academic performance among disadvantaged students. These projects will target specific problems of disadvantaged students (e.g., academic difficulties, lack of learning opportunities, family problems, personal problems, etc.) and corresponding strategies to help them overcome those problems (academic programs at the middle or high school level, school improvement, public library programs, social and mental health agency services, etc.). Projects will also include the design and implementation of strategies to improve the coordination of various agencies in their efforts to help disadvantaged students.

NATIONAL BOARD FOR PROFESSIONAL TEACHING STANDARDS

Mr. Conte: Congress set aside $5 million for the National Board for Professional Teaching Standards. What do you think about the board?

Mr. Cross: The Department supports the stated mission of the National Board for Professional Teaching Standards, which is the creation of a voluntary system for the certification of experienced teachers. The Board could potentially contribute to education reform efforts. By defining high standards for teaching, and implementing those standards through a thorough and authentic assessment process, it could help raise the professional status of teaching and increase the attractiveness of the profession to highly qualified individuals. It may also be the case that school districts would choose to pay higher salaries to teachers who meet high standards, as well as provide them with leadership roles and responsibilities for mentoring other teachers. The assessment process could have an impact on how teachers are prepared in preservice programs, as well as on the nature of continuing professional development programs.

However, there should not be Federal involvement in setting standards for the profession, and it would be highly inappropriate to provide Federal funding to the Board in the manner proposed. The Board, as it is presently constituted, is a private organization that operates with total independence from the Federal government. We believe that is the way it should remain. We have three major concerns about Federal funding for the Board. First, the Department, as a rule, opposes sole source contracts, particularly when the recipient of Federal dollars does not have an established track record and the money is to be used for unspecified research and development activities. Second, the proposal under consideration lacks accountability to the Secretary of Education. Third, the funds requested by the Board ($25 million) are excessive, and the research would likely duplicate research activities that are currently under way or that are planned by the Department.

UNSOLICITED GRANTS

Mr. Conte: In your research budget how much money are you requesting for funding unsolicited grants?

Mr. Cross: We do not have a specific request for unsolicited grants. We have requested $1.0 million for field-initiated grants. Although we won't set the topics for these grants (they will be set by the investigators who will apply), we will publish a notice inviting applications for field-initiatied research studies, and the applicants will compete for funding. Such awards would not be considered unsolicited grants.

SCHOOL HEALTH

Mr. Conte: Mr. Cross, last week I was told that it would not be useful to have an Office of School Health in the Secretary's office. It was said that this kind of thing isn't done because the person would be isolated, and thus not able to do anything. Afterwards I heard that Dr. Cavazos named someone to be his special advisor on school dropouts, right in his office. What is going on here? Why dropouts and not school health?

Mr. Cross: The Secretary has named a special advisor on dropouts, but that is a limited term appointment, not a permanent position. The Secretary has also announced that he will name a special assistant on teacher education. These individuals, however, will not be administering grant programs. In the case of Comprehensive School Health, we have legislation to implement and a grant program to administer. There are no instances of that type of activity being located in the Office of the Secretary.

Mr. Conte: Please provide a list of all special offices and advisors in the Secretary's office.

Mr. Cross: Besides the two advisors mentioned above, the Secretary's office includes an Executive Assistant on Private Education and a Staff Director for Drug Abuse Prevention Oversight.

JUSTIFICATION OF THE BUDGET ESTIMATES

DEPARTMENT OF EDUCATION

[EDUCATION] RESEARCH, [AND] STATISTICS, AND IMPROVEMENT OF PRACTICE

For necessary expenses to carry out section 405 and section 406 of the General Education Provisions Act, as amended, [$96,375,000, of which $6,000,000, to remain available until December 31, 1990, shall be for the rural education program conducted by the regional laboratories] 1/ $174,726,000, of which $25,000,000 shall be for activities to improve the training of school principals and may be used for payment of stipends and such allowances as the Secretary deems appropriate. 2/ (Department of Education Appropriations Act, 1990.)

Explanation of Language Changes

1/ Language earmarking funds for the rural education program conducted by the regional laboratories is deleted. This language is unnecessary, because the Department is incorporating the rural program as a component of the basic laboratory program, and the funds to do so have been included in the budget request.

2/ Language related to the President's initiative to improve the training of school principals is added to ensure that funds may be used to support costs of participants in the training program.

Research, Statistics, and Improvement of Practice

Language Analysis

Language Provision	Explanation
[...of which $6,000,000, to remain available until December 31, 1990, shall be for the rural education program conducted by the regional laboratories]	This language allows funds for the rural education program to support rural education activity under the new laboratory contracts to be awarded early in fiscal year 1991. The 1989 rural funds were awarded in September 1989 to support activity through September 30, 1990. The core laboratory contracts, to which the rural activities were added, expire on November 30, 1990. One-sixth of the 1990 rural funds will be used to ensure that there is no lapse in rural assistance between September 30 and November 30. The balance of the funds will be used to support a rural component under the new laboratory contracts to begin on December 1, 1990.
of which $25,000,000 shall be for activities to improve the training of school principals and may be used for payment of stipends and such allowances as the Secretary deems appropriate.	This language would require that $25,000,000 of the amount appropriated be used for a new program to improve the training and skills of school principals. The language would also ensure that both the exemplary principals and prospective principals participating in the training program could receive stipends and such allowances to defray their expenses as the Secretary deems appropriate.

1988	70,231,000	73,801,000	69,231,000	67,526,000
1989	81,000,000	83,512,000	74,460,000	78,201,000
1990	101,330,000	100,330,000	95,420,000	96,375,000
1990 Sequester				-1,134,000
1991	174,726,000			

1/ Reflects enacted supplementals, rescissions, and reappropriations in amounts appropriated prior to fiscal year 1985.

2/ Did not include funds for research activities under GEPA, section 405, which was pending reauthorization.

Research, Statistics, and Improvement of Practice

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report	
Rural Schools Program	
The Committee provides funds to enable the laboratories to continue the rural schools program. The Committee intends that these funds be used for innovative programs that show promise of upgrading instruction in rural schools. The Committee intends that laboratories support State and local efforts to rethink how rural schools can better serve their students.	Laboratories will provide assistance to State policy makers and local educators on rural education priorities identified by the Governing Board of each laboratory.
The bill provides extended availability of the rural education funds for 1990 because of the pending recompetition of the basic laboratories program. The funds provided will finance 12 months of activity but can now be awarded in two payments.	Rural education funds awarded to the laboratories in 1989 are to support activities through September 30, 1990, and the basic laboratory contracts expire on November 30, 1990. One-sixth of the 1990 rural education funds will be awarded to the existing laboratories to continue rural education activities until the expiration of their contracts on November 30, 1990. The balance of the 1990 rural education funding will be awarded as a component of the new laboratory contracts to begin on December 1, 1990, and will support the first ten months of rural education activity under those new contracts.
Research Centers	
The Committee intends that approximately $1 million of the funds approved for research be allocated on a competitive basis to establish a new center focusing on teacher performance evaluation.	A competition will be held for such a center.

Research, Statistics, and Improvement of Practice

Significant Items in Congressional Appropriations Reports--continued

Item	Action taken or to be taken
1990 House Report--continued	
Statistics	
The Committee expects the NCES will estimate the dropout rate as of March 30.	NCES is preparing a report comparing the March 1988 Current Population Survey dropout rates with those of October 1988, which were reported to Congress in the NCES publication, "Dropout Rates in the United States, 1988", submitted on September 12, 1989.
1990 Senate Report	
Center for Teacher Evaluation	
The Committee directs that approximately $1 million be used for a new competition to establish a center for teacher evaluation.	A competition will be held for a new center on teacher evaluation.
Rural Education Initiative	
The Committee provides funds to continue the rural education initiative and intends that the regional laboratories work within their regions to help State policymakers and local districts reorganize and rethink roles and functions of rural schools.	Laboratories will provide assistance to State policymakers and local districts on rural education priorities identified by the Governing Boards.
Pacific Basin Laboratory	
The Committee expects the Secretary to establish a laboratory in the Pacific basin as part of the recompetition of the regional laboratories scheduled to take place in fiscal year 1990.	The Department intends to establish a Pacific basin laboratory.

Research, Statistics, and Improvement of Practice

Significant Items in Congressional Appropriations Reports--continued

Item	Action taken or to be taken
1990 Senate Report--continued	
National Board for Professional Teaching Standards	
The Committee directs the Secretary to provide the National Board for Professional Teaching Standards with not less than $5 million in Federal matching funds for research and development contracts made on a competitive basis.	This language was superseded by the conference report, which indicates that these funds are provided contingent upon enactment of legislation authorizing the appropriation. The Department cannot impose matching requirements without specific statutory authority to do so.
ERIC Clearinghouses	
The Committee directs the Secretary to reallocate resources from other planned activities within ERIC in order to provide a significant boost in funding for the clearinghouses.	Support for the clearinghouses will be increased to $5.2 million in 1990.
National Assessment	
The Committee indicates it would give expedited consideration to any reprogramming requests to transfer funds to NAEP from other activities within the statistics budget.	A request to transfer $2.3 million from Statistics to Assessment has been submitted.
1990 Conference Report	
National Board for Professional Teaching Standards	
Funds included for the National Board for Professional Teaching Standards are to remain available for that purpose unless written approval for a transfer is provided through the normal reprogramming process.	The funds provided remain available.

Research, Statistics, and Improvement of Practice

Account Summary

	1989 Appropriation	1990 Appropriation	1991 Request
1. Research........................	$47,079,000	$55,502,000	$61,322,000
2. Statistics......................	21,736,000	22,655,000 1/	41,538,000
3. Assessment......................	9,386,000	17,084,000 1/	18,866,000
4. Evaluation of reform............	---	---	3,000,000
5. Dropout prevention..............	---	---	5,000,000
6. Principal training..............	---	---	25,000,000
7. Education summit follow-up......	---	---	20,000,000
Total........................	78,201,000	95,241,000	174,726,000

1/ Amounts reflect a proposed reprogramming of $2,300,000 in fiscal year 1990 funds from Statistics to Assessment.

At the conclusion of the President's Education Summit with Governors in Charlottesville, Virginia, last September, the President and the Nation's Governors agreed that, in addition to promoting education equity, the Federal financial role in education is "to provide research and development for programs that work, good information on the real performance of students, schools, and States, and assistance in replicating successful State and local initiatives all across the United States." Research, Statistics, and Improvement of Practice funds support the principal activities by which the Federal Government assists States, localities, education practitioners, policymakers, parents, and the general public to obtain information about the condition of education, successful programs and practices, and how to apply greater knowledge of education processes in ways that may yield improved educational performance.

A major increase of $79.5 million is sought for the activities in this account in 1991. These funds would be used to provide reliable, accurate, and timely statistical answers to questions about important features of schooling; to furnish reliable assessments of student learning, including how our education achievements compare with those of other nations; to produce more--and more useful--information from research and practice to refine our understanding of what works in education; and to disseminate information and provide technical assistance to see that the answers and the lessons supplied lead to better results, that is, higher levels of student performance.

Research, Statistics, and Improvement of Practice

Account Summary--continued

Included in the request are funds for four specific initiatives of the President. These include evaluating reform strategies, identifying strategies to help disadvantaged students successfully complete high school, improving the training of principals, and following up on the Education Summit by providing information to help gauge progress toward national performance goals and assistance to implement flexibility in program management linked to greater accountability for results.

Research, Statistics, and Improvement of Practice

---

1. Research
   (General Education Provisions Act, Section 405)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$55,502,000	$61,322,000	+$5,820,000

Purpose and Method of Operation

Funds appropriated to carry out the research, improvement, and dissemination activities authorized under section 405 of the General Education Provisions Act are administered by three units of the Office of Educational Research and Improvement. Activities may be carried out directly and through grants and contracts to institutions of higher education, public and private organizations, institutions, agencies, and individuals.

The Office of Research supports scholarly work of individuals and institutions seeking to advance knowledge about educational practice and to solve, alleviate, or illuminate specific education problems. The Office supports basic and applied research, evaluations, and analyses of Federal, State, and local education policies. Major programs include:

- National education research and development centers. The centers are based in universities and are responsible for conducting long-term research and development in areas of national concern, and for disseminating their findings and products nationally. Each center focuses on a particular set of education problems.
- Field-initiated research. The work of independent scholars is supported, with award decisions made through a rigorous peer review system.
- Education research grant programs. Grants support needed research and analysis on critical topics. Conferences, commissioned papers, and research syntheses are also supported.

The Programs for the Improvement of Practice unit (PIP) aims to narrow the gap between what is known and what is done in American education. The mission of PIP is to ensure that education data, research findings, and exemplary practices are easily accessible to teachers, school administrators, and others seeking to improve American education. The major activities are:

Purpose and Method of Operation--continued

- Regional education laboratories. The primary purpose of the regional laboratories is to determine the education research and development needs in a specified region of the country, and to help meet those needs through applied research, development, dissemination, and technical assistance. The laboratories support school improvement activities in all regions of the United States and the territories.

- Tracking education reforms and synthesizing research findings. Projects attempt to track reforms, sponsoring meetings with professional educators and organizations, which result in publications on topics critical to education improvement. Other projects synthesize and translate knowledge derived from research and practice and result in publications that help policymakers, teachers, parents, and school boards make sound decisions in education.

The Information Services unit manages the OERI dissemination program. The unit provides, in appropriate forms and formats, information on education statistics, research, and practice to parents, policymakers, and practitioners. In addition to responding to inquiries, disseminating information electronically and through publications, and managing the Department's library, this unit also supports:

- The Education Resources Information Center (ERIC) system. ERIC collects, indexes, abstracts, analyzes, and disseminates information on education. Its products and services include databases, abstracted journals, microfiche, computer searches, document reproductions, and analyses and syntheses. The clearinghouses in the ERIC system focus on specific areas of education.

- Information products. Dissemination of education information is also fostered through the development of publications, and the production and distribution of special tabulations and data tapes and computer disks.

This is a current-funded program for which funds are available from October 1 through September 30.

Accomplishments

During 1989, the Office of Research awarded a grant for a new research center. The Center for Research on Effective Schooling for Disadvantaged Students will examine ways to significantly improve the education of disadvantaged students at each level of schooling through new knowledge and practices produced by thorough scientific study and evaluation. The Center will focus on the school as the major source of improvement in the education of the disadvantaged, and as the means to address the needs and interests of the educationally disadvantaged at all levels of development, to address the unique needs of language minority students, and to incorporate the family and the community into the school improvement effort.

Accomplishments--continued

In preparation for the upcoming competition for new research and development centers, the Office of Research solicited advice directly from a cross-section of persons in the field and held two research agenda planning conferences with invited policymakers, education practitioners, researchers, and parent and community leaders. These activities were designed to obtain the widest possible range of recommendations and comments to assist the Office of Research identify important problems and issues in American education and the kinds of research needed to understand better and help to solve these problems. The awards for the new research and development centers are scheduled for Fall 1990.

The Office of Research continued to support several significant studies and published a variety of reports including:

- Effective Programs for Students at Risk: A Sourcebook, a review of the problems and most promising solutions for at-risk students;
- Reducing the Risk: Schools as Communities of Support, a report describing the efforts of fourteen secondary schools to prevent dropouts, which develops and tests a theory of the process of prevention;
- Strategies to Reduce Student Misbehavior, a collection of papers that explore discipline problems in schools and analyze possible solutions;
- Toward the Thinking Curriculum: Current Cognitive Research, a report that provides administrators, curriculum developers, and practitioners with reviews of current research on learning and explores its implications for instruction;
- Teachers and Independent Reading: Suggestions for the Classroom, a booklet written for elementary school teachers and designed to help them find ways to include more independent reading in their classes;
- Changes in the Science Attitudes of Urban Middle School Students, a report that examines the school and home variables influencing the science and mathematics achievements of urban students in grades 6 through 8 in a major city; and
- Signs and Traces: Model Indicators of College Student Learning in the Disciplines, a report that provides information to college faculty and administrators on how to measure both consensus on what graduating seniors should know in their majors and the actual learning of those students.

A limited number of intramural research studies were conducted by Office of Research staff, including a study that examines the shape of college curricula in science, engineering, and computer science for the National Science Foundation; a study on the academic careers and labor market experience of college athletes; and a study on the academic careers and labor market experience of bachelor degree recipients in business administration.

Accomplishments--continued

During 1989, Programs for the Improvement of Practice staff held five public meetings and commissioned seven papers from research and development experts in preparation for the upcoming recompetition of the regional education laboratories. New contracts for regional laboratories are scheduled for Fall 1990.

Collectively, the existing laboratories are addressing the following emerging priorities in their policy development and technical assistance activities: early childhood education, issues of choice, school restructuring, higher order thinking skills, teacher preparation, applications of technology, and problems of students at risk of dropping out of school. Laboratories are also developing and disseminating innovative and promising approaches to improve the rural schools in their regions. All nine laboratories have contributed to State and local policies related to school reform, and all are supporting school-based improvement models.

Examples of specific laboratory accomplishments during 1989 are:

- Appalachia: Developed a school-community partnership model that promotes collaboration among business, schools, and government officials;
- North Central: Developed a teleconference/video program, in cooperation with the Public Broadcasting System, on "The Failure of Basic Skills: Who's At Risk?", which included discussions by national experts on reasons for failure and suggestions for improvement;
- Mid-Continent: Assisted five pilot communities in South Dakota to successfully restructure their high school curricula to focus on economic development of the community through creation of jobs and businesses for students;
- Southwest: Trained trainers in 30 demonstration sites throughout the region to utilize effective schools research for school improvement, and provided major support to the Arkansas Governor's office in developing a system of State indicators on the condition of education in Arkansas;
- Far West: Established a Case Study Institute, which supports the growing national interest in case methods for educational preparation and staff development, with the first two products, the Mentor Teacher Casebook and the Intern Teacher Casebook, being used nationwide for teacher development programs;
- Mid-Atlantic: Continued to provide leadership in collaboration among the laboratories and with national professional organizations and others in the area of higher order thinking skills, and developed computer-based approaches to improving thinking skills in rural students;

Accomplishments--continued

- o Northeast: Developed, across the region, its At-Risk Youth Initiative with schools, where an "action team" of educators and parents implements changes; and with State educational agencies, where needs and resources are assessed;
- o Northwest: Provided training and technical assistance to about 34,000 educators in its regions (Northwest and Pacific), particularly through its "Onward to Excellence" school improvement program, and produced hundreds of applied research and development reports, publications, and resource documents, based on approximately forty different projects funded by OERI; and
- o Southeast: Conducted a wage comparability study of teacher salaries in the Southeast that led to revisions in teacher salary schedules in North Carolina and Georgia and to major policy revisions in Mississippi.

Also during 1989, PIP's Urban Superintendents' Network met in two action groups, one to pursue issues related to early intervention for at-risk students and the other to examine collaboration between schools, other agencies or institutions, and the business community. Publications will be issued in 1990 on both topics.

In 1989, Information Services, in conjunction with other OERI components, produced 124 publications of various types, with 750,000 copies distributed. Major titles produced included: Condition of Education, 1989, Digest of Education Statistics, 1989, Projections of Education Statistics to 2000, Choosing a School for Your Child, Making Sense of School Budgets, Becoming a Nation of Readers: What Principals Can Do, and Helping Your Child Use the Library.

IS also continued efforts to ensure that information about high priority issues is supplied in usable formats. Outreach efforts included: expansion of the Toll-Free Bulletin Board System to three lines (two toll-free) serving 5,000 callers per month; establishment of interest-based mailing lists (in addition to the organization-based lists previously available) in order to focus distribution efforts; coordination of OERI participation in the Office of Public Affairs radio broadcast service by providing approximately 360 interviews; presentation of major exhibits at the American Statistical Association meeting, Federal Forecasters meeting, and the annual LEAD conference; cooperative publishing efforts with other organizations, which resulted in the publication and distribution of more than one million additional copies of OERI-sponsored or -developed documents; and development of short format documents such as research-in-briefs (Moral Education and Reading and Writing), a brochure on Youth Indicators, announcements of OERI publications, and the Education Research Bulletin, a quarterly OERI publication with a distribution of more than 55,000.

Research, Statistics, and Improvement of Practice

1. Research

1991 Budget Proposal

The 1991 request for Research is $61,322,000. This is $5,820,000, or 10 percent, more than is available for 1990. As indicated in their Education Summit joint statement, the President and the Nation's Governors see research and development as critical to improving American education. That view is shared by countless others in business, government, education, and elsewhere. Many believe that the American people, armed with knowledge of what works in education, will improve the teaching and learning of American youngsters.

The majority of the funds requested for 1991 would be used to support continuation of well-established programs and activities. Approximately $49,450,000 would support those activities for which Congress has specifically mandated minimum funding levels totaling $40,960,000. The balance of the funds would support additional research, improvement, and dissemination activities. The aim is to support a full set of activities designed to assist American schools and communities in achieving substantial gains in student learning--by focusing the system on results and performance.

Approximately $21,760,000 of the amount requested would be used to support national research and development centers. This is $4,000,000 more than the minimum mandated by the authorizing statute. Seven centers established since 1987 will be continuing in 1991, at a combined total of $6,200,000. These centers are conducting research in the areas of technology, reading education, the context of teaching, school leadership, learning and teaching of elementary school subjects, and effective education of disadvantaged students. In addition, a new center on teacher performance evaluation will be established with $1,000,000 in 1990 funds and will also be continued in 1991. A major competition for an additional 18 new centers will be announced in late January or early February. The awards for these centers will be made from fiscal year 1991 funds, with the grants to begin in December 1990.

The Secretary sought public comments on the issues to be addressed by the new centers and those comments helped frame the priorities to be announced. The priorities are: (1) families, communities, and young children's learning; (2) student learning; (3) writing and literacy; (4) mathematics teaching and learning; (5) science teaching and learning; (6) learning to teach; (7) education in the inner cities; (8) education policies and student learning; (9) assessment, testing, and evaluation; (10) adult literacy; (11) educational quality of the workforce; (12) postsecondary learning, teaching, and assessment; (13) organization and restructuring of schools; (14) cultural diversity and second language learning; (15) literature education; (16) arts education; (17) education finance and productivity; and (18) dissemination and the use of education information. Funding for these new centers is projected at about $14,560,000, provided the full amount requested is appropriated.

1991 Budget Proposal--continued

Funding for the field-initiated studies program would be increased from about $740,000 in 1990 to $1,000,000 in 1991. This program has been extraordinarily competitive since it was reinstituted following the 1986 reauthorization, but few awards have been made. Nine awards were made in 1989 addressing topics such as "Educational Reform and At-Risk Children: Exclusion, Retention, Transition and Special Education Participation in an Era of Increased Accountability" and "Developing Language Skills in Language Minority Students through a Cooperative Learning Environment."

Of the total requested, $20,000,000 would be used to support the regional education laboratories. A major recompetition of the laboratory contracts will be announced in January or February. Plans call for competing a separate laboratory for the Pacific Basin and for incorporating the special rural education program as a component of the core laboratory contracts. Because of differences in award cycles for the existing core laboratory contracts and the special rural funding, most of the fiscal year 1990 funds for the rural education program will be available to support rural activity under the new contracts. The Congress provided for extended availability in the fiscal year 1990 appropriation, and $5,000,000 will be available for award in 1991. The 1991 request includes funds for the new laboratory and the balance of funds needed to support a full 12 months of rural activity, as well as funds needed for providing basic laboratory services in the other nine regions. A total of $25,000,000 would be used for support of the laboratory program in 1991.

Approximately $6,690,000 of the requested funds would go to the Education Resources Information Center (ERIC) system. This amount is needed to continue support for the ERIC clearinghouses, for which funding was increased in 1990, and for the other system components, including ACCESS ERIC.

After funding the above activities mandated by the authorizing statute, approximately $11,870,000 would be available for other research, improvement, and dissemination activities. These funds would be used to produce additional and more useful information from research and practice. Reliable test instruments, for example, are indispensable to holding schools and people in them accountable for student performance. Accountability is made possible only if feedback on student learning is available at the school district and the individual school levels, where the nuts-and-bolts decisions about education are made. Yet the instruments that currently furnish such feedback--standardized tests--draw more criticism than practically any other feature of American education. Today's standardized tests are, by all accounts, inadequate for the tasks demanded of them. The Department plans to launch a major effort to devise and develop models of valid, precise, and useful assessment. Support would be provided for research in the area of assessment and development of test prototypes that schools and States could adapt or build upon to measure higher-order thinking skills and high-level competencies, which are universally desired in American students, American workers, and American citizens.

1991 Budget Proposal--continued

The Department would also sponsor investigations, conferences, publications, and other efforts to refine our understanding of what works in education. Assistance would be provided to help State and local decisionmakers apply such knowledge to their educational problems and goals. How can schools increase parent involvement, particularly among hard-to-reach parents? What forms of parent involvement produce the greatest payoff in terms of student learning? As for teachers, what traits or characteristics are fundamental to teacher effectiveness, and how can those qualities be developed? What are the chronic and recurring roadblocks to competent performance in reading, writing, mathematics, science, history and other subjects essential to all students, and how can teachers be taught to help all youngsters over those obstacles? These are a few of the important questions that education research can help education decisionmakers answer. Other areas of inquiry would include students' transition to secondary schools, community service and the development of civic responsibility, second language learning, development of reading and literacy skills, educating teachers in school settings, quality indicators of teacher education programs, school restructuring, international evaluation, and enhancing the contribution of education research to education practice.

Simply "supplying answers" is not enough, however. The task is not only to make sure that these answers and "lessons learned" get into the hands of people on the front lines of education, but also to provide technical assistance and whatever else it takes to see that these answers and lessons produce better results, i.e., higher levels of student performance.

The Department plans to develop and launch a national strategy for disseminating information from research, practice, and statistics. The plan includes exhibits, demonstrations, and workshops across the country to train the staffs of policymakers and others in how to access and use the OERI database. High profile meetings would provide parents, community leaders, educators, and others with updates on what the latest research has to say about reducing dropout rates, building a world class workforce, improving science instruction, and other educational challenges. In short, the aim is to open new information-and-assistance "pipelines" to community leaders, parents, principals, teachers, and others. The Department intends to supply more and better information and technical assistance, to assist efforts to leverage educational change at the local level.

---

2. Statistics
(General Education Provisions Act, Section 406)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$22,655,000	$41,538,000	+$18,883,000

Purpose and Method of Operation

The National Center for Education Statistics, authorized by section 406 of the General Education Provisions Act, collects, analyzes, and reports statistics on education in the United States, and also provides leadership in developing and promoting the use of standardized terminology and definitions for the collection of education statistics. Activities are carried out directly and through contracts. Major products include: The Condition of Education and Digest of Education Statistics; projections of enrollments, teacher supply and demand, and other key data; and a variety of announcements, bulletins, and other statistical documents. The core activities of the Center include:

- Data on education institutions at all levels. The Center monitors trends in enrollments, staff, and finances by maintaining databases on public and private elementary and secondary, postsecondary, and vocational education. The Center gathers data on enrollments, staff, revenues and expenditures, teacher supply and demand, and other key indicators of the condition of education through surveys of State and local education agencies, libraries, colleges, teachers, and students.

- Longitudinal data on student progress. The Center has collected longitudinal data on the senior high school class of 1972 and the sophomore and senior classes of 1980, including information about course enrollments, financial aid, and the transition from high school, through college, to work and family formation. A new longitudinal study of the eighth grade class of 1988 is designed to provide data on student backgrounds and achievement, information on coursetaking, parental involvement, vocational programs, school climate and effectiveness, and for the first time, much-needed information about school dropouts--how many students drop out, who they are, and why and when they drop out.

- Surveys to obtain policy data. To support Federal education planning and analysis activities, unique surveys and studies are carried out, including fast-response surveys and special compilations of data on topics of particular interest to Congress or the Executive branch.

Purpose and Method of Operation--continued

- o Technical assistance. To help State and local education agencies improve their statistical systems, the Center provides technical assistance and training and maintains networks among both the elementary/secondary and postsecondary education communities.

This is a current-funded program for which funds are available from October 1 through September 30.

Accomplishments

During 1989, the National Center for Education Statistics continued its expansion of both the elementary/secondary and postsecondary databases and began implementing provisions of the Augustus F. Hawkins-Robert T. Stafford Elementary and Secondary School Improvement Amendments of 1988.

At the elementary/secondary level, the Center held the first two meetings of the Federal/State Forum, the mechanism through which policies for the National Cooperative Education Statistics System (NCESS) will be determined; issued contracts to States to participate in development and implementation of the NCESS; completed plans for implementation of an enhanced finance data collection program for school year 1989-90; let a contract to validate a new measure of dropouts being field tested in twenty-seven States, the District of Columbia, and three outlying areas during 1989-90; continued work on standards for comparability of the Common Core of Data among States; completed collection of data on the Schools and Staffing Surveys; and began developmental work on a universe listing of private schools as a basis for a biennial census of all private schools.

At the postsecondary level, the Center significantly improved the timeliness of data from the Integrated Postsecondary Education Data System; released data on enrollments, degrees conferred, and institutional characteristics for school year 1988-89; completed the field test of the second cycle of the National Postsecondary Student Aid Study; completed data collection for the National Survey of Postsecondary Faculty; and completed the field test for the Beginning Postsecondary Student component of the newly designed Postsecondary Longitudinal Study.

At the international level, the Center expanded its program through continued development of international education indicators with the Organization for Economic Cooperation and Development (OECD); award of a contract to conduct a study on international reading literacy; developmental work with the National Science Foundation on an International Assessment of Educational Progress; and participation in a National Academy of Sciences consortium to study issues in international assessments and comparisons.

In addition, the Center awarded a contract for an adult literacy study; completed collection of data on direct service public libraries in 45 States through the cooperative library statistics program jointly designed by

---

Accomplishments--continued

NCES and the National Commission on Libraries and Information Science; expanded and refined its major publications--The Condition of Education, Digest of Education Statistics, and Projections of Education Statistics; and, for the first time, released a publication with State level projections.

1991 Budget Proposal

The 1991 request for Statistics is $41,538,000, which is $18,883,000, or 83 percent, more than the 1990 level. This increase is requested to cover the costs of the Center's ongoing data-gathering, analysis, and dissemination activities and the activities initiated in 1989 pursuant to mandates in the Hawkins-Stafford Amendments. No new statistical programs are planned at this time, but major expansions and new rounds of data collection are scheduled.

Of the total requested for 1991, $20,000,000 would be used for elementary and secondary education statistics, approximately $9,500,000 more than the amount to be spent in 1990. The 1991 funds would support the following major statistical programs: (1) the Schools and Staffing Surveys, a sample survey program, conducted for the Department by the Census Bureau, to obtain information on teacher supply and demand; school, administrator, teacher, and student characteristics; school environment and teaching conditions; and other school and staffing issues; (2) the Common Core of Data, the primary data base on elementary and secondary public education, providing data from administrative records maintained by State education agencies on all schools and school districts, including general descriptive information, basic statistics, and fiscal data; (3) the National Cooperative Education Statistics System, a cooperative effort with the States, which provides them with support to improve and enhance their education statistics so that they can provide the Center with comprehensive, comparable, and timely data; (4) the National Education Longitudinal Study of 1988, a longitudinal study of the eighth grade class of 1988 designed to provide trend data about the critical transitions in the lives of young people as they develop, attend school, and embark on their careers, including information on how school policies, teacher practices, and family involvement affect student educational outcomes; and (5) the National Household Education Survey, a new system to survey a sample of households with children in order to provide information on high school dropouts, access to postsecondary education, early childhood education, adult and continuing education, out-of-school learning, and educational activities provided at home. Increases are needed in 1991 to cover the costs of the second round of data collection and methodological studies for the Schools and Staffing Surveys; continuing efforts to improve the comprehensiveness and comparability of data collected for the Common Core of Data, especially the fiscal data, including pilot testing of a new finance survey to be conducted by the Census Bureau; continued expansion of the National Cooperative Education Statistics System, including further training on the collection of dropout statistics,

---

1991 Budget Proposal--continued

and other support to improve the ability of the States to respond to data requests from the Center; field testing and data collection for the second follow-up of students in the National Education Longitudinal Study; and the first full scale data collection for the National Household Education Survey. A major increase is included for Census Mapping, a project to reaggregate data from the Decennial Census by school district so that the wealth of demographic and household information collected in the Census is useful to the education community, including Federal, State, and local policy officials and educational researchers.

Approximately $11,900,000 of the total request would be used for statistics on postsecondary education, almost $3,000,000 more than will be spent in 1990. These funds would support four major statistical programs: (1) the Integrated Postsecondary Education Data System, the core postsecondary education data collection of the Center, which encompasses all identified institutions whose primary purpose is to provide postsecondary education, yielding information on who provides postsecondary education, who participates in it and completes it, what programs are offered and what programs are completed, and the resources, both human and financial, involved in the provision of institutionally-based postsecondary education; (2) the National Postsecondary Student Aid Study, which collects data for a nationally representative sample of students enrolled in postsecondary institutions in order to provide information about students who benefit from Federal aid, how financial aid is distributed, and the effects of financial aid on students who receive aid and those who do not; (3) the Recent College Graduates Survey, which collects information on the post degree employment and education experiences of a sample of persons who obtain a bachelor or master degree, with major emphasis on graduates who are qualified to teach at the elementary or secondary level; and (4) the Postsecondary Longitudinal Study, a new program consisting of data from several data series, which together will provide information on the major transitions into, through, and following postsecondary education. Increases are needed in 1991 for conduct of a Recent College Graduates Study of persons who earned bachelor or master degrees between July 1989 and June 1990, the first such survey since one done in 1987 of graduates between 1985 and 1986; and for two components of the Postsecondary Longitudinal Study, the new longitudinal study of Beginning Postsecondary Students and the fourth follow-up of the High School and Beyond cohort of 1980 high school sophomores.

Nearly $6,000,000 of the 1991 request would be devoted to other outcome statistics. The major efforts here are International Studies and the National Adult Literacy Survey. Major increases are needed for both in 1991. Two international surveys would be supported--the IEA Reading Literacy Study, which will compare the reading literacy of students at the fourth and ninth

---

1991 Budget Proposal--continued

grade levels in 37 countries, and the International Assessment of Educational Progress, which will test students at ages 9 and 13 in 21 countries in math, science, and geography. For the Adult Literacy Assessment, design work would continue and field testing would be done for a household survey to be conducted in 1992 to collect literacy assessment data on a sample of adults, ages 16 to 64.

The balance of the funds requested for 1991, approximately $3,600,000, would be used for cross-level statistics and other special analyses and special studies of the Center, and for printing of Center reports. Increases are needed for technical assistance on new confidentiality/disclosure avoidance requirements and procedures for complying with the requirements.

---

3. Assessment
   (General Education Provisions Act, Section 406(i))

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$17,084,000	$18,866,000	+$1,782,000

Purpose and Method of Operation

The National Assessment of Educational Progress (NAEP) is the only nationally representative assessment of what American students know and can do. It is an ongoing, Congressionally mandated project created to survey the educational attainments of young Americans. Its primary goal is to determine and report the status and trends over time in educational achievement, subject by subject.

Since 1969, NAEP has assessed over one million young Americans at ages 9, 13, and 17. Occasionally, young adults have also been tested. The subject areas assessed in the past have included reading, writing, mathematics, science, and social studies, as well as citizenship, literature, art, and music.

NAEP designs its assessments through a consensus process. Educators, scholars, and citizens drawn from many constituencies and backgrounds develop objectives for each subject area assessment, proposing general goals they believe students should achieve in the course of their education. All test exercises, based on the consensus objectives, undergo extensive reviews by subject matter experts and measurement specialists. Additionally, items are subject to careful scrutiny to eliminate any potential bias.

A nationally-representative sample of students is selected to take the assessment. Once the data are collected, scored, and analyzed, NAEP publishes and disseminates the results in public reports, press releases, teacher and administrator bulletins, and through other means, to reach a wide audience. The purpose of the publications is to provide information that will assist educators, policymakers, and the public to improve education in the United States.

This program is administered by the National Center for Education Statistics, which makes competitive awards for the actual operation of NAEP. A National Assessment Governing Board formulates the policy guidelines for the program. The Hawkins-Stafford Amendments require that, in the 1990 and 1992 assessments,

---

Purpose and Method of Operation--continued

data be collected not only from a nationally-representative sample of students, but also from State-representative samples, in order to determine whether a regular State-representative assessment is feasible and would yield valid, reliable State-representative data.

This is a current-funded program for which funds are available from October 1 through September 30.

Accomplishments

In 1989, a new contract was awarded for conduct of the 1990 and 1992 assessments. The 1990 assessment activities will include the collection of data for the first State-representative assessment, of eighth grade mathematics achievement. Thirty-seven States, the District of Columbia, the Virgin Islands, and Guam will participate in that assessment. The 1992 assessment will include three State-representative assessments, of fourth grade reading, and fourth and eighth grade mathematics.

1991 Budget Proposal

The 1991 request for Assessment is $18,866,000. This is $1,782,000, or 10 percent, more than the level for 1990. The amount requested is necessary to cover the 1991 costs of the contract for conduct of the 1990 and 1992 assessments. Up to 10 percent of the funds would be used for the expenses of the National Assessment Governing Board. Other essential costs included in the total request are the costs of the mandated independent evaluation of the pilot State assessments, which is being conducted by the National Academy of Education; the costs of contracted validation studies also required by the authorizing statute; and costs of the technical review panel, which advises NCES on technical issues related to the operation of NAEP.

4. Evaluation of reform
(General Education Provisions Act, Section 405)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
---	$3,000,000	+$3,000,000

Purpose and Method of Operation

Under the authority provided by section 405 of the General Education Provisions Act, the Office of Educational Research and Improvement would undertake evaluations of reform strategies implemented by States and local school districts in order to provide "lessons learned" for others interested in pursuing the reforms. The results and findings could also assist those already experimenting with the strategies to refine their efforts. School restructuring and strategies for academic improvement would be of particular interest, and attempts would be made to compare the results of the same or similar strategies in different locales or situations. Grants and contracts, as well as intramural efforts, would be used.

This would be a current-funded program for which funds would be available from October 1 through September 30.

1991 Budget Proposal

The 1991 request for this new activity is $3,000,000. Given the resolve of the President and the Nation's Governors to pursue national performance goals in education, as well as the growing concern of the American people for improvement in the Nation's educational performance, much more information is needed about the effectiveness of the reform strategies with which States and school districts have been experimenting over the past several years, and about the elements or conditions necessary for success.

The funds requested would support the initiation of 10 to 12 evaluations of these ongoing reform strategies. These evaluations would require from 18 to 36 months for completion. The findings of these studies would provide important guidance about the effectiveness of different reform strategies and would be quickly and widely disseminated.

5. Dropout prevention
(General Education Provisions Act, Section 405)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
---	$5,000,000	+$5,000,000

Purpose and Method of Operation

Under the authority provided by section 405 of the General Education Provisions Act, the Office of Educational Research and Improvement would undertake research and development activities to provide useful information about how to improve the academic performance of secondary school students and reduce the number of dropouts. A national research and development center would be established to investigate alterable conditions impinging on student achievement and retention, and its work would be supplemented by a variety of other research and development projects. The total research and development effort would be designed to identify conditions promoting the success of dropout prevention programs, and program components most strongly related to program success.

This would be a current-funded program for which funds would be available from October 1 through September 30.

1991 Budget Proposal

The 1991 request for this new activity is $5,000,000. Ensuring an internationally competitive workforce and bright futures for America's young people requires answers to questions about how to keep students in school and provide them with the competencies and higher-order skills necessary for the jobs of the future. The educational performance and retention prospects of school students are affected by many factors, such as student characteristics, family and community situations, and school factors. Many dropout prevention programs are in operation, but few have been validated by research. This initiative will investigate issues such as the effects of instruction, school organization, and school-community relations, in order to identify effective strategies and approaches to help disadvantaged students successfully complete high school.

The funds requested would support first year funding for a national research and development center on dropout prevention and additional smaller projects.

**6. Principal training
(General Education Provisions Act, Section 405)**

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
---	$25,000,000	+$25,000,000

Purpose and Method of Operation

Under the-authority provided by section 405 of the General Education Provisions Act, the Department would support a major initiative to improve the preparation of school principals by utilizing exemplary principals to train prospective principals. A program would be put in place to provide six to eight weeks of residential summer institute training followed by a year-long mentorship in which the principal candidates would spend a full academic year observing and receiving on-the-job training from recognized experts. Federal funds would support the cost of the summer training and salary and related costs for the principals-to-be during the year they spend in residence at another school. Exemplary principals would also receive small grants for use at their schools. The program would be carefully evaluated.

This would be a current-funded program for which funds would be available from October 1 through September 30.

1991 Budget Proposal

The 1991 request for this new initiative is $25,000,000. Research has shown that the school principal is a central figure in school performance and reform. The principal's leadership becomes even more critical in the context of increased school-site management, which provides greater autonomy, authority, and accountability at the school building level. Not only is the turnover in incumbent principals expected to be unusually high in the next five to ten years, but the nature of their jobs is also changing. Yet, with few exceptions, existing programs for training principals do not focus on their critical leadership role. Moreover, there are no broadly-available programs that involve persons who do not have education-school backgrounds but who possess the interest and aptitude required for success as school leaders. This program would prepare exceptionally able persons, whatever their backgrounds, to be principals, and do so quickly. With the funds requested, the 1991 program would involve up to 500 trainees and an equal number of mentors.

7. Education summit follow-up
(General Education Provisions Act, Sections 405 and 406)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
---	$20,000,000	+$20,000,000

Purpose and Method of Operation

A variety of activities authorized under sections 405 and 406 of the General Education Provisions Act would be carried out to provide useful information and help track the Nation's progress, in some cases State-by-State, toward the national performance goals in education.

This would be a current-funded program for which funds would be available from October 1 through September 30.

1991 Budget Proposal

A one-time appropriation of $20,000,000 is requested to finance research and data collection activities growing out of the Charlottesville meeting. Funds would be used to fill specific gaps and needs once national goals have been established. These activities would include research to help policymakers and practitioners determine what changes are needed or what strategies are likely to be effective in yielding the outcomes envisioned in the goals, and data collection to provide the indicators with which to gauge progress toward the goals. Also included would be activities incident to implementing any congressionally approved strategy for providing States and local school districts with greater flexibility in program management linked to enhanced accountability for educational results, a strategy also endorsed by the President and the Governors at the Education Summit. Specific activities will be determined and more details provided after the President and the Governors have announced the goals.

LIBRARIES

WITNESSES

CHRISTOPHER T. CROSS, ASSISTANT SECRETARY FOR EDUCATIONAL RESEARCH AND IMPROVEMENT

ANNE J. MATHEWS, DIRECTOR, LIBRARY PROGRAMS, OFFICE OF EDUCATIONAL RESEARCH AND IMPROVEMENT

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

CAROL CICHOWSKI, DIRECTOR, SPECIAL EDUCATION, REHABILITATION AND RESEARCH ANALYSIS DIVISION, BUDGET SERVICE

Mr. NATCHER. We take up at this time the budget request for 1991 for Libraries.

Mr. Cross, with your permission, we will place your statement in its entirety in the record and go right to questions.

Mr. CROSS. That is fine.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

Christopher T. Cross
Assistant Secretary for
Educational Research and Improvement

on

Libraries

Mr. Chairman and Members of the Committee:

I appreciate the opportunity to discuss with you the Department of Education's 1991 budget request for library programs.

Rationale

Our budget for library programs requests $39,062,000 to fund only those programs that are focused and well-defined. We maintain that one of the main goals of the Library Services and Construction Act, access to library services, has been achieved. However, we believe there is still a Federal role in library funding. We have shown as much in our efforts to change the library legislation to make it more focused and the Federal dollar better targeted. It is appropriate for the Federal library dollar to address critical national needs such as support for literacy. Equally, it is appropriate for the Federal dollar to provide support for activities such as electronic networking that cross political and geographical boundaries. And we believe Federal support is appropriate for high-cost activities that could not be borne by individual libraries such as research and technological improvements in cataloging, information storage and retrieval, and delivery of services. It is not a judicious use of the Federal dollar to support programs that are broad, unfocused, ill-defined, and untargeted.

Library Services and Construction Act

The Department has maintained for the past several years that the original intent of the Library Services and Construction Act, access to library services, has been attained and that the Federal role has been fulfilled. Therefore, we are not seeking funds for Title I, Public Library Services, and Title II, Public Library Construction.

Since 1956 when the Public Library Services program began, access to libraries has increased from 56 percent of the population to 96 percent. And most States have assumed the leadership role in encouraging public library services; nearly 96 percent of the total expenditures for public libraries comes from State and local governments, with additional support from the private sector.

The construction portion of the legislation has provided more than a quarter billion dollars for over 3,000 library building and renovation projects. But the Federal Government simply cannot continue to support this program in the 1990s. The State and local governments can and should assume the fiscal responsibility for building their libraries.

The funding needs in today's libraries have evolved from the most rudimentary needs of buildings, books, and shelving, to the more sophisticated needs of an increasingly technological society. Today's information needs are more sophisticated and more complex, as are the media now used to store, manipulate, and retrieve that information. Beyond the traditional book or the encyclopedia are such things as computer information networks and the videodisk; and the search for materials no longer must rely on the card catalog, but instead is expedited through the use of machine-readable databases of bibliographic holdings.

We are requesting $20.4 million, an increase of 4.2 percent over the 1990 level, for Title III, Interlibrary Cooperation, to support the development of new interstate and intrastate library networks and the expansion of existing ones; the acquisition of computer hardware and software and telecommunications equipment to make resource sharing faster and less expensive; the training of library personnel in the use of new technologies; and the conversion of library holdings to databases to facilitate sharing and broaden availability of all types of materials.

We are also requesting $8.4 million for expansion of Library Literacy Programs, an increase of $3 million. Literacy is a critical national problem and it will continue to be for some time to come. We hope that the concept of conducting literacy training in local public libraries will become more widespread through the efforts of this program. The increase for this program indicates the high priority the Department gives to combating illiteracy.

Higher Education Act

We are seeking level funding for the programs supported under Title II of the Higher Education Act. The request includes nearly $1 million to support library research, the dissemination of the research findings, and the training or retraining of librarians to meet changing information needs. Support of $5.7 million will help major research libraries to preserve and share their resources. And $3.7 million will assist academic libraries with the purchase of state-of-the-art equipment to be used primarily to increase participation in national library networking to facilitate resource sharing. The authorization for the Higher Education Act expires at the end of fiscal year 1991, and we are already working on developing a reauthorization package that will reflect the appropriate Federal investment in the future.

Summary

In a time of severe budget restrictions, it is our responsibility to ensure that every Federal dollar is focused on an area of critical national need. With this goal in mind, we have requested a budget that would direct Federal monies to those activities, such as research, resource sharing, technology, and literacy, that would provide the most benefit to the larger library community, that is, to the citizens who depend on libraries to meet their information needs.

My colleagues and I will be happy to respond to any questions you may have.

DEPARTMENT OF EDUCATION

Office of Educational Research and Improvement

Biographical Sketch

NAME : Christopher T. Cross

POSITION : Assistant Secretary for Educational Research and Improvement

BIRTHPLACE AND DATE : Lakewood, Ohio, May 30, 1940

EDUCATION : Whittier College, B.A., 1962
California State University, Los Angeles, M.A., 1970

EXPERIENCE

October 1989-Present : Assistant Secretary for Educational Research and Improvement
U.S. Deparment of Education

January-October 1989: Vice Chairman, Macro Systems, Inc., Silver Spring, Maryland

1983-1988 : President, 1985-1988, Executive Vice President, 1983-1985,
University Research Corporation, Center for Human Services,
Bethesda, Maryland

1980-1983 : Manager, Federal Systems, Westinghouse Information Services
Westinghouse Learning Corporation, Washington, D.C.

1978-1980 : Director, Washington Office Operations/Policy Analysis
Abt Associates, Inc., Washington, D.C.

1972-1978 : Republican Staff Director and Senior Education Consultant
Committee on Education and Labor, United States House of Representatives,
Washington, D.C.

1970-1972 : Deputy Assistant Secretary for Legislation (Education)
U.S. Department of Health, Education, and Welfare
Washington, D.C.

PROFESSIONAL MEMBERSHIPS : Executive Committee, Professional Services Council, 1980-Present, Chair, Government Relations Committee, 1983-1985, 1988

PROFESSIONAL MEMBERSHIPS (continued)

Secretary, Board of Trustees, Council for Excellence in Government, 1986-1989

Chair, Lab Review Panel, U.S. Department of Education, 1987-1989

National Research Council Panel of the National Academy of Sciences on Education Evaluation, 1979-1981

American Society of Training and Development, 1984-1989

U.S. Chamber of Commerce, Council on Procurement Policy, 1985-1989

OTHER PROFESSIONAL ACTIVITIES AND AWARDS:

Frequently testified before both Houses of Congress on issues of Federal education policy, education research policy and procurement, 1984-1989

The Secretary's Special Citation from HEW Secretary Elliot L. Richardson, 1973

Speaker or panelist at annual conference for a number of major associations

Numerous citations from Professional Services Council for industry leadership in areas related to Federal procurement

Team Captain, The Prune Book, Center for Excellence in Government, 1988, Madison Books

Numerous publications and presentations related to education research, policy, and procurement issues

REDUCED REQUEST FOR LIBRARIES

Mr. **Natcher**. Mr. Cross, as you know, the Department's request for libraries is a $98,000,000 or 71 percent reduction from the amount requested last year. The committee is concerned about the Department proposal at a time when this country is facing serious literacy and reading skills problems.

How do you reconcile your proposal with data on literacy problems in this country?

Mr. **Cross**. Mr. Chairman, in fact, in the title of the Library Services and Construction Act that is targeted on literacy, we have requested a better than 50 percent increase. Our decreases are in titles I and II for public library services and construction.

As I am sure you know, in 10 of the last 25 years there have been no funds appropriated for the construction title, so that is not a new issue. In the public library services area, the Administration submitted a new bill to Congress about a year and a half ago. It was not adopted by the Congress. In fact, I think the House today or earlier this week voted to approve the conference report on the Library Services and Construction Act reauthorization.

Our amendments, except in a few cases, were not accepted. Our concern with Title I, Mr. Chairman, is that only about one quarter of the money under that title goes to the targeted populations set forth in the law. Most of the money goes for support of State libraries and for something called "inadequate services," which is a category that deals with not having the library open enough hours, or not having a collection that is up to certain standards that the American Library Association or others might deem acceptable.

So we just don't think that is an effective targeting of resources.

Ms. **Christensen**. Mr. Chairman, may I add one other thing?

Mr. **Natcher**. Yes, go ahead.

Ms. **Christensen**. In all programs that address the literacy problem within the Department of Education, we are requesting a total of $314,000,000 which is $77,000,000 or a 32 percent increase over the 1990 level. We will be glad to supply a list of those for the record. We focused our resources on those programs that most directly address that problem.

[The information follows:]

ADULT LITERACY PROGRAMS IN THE DEPARTMENT OF EDUCATION

[Dollars in millions]

	1990 appropriation	1991 request
Adult education State programs	$157.8	$200.0
Adult education national programs	2.0	8.0
Literacy training for homeless adults	7.4	10.0
Workplace literacy partnerships	19.7	19.7
English literacy grants	5.9	1.0
Library literacy programs	5.4	8.4
Student literacy corps	5.0	5.0
Even Start	24.2	48.0
Family English literacy (bilingual education)	4.9	5.5
Indian education (adults)	4.1	4.2
OERI Adult Literacy Reserach Center		1.0
National assessment of adult literacy	0.9	3.5
Total	237.3	314.3

Mr. NATCHER. The committee understands that in some rural counties, the Federal appropriation accounts for 19 percent of the total spending on library services.

What would be the practical effect of your budget in local communities if we approved it as you submitted it, Mr. Cross?

Mr. CROSS. Well, Mr. Chairman, we cannot speak for every county but I know that from a national perspective the library services money coming from the Federal Government amounts to only one and a half percent of the amount that is spent on public libraries in the country.

I think the honest answer is that there will be ramifications felt in different ways in different communities.

REQUEST TO OMB FOR LIBRARIES

Mr. NATCHER. What was the Department's request to the OMB for the public libraries program when you submitted your original budget last fall?

Mr. CROSS. Mr. Chairman, our request was $137,200,000 for the Libraries account.

Mr. NATCHER. And now it is zero?

Mr. CROSS. It is zero only for Titles I and II of LSCA.

Mr. NATCHER. Did it kind of make you mad when they turned you down to that extent?

Ms. CHRISTENSEN. We went through a lot of back and forth discussions with OMB. We had to make some very tough choices. The secretary had some higher priorities such as Chapter 1 and Pell grants and programs that directly served the disadvantaged.

This was one of the areas that we felt was a lower priority. It was a joint agreement between the Department and OMB to zero this out.

As you know, Mr. Chairman, this has been recommended several times in the past, so it was not anything new.

RELATIONSHIP OF RESEARCH AND LIBRARY FUNDING

Mr. NATCHER. Is there any link between your proposal to reduce funding for libraries and your proposal to increase the budget for educational research?

Ms. CHRISTENSEN. Absolutely not. I would make three points with regard to that.

There are 24 other programs that we are proposing be either decreased or eliminated in our budget, and one could say that any one of those could have been a trade-off for the research increase. Secondly, I was there during the final negotiations on the budget with OMB and, if one really were forced to say where the tradeoff came, it would be that we decreased Libraries to keep the total for Chapter 1 as high as we could.

The third point I would make is that no one looks at totals within the offices within the Department. The Secretary, OMB, everyone decides program by program or priority area, as I know this subcommittee does when they mark up. Nobody really keeps track of how much a certain office's total will be. We look at the programs and populations to be served.

Mr. **Natcher**. When you take up these matters with the Office of Management and Budget, do they request an offset? When you come in and say we want this tremendous increase for research, what do they say to you about offsetting?

Ms. **Christensen**. Nothing, per se.

Mr. **Natcher**. But between the lines, don't they just—

Ms. **Christensen**. They come back with an allowance or a pass back that distributes the money they would like to see program by program.

The Secretary looks at where he thinks the priority should be. There is a back and forth and there are lots of tradeoffs among all the programs during that time. There is no specific tradeoff program by program.

We have 208 major programs. There was never this kind of tradeoff.

Mr. **Natcher**. At this point in the record, if you will, please, insert the funding history of the libraries programs since 1981, displaying the Department's request and the final appropriation.

[The information follows:]

LIBRARIES FUNDING HISTORY: 1981-1990
($000)

	Public Library Services	Public Library Construction	Interlibrary Cooperation	Library Literacy	Training and Demonstrations	Research Libraries	College Library Technology	Totals
1981:								
Request	$62,500	---	$12,000	---	$1,167	$6,000	---	$81,667

CHANGES IN LSCA REAUTHORIZATION

Mr. **Natcher.** Mr. Cross, the House passed the conference report on the new libraries services legislation yesterday. Are there any significant program changes in the bill which is about to go to the President?

Mr. **Cross.** There is the addition of an evaluation title which actually was the one title that the Administration had requested that was included in the final conference bill.

There is an increase in the amount of the maximum grant for Title VI included in the legislation. There is a new Title VIII for family learning centers and an expanded definition of networks.

All in all, though, it does not change Titles I and II to any extent.

Mr. **Natcher.** Will the Department recommend to the President that he sign the bill when it is presented to him?

Mr. **Cross.** We do not anticipate recommending a veto.

PUBLIC LIBRARY ACCESS

Mr. **Natcher.** Could you review for the committee briefly the latest data on the number of libraries in this country and access to library services, particularly in rural areas? Mr. Cross, that is where we have our problem. These are the people we hear from. It is the small communities.

Ms. **Mathews.** May I respond?

Mr. **Natcher.** Yes, go ahead.

Ms. **Mathews.** We know that when the original bill was initiated in 1956 there were approximately 13,000 public libraries in the Nation. Our latest figures show that there are upwards of 15,000 public libraries, so there has been an increase in public libraries. We also know that there are some 1100 bookmobiles that serve rural areas in the country today.

I would also like to comment on the fact that the States do have discretion over how they spend the monies they receive through LSCA Title I. If they decide they will put 19 percent of the Federal funds into the bookmobile or rural program, as Utah does, they are able to do that.

Basically, that is a State decision as to whether it goes to rural libraries through books-by-mail or some other way of providing services.

LSCA TITLE I TARGETING

Mr. **Natcher.** Last year you sought $91,000,000 to address the needs of the handicapped and economically disadvantaged. Can the existing public library programs be used to address these needs?

Mr. **Cross.** They can, Mr. Chairman, but the decision under Title I is a State decision as to how those monies are used. We would be happy to submit for the record at this point a table that shows how the States have chosen to spend the Title I money in each of the last two years for which we have data.

[The information follows:]

LIBRARY SERVICES AND CONSTRUCTION ACT
TITLE I – SUMMARY OF EXPENDITURES PER CATEGORY

PROGRAM STAFFING

Mr. **Natcher.** Does your budget assume reductions in the staff currently assigned to the library programs?

Mr. **Cross.** No, it does not.

LIBRARY LITERACY PROGRAMS

Mr. **Natcher.** The President and the governors have identified the need to improve the literacy of adult Americans as part of the national education agenda. Your budget includes a $3,000,000 increase for Library Literacy Programs. Could this program use more money effectively if Congress wants to increase our effort to improve literacy skills?

Mr. **Cross.** There are several other places in the budget that also have increases for literacy. As Ms. Christensen mentioned before, I think there are a number of areas where we are trying to strengthen literacy.

I think this title is pretty effective. And $3,000,000 is, in fact, more than a 50 percent increase for one year. I am not sure if more could be effectively used in a single year.

Mr. **Natcher.** How many requests for library literacy grants did you receive last year and how many were you able to actually fund?

Ms. **Mathews.** I would like to respond to that. We had 533 applications from 49 States. We awarded 214 grants which are going to 47 States. The primary use of the dollars was to plan and coordinate programs to train librarians and tutors and promote other literacy programs.

Mr. **Natcher.** How much is the average library literacy grant and how are these programs operated?

Ms. **Mathews.** The average grant is just under $20,000. The cap is $25,000 and many libraries request the full amount but some request less than that.

What was the second part of the question, sir?

Mr. **Natcher.** How are the programs operated, generally speaking?

Ms. **Mathews.** They are all operated through the local public library or State library agency which receives the money. We have a competition for the grants that is carried out by our office.

The operation of the program is at the local level. They assess the needs and carry out the programs.

Mr. **Natcher.** Mr. Conte, I yield to you.

ADEQUACY OF LIBRARY SERVICES

Mr. **Conte.** Thank you, Mr. Chairman. In your testimony, Mr. Cross, you said that access was the main goal of the Library Services and Construction Act and that has been achieved because 96 percent of the folks have access to some library service.

I disagree. I think the act was intended to not only create services where there were none, but also to improve services where they were inadequate.

The cuts that you are proposing would lead us to believe that services everywhere in the country are adequate. What evidence do you have that nationwide the public library services are adequate?

Ms. **MATHEWS**. I think it lies in the fact that the States spend approximately 36 percent of their funds on those inadequate services to which you refer.

Again, that is a State decision as to whether or not they feel those are the areas that they should target. If they spend it for inadequate services perhaps they are not targeting the money for the handicapped or the blind, or the physically handicapped or the illiterate.

We are saying it is a State needs assessment upon which they base their State plan, and they use their monies according to that assessment.

I would like to add to what Mr. Cross said about Title VII of the bill that is under consideration now, providing an evaluation component. We have never had an evaluation or assessment of services included in the bill. It is very important that we look at how those monies are being spent.

Mr. **CONTE**. Is that the only structural change to the current law if that compromise bill comes out of the House and Senate?

Mr. **CROSS**. There was another title added for family learning centers.

Ms. **MATHEWS**. Other provisions and services that have been added include child care, library outreach, intergenerational library services, library literacy centers and drug abuse prevention, in addition to Title VII, which authorizes evaluation and assessment.

Mr. **CONTE**. Has the National Commission on Libraries and Information Services developed any minimum standards for libraries?

Ms. **MATHEWS**. We feel that the setting of standards really is a State and local activity. Quality is usually assessed around the standards which are set by the States or by the local public libraries.

OVERVIEW OF REQUEST FOR LIBRARIES

Mr. **CONTE**. You are proposing to cut $100,000,000 from the library account because the Department only wants to fund programs that are "focused and well defined". How did you determine which of the library programs are "focused and well defined" and which programs are not "focused and well defined"?

Mr. **CROSS**. We looked at the reports that the States submitted under Title I to determine how they were spending the money. The chart I mentioned to the Chairman earlier shows the degree to which the money is spread out and is used for other categories besides targeted populations.

For example, the States reported in 1988 that only 5 percent of their money was used to serve the disadvantaged, only 7 percent was used to serve the handicapped, and 2 percent was used to serve the elderly.

We felt that that was just inadequate in terms of the amount of money that was available to them. On the other hand, strengthening State library agencies received a much larger share at 21 percent of the money.

Mr. **CONTE**. Is that why you requested no funds in Title I and II of the act and support funds for Title III and IV?

Mr. CROSS. Yes, although Title II is a different story because that is construction. We have felt that the construction needs just are not as great as they were.

Our average grant under Title II is $200,000. It is over-matched by a ratio of three to one by the States or local communities.

TARGETED POPULATIONS

Mr. CONTE. You've talked about reporting categories. Things like institutional priorities and targeted population priorities could mean anything. The law doesn't make these distinctions.

Aren't these rather arbitrary distinctions?

Mr. CROSS. The Title I reporting categories which States report back on are specific; for example, the category of providing services to areas without service is 4 percent.

I do not believe that these are arbitrary categories. Let me ask Mrs. Mathews to expand on that.

Ms. MATHEWS. We are talking about the reports of the last two years. I do want to say that the National Center for Education Statistics is beginning to gather statistics on libraries, and the figures that we are quoting to you from the last two years are those data which we have just begun to gather. The public libraries themselves are sending in the information.

I would also like to add that only 1.4 percent of the total public library funding is Federal funds. What we have found out is that local giving is up in terms of support of libraries and all but three States now provide aid for libraries.

So there is a great deal of State and local support that was not there 25 years ago which we find is a very encouraging fact. Local support indicates that there is a local priority for libraries in a city or county.

Mr. CONTE. Title I of the act allows libraries to better serve the disadvantaged, illiterate and handicapped. Improving adequate services to these folks is at the heart of the act. Why would you eliminate funds for Title I?

Mr. CROSS. Those are only some of the things the funding under that title can be used for. As I mentioned earlier, not a lot of the money, in fact 25 percent of the money, gets used for those targeted categories. Some of the other categories are 21 percent for strengthening State libraries, 4 percent for administration, and 7 percent for metropolitan urban resource libraries. There are a variety of other categories beyond the inadequate service that will take funding.

Mr. CONTE. Did you give them any guidance in filling out those reports?

Ms. MATHEWS. Well, the National Center for Education Statistics is gathering those data to which we are referring. They are asked to submit where their support comes from, the hours the library is open, how many staff there are, how many of those people are professional librarians, questions like that. Those are the categories that the study includes.

However, it is the State's decision to put the Title I monies in each of those 14 categories they choose. For 1988, the States used 75 percent of the money for institutional purposes and 25 percent for the disadvantaged and the handicapped and elderly and those with limited English speaking ability and illiterate.

Ms. CICHOWSKI. Our budget reflects our frustration with the authorizing legislation here. Although the authorizing legislation identifies special populations like the disadvantaged, elderly, and handicapped as populations that could or should be addressed, it does not require the States to spend any specific proportion of their funds on these populations.

We think an appropriate area for Federal investment is assistance for library services that would address the needs of special populations, hence our request for a significant increase in the Library Literacy Program. We do not feel we should continue to request funds for Title I as currently structured because it permits States to use funds for needs that are less essential.

We would like to see that program more targeted. We have proposed legislation reflecting that objective, but we could not persuade the Congress to enact such legislation. What the Congress has done in this reauthorization is expand the list of priorities to include drug education, child care, and so forth; so they have added to the list of laudable goals but have not required the States to give any of these items any special emphasis.

LIBRARY ACCESS FOR THE HANDICAPPED

Mr. CONTE. What about special requirement from the State to build a ramp to a library so that the handicapped can use it?

Ms. CICHOWSKI. The States have the discretion to use the funds for this purpose, but it is a matter of State judgment as to whether or not to do so.

Mr. CONTE. We spend a lot of money on literacy. What good is it if an illiterate person is tied to a wheelchair and cannot get into the library? You are not going to help that person much unless you built a ramp and allow the wheelchair to get into that library.

I saw that happen. There was a guy who lived in Holyoke, Massachusetts, who wanted to get into the library. He could not get in because he was in a wheelchair. They built a ramp. Now he is in the library all the time.

Ms. CICHOWSKI. Historically, Title I funds have been available for purposes like that and the States have used very, very little money on addressing the needs of special populations.

Mr. CONTE. Maybe we ought to stop giving it to States and make the grants directly to the local Government.

Mr. CROSS. I expect what happened in Holyoke was that Section 504 of the Rehabilitation Act, which requires access, required that library to build a ramp.

Mr. CONTE. They got the funding out of this program.

Mr. CROSS. It was probably because of the Section 504 requirement.

Ms. CICHOWSKI. The Americans with Disabilities Act will take care of more of these issues, too.

Mr. CONTE. If the budget is based on an arbitrary accounting process, perhaps we need a more detailed break-out of what the categories really mean and what was left for each category. Mr. Cross, for the record, will you provide that for us for the record?

Mr. CROSS. Yes.
[The information follows:]

FUNDING CATEGORIES OF THE PUBLIC LIBRARY SERVICES PROGRAM (LSCA I)

Neither the categories nor the reporting requirements relating to the Public Library Services program are arbitrary. The categories are found in various sections of the Library Services and Construction Act. States decide on the amounts to be used among these categories according to their own needs and priorities, and they include the information in their applications for funds. At the end of the year, each State must file an annual report detailing fund usage among these same categories.

A table detailing fund usage by category for fiscal years 1987 and 1988 appears earlier in this transcript.

NO FUNDING REQUESTED FOR LSCA I

Mr. CONTE. A number of Title I projects in Massachusetts help get young children into the libraries so they are reading at an earlier age. How does it make sense to increase Headstart and literacy programs and then zero out the libraries?

Mr. CROSS. I think one has to look at the programs we are funding. The Even Start program funding in the elementary and secondary area is, in fact, doubled in the budget for next year. So I don't think it is fair to say we are ignoring these issues. We are trying to distinguish where the best investment is.

NO FUNDING REQUESTED FOR LSCA II

Mr. CONTE. For the record, Massachusetts is in a very severe fiscal crisis. Title II has been especially useful in my State to help with construction.

Plus they have helped to stimulate matching funds. This is probably true of many other States. Can you tell us for the record why you are eliminating Title II?

[The information follows:]

PUBLIC LIBRARY CONSTRUCTION BUDGET JUSTIFICATION

The Federal share of the total dollars spent on public library construction has decreased to less than 5 percent, with State, local and private funds contributing 95 percent. We simply do not feel that Federal funding is necessary any longer.

Mr. CONTE. Tell us also for the record how many requests for library construction aid have you rejected?

[The information follows:]

REJECTION OF CONSTRUCTION REQUESTS

The Public Library Construction program (LSCA Title II) is a State formula grant program operated by the States. We do not collect data from the States on unfunded projects.

Mr. CONTE. For the record, provide a State-by-State break-out of how the Title II funds have been distributed in each of the past five years.

Mr. CROSS. We will do that.

[The information follows:]

LIBRARY DATA COLLECTION BY NCES

Mr. CONTE. The National Center for Education Statistics has been required to establish a national system for collecting statistics about public libraries.

How is this program funded and what is the status of this program?

Mr. CROSS. Do you want that for the record?

Mr. CONTE. All right. Get that for the record.

[The information follows:]

LIBRARY DATA COLLECTION

The development and implementation of a cooperative system for the collection of data on public libraries is being carried out jointly by NCES and the National Commission on Libraries and Information Science. Data from the participating 44 States and the District of Columbia are available in a "working paper." Efforts are continuing to make the reporting complete and consistent across the States. The program is funded by NCES at the following levels: $251,000 in fiscal year 1989; $500,000 in 1990; and $750,000 requested for 1991.

Mr. CROSS. NCES is funding that and the first data collection has been undertaken. It is being tabulated and is ready for reporting right now.

NEW TECHNOLOGIES

Mr. CONTE. It may be appropriate for the Federal Government to support the development of the newest forms of information and technology, such as the laser disc. What is the Department or other Federal agencies doing to explore this service?

Mr. CROSS. One thing we have is a Center for Technology in Education which is funded under the Research and Statistics account. It is located at Bank Street College, New York. They are looking at those kinds of issues.

I would be glad to provide you with some information on the kinds of projects they are looking at, among which is the laser disc and CD-ROM.

LIBRARY RESEARCH AND DEMONSTRATIONS

Mr. CONTE. What type of research and demonstrations are supported under Title II Part B of the Higher Education Act?

Ms. MATHEWS. We can supply a full list for the record. In addition to library research, we are supporting masters and doctoral fellowships as well as institutes to update the skills of practitioners under HEA II-B

[The information follows:]

LIBRARY RESEARCH PROJECTS

Five projects were funded in 1989 under the Library Research and Demonstrations program: One was in the area of library materials collection management, "Age Analysis of Public Library Collections;" another involves the development of a prototype system to assist library users in accessing bibliographic information in the biological sciences more efficiently; and another will demonstrate the benefits to be derived from the use of hypermedia, which are interactive electronic programs to teach students how to do research in specific subject areas. The other two projects were "Factors Influencing the Outcome of Challenges to Materials in Middle, Junior, and Senior High School Libraries" and "Local Implementation of the Public Library Planning and Role-Setting Process."

Mr. CONTE. Also for the record, how are the findings from these projects disseminated?

Ms. MATHEWS. We will supply the information for the record.

[The information follows:]

DISSEMINATION OF LIBRARY RESEARCH FINDINGS

Our research reports are printed by the Government Printing Office and distributed by direct mail by our Information Services office to the library community. They are also promoted in library and education journals, and they are available through ERIC.

RESEARCH ON EFFECTIVENESS OF LIBRARIES

Mr. CONTE. Are any of the projects you are currently funding developing measures for assessing the quality or the effectiveness of libraries?

Ms. MATHEWS. We completed a study in 1989 which Drexel University did under a Title II–B Research and Demonstration project which looked at effectiveness indicators. We will be happy to give you the results of that study which might be of interest because it does look at what people themselves say are those qualities they look for in a library.

PRESERVATION OF LIBRARY MATERIALS

Mr. CONTE. Are you funding anything to help learn about the preservation of books and other print material made of brittle paper?

Ms. MATHEWS. The Higher Education Act Title II–C has as one of its purposes the preservation of materials. We have allocated money to that over the past decade.

However, in terms of competitive grants, the monies that are being used by the National Endowment for the Humanities and, of course, the work of the Library of Congress are also adding to what we are doing in our program about brittle books.

Mr. CROSS. But we are funding at least two projects of which I am aware.

Ms. MATHEWS. The money from II–C has helped to set up the centers for preservation at Harvard, the Boston Public Library and the Folger Shakespeare Library.

TOTAL FEDERAL FUNDS FOR RESEARCH LIBRARIES

Mr. CONTE. What is the total level of funding for research libraries from all agencies?

Ms. MATHEWS. We will have to supply that for the record because a lot of that is proprietary information since many of those research libraries are private. We will get what we can.

Mr. CONTE. Thank you.

[The information follows:]

RESEARCH LIBRARY FUNDING

Because agencies define research libraries differently, and because in some cases the information is proprietary, we have no reliable data on total funding for research libraries. In addition to our Research Libraries program funds, other Federal support for research libraries is provided by the National Endowment for the Humanities and, to a lesser degree, the National Historical Publications and Records Commission.

CONCLUSION

Mr. **Natcher**. Mr. Cross, we want to thank you and your associates for appearing before our committee on behalf of your request for fiscal year 1991, Libraries.

It has been a good hearing. Thank you very much.

Mr. **Cross**. Thank you, Mr. Chairman.

Mr. **Natcher**. The committee will now recess. We will adjourn until 10 o'clock in the morning.

[The following questions were submitted to be answered for the record:]

ACCESS TO LIBRARY SERVICES

Mr. Natcher: Last year, this Committee was told that 96 percent of the country has access to public libraries. Can you tell exactly what data this conclusion is based upon, and also tell us if quality of service was taken into account when you measured access?

Mr. Cross: We define access in terms of the availability of library facilities and services to the general public, and the data have been compiled from State reports. After more than 30 years of funding, we believe that with the increase in the number of library facilities and the expansion of library services, access is no longer an issue. Quality of service is defined by the States according to State or local standards which include such things as the number of hours open and the number of volumes in circulation.

NEW LSCA VII

Mr. Natcher: Title VII of the proposed reauthorization to the Library Services and Construction Act provides authority for program evaluation. Will additional money and staff resources be required to undertake this review if the legislation becomes law?

Mr. Cross: Title VII simply authorizes evaluations and assessments of LSCA programs, but does not mandate specific activities or studies. However, if funds are provided for LSCA VII, additional staffing may be required.

WHITE HOUSE CONFERENCE ON LIBRARIES

Mr. Natcher: Mr. Cross, what is the Department's involvement in the White House Conference on Library and Information Services, and when will this conference be held?

Mr. Cross: The Secretary of Education is an ex officio member of the Advisory Committee on the White House Conference on Library and Information Services (WHCLIS). The Office of Educational Research and Improvement has detailed two senior staff members to WHCLIS full time until the conference, which is to be held in July 1991.

THE CHANGING DEMOGRAPHICS

Mr. Natcher: What is the Federal Government, and the library community more broadly, doing to accommodate the changing demographics such as the growing elderly, disabled and foreign-speaking populations?

Mr. Cross: Libraries nationwide have programs specifically designed for these populations. The Federal Government has supported some of these programs over the years through funding under the Public Library Services program. Now these programs are heavily supported by State and local governments and private contributions.

BRITTLE BOOKS

Mr. Natcher: Mr. Cross, as you may or may not know, I have been very concerned about the problem of deteriorating paper in our modern books. What portion of the country's library collection is threatened by the "brittle book" problem?

Mr. Cross: Information supplied by the Commission on Preservation and Access indicates that more than 75 million volumes, or 25 percent of the collections of the Nation's major libraries, including the Library of Congress and the major research libraries, are in a serious state of embrittlement.

Mr. Natcher: Should the Federal Government take a more active role in the area of helping libraries to preserve their collections, and ensure that new materials are produced on adequate paper?

Mr. Cross: The Federal Government plays a considerable role now. Preservation projects are largely funded by the National Endowment for the Humanities. Additionally, the major Federal libraries, including the National Library of Medicine and the National Agricultural Library, play major roles in the preservation and conservation of collections.

PUBLIC LIBRARY CONSTRUCTION

Mr. Natcher: How much has the Federal Government invested in public library construction over the last ten years? What percentage of the total spending for public library construction is provided by the Federal Government?

Mr. Cross: Over the past ten years more than $180.2 million has been appropriated for public library construction. The Federal share over this same time period has been less than 5 percent.

Mr. Natcher: Can you tell us what is the average cost of a project funded under the Title II construction grant program, and also tell us what is the average Federal and local share of these projects?

Mr. Cross: The average cost of funded projects is approximately $200,000. State and local support for these projects is about 75 percent, the Federal share about 25 percent.

Mr. Natcher: The Committee has been told that when Title II construction grant funds are available, they stimulate twice the required amount of Federal matching funds. What type of response do you see when these grants are announced?

Mr. Cross: Data from State annual reports indicate matching is at a rate of three State and local dollars against each Federal dollar awarded. The construction program is a State formula grant program; therefore, the States do not compete for the funds. Since the funds remain available until used, the States have the option of using their funds beyond the initial year of availability. In 1989 the States were able to use $15.4 million of the $21.9 million that was appropriated for construction. $8.7 million was carried over to fiscal year 1990 from 1989 and prior years, resulting in a total of $27.2 million available in 1990.

LIBRARY SERVICES FOR INDIAN TRIBES

Mr. Natcher: The Federal library program has contained for some years special set-asides for Native Americans. What can you tell us about the needs of these groups, and how they are being met by the existing library programs?

Mr. Cross: The National Commission on Libraries and Information Science has recently established a task force to study the library needs of Native Americans. We will follow this effort closely. We can report that, from among the list of allowable uses, most of the Title IV funds have been used by the grantees to build library facilities, purchase library materials, and support the salaries of library personnel.

SELECTION OF RESEARCH LIBRARY GRANTEES

Mr. Natcher: Please tell us which institutions receive the Higher Education Act Title II-C research library grants.

Mr. Cross: Most of the grantees are higher education institutions, both public and private, but a few grants have been awarded to historical societies, independent research libraries, public libraries, and museums.

Mr. Natcher: The Committee has been told that several prestigious, well-funded institutions receive the Higher Education Act, Title II-C research library grants. How are these grants awarded?

Mr. Cross: The Research Libraries grants are awarded competitively based on the quality of the applications. These grants are awarded primarily to major research libraries, some of which are quite financially secure; however, the legislation does not require that an institution's wealth be taken into account. Grantees must have a library collection which is available to qualified users and which makes a significant contribution to higher education and research; is broadly based and is recognized as having national or international significance for scholarly research; is of a unique nature, containing material not widely available; and is in substantial demand by researchers and scholars not connected with that institution.

SUPPORT FOR PUBLIC LIBRARIES

Mr. Natcher: In your view, what are the respective Federal, State, and local roles in supporting public libraries?

Mr. Cross: Libraries, like schools, are a State and local responsibility. The Federal role has been to address critical national needs such as support for literacy; to support activities that provide benefits across political and geographic boundaries, including electronic networking which enhances the sharing of unique national resources; and to support those activities that are most efficiently carried out at the Federal level, such as research and evaluation.

ALLOCATION OF LEVEL FUNDING

Mr. Natcher: If you assume enactment of the current LSCA reauthorization bills, how would you allocate $137 million for library programs? Provide a brief justification for each funding level, and a short rationale for not funding any provisions.

Mr. Cross: The Libraries account includes programs authorized under both the Library Services and Construction Act and Title II of the Higher Education Act. We believe that the amount we requested in 1991 is sufficient; but if we had to allocate $137 million among all of our library programs, we would focus the funds on activities where there is an appropriate Federal role and a critical national need. First, we would provide $76,500,000 for LSCA Title I, Public Library Services, but would propose appropriation language restricting use of the funds to targeted populations, namely the economically disadvantaged, the blind and physically handicapped, and illiterate adults. We would increase LSCA Title III, Interlibrary Cooperation, to $34,175,000 to further increase the resource sharing capacities of all types of libraries.

The Library Literacy Programs would receive $15 million in recognition of the critical national need to reduce the illiteracy level. At this funding level, we feel it would be necessary to eliminate the grant ceiling and permit this program to become a major contributor to the adult literacy effort. In areas where the needs are the greatest, larger grants would provide more meaningful support for materials, staffing, and the recruitment of volunteers to be trained as tutors.

Finally, we would fund at $1 million the new Title VII found in the LSCA reauthorization bill, providing for Evaluation and Assessment of the LSCA programs. Since none of these programs has been formally evaluated in recent years, these funds would permit the Department to fund a thorough study of one or more of the LSCA programs, providing a possible basis for funding decisions in the future.

The budget requests for Training and Demonstrations, Research Libraries, and College Library Technology would remain unchanged.

We would not fund LSCA Title II, Public Library Construction, because we believe that it is no longer a Federal responsibility to subsidize State construction needs. Nor would we fund the new LSCA Title VIII, the Library Learning Centers program, because we feel it is duplicative of programs already covered under LSCA Titles I and VI.

STAFFING FOR OFFICE OF LIBRARY PROGRAMS

Mr. Natcher: Please prepare a historical table which displays the number of FTEs allocated to the Office of Library Programs for each year from 1986 to 1991.

Mr. Cross: The following table provides actual FTE usage for Library Programs from 1986 to 1989, and estimates for 1990 and 1991.

Fiscal Year	FTE Usage
1986	28
1987	30
1988	31
1989	34
1990	34
1991	34

LIBRARY SERVICES FOR PRIORITY GROUPS

Mr. Natcher: Provide a table which shows Library Services (LSCA Title I) expenditures by priority group for the most recent year for which this information is available.

Mr. Cross: The information follows:

Priority Group	1988 Amount	% of Total Funds Available
Blind/physically handicapped.......	$5,098,000	7
Economically disadvantaged.........	3,324,000	5
Illiterate/functionally illiterate.	3,211,000	4
Limited English speaking...........	2,862,000	4
Institutionalized..................	2,363,000	3
Elderly............................	1,706,000	2

TYPES OF LSCA II PROJECTS

Mr. Natcher: Provide a table which shows construction grant (LSCA Title II) expenditures by project type (new construction, remodeling, equipment, etc.) for the most recent year for which this information is available. Display the total number of projects in each category and, if available, the average Federal share as a percentage of the total project cost.

Mr. Cross: The compilation of LSCA Title II completion report data for 1988 submitted by the State Library Administrative Agencies is as follows:

Type of project	No. of Projects
Improve access to handicapped.........	37
Remodeling............................	37
Expansion.............................	35
Construction--new buildings...........	23
Energy efficiency.....................	22
Modifications needed to accommodate... new technologies....................	13
Alterations...........................	8
Acquisition costs.....................	5
Preserve historic buildings...........	5

We have no data on the Federal share per project. However, the overall Federal proportion of construction funding is less than 5 percent; the State share, 16 percent; the local share, 71 percent; and private funds, over 8 percent.

LSCA I AND II GRANTS AS SEED MONEY

Mr. Natcher: Libraries tell us that the LSCA Title I and II grants often provide essential "seed" money without which they could not obtain State and local matching funds. Is there any merit to this argument?

Mr. Cross: This argument has some merit. However, the Federal influence is probably minimal since it represents only 1.4 percent of the funds expended on public libraries nationwide.

INTERLIBRARY COOPERATION

Mr. Natcher: What are the national short- and long-term goals of the interlibrary cooperation effort and where do we stand in terms of achieving these goals? What is the Federal role in this area?

Mr. Cross: The goal of the Interlibrary Cooperation program is to promote cooperation and resource sharing among all types of libraries and information centers, and thereby improve the efficiency and effectiveness of the Nation's library services. The Title III funding has been, and continues to be, instrumental in encouraging States to share their library holdings. We feel that there is a legitimate Federal role in supporting activities that would help make library collections more widely available, especially activities that result in increased interstate networking.

Mr. Natcher: What percentage of the total interlibrary cooperation effort is funded with Federal grants? How big is the demand for these grants at the State level?

Mr. Cross: No comparable data are available on the country's total interlibrary cooperation effort. NCES tabulations of 1988 State data for 44 States and the District of Columbia indicate that over 6,000 public libraries had 7.4 million interlibrary loan transactions. The demand for materials has increased with the creation of statewide bibliographic databases of holdings, many of which were initiated or are currently supported with LSCA Title III funds.

Mr. Natcher: Are the Interlibrary Cooperation grants used primarily for maintaining and expanding existing resource sharing systems or for acquiring new technologies?

Mr. Cross: Most of the funds support existing resource sharing systems, but the purchase of new equipment utilizing the most up-to-date technology is a part of that support.

Mr. Natcher: What is the Department doing to ensure that the latest library technologies developed by the Library of Congress and the National Commission on Libraries and Information Science are made available to the library community?

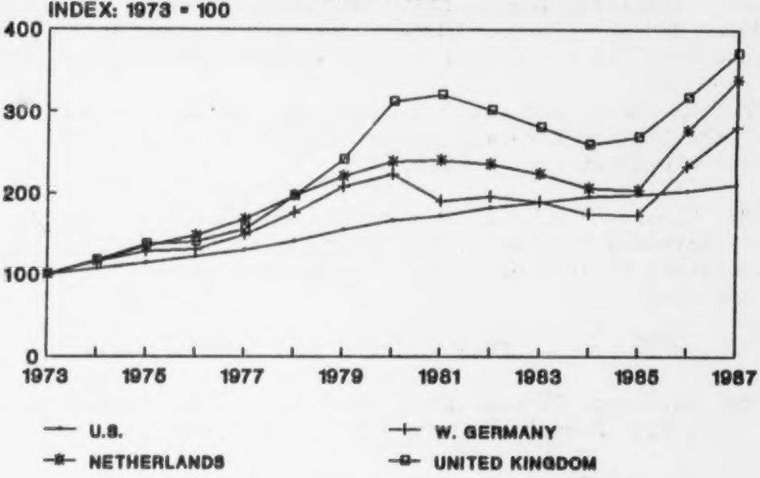
Mr. Cross: It is not the role of the Department to promote any specific technological innovation. However, the Library of Congress routinely promotes its various products to the library community through its marketing office. Although NCLIS does not develop technology, it does promote research and development activities that improve the Nation's libraries.

COST OF FOREIGN LANGUAGE MATERIALS

Mr. Natcher: What is the relative cost differential between domestic and foreign materials?

Mr. Cross: The costs are skyrocketing for the purchase of foreign scientific and technical journals. The following chart comes from a recent study by the Association of Research Libraries titled "A Study of Trends in Average Prices and Costs of Certain Serials Over Time."

U.S. DOLLAR BASED INDEX OF AVERAGE PUBLISHING COSTS
FOR THE U.S., WEST GERMANY, NETHERLANDS, AND U.K.
1973 - 1987



LIBRARY LITERACY PROGRAMS

Mr. Natcher: Do public libraries charge user fees to participants in the literacy programs?

Mr. Cross: Not to our knowledge.

Mr. Natcher: In requesting a $3 million increase for Library Literacy Programs, how did you balance the need to increase the size of grants with the need to fund new grants?

Mr. Cross: Despite a grant ceiling of $25,000, we received more than 500 applications in FY 1989 and were able to fund only 214 projects. With an increase in the grant ceiling to $35,000, we expect to receive even more applications in 1991. Our request level strikes a good balance by providing sufficient funds to increase the number of grants from 243 to 275 at the same time the award size will increase.

Mr. Natcher: If additional funds were added to your request, would your priority be to increase the average grant size or increase the number of grants available?

Mr. Cross: We have no objection to the change in the recently enacted authorizing legislation that increased the maximum grant to $35,000. However, we would hope to receive sufficient funds to increase both the number and size of awards.

Mr. Natcher: How would the proposed National Literacy Act affect the Library Literacy Program under the reauthorized Library Services and Construction Act?

Mr. Cross: The National Literacy Act (NLA) would further amend Library Literacy Programs, LSCA Title VI, Section 601, to require the Secretary to give priority to projects in communities with the greatest need.

LIBRARY LITERACY CENTERS

Mr. Natcher: Do the Library Literacy Centers under the new LSCA Title VIII-B duplicate the existing Title VI programs?

Mr. Cross: To a degree, yes, in that every effort is now made to disseminate information about successful literacy projects and to encourage replication in other jurisdictions. The new Title VIII-B would establish Library Literacy Centers to serve as the State dissemination point for literacy project information, materials, and equipment. We would rather see the Federal dollar go directly to local libraries to support literacy projects.

IMPORTANCE OF RESEARCH LIBRARIES

Mr. Natcher: How does the current need for Federal support of research libraries differ from public libraries? Does the Department place a higher priority on supporting research libraries?

Mr. Cross: While we feel that support of public libraries is a State and local responsibility, we believe that there is a Federal role in providing for sharing of the unique resource materials found in the Nation's major research libraries. The primary purposes of the Research Libraries program are the preservation of materials and the entering of materials into electronic data bases so the materials may be shared nationally in order to enhance scholarship and the conduct of research.

POPULATIONS SERVED BY LIBRARY LITERACY PROGRAMS

Mr. Stokes: What populations are served by the Library Literacy Program? Is this program reaching the homeless? How is it coordinated with the Department's other literacy programs?

Mr. Cross: We have identified 14 discrete populations, in addition to the general population, served by the Library Literacy Program: the homeless, Native American Indian tribes, learning disabled, visually impaired, hearing impaired, inmates of correctional institutions, adults who speak English as a second language, workforce, intergenerational (family), mentally disabled, older adults, migrant workers, rural adults, and the homebound. The offices throughout the Department charged with responsibility for administering literacy programs share information and communicate routinely in their effort to address the Nation's need to eliminate illiteracy.

ACCESS TO PUBLIC LIBRARY SERVICES

Mr. Stokes: Your justification states that "evaluations have shown that access to the services of public libraries is almost universal in the United States today, compared to a 56 percent level of access in 1956 when the program began." How are you defining "access"? Is the ability to read a part of "access" as you define it? Which evaluations are you referring to? The justification goes on to say that "those who do not have access to public library services live either in remote areas or in areas that have chosen not to support public libraries." What areas have chosen not to support public libraries? And shouldn't we continue to promote access to libraries in remote areas?

Mr. Cross: We define access in terms of the availability of library facilities and services to the general public. The access data appeared in a 1981 program evaluation completed by Applied Management Sciences, Inc. We do not believe there is a Federal responsibility to provide library services in those localities choosing not to use tax revenues for public libraries.

LIBRARY ACCESSIBILITY TO THE HANDICAPPED

Mr. Stokes: What portion of construction funds are used to provide physically handicapped persons with access to libraries? To what extent are public libraries now accessible to the handicapped?

Mr. Cross: According to State annual reports about 20 percent of LSCA II funds are used to provide access to disabled persons. We have no national data on the extent to which public libraries are now accessible to the handicapped.

LIBRARY RESEARCH AND DEMONSTRATIONS

Mr. Stokes: The Training and Demonstrations program is currently supporting 5 field-initiated research grants and the request would enable you to continue supporting 5 grants. How many grant applications do you receive from researchers in the field?

Mr. Cross: In 1989 we received 41 proposals and 45 in 1990.

LIBRARY CAREER TRAINING

Mr. Stokes: You indicate that a large number of women and persons from minority groups have been recipients of fellowships from your training programs. To what extent are women and minorities represented in library careers? What percentage of the total number of fellowships went to women and minorities in FY 1989?

Mr. Cross: According to a report by the American Library Association in 1987, women occupied 75 percent of library career positions. Minorities were represented as follows: 0.2 percent were Alaskan Native/American Indian; 3.4 percent Asian/Pacific Islander; 6.1 percent black; and 1.8 percent Hispanic. In 1988, the latest year for which data are available, 22 of the 25 recipients (88 percent) of fellowships were awarded to women and 12 of the 25 (48 percent) were awarded to minorities.

COLLEGE LIBRARY TECHNOLOGY

Mr. Stokes: Are historically black colleges and universities participating in the College Library Technology program?

Mr. Cross: Five applications were received from historically black colleges and universities in 1989; however, none was funded.

LIBRARY SERVICES FOR TARGET GROUPS

Mr. Early: Last year the Department told us that "low-income readers and non-readers as well as many handicapped individuals are still in need of quality library programs." In fact, the Administration requested $91 million in FY 90 for Title I (Library Services) for local library projects aimed specifically at economically disadvantaged or handicapped persons. Has this problem been eradicated, or does the Administration no longer believe that this is a problem for the Federal Government?

Mr. Cross: Last year, the Administration did not request funds for LSCA Title I, Public Library Services. However, we did request $91 million for Title I of our proposed legislation, the Library Services Improvement Act, which specifically targeted the Federal dollar for these populations. Our justification then, as now, for zero funding of LSCA Title I is that, based on the States' own reports to us, only about one-quarter of the Title I funds are used for these special populations. In times of fiscal restraint, the library dollar needs to be targeted. Current legislation appears to have evolved into a general assistance program.

LIBRARY LITERACY PROGRAMS

Mr. Early: How many adults will be provided tutoring and other literacy services during FY 90? How many volunteers will be trained as tutors to provide literacy instruction during FY 90? How many librarians will receive training to provide library services to new readers during FY 90? How will the administration's proposed increase of $3,000,000 for fiscal year 1991 affect the number of people who are served under this program?

Mr. Cross: Based on results of projects that ended in December 1987, we project that over 50,000 adults will benefit and that over 18,000 tutors and 4,000 librarians will be trained to assist in the effort in FY 1990. With an increase of $3 million in FY 1991, we expect to award about 25 percent more grants and serve over 76,000 adults. We want the increase in library literacy programs because it would be supportive of the national goal that, by the year 2000, every adult American will be literate and possess the skills necessary to compete in a global economy and exercise the rights and responsibilities of citizenship.

PUBLIC LIBRARY USE OF NEW TECHNOLOGIES

Mr. Dwyer: The Department has requested a 4.2 percent increase for the Interlibrary Cooperation program. This program is used to support projects that link two or more types of libraries through networking, resource sharing, and other cooperative activities. What efforts has the Department made to review the technologies currently in place at our public libraries? Are our libraries keeping pace with technological advances?

Mr. Cross: The NCES Federal-State Cooperative System for Public Library Data does not collect information on technologies currently in place in public libraries. We are aware, however, that libraries are working to expand their capabilities to share materials through State and regional library networks. According to a recent Online Computer Library Center (OCLC) equipment survey, 92 percent of all public libraries had computers; 60 percent had at least one compact disk product; and 53 percent own or lease fax machines.

LITERACY TRAINING FOR THE HOMELESS

Mr. Dwyer: Yesterday, the committee heard testimony from the Office of Vocational and Adult Education about literacy training for the homeless becoming a gathering place for homeless individuals in many communities. To what extent does the Library Literacy program interact with the Homeless Adult Literacy program?

Mr. Cross: The staffs of both programs are quite familiar with each other's work and meet on issues of mutual concern.

USE OF PUBLIC LIBRARY SERVICES FUNDS

Mr. Hoyer: The justification indicates that approximately one quarter of the funds provided under this account are used to provide services to the economically and otherwise disadvantaged, like the blind and the elderly. Are you confident that these numbers reflect reality?

Mr. Cross: These figures were drawn from 1988 reports submitted to us by the State Library Administrative Agencies and apply only to the Public Library Services program.

Mr. Hoyer: Do you have useful information on the uses of the remaining funds?

Mr. Cross: According to State reports, the remainder was used as follows:

33 percent for areas with inadequate services;
21 percent for strengthening State library agencies;
7 percent for metropolitan urban resource libraries;
4 percent for administration; and
10 percent for miscellaneous categories.

Mr. Hoyer: What will happen to the services that are provided to the blind, the elderly and others if the Congress follows the President's budget request and does not fund this program?

Mr. Cross: The Federal portion of all funding for public libraries represents only about 1.4 percent. The lion's share of the support for library services comes from State and local governments and private contributions. Since nearly all libraries provide services for special populations routinely, we would expect that these services would continue.

EFFECT OF LIBRARY REQUEST ON THE PUBLIC

Mr. Hoyer: I strongly support library services, including interlibrary loan, research libraries, and library-based illiteracy programs. The Department maintains or increases funds for these programs. Could these programs be described as serving the "higher end of the market" at the same time that the Administration wants to eliminate programs that make libraries more accessible to the majority of library users and would-be users?

Mr. Cross: If anything, interlibrary loans, research libraries, and library-based literacy programs enhance access to libraries and information for all citizens by equalizing opportunity. The first two programs are especially beneficial to those living in rural or remote areas where information sources are limited. For example, a scholar conducting research or a lay person seeking everyday or avocational information can tap resources available in libraries at sites thousands of miles away via computer terminal. The many networking and bibliographic system allow citizens to access all types of information.

Total.............	137,200,000	136,646,000	39,062,000

1/ Request for these programs is based on pending legislation.

The fiscal year 1991 budget request for Libraries is $39,062,000, a decrease of $97,584,000 below the appropriation for 1990. The request includes no funds for activities for which Federal support is no longer necessary or warranted; provides a major increase to help address a recognized and critical national need, i.e., increasing the literacy skills of the many American adults who are illiterate; and increases funding for resource sharing, the most efficient means of making more materials available to more people.

Libraries

---

1. Public library services
(Library Services and Construction Act, Title I)

1991 Authorization: ($100,000,000) 1/

Budget Authority:

	1990 Appropriation	1991 Request	Increase or Decrease
State grants.........	$80,855,000	---	-$80,855,000
Set-aside 2/.........	1,650,000	---	-1,650,000
Total.............	82,505,000	---	-82,505,000

1/ Authorization based on pending legislation.
2/ P.L. 98-480 mandates set-asides of 1.5 percent for Indian tribes and 0.5 percent for Hawaiian natives.

Purpose and Method of Operation

The purposes of this program are to:

- extend and improve public library services in areas that are without services or in which services are inadequate;
- improve and strengthen library administrative agencies;
- make library services more accessible to persons who by reason of distance, residence, physical handicap, or other disadvantages are unable to receive public library services; and
- strengthen major urban resource libraries.

Funds for this program are distributed to State libraries through a formula based on total resident population, but with a $200,000 minimum for the 50 States, D.C., and Puerto Rico, and a $40,000 minimum for the other outlying areas. The State and local matching requirements range from 33 percent to 66 percent, with States providing matching funds in proportion to their per capita income. The legislation provides that, when the appropriation exceeds $60 million, the additional funds be distributed by the States to support and expand major urban resource libraries.

Pending legislation would amend, among other things, the program priority areas to include intergenerational library programs, mobile library services to child-care providers, and model library literacy centers.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Libraries

1. Public library services

Accomplishments

This program, along with the Public Library Construction program, has been instrumental in extending access to the services of public libraries to all segments of the Nation's population. It was initially created to provide seed money to help States extend public library services to largely unserved rural populations and was later expanded to include services for other underserved groups, including urban poor, elderly, limited English-proficient, handicapped, and State-institutionalized persons. Evaluations have shown that access to the services of public libraries is almost universal in the United States today, compared to a 56 percent level of access in 1956 when the program began. Those who do not have access to public library services live either in remote areas or in areas that have chosen not to support public libraries.

Data from the fiscal year 1987 annual reports (the latest year for which data have been compiled) from the States indicate that only about one-quarter of the funds made available under this program support services for the handicapped and disadvantaged. Reports reflect that the following percentages of funds are spent on services for the groups identified: blind and other handicapped, 7 percent; economically disadvantaged, 5 percent; limited English-proficient, 4 percent; illiterate, 4 percent; State institutionalized, 3 percent; and elderly, 1 percent. About 20 percent of the funds are used for strengthening State library administrative agencies.

1991 Budget Proposal

No funds are requested in fiscal year 1991 for this program. The Department believes that no funding is required for this program because general assistance is no longer necessary to increase access to public library services. Access is now at the highest level deemed practicable, and Federal support is not needed for strengthening State library administrative agencies when nearly every State now has a program of State aid for public libraries. The pending reauthorization legislation would only expand the long list of program purposes, failing to provide a focus on improving services to those with the greatest needs.

2. Public library construction
(Library Services and Construction Act, Title II)

1991 Authorization: ($55,000,000) 1/

Budget Authority:

	1990 Appropriation	1991 Request	Increase or Decrease
State grants........	$18,522,000	—	-$18,522,000
Set-aside 2/........	378,000	—	-378,000
Total.............	18,900,000	—	-18,900,000
(Obligations).....	(27,621,000)	(—)	(-27,621,000)

1/ Authorization based on pending legislation.
2/ P.L. 98-480 mandates set-asides of 1.5 percent for Indian tribes and 0.5 percent for Hawaiian natives.

Purpose and Method of Operation

The purpose of this program is to ensure that facilities are available for the provision of local public library services. States may approve projects for the construction of new buildings, for the acquisition, expansion, remodeling, and alteration of existing buildings (including architects' fees and the cost of the acquisition of land), and for the initial equipment of such buildings.

Funds appropriated for this program remain available until expended and are distributed to States according to a formula based on total resident population, but with a minimum of $100,000 for the 50 States, D.C., and Puerto Rico, and a minimum of $20,000 for the other outlying areas. State and local matching requirements are based on per capita income and range from 50 percent to 66 percent of the total project costs. The Federal share of the cost of each individual project cannot exceed half of the total cost of the project.

Pending legislation would expand the scope of this program by authorizing support for the purchase, lease, and installation of equipment for use in public libraries.

This is a current-funded program for which funds are available from October 1 until expended. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The Public Library Construction program, first funded in fiscal year 1965, was created to complement the Public Library Services program for providing access to the services of public libraries in both urban and rural areas. This program has helped support about 3,000 construction projects with Federal funds totalling $350 million. Projects have been located in cities and towns of all sizes and have played an important role in increasing access to public library services, access which is now almost universal.

Accomplishments--Continued

Recent State library annual reports show that funds for this program were used at the local level in the following general categories: 50 percent for remodeling to conserve energy, to provide access to the handicapped, and to accommodate the use of new technology; 25 percent for the construction of new buildings; and 25 percent for public library additions, acquisition costs, land purchases, and architectural fees.

1991 Budget Proposal

No funds are requested for this program in fiscal year 1991. This program and the Public Library Services program have helped States extend access to the services of public libraries to nearly all citizens. Pending legislation would expand the authority of the States to use funds under this program not only for equipment associated with new or expanded library facilities, but also for the purchase, lease, and installation of other library equipment, calling into question the need for a continuing Federal role in the area of public library construction.

Impact Data (Estimated)	1989	1990	1991
Number of projects supported....	378	320	---

3. Interlibrary cooperation
(Library Services and Construction Act, Title III)

1991 Authorization: ($35,000,000) 1/

Budget Authority:

	1990 Appropriation	1991 Request	Increase or Decrease
State grants........	$19,160,000	$19,965,000	+$805,000
Set-aside 2/........	391,000	407,000	+16,000
Total.............	19,551,000	20,372,000	+821,000

1/ Authorization based on pending legislation.
2/ P.L. 98-480 mandates set-asides of 1.5 percent for Indian tribes and 0.5 percent for Hawaiian natives.

Purpose and Method of Operation

The purpose of this program is to improve the efficiency and effectiveness of the Nation's library services. Funds are used by States to stimulate interlibrary cooperation and resource sharing among all types of libraries: school libraries, academic libraries, public libraries, and special libraries.

Awards for this program are made to State libraries according to a formula based on total resident population, but with a minimum of $40,000 for the 50 States, D.C., and Puerto Rico, and a $10,000 minimum for the other outlying areas. Matching funds are not required.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Interlibrary cooperation and loans between library systems were uncommon prior to the initiation of this Federal program in fiscal year 1967. Using the MARC (machine readable cataloging) format as a standard, State library agencies have used Federal funds to create statewide databases of bibliographic holdings by making subgrants to various types of libraries to convert their catalogs to machine-readable records. States have updated and upgraded their entries and added new libraries, as well as different types of materials, to their databases. Most States have access to OCLC (Online Computer Library Center) directly, or have access to OCLC through various regional bibliographic service networks. States have also engaged the services of consultants in networking to assist them in developing both long-range and short-term programs for local and statewide library automation and resource sharing. In addition, new methods of storing and disseminating bibliographic data, of delivering library materials, and of transmitting documents and information were explored by a number of States with funds from this program.

Libraries

3. Interlibrary cooperation

1991 Budget Proposal

An increase of 4.2 percent is requested in 1991 for this program to help meet increased costs. Funds would be used to continue support for projects that link two or more types of libraries through networking, resource sharing projects, or other cooperative activities.

In contrast to the other two State formula grant programs in this account, Public Library Services and Public Library Construction, which have for all practical purposes met their objectives of extending access to the services of public libraries to nearly every person in the Nation, the Interlibrary Cooperation program warrants continued Federal support. Resource sharing among libraries is in a constant state of flux due to ongoing technological changes. Although libraries may already be linked electronically, expanding their capabilities to share materials requires the acquisition of new equipment or obtaining access to regional or national, computerized bibliographic databases. Further interlibrary cooperation would result in better library services to the Nation's academic and research communities, as well as to the general public, and should be supported with continued Federal funding.

Impact Data (Estimated)	1989	1990	1991
Number of projects supported....	476	488	488

---

4. Library literacy programs
   (Library Services and Construction Act, Title VI)

1991 Authorization: ($10,000,000) 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$5,365,000	$8,365,000	+$3,000,000

1/ Authorization based on pending legislation.

Purpose and Method of Operation

The purpose of this program is to promote literacy training programs in the Nation's public libraries to combat the problem of illiteracy among adults.

This program provides funds for competitive grants to local public libraries and to State library administrative agencies. Grants, which by law may not exceed $25,000, are to be used by State library administrative agencies for coordinating and planning library literacy programs and making arrangements for training librarians and volunteers to carry out such programs. Grants to local public libraries are for (1) promoting the use of the voluntary services of individuals, agencies, and organizations in providing literacy programs, (2) acquisition of materials for literacy programs, and (3) using library facilities for such programs. Pending legislation would increase the maximum grant award size to $35,000.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In fiscal year 1989, this program provided for tutoring or other literacy services for about 25,000 adults. Also, about 15,000 volunteers were trained as tutors to provide literacy instruction, and about 5,000 librarians received training to provide library services to adult new readers. In well over half of the projects funded by this program, the library is the community's primary provider of literacy services. In these projects, the library either established a literacy program where none existed or served as the primary contact for seeing that literacy services, information, and referrals were provided to the public. Many projects also help libraries to acquire the basic reading materials for adults and the tutor support materials necessary for literacy instruction programs.

Libraries

4. Library literacy programs

1991 Budget Proposal

An increase of $3 million is requested to help address the critical problem of illiteracy in our Nation. With an increase in the maximum grant amount to $35,000, applicants are expected to propose projects that are larger in scope than those supported in previous years, thus facilitating the provision of literacy training to more of those wanting assistance. As in the past, funds will be awarded primarily to assist in promoting volunteerism, acquiring materials, and using public library facilities for literacy projects. The impact data shown below are estimated on the assumption that the maximum award will be increased to $35,000 effective in fiscal year 1991.

Impact Data (Estimated)	1989	1990	1991
Number of projects supported:			
At the State level.......	16	20	25
In local libraries.......	198	223	250

5. Training and demonstrations
(Higher Education Act, Title II, Part B)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$855,000	$855,000	---

Purpose and Method of Operation

The Library Career Training and the Library Research and Demonstrations programs are authorized jointly under Title II, Part B, of the Higher Education Act.

The Library Career Training program is a discretionary grant program that provides assistance to institutions of higher education and library organizations or agencies to train or retrain individuals for service in all types of libraries and information centers. This program provides training opportunities for professionals and paraprofessionals in library and information services through fellowships, traineeships, and institutes. The objectives are to increase opportunities for minorities and disadvantaged groups; to assist minorities and women in obtaining the skills necessary for their professional advancement; and to provide opportunities for people already in the profession to upgrade their skills or to learn new techniques of information transfer and communication technology.

The Library Research and Demonstrations program encourages efficiency in providing library and information services by demonstrating the applicability of technology to library services, and the potential for new kinds of cooperative activities among libraries. The program also demonstrates ways to improve services to specialized library users who have been bypassed by the traditional systems. Discretionary grants and contracts are awarded to support research and demonstration projects to improve libraries and information technologies, and to disseminate the results of these projects.

These are both current-funded programs for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The Library Career Training program has provided over $50 million to help secure for the Nation's libraries qualified persons to manage library resources wisely. These funds provided over 4,000 fellowships at various degree levels, including doctoral, to help personnel attain both entry-level and higher level librarian positions. A large number of women and persons from minority population groups have been fellowship recipients. In 1989,

Libraries

5. Training and demonstrations

Accomplishments--Continued

funds supported 10 doctoral and 12 master's fellowships. The funds have also been used to provide inservice training to many librarians to help them in such areas as using technological innovations, serving disadvantaged persons, and becoming information referral specialists. Four inservice training institutes were supported in 1989, providing training to 190 participants.

Library Research and Demonstration projects have been supported with Federal funds since the program began in 1967. Several projects have been successful locally, and others have had national impact, such as the series of projects that contributed to the development and improvement of the first nationwide bibliographic data base, the Online Computer Library Center (OCLC). Specific projects in 1989 included one in the area of library materials collection management, "Age Analysis of Public Library Collections;" another involves the development of a prototype system to assist library users in accessing bibliographic information in the biological sciences more efficiently; and another will demonstrate the benefits to be derived from the use of hypermedia, which are interactive electronic programs to teach students how to do research in specific subject areas.

1991 Budget Proposal

The Department requests level funding for the Training and Demonstrations activity in fiscal year 1991. This amount would provide support for the same number of fellowships and inservice training institutes as supported in 1990, as well as the same number of research projects.

Impact Data (Estimated)	1989	1990	1991
Library Career Training:			
Number of fellowships.............	22	32	32
Number of inservice trainees......	190	200	200
Library Research and Demonstrations:			
Number of field-initiated research grants.................	5	5	5

---

6. Research libraries
(Higher Education Act, Title II, Part C)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$5,738,000	$5,738,000	---

Purpose and Method of Operation

The purpose of this discretionary grant program is to strengthen major research library collections, both private and public, and to make these collections available to individual researchers, scholars, and to other libraries. The major objectives are the following:

- -- to promote inter-institutional cooperation;
- -- to assist research libraries in acquiring distinctive, unique, and specialized resource materials;
- -- to preserve unique materials; and
- -- to increase access to research materials.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The Research Libraries program was first funded in 1978. To date, over 100 research libraries have each received at least one grant or subgrant to be used for collection development, networking and interlibrary loans, preservation of unique and endangered materials, or adding materials to the database. Most of the libraries involved have received more than one grant or subgrant.

In 1989, this program awarded 32 grants, some of which involved more than one major research library in the project; this resulted in 47 participating libraries benefiting from the program. Among the projects funded in 1989 was one to assist the Folger Shakespeare Library in Washington to acquire theatrical promptbooks and manuscripts related to Shakespearean and Elizabethan drama and political, social, and ecclesiastical history of England and Colonial America. Another was a continuation of a 1988 grant to Indiana University which is working in cooperation with several other colleges and universities to convert their bibliographic records for printed music into machine-readable format for entry into two national databases.

Libraries

6. Research libraries

1991 Budget Proposal

Level funding at $5,738,000 is requested for Research Libraries in 1991. Experience over the last several years shows that about 80 percent of these funds support projects designed to increase access to research materials, 18 percent is used for preservation of materials, and only about 2 percent is used for the purchase of unique materials for collection development. Increasing access to unique materials via a library other than the one housing the materials contributes significantly to the conduct of research in our Nation.

Impact Data (Estimated)	1989	1990	1991
Number of major research libraries assisted.........	47	48	48

7. College library technology
(Higher Education Act, Title II, Part D)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$3,732,000	$3,732,000	---

Purpose and Method of Operation

The College Library Technology program supports competitive grants for the purchase of technological equipment and for other special purposes designed to encourage the use of technology and expand library resource sharing among institutions of higher education.

Four types of grants are authorized, as follows:

Networking--grants to individual institutions of higher education for the purchase of technological equipment;

Combination--grants to consortia of institutions of higher education for assistance with joint-use facilities, resources or equipment;

Services to Institutions--grants to public and private nonprofit organizations to improve their library and information services to institutions of higher education; and

Research and Demonstration--grants to institutions of higher education for research and demonstration projects to meet special national or regional needs in using technology to enhance library or information sciences.

All four types of grants are to be funded each year, and the law mandates a minimum award of $15,000 per grant.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The 52 grants awarded in fiscal year 1989 are expected to benefit directly about 325 universities, colleges, and community colleges, and will benefit indirectly the hundreds of members of about 21 local, regional, and national networks. One of these grants was awarded to Georgetown University for the

Accomplishments--Continued

establishment of a network for electronic interlibrary exchange and resource sharing among four academic health science center libraries. The Network of Alabama Academic Libraries received a "combination" grant to purchase telefacsimile equipment for a statewide cooperative collection program designed to assess collections and correct existing deficiencies in the member institution libraries. An example of the "services to institutions" grants is one awarded to the Pittsburgh Regional Library Center designed to extend its microcomputer and OCLC training programs to member libraries of colleges in Pennsylvania and Western Maryland. Finally, a "research and demonstration" grant was awarded to Eastern Oregon State College to demonstrate that affordable information service can be provided to distant and remote college populations through an existing regional computer/telefacsimile network which uses interactive online database searching.

1991 Budget Proposal

Level funding at $3,732,000 is requested for College Library Technology in 1991. The first grants for this program were awarded during fiscal year 1988, with the project period beginning on October 1, 1988. This program is assisting colleges and universities with the purchase of state-of-the-art equipment to be used primarily to increase participation in national library networking. Some institutions are joining networks for the first time, while others are joining additional networks or expanding their capacity for sharing library resources. Funds would support the same number of grants supported in 1990.

THURSDAY, MARCH 1, 1990.

DEPARTMENTAL MANAGEMENT

WITNESSES

CHARLES E.M. KOLB, DEPUTY UNDER SECRETARY FOR PLANNING, BUDGET AND EVALUATION

WILLIAM L. SMITH, ACTING ASSISTANT SECRETARY FOR CIVIL RIGHTS

JAMES B. THOMAS, JR., INSPECTOR GENERAL

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

THOMAS P. SKELLY, DIRECTOR, BUDGET SYSTEMS DIVISION, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

Mr. NATCHER. At this time, we take up the budget request for the fiscal year 1991 for program administration, Office of Inspector General, and Office of Civil Rights.

We have before the committee Mr. Charles Kolb; and Mr. Kolb, tell us who you have with you there at the table.

Mr. KOLB. Thank you, Mr. Chairman. I am delighted to be here with you this afternoon.

With me at the table are our Inspector General, James B. Thomas, Jr.; our Acting Assistant Secretary for the Office for Civil Rights, Bill Smith, I think you know; and, of course, Sally Christensen, the Director of our Budget Service needs no introduction; and Thomas Skelly from the Budget Systems Staff is with us today.

Mr. NATCHER. All statements will be placed in the record in their entirety, and if it meets with your approval, we will go right to the questions.

Mr. KOLB. We will be delighted.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

Charles E.M. Kolb
Deputy Under Secretary for Planning, Budget and Evaluation

on

Departmental Management

Mr. Chairman and Members of the Committee:

I am pleased to appear before you to present the 1991 budget request for Departmental Management.

Overview

The Education Department administers over 200 Federal education programs that affect every level of education, from pre-school through graduate studies, with a budget totaling over $24.6 billion. Managing these programs effectively in 1991 will require a total of $331 million for Program Administration. In addition, the 1991 budget request for Departmental Management includes $49.9 million for the Office for Civil Rights and $25.8 million for the Office of the Inspector General. The total request of $406.7 million for the three accounts is $65.7 million, or 19 percent, over the 1990 level.

The requested increase for our salaries and expenses is not an exaggerated statement of our need; nor is our request a "bare-bones" budget. It is the amount we believe is needed to ensure effective stewardship over our resources. We deal with some very large responsibilities--such as the Guaranteed Student Loans program $50 billion loan portfolio--with what have been very limited administrative resources. We are not going to stop all loan defaults and program abuses with this request, but we believe we can make a significant impact and do a better job by upgrading our computer systems, increasing reviews of schools and lenders, providing more consumer and counseling information to students, and helping schools with default management plans.

We hear constantly from our Inspector General as well as from people in the General Accounting Office, OMB, and many of the committees here in Congress, that we need to monitor programs more, increase accountability for the use of our funds, and improve our systems of internal control. Moreover, greater accountability is one of the themes stressed by the Bush Administration to improve education in America. Our entire industrial enterprise must be held accountable for better outcomes--and that includes starting with ourselves in the Department.

We share the Congress' concern about our ability to effectively monitor Department programs, particularly Student Aid programs. Our request reflects our belief that more on-site monitoring of grantees will help to ensure more program and financial accountability and will improve educational services through the technical assistance and training provided to grantees.

Another area that we want to improve is the delivery of services in our large Student Aid programs where we deal with over 10 million students a year who want to know about our programs, who apply for student aid, and who are repaying loans. Just to maintain the current level of services will require increases this year. We also will be taking steps to make it easier for needy students in particular to apply for Federal student aid by providing to all students a free application form. We will also print a comprehensive Student Aid Guide to the Federal Student Aid programs for use by students and parents who need assistance in meeting college costs. This Guide lists the Federal Student Aid programs, their requirements, and where to get help in applying for financial aid.

We had postponed many of these activities in the past because of limited resources. In fact, appropriations over the last 10 years have not kept up with inflation. Indeed, when converted to constant dollars, the 1991 request is really 4 percent, or $12 million, less than what we had in 1981. But even ignoring inflation, when viewed from the perspective of our increased programmatic responsibilities--responsibilities that Congress has asked us to carry out--our salaries and expenses appropriations have been vastly inadequate. In 1981, the first full year of the Department, the appropriation for Departmental Management was $288 million to administer 150 programs. Now there are over 200 programs and the 1991 request of $407 million is comparable to only $276 million in constant dollars. To illustrate how our responsibilities have increased, the cumulative balance of GSL loans in 1981 was $18 billion, and loan default costs were $230 million. Now we have a $50 billion portfolio of loans outstanding, and defaults cost us $1.8 billion in 1989. The number of Student Aid applicants and recipients has also grown considerably since 1981. This is clearly a good thing. But our full-time equivalent employment level is way down, about 35 percent, and that helps to explain why we spend more on computer costs and processing contracts.

For 1991, we are proposing a total employment level of 4,735 full-time equivalents (FTE), an increase of 100 FTE above 1990. Included in the Department's FTE total are 3,495 for Program Administration, 820 for the Office for Civil Rights, and 360 for the Inspector General. Also included are 50 FTE funded by the Indian Education account in the Interior Department's appropriations, and another 10 FTE supported by program funds.

This increase in personnel is necessary to provide additional program monitoring, technical assistance and Student Aid program reviews, investigate complaints filed with the Office for Civil Rights, increase the number of audits and investigations by the Inspector General, and ensure the integrity and accountability of the Department's financial systems.

Program Administration

For Program Administration, the requested $331 million is an increase of $57.7 million, or 21 percent, above 1990. The major factors that contribute to this increase include:

- the continued growth in the number of complex programs requiring additional staff;
- a need for more resources for program monitoring as recommended by the Office of Management and Budget, the General Accounting Office, the Department's Inspector General, and the staff of various congressional committees;
- increased effort focusing on the loan default reduction initiative--to stem the $1.8 billion annual cost of defaulted student loans;
- the costs of providing and processing Pell Grant applications and administering other Student Aid programs; and
- financial management systems improvements for better accountability of resources.

Of the $13.3 million increase for salaries and benefits--which is 23 percent of the total requested increase--$10.5 million is for proposed employee pay raises, an extra paid day in 1991, and the increased costs of health and retirement benefits. The remaining $2.8 million increase for salaries and benefits is for the cost of 58 additional FTE.

Since the Department's inception, the number of programs has grown from approximately 150 to over 200. In recent years, Congress has passed legislation establishing dozens of new programs, such as Math-Science Education, Magnet Schools, Drug-Free Schools, and Dropout Prevention Demonstrations. Additional new programs funded in 1990 include Secondary Schools Basic Skills Demonstrations, Business-Education Partnerships, and Grants for Exemplary Programs for Homeless Children and Youth. These programs, as well as the ongoing Student Aid programs--which award more money, serve more students, and involve more schools, lenders and institutions than in previous years--require additional Federal staff to administer and monitor.

An additional $29.3 million, or nearly 51 percent of the requested increase, is for ADP services that were postponed or curtailed in prior years because of funding shortages, and for costs associated with the Student Aid programs. Over 60 percent of the ADP increase, or $17.8 million, is required to administer Student Aid programs, and is primarily for contracts emphasizing improved services and increased fiscal accountability. An estimated $12 million of this increase is for Pell Grant processing and support, including $7 million to provide a free Federal aid application form to students. Other increases for Student Aid activities include $2.3 million for administering the GSL and Perkins Loans programs and $400,000 for administering campus-based programs. The remaining $3.1 million is largely for quality control studies to identify problems in the GSL program, development of the National Student Loan Data System, and implementation of the default reduction initiatives.

While the Department's financial and accounting systems have improved over the past few years, there are still several problems that need to be resolved to address the criticisms noted in recent reports by the Department's Inspector General and the General Accounting Office. We currently have accounting systems tying all of our financial information together, but they need overhaul, new hardware, and better support. Approximately $10.3 million of the $29.3 million increase in ADP services will be devoted to improved accountability in this area. For example, we are requesting $6 million to upgrade and partially replace the four minicomputers that run the systems for accounting, grants and contracts, and budget control. Replacement of existing hardware is both necessary and overdue. With the minicomputers operating at full capacity, serious problems with downtime and accessibility occurred at the end of fiscal year 1989.

We are also requesting $2 million to improve the reliability of financial accounting information received by the accounting system from the Department's 23 financial feeder systems. For example, data from the separate GSL and Pell Grant systems are fed into the accounting system, but problems can occur in the transmission of data so that the systems do not report the same data. In addition, we plan to replace the 10-year old system which provides cash payments to grant recipients. To do this will require nearly $2.3 million.

Another $9 million, or 16 percent of the increase, is for printing a more comprehensive Student Aid Guide; for travel to conduct audits and program reviews to increase accountability of grant recipients; and for contracts to provide toll-free Student Aid information, increase accountability through evaluations of programs, and collect data needed to analyze reauthorization issues.

The remaining 10 percent of the increase includes cost increases for mail, interagency agreements for administrative and financial services, building renovations to correct problems with environmental systems and work space, and purchase of systems furniture, supplies, and office automation equipment.

Office for Civil Rights

For the Office for Civil Rights, the requested $49.9 million and 820 FTE is an increase of $5.3 million above the 1990 budget, and 18 FTE above expected usage in 1990.

Of the requested increase of $5.3 million, $2 million is for proposed employee pay raises and other salary increases, the extra paid day in 1991, and increases in employee retirement and other benefits costs. Another $836,000 is for the cost of an additional 18 FTE in 1991.

Although OCR's 1990 employment ceiling is 820 FTE, we do not expect FTE usage to rise above 802 FTE due to budget constraints. For 1991, an increase of 18 FTE above the 1990 usage level is necessary to provide resources to several areas of OCR operations. For example, additional FTE will be focused on increased technical assistance to grant recipients, additional follow-up monitoring of compliance reviews and complaint investigations, and expanded compliance reviews--both in the number conducted and the complexity--to strengthen civil rights enforcement.

With regard to compliance reviews, the additional staff will be able to conduct reviews of systemic discrimination, such as school admission standards, and reviews that embrace multiple issues and areas in civil rights law that have not been addressed recently by compliance reviews. Such reviews are currently being conducted at Harvard University and the University of California at Los Angeles (UCLA). These complex reviews of 3 undergraduate and 42 graduate programs, each with its own admissions procedures and criteria, involve alleged discrimination in college admissions of Asian-American students. Initial plans in 1991 provide for a substantial increase in the number of Title VI (race, color, and national origin) reviews to be undertaken. The additional resources also will enable OCR to conduct follow-up reviews to those now being undertaken at Harvard University and UCLA.

Another $1.3 million of the total increase in funds is for additional ADP equipment and services. This will allow OCR to purchase much needed microcomputers, primarily in the regions, to replace its current, antiquated inventory. The additional funds will enable funding of on-going surveys such as the Elementary and Secondary Civil Rights Survey--postponed from 1990 due to budget constraints--which will provide data to assist in selecting compliance review sites. In addition, requested funds will be used to implement a new data collection information system which will collect and record all case-related data.

The remaining $1.2 million of the increase is for a variety of costs, including travel to enable OCR to conduct compliance reviews and complaint investigations and to provide technical assistance and follow-up monitoring of reviews and investigations; training of regional staff; and for other areas of the budget such as printing of technical assistance materials, contract support for litigation services, interagency agreements for administrative services, and supplies.

Office of the Inspector General

For the Office of the Inspector General, a total budget of $25.8 million is requested, supporting 360 FTE--an increase of $2.7 million above the 1990 budget and 30 FTE above the expected usage in 1990.

Personnel compensation and benefits account for 81 percent, or $2.2 million, of the total requested increase. Over $600,000 of this increase is for proposed employee pay raises and other salary increases, the extra paid day in 1991, and increases in employee retirement costs and other employee benefits. Another $1.5 million of this increase represents the cost of the additional 30 FTE in 1991. The 1991 increase in dollars and personnel is necessary to expand our efforts to identify causes of Student Financial Aid problems and potential solutions, as well as to audit and investigate those alleged to be misusing Federal Student Aid funds.

Included in the total increase is $350,000, to initiate a pilot project in which the OIG will contract directly with independent certified public accountants to perform mandated non-Federal audits of participating schools' Student Financial Aid funds. This would make the auditors directly accountable to OIG. Currently, auditors of Student Financial Aid funds are hired by the participating schools and are primarily accountable to those schools.

Mr. Chairman, in conclusion, I would ask that you and the members of this Committee act favorably on our Departmental Management request. The resources we are requesting today are essential to our effective stewardship over the resources appropriated to the Department of Education. Accountability is vital: the American taxpayers want to know more than whether we simply spent their dollars; they want to know that we spent them wisely and effectively.

Thank you, Mr. Chairman. I will be happy to respond to any questions you may have.

DEPARTMENT OF EDUCATION

Biographical Sketch

NAME : Charles E.M. Kolb

POSITION : Deputy Under Secretary for Planning, Budget and Evaluation

BIRTHPLACE AND DATE : Salisbury, Maryland - November 6, 1950

EDUCATION : Princeton University, 1973, A.B. Balliol College, Oxford University, 1975, B.A.; 1980, M.A. University of Virginia, 1978, J.D..

EXPERIENCE

9/88 - present : Deputy Under Secretary for Planning, Budget, and Evaluation, U.S. Department of Education

1/86 - 9/88 : Deputy General Counsel for Regulations and Legislation, U.S. Department of Education

6/83 - 1/86 : Assistant General Counsel, Office of Management and Budget

7/82 - 6/83 : Associate, Foreman & Dyess, Washington, D.C.

10/79 - 7/82 : Associate, Covington & Burling, Washington, D.C.

8/78 - 8/79 : Law Clerk to the Honorable Joseph H. Young, United States District Judge, U.S. Courthouse, Baltimore, Maryland

HUGE INCREASE IN ADMINISTRATIVE FUNDS

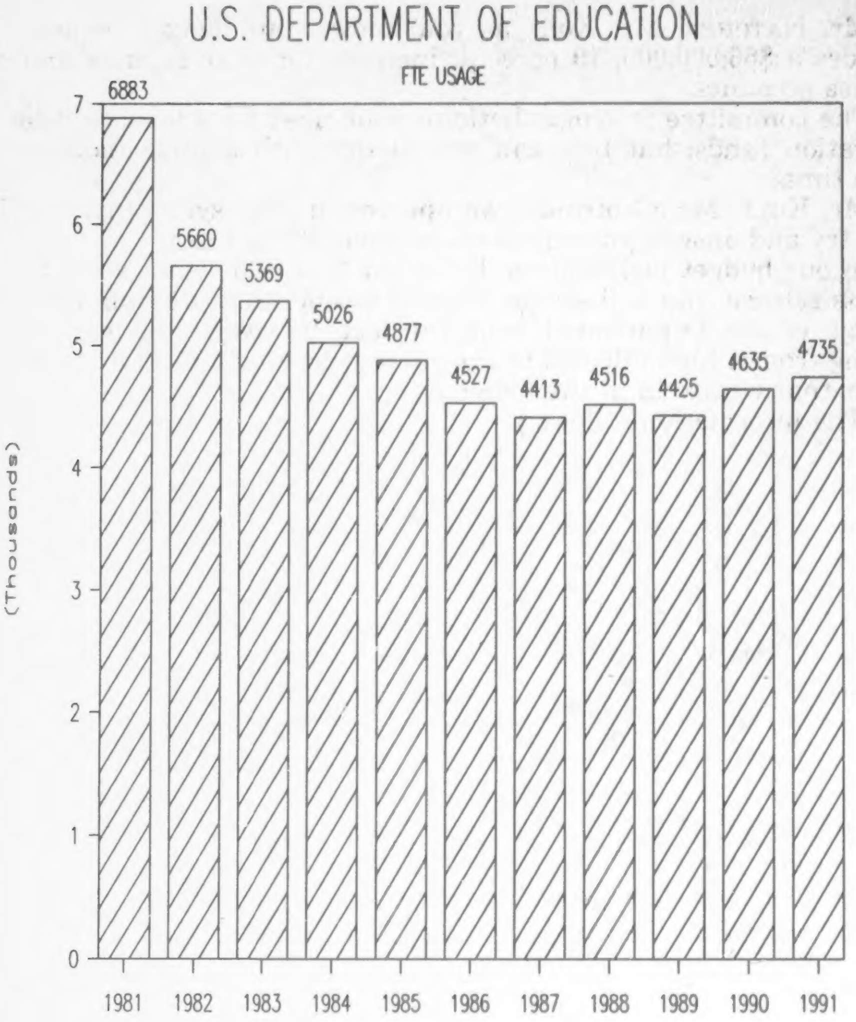
Mr. NATCHER. Mr. Kolb, as you know, your budget request includes a $66,000,000, 19 percent, increase for your salaries and expense accounts.

The committee is sympathetic to your need for adequate Administration funds, but how can you justify such a huge increase at one time?

Mr. KOLB. Mr. Chairman, we appreciate your sympathy, and let me try and answer your question as candidly as I can.

In our budget justification document this year, what we call our press release, you will see on Page 66 a table that presents the FTE usage of the Department over the last 10 years, and you see it going from a high of 6,883 to the current level of 4,635 for the fiscal year that we are in at the moment.

[The information follows:]



U.S. DEPARTMENT OF EDUCATION

Mr. KOLB. What that table tells one, when you add to it the history of the Department's programs over the last year, is that I think we have been pretty successful so far in managing to extract a quart out of a pint pot.

What I mean by that is that earlier in the decade, we started with about 150 programs, and we had the block grants come along in the early 1980s that got us down to 120 programs.

But now we are back to over 200 programs, 208 programs, and the rationale for the 19 percent increase in departmental management is really to help us do the job in administering these programs and in providing to the country the best services that we can.

If you look at the programs, those 208 programs, they have become increasingly complex. Programs such as the student aid programs have required additional support, not only in people, in FTE, but also in dollars for things like automated data processing and computer support, so that we can process and monitor the student financial aid programs, get the checks out on time, and get the very important student aid to the students.

Mr. Thomas will tell you this afternoon that he has a very desperate need for additional staff to carry out some of the monitoring activities that can assure you, the Members of Congress and the President and the Secretary, that these programs are being carried out with integrity as well as efficiency.

You will hear from my colleague, Bill Smith, this afternoon, who will explain the need in areas such as civil rights enforcement and monitoring, compliance, technical assistance.

So I think the real answer to your question, Mr. Chairman, is that we see as part of our stewardship responsibility the need to assure the taxpayer, of course, that we have spent their money.

But I think more importantly, to assure you that we spent it wisely and effectively; and, of course, that is a theme that President Bush and Secretary Cavazos have been stressing during the last year and that is accountability.

Accountability for outcomes in terms of quality education, but also accountability at home in terms of delivering these services.

You know as well as I do that the press, during the last year, has had a lot of stories of other departments in the Federal Government, and also in local government, where there have been some real questions about effective stewardship. And we don't want that to happen in the Department of Education.

And therefore, our request, I think it's a sound request, and we will work with you and provide whatever level of detail you need in terms of justifying this.

But we need it. This is the level necessary to assure effective stewardship over our program. I don't know if my colleagues would want to elaborate on that at this point.

DEPARTMENT STAFF INCREASE

Mr. NATCHER. Despite this large increase in dollars, Mr. Kolb, the department is proposing a quite small increase in staff. As you know, the full-time employee increase is only 100 positions. Does the 1991 budget proposal include enough staff to handle the responsibilities of the agencies?

Mr. KOLB. I think the answer to that question is "yes." As you will note from the chart that I referred to, we have gone from a low of a little over 4,400 FTE up to the current request of 4,735 FTE for fiscal year 1991.

I think that if you look at the breakdown of the additional staff, some of which would go to the Inspector General, to Civil Rights, to postsecondary education, 10 extra to educational research and improvement, we have tried to target the FTE request to coincide with the priorities of the Department, particularly in the stewardship priorities that I mentioned.

Just take student aid, for example. We think we need to increase the program monitoring there; and, of course, we have 52 FTE out of that 100 that would go to program monitoring; not all in postsecondary education, but some in elementary and secondary and elsewhere.

But again, that is an area that I link up directly with this theme of accountability.

So I think we can get the job done, and I am pleased to say that in preparing this request and working with the Office of Management and Budget, they have been sympathetic to our needs, as well.

DEPARTMENT STAFF

Mr. NATCHER. How does your proposal for 1991 staffing level compare to the level when the Department was first created?

Mr. KOLB. We go back to that chart, Mr. Chairman, and you will see in 1981, about a year after the Department was created, we have a high of 6,883 FTE, and the request for 1991 is 4,735.

NEW PROGRAMS

Mr. NATCHER. How many new programs have been created within the last decade, just generally, Mr. Kolb? What would that figure be?

Mr. KOLB. Mr. Chairman, I think the answer there is approximately 80 some programs. It's about a 45 percent increase. The numbers change. We started out the decade with about 150 programs, dropped down to approximately 120 with the block grant, and we are now back up to about 208. We have had a number of programs, as you know, come up just within the last couple of years, such as the drug-related programs.

We can give you the list if you like. But you will see that our responsibilities have increased significantly over the last decade.

STAFF AND DOLLARS

Mr. NATCHER. Has the Office of Management and Budget given the Department increased flexibility in setting personnel levels within the dollar amounts being requested?

Mr. KOLB. I think the answer to that is "yes." Our relations with OMB, I think, over the last couple of years have been positive. They understand what our needs are; and, of course, we work with them in setting out the priorities.

I come from OMB. I started out there in my career in government, and I must say that, at least since I have been doing this job, it's been a pleasure working with them.

It's a very close relationship with them. We don't always agree, but I think they have been increasingly receptive to our requests in this area.

Sally or Tom, if you want to add to that.

Mr. SKELLY. Yes, Mr. Chairman, in the last two years, we have had increases in the FTE ceiling, following about an eight-year decline when the Administration was trying to reduce staffing for all domestic agencies, but especially in Education which at one point it tried to abolish as a Cabinet Agency.

So we are sort of on the upswing again, and we think our workload justifies that increase.

Mr. KOLB. To give you an example, I want to get back to your question about some of the new programs. We have had new programs for Magnet Schools, Math and Science, Drug-Free Schools, Income Contingent Loans, the FIRST program (i.e., Fund for the Improvement and Reform of Schools and Teaching), Dropouts, et cetera.

And 1990, the current fiscal year, also saw a number of new programs. So again, I think the responsibilities are placed on the Department, and we would very much like to work with you to ensure that the programs that you appropriate the funds for can be effectively monitored and administered.

ADDITIONAL STAFF

Mr. NATCHER. The committee has been advised that the Department had requested 200 more people when you submitted your original budget request. This, I believe, would add about $10,000,000.

Would it be a mistake if the subcommittee suggested in its report that you take some of the money increase, which is in the President's proposal, and use it to hire these additional 200 members for the—of the staff?

Mr. KOLB. If I understand your question, Mr. Chairman, it's that we would take money in our budget request for an additional 100 over the 100 that we are requesting now?

Mr. NATCHER. A total of 200 additional.

Mr. KOLB. Two hundred?

Mr. NATCHER. Yes.

Mr. KOLB. Mr. Chairman, I don't know that I can answer that question without sitting down and working with you on some of the other priorities. I hope perhaps, as we proceed through this hearing, that the answer to that question might emerge.

We certainly need the funds for staff. There is no question about that. We also need funds in other critical areas that complement the ability of the staff to get their work done, such as automated data processing.

We can have extra staff, for example, in the student aid programs, but if our computers break down or don't enable us to get the work out in time, then the students out there are the people who really suffer.

So what we have tried to do is put together a package in which the request for FTE and the request for other items, such as ADP, are very closely integrated.

SENIOR STAFF INCREASES

Mr. NATCHER. The personnel schedules show the number of senior level positions increasing substantially in 1990. This involves eight more executive level employees, 19 SES positions.

Why is there such a large increase at the top, Mr. Kolb?

Mr. KOLB. Mr. Chairman, the answer is a simple one. If you look at where we were last year, there were a lot of vacancies in those senior level positions in the Department, both at the Presidential appointee level and at the senior executive service level.

I do not believe that we have had any addition to the overall level of SES positions that we have; and, of course, the Presidential appointments are in every instance authorized by statute.

A year ago, we had filled about eight of them. Now we are pretty close to the full complement of 16. So again, this does not reflect any new positions, but simply filling the positions that have been authorized or allowed by the Office of Personnel Management.

COMPENSATION INCREASES

Mr. NATCHER. How much money is built into your 1991 request for pay increases, including the increase for top people?

Mr. KOLB. I think the answer is $1.2 million.

Mr. SKELLY. Mr. Chairman, I might clarify for the record that we have pay raises also for general schedule employees. The executives get approximately $1.4 million, and the pay raise costs for other employees is $5.9 million. So the total is about $7.2 million.

Mr. NATCHER. What is the total figure?

Mr. SKELLY. Approximately $7.2 million, for compensation costs.

INCREASE FOR CONTRACTS

Mr. NATCHER. Mr. Kolb, there are several increases identified in the object class schedule, which we should understand a little better.

First, tell us, if you will, why the Department's contracts budget will increase by almost 40 percent, including a $1.4 million increase in your own office.

Mr. KOLB. Mr. Chairman, I would like to ask Mr. Skelly to answer that question.

Mr. NATCHER. All right. Go right ahead.

Mr. SKELLY. We have those increases for a variety of reasons. In postsecondary education, we have an increase of approximately $2.5 million. Much of that increase is related to a toll-free information line, which students all across the country can call if they want to find out about our student aid programs. It's 1-800-333-INFO.

Other cost increases there include funds that we are using to analyze the multiple data entry centers. These are contracts which help us to assist students in applying for the program.

We also have small increases to help us in debt collection. For example, we have a contract that will enable us to do a better job at filing the records of students who have defaulted on loans, so that we can follow up on them and make sure that we collect on the defaults.

In the Office of Planning, Budget and Evaluation, we have an increase of approximately $1.4 million, largely for studies, or evaluations, of our existing programs, to see if we can do a better job with those programs.

We would like to make sure that the taxpayers are getting a good bang for the buck that we are putting into our programs. By spending this additional $1.4 million, we will be able to determine if the programs are doing a good job.

For example, we are doing an evaluation of the income contingent loan program. We are doing some studies about why certain students choose to go into particular areas of graduate education. We are going to do a follow-up on the default initiative to see if that has been working well in both reducing the numbers of defaults as well as increasing the collections we receive.

CONSULTANT SERVICES

Mr. NATCHER. The budget distribution indicates that $3,545,000 of your contracts increases is for consultants. Are all of these funds awarded competitively?

Mr. SKELLY. Yes, sir, Mr. Chairman. They go through the competitive process.

Mr. NATCHER. If the number of Federal staff were increased, could you cut down on contracting costs?

Mr. SKELLY. There is a possibility, Mr. Chairman, that if we had a significant increase in staff, such as the 200 FTE that you mentioned earlier, that we would have less need for consulting service contracts.

But there are occasions where the consulting contracts are actually more efficient than the employees. With employees, we incur a long-term liability to pay for their retirement cost and leave and other things.

With contractors, even though we do pay an overhead expense, we can often get the work done for a smaller price. So we like to make sure that whatever mix we have, it's the most efficient mix between staff and contract help.

PRINTING AND TRAVEL INCREASES

Mr. NATCHER. As you know, there is also a 50 percent $3,000,000 increase for printing, and $1.6 million or 30 percent increase for travel. What about these two items, Mr. Kolb?

Mr. KOLB. Let me take the printing first.

One of the most important roles of the Federal Department of Education, I believe, is dissemination; and that helps us provide the type of service that I think we need in terms of making our programs effective.

Let me give you one example. We have over the last few years published something called the *Student Guide*, which is an explanation of how our financial aid grant and loan programs work. We have gotten a number of compliments on this document, and in fact, I believe the Office of Postsecondary Education received an award for the quality of this publication.

Some might say this is a Cadillac type guide, and in essence, it is. It is very well done, but it's also very well received.

Because of the tightness in our printing budget this year, we had to reduce substantially the size and format of this document. I think we managed to save all of the content, but again, this is an example where we are trying to provide the best possible service with the limited resources that we have. We think we can do more and that we can do it better. And so we have asked for this additional printing money which will assist us in disseminating things like the *Student Guide*.

On travel, I think that it's fair to say that a lot of that money is going to assist us in our monitoring and evaluation activities around the country. Our Inspector General can tell you that he has additional needs for travel, just in terms of the responsibilities that he has to carry out around the country.

We have 10 regional offices, and in those regional offices we carry out responsibilities that are, of course, related to the mission of the home office. But to do that effectively, we need to send people on the road from time to time.

And again, I think that we have worked this through very carefully. It is not a Cadillac budget, I might say, in terms of travel and printing. But I do think it allows us to provide the best possible service we can.

Mr. SKELLY. The largest single increase in travel, accounting for over $600,000, approximately one-third of the increase, is for the Office of Postsecondary Education, which would allow the employees to go out and visit the individual schools and lenders involved in the student aid programs.

We have heard from GAO and the IG and many staff people here in Congress that we are not doing a good enough job getting out to those individual schools to make sure they are running the student aid programs correctly.

If we are not there monitoring those programs, then they tend to have higher incidences of defaults. There are other kinds of abuses which the IG could catalog for you. We simply have to do a better job of program reviews in the student aid area, and this budget would certainly help us do that.

MAIL INCREASE

Mr. NATCHER. The other very large increase is in postage, which goes up by $1.9 million or about a third.

What can you tell us about this additional cost?

Mr. SKELLY. Postage goes up for three reasons. One reason is that we will be sending out this larger and heavier STUDENT GUIDE next year to students, so it's going to cost us more in postage costs to mail this than it does to mail this 12-page slimmed down version.

Also, in the student aid program, we are going to be sending out information to students to help them be consumers. We are going to send out information on proprietary schools and other schools to let them know the relative default rates of those schools and the success those schools have in placing their students after they finish. So default collection efforts will cause our printing budget to go up.

A third factor is that the Postal Service has told us that based on surveys they have done in the Department, we are actually mailing more things out than they thought we had previously, and they are just trying to balance out the books.

COSTS FOR STUDENT GUIDE

Mr. NATCHER. What does a guide book cost to produce?

Mr. SKELLY. This guide book, the nice one cost approximately $2.4 million to produce in 1989.

Mr. NATCHER. And then to distribute it, what would the distribution cost be?

Mr. SKELLY. The mailing cost I could estimate for you—it's about 7,000,000 copies times maybe 25 cents.

Mr. NATCHER. What was your guess?

Mr. SKELLY. About $250,000.

Mr. THOMAS. No, no, no.——

Mr. SKELLY. We send these out in bulk, and it would be—

Mr. KOLB. Tom thinks it's about 25 cents a copy, but we will get you a precise figure for the record.

[The information follows:]

"STUDENT GUIDE" MAILING COSTS

To mail out the *Student Guide* in 1989, it cost $651,000 in postage and contractual labor costs. In 1991, to mail out a *Student Guide* comparable to the one provided in 1989, it would cost about $800,000.

Ms. CHRISTENSEN. Mr. Chairman, I would just make one comment.

We call this the Cadillac guide book, but the real reason is that these programs are so complicated, and it's the disadvantaged student who has such a problem getting through the maze of programs. And this particular book that we have spent a lot of time developing helps those students to understand the whole process better, and what is available to them, and how to go about getting the grants and loans.

As Mr. Kolb pointed out, we can put the same information in this other shorter version book. But it's not going to be nearly as understandable as the way we can do it in the nicer book. So that is the bottom line, I think, to let the disadvantaged student have access to information on these programs.

Mr. NATCHER. Do you have to send this student aid guide book out every year?

Mr. KOLB. In theory, no. One of the problems, though, Mr. Chairman, to be quite frank about it is that, over the years, these programs have grown increasingly complex and therefore we have, I think, an obligation to make sure that it's up to date every year.

For example, there have been a number of marginal changes throughout the years in things like eligibility for these programs, and we need to make sure that the book that goes out every year is up to date so that students are not actually misled.

Again, we think that is an important consumer-related obligation and service that we can provide. So I think that though we don't restart—we don't redo—all this book from scratch every year, we do make an effort to make sure that it's current.

And, of course, if there are no changes in the programs, or changes that would not affect eligibility, then of course we would not need to change the book.

"STUDENT GUIDE" DISTRIBUTION

Mr. NATCHER. Mr. Kolb, do you have any evidence at all that the students or the members of the family use the guide book?

Mr. KOLB. I have heard from the Office of Postsecondary Education that this book is, in fact, very well received and widely distributed.

As I mentioned, the people who put the book together in the Office of Postsecondary Education did, in fact, receive an award for the quality of this book, and I would commend it to you, because I think it's written in clear English, and it's user friendly, I guess, as they say, and that is what we have intended it to be.

I will also point out that there have been a number of stories recently in the education press decrying the fact that we had to go from this green version to this shorter version. But again, we need to keep this service alive because it's an important program. Student Financial Assistance is almost half our budget, and because of its complexity and the fact that many of the programs are targeted on needy and disadvantaged students, we believe we have a firm obligation to keep this up.

Mr. NATCHER. Mr. Stokes, I yield to you.

Mr. STOKES. Thank you very much, Mr. Chairman.

Mr. Kolb, Mr. Smith.

Mr. KOLB. Good afternoon.

OCR REVIEW

Mr. STOKES. Last year I asked a number of questions related to the Office for Civil Rights, some of which were specifically related to criticisms leveled against it by the staff of the House Committee on Education and Labor.

Chairman Gus Hawkins called for a comprehensive review of the issues raised in the staff report, and I was told last year such a review would be done.

Can you tell us what is the status of this review?

Mr. SMITH. The review, Mr. Stokes, has been completed, and a copy of the outcome of that review has been submitted to the Chairman as of January 16th.

We had oversight hearings on the 28th of November, at which time I promised that I would have it for him on that date. And he has received it.

In addition, we are working with the General Accounting Office, who is looking at this management review and who will be doing a follow-up study of our organization.

I have a copy with me, which I had submitted, and if you would like, I would be more than pleased to submit it for the record to you, sir.

Mr. **Stokes**. I would appreciate that, Mr. Chairman, so we could have it made a part of the record.

Mr. **Natcher**. Yes.

[The information follows:]

OCR Review

OCR's response to the December 1988 Committee on Education and Labor staff report entitled "Investigation of the Civil Rights Enforcement Activities of the Office for Civil Rights, U.S. Department of Education" is too lengthy to be included in the record. However, a copy has been provided to the Subcommittee.

REPORT FINDINGS

Mr. **Stokes**. Can you just capsulize for us some of the findings?

Mr. **Smith**. There were, I think, a total of 24 major findings from the House Committee, plus 18 recommendations. We found that the House Committee's staff report had some credence in terms of the evidence that they had uncovered.

At the same time, we found that there were some misunderstandings and misinterpretations reflected in the findings, and we have attempted, where possible, to correct for the record those misinterpretations.

The biggest thing that we found was that we had a tremendous morale problem, that there were some misperceptions on our own staff's part with regard to what was expected and how we were doing our business.

I think that we are now in a position to say very safely that we have developed work groups to deal with every single one of the items that had been identified by the House Committee's report.

We have had, in addition to that, our own management review team go to every single region and, using the materials that have been developed by the House Committee, found those regional offices that did and did not have problems. We now have a management review report which we are submitting next week to the GAO that will identify each and every item.

The biggest thing, Mr. Stokes, focused on such things as whether or not we were meeting timeframes, whether or not in some of the instances within regions we were carrying out our obligation to identify in compliance reviews all of the issues.

And one of the real problems that I think we are addressing today is whether or not we had, during that period of time, all of the resources necessary to do all of the things that had to be done.

We are discovering, for example, that to do a compliance review is often a much more extensive and expensive venture than investigating complaints. And one of the things that we are presently confronted with is an inordinate number of complaints.

And so we are finding that we did not have at the time the study was made in 1988 the resources that were necessary to do all of the things. This budget will provide us in 1991 with many more resources that will allow us to be able to initiate and complete more complex compliance reviews, or at least conduct compliance reviews that we are not in a position to do at this time.

OCR PERSONNEL

Mr. **Stokes**. I notice you have just commented upon the number of complaints that the agency gets. From 1981 to the end of 1988, the Office for Civil Rights staffing level went from 1,099 down to 808, a decrease of 291. What is your current staffing level?

Mr. **Smith**. At this very moment, it's 833. We had been down to, by the end of the fiscal year 1989, about 783 or 790. The increase in complaints has been so inordinate that we have had, in fact, to ask for additional staff. A portion of the budget for fiscal year 1991 will allow us to increase our staff.

But right now, I am overselling, primarily because I need to hire staff in order to carry out the investigations for all of the complaints that are, in fact, before us.

Just this past quarter, this quarter alone, from the beginning of the new fiscal year, October through January, we had anywhere from a 15 to 25 percent increase in the number of complaints over last fiscal year, and an increase of almost seven-some percent over the year before, before the Restoration Act.

So that since the Congress passed the Civil Rights Restoration Act in 1988, we have had a continued increase in the number of complaints.

In the month of October alone, we had over 300 complaints which exceeded any number of complaints that we have had in a single month since 1981.

So what we are seeing is a pattern that is falling back to what it looked like in 1981. There are more and more complaints as a result of the Restoration Act, and, therefore, the Department and OMB have been wise enough to recognize that we need additional staff.

So we are moving upward now.

1991 FTE REQUEST

Mr. **Stokes**. What is your request for fiscal year 1991?

Mr. **Smith**. Actually it was 820, and we are already at 833, which means that the Department is going to have to recognize that we may need some additional help in handling that. And they have included in this budget an additional $600,000 or $700,000 that will allow us to pick up those FTE.

LAPSED FUNDS

Mr. **Stokes**. Now, in last year's hearing record we have a table showing a significant amount of funds were lapsed from the Office for Civil Rights appropriation, from fiscal year 1981 to fiscal year 1988. I know that some of these funds are required to lapse.

Was there a lapse of funds in fiscal year 1989? And do you anticipate a lapse of funds for fiscal year 1990?

Mr. **Smith**. I am pausing, and let me tell you why I am pausing.

Mr. **Stokes**. Okay.

Mr. **Smith**. You are correct, that there have been occasions where there were funds that were, in fact, allowed to lapse.

In fiscal year 1988, the total number of dollars that were lapsed was something like $82,000. That money on record showed $82,000, but during fiscal year 1989, those dollars were in fact spent because we had obligated costs that had not been taken care of, so that there was no lapse of funds in toto in fiscal year 1988.

In 1989, we received a supplemental, because we were in such dire straits. The record shows a sum of $400,000 that was on the books as of the end of the fiscal year.

At this very moment, there is only about $100,000 of that $400,000 that is left, and we still have bills for valid obligations that we are paying for fiscal year 1989.

So I can say to you unequivocably that in the last two years, any dollars that have been available have been spent. In fiscal year 1988 and in fiscal year 1989 we do not anticipate any lapsed funds.

As a matter of fact, I am worried about being too definite for fiscal year 1990 because I have some problems with regard to the number of dollars I have.

ASIAN AMERICAN STUDENTS

Mr. STOKES. Mr. Smith, what is the status of the two reviews regarding discrimination and college admissions of Asian American students?

Mr. SMITH. We have two. One at UCLA and one at Harvard.

I think it's safe for me to say that I expect within—and I am hedging, so Mr. Stokes, give me a little wiggle room—I think that we will be in a position to have a letter of finding, which may say there is a violation or may not be a violation, at the end of this month.

We should by the end of this month, or no later than the first or second week in April, be able to finish our Harvard review.

With regard to UCLA, there are three facets. We are looking at their graduate programs, and they have 89 graduate programs. We are looking at their undergraduate program, and have examined 17 individual undergraduate programs. And we are looking at their affirmative action program. As we received their data, we began to look at patterns to see whether or not that institution had patterns of consistency that might in fact reflect quotas.

I think I would have to say that the UCLA study in toto may take us a much longer time than anybody had anticipated, and at this moment, we are dealing with whether or not we might provide three letters of findings.

This has not yet been firmed up, but we may have to come out with a study on the graduate program, a study on the undergraduate program, and a subsequent study on the affirmative action program.

Those things are still moving, but I would have to say that the one that is closest to completion at this point is the graduate school.

The biggest problem we have between Harvard and UCLA is that Harvard's data, since we were only looking at their undergraduate program, was computerized and automated and therefore it became easier for us to handle.

I had a staff of people in UCLA last week in a basement going through 700 files to determine whether or not they acquired all of the information that is possibly available concerning a specific graduate program. The difficulty at UCLA is that it's such a mammoth decentralized system that we do not have data as clean as we had at Harvard, so it's taking us a longer period of time.

Mr. STOKES. Off the record for a moment.

[Discussion off the record.]

Mr. NATCHER. Thank you, Mr. Stokes. Go right ahead.

Mr. STOKES. I am finished.

Mr. NATCHER. Mr. Conte, I yield to you.

GAO REPORT

Mr. CONTE. Thank you Mr. Chairman.

The GAO, in its November of 1988 report, calls for the Secretary to take a stronger role in managing the elementary and secondary education programs. The report said that better financial and operational management systems are needed.

How has the Department responded to this report?

Mr. SKELLY. In a number of ways, Mr. Conte. The Department has planned for an increase in FTE and travel funds in elementary and secondary education which would enable the staff there to do a better job of monitoring the programs with onsite visits.

We have also budgeted funds to implement a new system for tracking the Impact Aid program, which will estimate both the amount of money that would go to local school districts and the amount of money they have used.

Those are probably the two biggest things we have done in that area.

BUILDING A BETTER AMERICA

Mr. CONTE. In the President's 1988 plan for "Building A Better America," his education objectives included recognizing and rewarding excellence in education, targeting Federal funds to help those most in need, promoting choice and flexibility, and for increasing accountability.

If we were to expect a stronger Federal leadership role as indicated in that GAO report, what progress has been made in each of these goals, and has any follow up been done?

Mr. SKELLY. In a number of areas the Department—the Administration—made progress towards those goals. Not necessarily in the order that you read those off, but I know the President has proposed several legislative initiatives that will target on excellence. They are included in the Educational Excellence Act, which has now passed the Senate.

It includes both Presidential Merit Schools and Magnet Schools of Excellence, of particular note.

On the accountability initiative, I think, our S&E request that's here before you today underscores the Administration's commitment to improve accountability for Federal resources. Both the increase in staff that we have requested and the increase in travel dollars will enable us to do a better job in making sure the programs are doing what they are supposed to do.

Mr. CONTE. Targeting Federal funds to help those most in need.

Mr. SKELLY. Thank you, Mr. Conte.

Targeting—we have done a particularly good job along with the help of the Congress which last year appropriated more money for Chapter 1 and Pell Grants. Those programs, in particular, are focused on the disadvantaged, and we are trying to do a very good job at making sure those funds get to the children that they are intended to serve.

Indeed, in the 1991 budget, again, there is increased funding for those programs serving the disadvantaged. We have between a 4 and 8 percent increase in Chapter 1. We again have proposed an increase in Pell Grants, and we have inflation increases or better in programs serving the handicapped and other disadvantaged students.

SECTION 511 REGULATION COMPLIANCE

Mr. CONTE. Section 511 in the 1990 Labor-HHS Appropriation bill says that when someone receives a Federal grant, that all statements about that grant shall mention the percentage of the total cost of the project that were funded with Federal money, the amount of Federal money awarded, amount of money for the project that came from non-Federal sources.

To what extent does is this regulation being complied with?

Mr. SKELLY. We require all grantees to comply with that. It's a requirement, and, to the best of my knowledge, all grant recipients comply with it.

We could check that for the record to make sure. I am not familiar with all the notices put out by grant recipients.

Mr. CONTE. Have you got any examples of that?

Mr. SKELLY. Not off the top of my head, but we do make grant awards to many thousands of institutions around the country, and I don't recall—I recall seeing press releases where the Department indicates how much money we provided to individual schools or districts, but I don't recall seeing anything from the schools. Maybe that is because we are locked in buildings here in Washington and don't get out.

Mr. CONTE. Well, I have never seen any. Send me some.

Mr. SKELLY. Okay. We will do that, Mr. Conte.

[The information follows:]

REGULATION COMPLIANCE

The following statement of disclosure of Federal funding in public announcements is included with all grants awarded by the Department of Education:

When issuing statements, press releases, requests for proposals, bid solicitations, and other documents describing this project, the recipient shall state clearly: 1) the dollar amount of Federal funds for the project, 2) the percentage of the total cost of the project that will be financed with Federal funds, and 3) the percentage and dollar amount of the total costs of the project that will be financed by nongovernmental sources.

Although the Department requires all grant recipients to comply with this regulation, there is no information on the extent of compliance since the law does not require grantees to provide their disclosure notice to the Department of Education.

DISCRETIONARY GRANTS MANAGEMENT

Mr. CONTE. The GAO 1988 report on desegregation grants made by the Department called attention to many problems in how grants were being administered.

Grant management weaknesses were also identified in the Department's fiscal year 1989 report on internal controls, plus in 1990, OMB cited the Department's monitoring of grants on their list of high risk problems.

Why have problems with managing discretionary grants persisted in the Department?

Mr. SKELLY. Mr. Conte, I think there are a number of reasons, but two that stand out are that we have had over time a lack of resources and a lack of people.

Our request today before you is for a total increase of $67,000,000, and as the Chairman noted, it seems like a very large increase all at once, but we are catching up with the problem we have had since 1980.

I know on the Appropriations Committee you often get these arguments about inflation adjusted dollars. Well, our inflation adjusted dollars are way, way down over the last ten years. Even with this request for a $67,000,000 increase, we are still 4 percent below where we would have to be just to maintain our 1981 level.

That lack of resources has meant that we haven't been able to do the job we would like on program monitoring. We haven't been able to get out to the schools that participate in the student aid programs. We haven't been able to check the lenders that give money to the schools.

We haven't been able to check out discretionary grant recipients.

Mr. CONTE. Are you saying that your discretionary grant awards will be continued to be mismanaged unless you get more money?

Mr. SKELLY. No. I don't want to leave you with that impression. We are trying to do a very good job on discretionary grants, as well as all other grants. But we have a lot less money in discretionary grants than we do in student aid.

In guaranteed student loans alone, we have a $50,000,000,000 loan portfolio outstanding. Because of that magnitude, we devote a lot of our staff to working on the Guaranteed Student Loans program, and also, on Pell Grants and other large programs.

After dealing with all those programs and the civil rights activities that Dr. Smith works with and the IG activities, we just don't have a lot left for discretionary grant activities, or we haven't had in the past.

We would like to do a better job there. We would like to do more. We just don't feel we have had all the money we needed.

MANAGEMENT OF OSERS

Mr. CONTE. The Department has agreed with many of the concerns raised in the 1989 GAO study of the Office of Special Education and Rehabilitative Services. What has been done to improve these management problems identified by GAO?

Mr. SKELLY. Secretary Davilla has done a number of things in that area on his part. He has conducted a review of the functions of the staff. He has tried to delegate activities down to a lower level of management.

For the Department's part, we continue to request increased FTE and increased travel funds for the office. Those were items that GAO cited. The OSERS staff that GAO contacted had also cited those problems. We know that they have had shortages there, and we have tried to address them.

STATE AND FEDERAL RELATIONSHIP

Mr. CONTE. In that report, 80 percent of the State rehabilitation directors said that the relationship between the Office of Special Education and Rehabilitative Services wasn't good. What has been done to improve that relationship?

Mr. SKELLY. I think Dr. Davilla has done a very good job in the time that he has been there working with his new appointees that he has brought in. He has hired an entirely new management staff, and people have been reassigned from one office to another.

He seems to be working very well with the people, both in the Department and outside.

CONSULTANTS

Mr. CONTE. How many consultants do you hire each year, and what is the fee schedule for consultants?

Mr. SKELLY. The number of consultants varies. We hire them through a number of ways. One is through contracts. Those are what we call consulting services. We also hire people directly as employees.

We also call the people who serve on advisory councils consultants. In total, this will be a guess that I will correct for the record, but I would say it's got to be at least 500 individuals. And we will spend in total $33.7 million on those consultants and contracts. But a lot of that is for costs other than people. Computer support and survey design and other things.

[The information follows:]

CONSULTANTS

In 1989, we hired 282 people as consultants or advisory council members exclusive of those hired through a contract.

Mr. CONTE. That is a lot.

How about the fee schedule?

Mr. SKELLY. The average fee for an individual consultant is, I believe, $225 per day, plus per diem and travel expenses.

Mr. CONTE. That is pretty good pay!

Mr. SKELLY. No heavy lifting.

ADVISORY AND ASSISTANCE SERVICES

Mr. CONTE. The Inspector General said that there are two weaknesses within the Department with regard to managing advisory and assistance services. They are written evaluations of expired contracts and completion of contracts on time.

What are you doing to solve these weaknesses?

Mr. SKELLY. We are working through our Office of Management to have all program offices comply with the administrative directive that we put out, I believe in just the last year. Perhaps Jim Thomas, our Inspector General, could amplify on this. His office does a review of our consulting services and he supplied a report to you just two weeks ago.

Mr. **Thomas**. One of the things we are doing now, Mr. Chairman, is just starting up with a new audit contract which will look at contract completion. We are taking a look at the products that come in from the contracts that are let, the amounts that are paid, and what benefit to the Government and to the Department these contracts provide.

We have not yet finished that job. I would be happy to forward it to you at such time as we complete it.

STUDENT AID ABUSES

Mr. **Conte**. In January, OMB said that some institutions have abused the Department's student financial aid programs by either enrolling unqualified students or by providing inadequate training.

OMB also cited a high loan default rate as an example of mismanagement. What do you say about those charges?

Mr. **Skelly**. I think studies have shown over time that there are a number of schools and students who aren't really playing fair with the program. We are trying to do a better job of helping the students and the schools understand the program.

We are sending out more information on the student aid program, consumer information to the individual students. We are publishing records of default rates so that people can know which schools are good and which schools aren't.

We have requested additional FTE and travel funds to do more program reviews of the individual schools and lenders. We have also increased our Inspector General staff by 30 FTE so that they can do more audits and investigations of the schools and help identify some of the problems for us in general so that we can go in and do the follow-up work and try to help those schools and students do the right thing.

ADMINISTRATIVE COSTS

Mr. **Conte**. Folks have been critical of school districts for being too top heavy. You have a $331,000,000 budget, and are requesting a 21 percent increase for fiscal year 1991. How does your management to service ratio compare to the ratio for most school districts?

Mr. **Skelly**. Our administrative——

Mr. **Conte**. Is it top heavy?

Mr. **Skelly**. Not in comparison to those. It's all relative, but our administrative budget is less than 1.7 percent of our total program budget, which is $24.6 billion. School districts are going to run around 50 to 60 percent of their non-capital budgets.

I take that back. Their administrative budget is going to be more in the line of 30 percent. A lot of their money is devoted, of course, to teachers. They have other expenses such as school buildings and buses and things. But I know our administrative budget is a much smaller percentage, even infinitesimal, compared to the administrative budgets of not only school districts but universities and most other businesses.

We just don't spend a lot of money on administration.

A-76 STUDIES

Mr. **Conte**. An effort to privatize the Department's research library has been under study for more than a year now. What is the status of that study and other efforts to privatize the Department?

Mr. **Skelly**. That is what's called an A-76 study after the OMB circular of that name. The study is supposed to look at the cost and benefits of running a government function to see whether or not an outside contractor can do it for less money than the Federal employees.

On the library study, it didn't look that conclusive that a contractor could do a better job than us. So for now, it looks like we are going to keep that library function in the Department performed largely by Department employees.

We have also requested $200,000 for 1991 for three other A-76 studies. They would examine such areas as automatic data processing, training, and accounts management. We will also look at debt collection.

Mr. **Conte**. Put a little more detail in the record on that.

Mr. **Skelly**. We would be glad to, Mr. Conte.

[The information follows:]

A-76 Studies

The Department initiated its first A-76 cost comparison study in 1989 to conduct a study of the Education Research Library. Completion of that study is on hold pending the results of a Comptroller General study directed by H.R. 2724. The General Accounting Office will conduct a study to evaluate the services provided by, the feasibility and merits of public access to, and the historic and scholastic value of the library. No funds have been put aside for A-76 studies in 1990. The 1991 budget request contains $200,000 for contractor support to study accounts management and debt collection, training, and ADP activities.

LOBBYING REGULATIONS

Mr. **Conte**. OMB issued new regulations concerning lobbying activities by folks who get Federal money. What impact will those restrictions have on the education community?

Mr. **Skelly**. We don't see an immediate impact from those new regulations. We and all of our grant recipients will have to comply with the provisions and restrictions.

It might delay the award of some of our grants by some time. I know based on the experience we have had the last two years with certifications that are required for a drug-free work place and the certifications for suspension and debarment, that the grantees sometimes take a couple extra days or weeks to get in those certifications. So it delays the award of the grant funds.

Ms. **Christensen**. Mr. Conte, in December we notified all current applicants and recipients of this requirement, and we also notified our regional offices so that they could inform all applicants or prospective applicants so that they would know about it. We sent copies of the guidance and disclosure forms to all current recipients and new ones that will probably be getting awards later.

Also, as required for all agencies, twice a year we will be sending to Congress a compilation of all the information that is disclosed as a result of this requirement. I think the Inspector General, in fact, has to send a report to Congress once or twice a year on this.

So we will be monitoring it very closely. We have taken the appropriate action to date, and we will be monitoring it very closely, and you will be getting reports on it as we go along.

Jim, you might want to amplify on that.

Mr. THOMAS. I don't have anything to add at this point, Sally.

Mr. CONTE. Could you also put in the record what procedure the Department follows in announcing grants and other federally financed projects to the States? Put that in the record.

Ms. CHRISTENSEN. Okay.

[The information follows:]

ANNOUNCEMENT PROCEDURES

On all new formula and discretionary grants, the Department first sends notification letters to the appropriate congressional offices. After the five-day congressional notification period, recipients are notified by mail and any public announcements are made. Press releases are issued for virtually all forumla an discretionary grant programs.

DISCRIMINATION COMPLAINTS INCREASE

Mr. CONTE. Mr. Smith, the number of discrimination complaints has increased. Will your fiscal year 1991 request for $50,000,000 give you enough money to handle these complaints without reducing the number of compliance reviews?

Mr. SMITH. Forgive me for hedging. I am hedging because fiscal year 1990, as we are looking at it now, with the volume of complaints, has forced us to reduce the number of compliance reviews we anticipated being able to conduct this year.

And, it's almost too late now to do compliance reviews, because we are talking now about the month of March, and schools close in May, and because of the case processing time frame, we would have to put the reviews on reserve during the period when the schools were closed.

So we will be down on compliance reviews this year. The funds that you have provided us will allow us to begin to develop a comprehensive compliance review program in fiscal year 1991.

I cannot say that we will have enough resources to do all of them, but I can say that we will be in a position to do more complicated and in-depth compliance reviews.

As I mentioned, the Asian discrimination compliance reviews have turned out to be much more expensive than we had ever dreamed.

Mr. CONTE. At UCLA?

Mr. SMITH. Right. And we are now in a position to work with the Department of Justice to look at the question of resegregation in school districts that are under court order—where we are working on pilot projects for compliance reviews with the Department of Justice.

So I can say we will have many more, but they will be different than the ones we have done in the past because they will be focusing primarily on Title VI and Title IX.

MANAGEMENT IMPROVEMENTS IN OCR

Mr. CONTE. The last question, the Office for Civil Rights has undergone extensive management review and new administrative policies have been announced. At least you have announced those things.

What improvements can we expect in the next year?

Mr. SMITH. I think you have to start with whether the people who are in the Office for Civil Rights will be able to be more responsive to the mission of the organization than they have been in the past, and the answer will be "yes."

I think that we have begun to see—we have, by virtue of the steps that we have taken, been able to humanize the management process, and have not been caught up in the rigors of trying to meet case processing timeframes at all costs.

We have been able to modify the timeframes, which allow our people more time to do their investigations than they had in the past.

Secondly, I believe very firmly that we will be in a position to have more policy studies available so that the regional offices will be able to have in their hands policy documents that will allow them to do their investigations faster and more thoroughly.

Mr. CONTE. Thank you, Mr. Chairman.

I have no further questions.

STUDENT NOTICES

Mr. NATCHER. Now, the bil! language, as you know, proposes to override Section 483 regarding student notices. Tell the committee why you need this language. Why do you have to have it?

Mr. SKELLY. Mr. Chairman, we asked for that language so we would have statutory authority to forego putting that requirement on institutions. We did a *Federal Register* notice asking schools to comment upon the form. It is a form that would list all the student aid that a student gets on Treasury check paper with the great seal of the United States embossed on it.

We asked the schools what they thought about it, and of 600 schools or individuals replying, 597 said it would be a costly administrative burden for them.

We are still working out ways of trying to get the same information to students. We currently require the schools to notify the students of the amount of money that they are getting from the Federal Government, and we are also seeking changes in the higher education reauthorization that would make that report more useful.

Mr. NATCHER. Just generally speaking, what will you do if this language is not approved? If you recall, last year it wasn't approved. It wasn't approved the year before. What will you do now?

Mr. SKELLY. Mr. Chairman, we will work on it very hard to see if we can get a good report produced by the schools that would help the students understand their obligations.

DECREASE IN REIMBURSABLES

Mr. NATCHER. All right, Mr. Skelly.

The budget documents show a substantial decline in funds for your reimbursable program. Is this related to work load, or are costs being reallocated to your direct appropriation? Which way are you traveling?

Mr. Skelly. A couple of things. One—the total decline is approximately $2,000,000. One million dollars of that is because the Drug-Free Schools Commission ends after 1989. That accounts for about $1,000,000 or half of the decrease.

The other changes are a combination of things, including changes in how we pay field readers and the amount of money that will be coming in through contract collection costs.

EVALUATION COSTS

Mr. Natcher. Last week, as you know, you sent the committee a copy of your evaluation plan for 1991. What is the total cost of these evaluations in 1991 and how is this cost changed in recent years? How has it changed in recent years?

Mr. Skelly. Mr. Chairman, the cost for evaluations has gone up in recent years. In 1989, as a Department we spent $28.5 million. In 1990, we will spend $38.2 million, and in 1991, we hope to spend $44.9 million.

However, I would like to point out that the overwhelming majority of that money for studies and evaluations comes from the program accounts, such as Chapter 1 evaluation. We have an evaluation in Chapter 2. The amount of money in the Program Administration account only increases from approximately $2.7 million in 1989 to $3.7 million in 1990, to approximately $4.5 million in 1991.

Mr. Natcher. Should the cost of these evaluations be centralized in your account rather than being spread throughout the Department, Mr. Skelly?

Mr. Skelly. Mr. Chairman, you can go either way. The reason that we have the dispersal of funds throughout the program accounts is because they are authorized that way. The authorizing committees seem to think that it's appropriate to have a separate amount funded for those studies.

If we had all the evaluation money in one central pot, I would venture to guess that we would often cut back on evaluations and studies at the expense of other activities, such as salaries when we have a pay raise increase.

So if Congress wants to fund evaluations at this level of effort, we will probably have to have those separate amounts.

Ms. Christensen. Mr. Chairman, I would point out that our planning and evaluation service coordinates these studies, Department-wide, very carefully. They have a somewhat elaborate process set up during the course of the year as far as planning the studies goes, and they review what all of the assistant secretaries of different areas are doing in their studies, whether it's OSERS or Office of Postsecondary Education, or wherever, so that we are not duplicating anything. And that the highest priorities are the items that we look at, in particular. We get a lot of questions from this committee during the course of the year about what is really happening in this program, and if this activity is really working.

We think we are getting the most effective use out of those dollars. The way that they are now is really not a problem.

STUDENT AID TOLL-FREE LINE

Mr. NATCHER. When will the toll-free student aid inquiry system be operational, and about what will it cost?

Mr. SKELLY. Mr. Chairman, the toll-free information line actually started back in 1976, and it proceeded as a toll-free line through 1983. At that time, we had to eliminate the toll-free line because of budget constraints, and we reimplemented the toll-free line as a result of 1986 HEA amendments.

It has been running since then. The total cost will be about $2.5 million in 1990. Approximately $338,000 of that is the amount charged for the toll-free calls themselves.

ADDITIONAL FUNDS FOR INSPECTOR GENERAL

Mr. NATCHER. Mr. Thomas, we haven't asked you any questions today.

There has been a relatively large increase in funding for the Inspector General in 1990 from $18.7 million to $23.1 million. What are you using—what are you doing with the additional money, Mr. Thomas?

Mr. THOMAS. Well, in 1990, Mr. Chairman, most of the money goes for salaries, rent and travel. Those are our very big items in the Inspector General's office.

We also have an amount in there for doing some contracts with certified public accountants. Part of that contract is to have these CPAs leverage the staff that we have and help us set priorities, in essence, by having a broad-scale coverage.

In this particular case, this particular year, we went into a contract with a CPA firm to look at a number of lending institutions for student aid programs. What we do is get the results of those reviews and identify those that in our opinion need further intensive audit work.

We will target our resources to look at those lending institutions where we think there are problems. We also will be having some assistance in looking at contract close-out activities and things of that kind.

So we believe that the use of a contractor allows us to get over peak loads, if you will, so we don't have to staff up for those peaks all the time but rather take care of that business as it comes about; it helps us to better target the use of our own resources.

USE OF CPA FIRMS

Mr. NATCHER. The budget proposal that we have before the committee indicates that the use of private CPA firms will be expanded. Is this the most cost-effective way to buy these services, Mr. Thomas?

Mr. THOMAS. Yes, sir, I believe it is, Mr. Chairman. With the particular contract for the upcoming year, 1991, we will be starting a pilot program in the student aid area. We will be contracting with CPAs to go ahead and do audits; the CPAs will actually be retained by the Government to do those audits.

At the present time, you know that the individual proprietary schools and other schools hire their own CPAs to do those audits, and there has been some question about the quality of these audits.

We consistently have had problems with audits that we get in from institutions. So we are going to try a pilot program and retain some CPAs ourselves and see if the results of that produce anything different than those where the institution hires their own CPA.

We will also be using some contract funds to audit indirect costs for State and local governments, as well as to further look at contract close-out activities in the Department.

ACCREDITATION

Mr. NATCHER. Mr. Thomas, what is the status of your review of the Department's system for reviewing post secondary school accreditations?

Mr. THOMAS. The thing we have been doing there, Mr. Chairman, is looking at the entire program of student aid. And one of those activities, of course, is the accreditation that is done by private, independent accrediting organizations.

The Department's role in that process is that of recognizing which ones of these accrediting organizations can be used so that an institution can become eligible for student aid.

We have looked at that problem of recognition of accrediting organizations, and will be issuing a report before long. And part of the issue that we have come up with there is the non-use of information that is available within the Department, in advising the Secretary and making good judgments on which accrediting organizations that the Secretary should recognize.

LEGITIMATE TRAINING PROGRAMS

Mr. NATCHER. Based on your student aid reviews, what level of confidence can this committee have that eligible students are attending legitimate training programs? What do you say about that, Mr. Thomas?

Mr. THOMAS. Well, we continue to find problems in those areas, Mr. Chairman. There are three actual basic points there. One is whether or not the student is a proper student or an eligible student, and we continue to find some students who are not eligible for student aid and should not be receiving it.

Another is when the student is going to an accredited institution, and we find that there are mechanisms that come into play where individual institutions affiliate themselves with other institutions, so that in fact, some of the schools whose students are receiving student aid are not recognized by the Department.

These are programs where we don't have much assurance that the training that those students receive is very valid.

And then the third point is whether the student really has the ability to benefit. Among the requirements for students to get student aid is either to be a high school graduate, to have a GED, or to have some other process of determining that student's ability to benefit.

We have found problems with those different areas. We did an audit investigation of one institution where each one of the files included a falsified high school diploma, for example. That school ultimately was closed, and the two owners were both sent to jail.

We have had other institutions where the results of the ability-to-benefit tests were falsified, where wrong answers were made to be right, and where scores that were too low to pass were increased so that the students could pass.

In many of those cases, the students have dropped out of school owing the Government substantial amounts of money, and, in most cases, ultimately going into default on those loans.

So even though we think that in the totality of the student aid program—we think that it's a good and sound program, and most of the students get sound education for the money spent. Too often there are cases where that is not the situation.

Mr. NATCHER. Thank you, Mr. Thomas.

Mr. Conte, do you have additional questions?

Mr. CONTE. I have no further questions.

CONCLUSION

Mr. NATCHER. Mr. Thomas, this completes the testimony for the Department of Education for fiscal year 1991. On this committee we like the Secretary of Education, Secretary Cavazos. We think he is a well qualified, able member of the President's Cabinet.

We also know on this committee that in the last nine years, Congress has appropriated and the Department has spent a total of about $199,000,000,000 for education.

During this nine-year period, in the Department of Defense, the Congress has appropriated and the Department of Defense has spent about $2,364,000,000,000.

We are hoping, Mr. Thomas, and we say this to you as the Inspector General and to the Secretary of Education, that now with the change around the world, that we can spend more money and render more assistance at the Federal level for education. We believe on this subcommittee and on the full committee on appropriations if we take care of the health of our people and educate our children, we continue living in the strongest country in the world. We believe that.

Mr. Conte and I take this bill over to the Capitol, and the Members in the House know that we believe it, and they stay with us, and they help us pass this bill.

This is the second largest appropriation bill of the 13 in the budget, as you know. Here we have an increase requested for education, Mr. Skelly, of $496,000,000 as of now.

Now, we have a $496,000,000 increase before us now. It took a long time to bring education up to $20,000,000,000. And Mr. Smith, if I have my way today, it would be $40,000,000,000. I don't mind telling you. That's where we ought to spend our money.

But this completes the testimony, and I am hoping now, Mr. Skelly, you will come to us one time and say to us this is one time we are requesting $40,000,000,000 for education to help educate the children in this country, the greatest asset that we have.

This completes the hearing. You can tell Secretary Cavazos that the hearings for the Department of Education have been good.

I am hoping that we are able to bring out a good bill. And I think we will bring one out, Mr. Skelly, that you will like.

Mr. SMITH. Thank you, Mr. Chairman.

Mr. NATCHER. Thank you very much.

This will be a good hearing, and the committee will now adjourn until 2 o'clock on Monday.

[The following questions were submitted to be answered for the record:]

FTE INCREASE

Mr. Hoyer: It appears that the 58 new FTE's for Program Administration are principally in the area of enhancing accountability of grantees. Are the increases in this area for newly proposed programs or existing or unfunded programs?

Mr. Kolb: The additional FTE for Program Administration will handle enhanced efforts in existing programs enacted in recent years, legislated requirements for statistical gathering and analysis, and increased student aid program review and default reduction efforts.

TECHNICAL ASSISTANCE FOR SCHOOL REFORM

Mr. Hoyer: I am especially interested in the Department's ability to provide meaningful technical assistance at the State and local level in the area of Education Reform. Can you tell me approximately how many Departmental personnel are employed directly or indirectly in providing direct technical assistance in the area of Education Reform and Improvement in this budget compared to FY 1990?

Mr. Kolb: The Department's budget reflects the President's initiatives to improve administration and accountability of Federal programs, resulting indirectly in educational reform. The Department's request for additional FTE stems from the Secretary's default reduction initiatives, and the need for additional program reviews and monitoring as well as the direct technical assistance to grantees in an effort to increase program accountability.

Mr. Hoyer: How many of these personnel are associated with new and unauthorized programs?

Mr. Kolb: The additional personnel requested will work in areas to improve administration and accountability of current programs and assist grantees to comply with Federal program requirements. Improved grant administration and technical assistance will likely lead to education reform and improvement at the local level.

PAY RAISE

Mr. Hoyer: Does the $7.1 million added to the 1990 base cover the entire cost of the 3.5 percent pay raise in 1991, as well as the average 22 percent increase for SES and executive level employees?

Mr. Kolb: The compensation costs for the 3.5 percent pay raise and the average 22 percent increase for SES and executive level employees are covered by the additional $7.1 million. A large portion of the $3.1 million increase for employee benefits is due to the pay raises for all employees.

Mr. Hoyer: Can you provide any anecdotal or statistical information on the impact the raise for executive level and SES employees will have on the Department's ability to recruit and retain highly qualified employees?

Mr. Kolb: We have no statistical information on the impact the raise will have on recruitment and retention of executive level and SES employees. However, it is hoped that the raises will encourage qualified individuals to seek Federal employment. The raises should also give us a better chance to retain career SES employees who leave to seek higher salaries. Recently, for example, three SES employees left the Department and have since doubled their salaries by joining proprietary schools and other institutions that benefit from our student aid programs.

After talking to many SES employees in the Department, our sense is that they will remain in the Government longer if the raises take effect as scheduled.

A-76 STUDIES

Mr. Hoyer: Why is the Department conducting a series of A-76 studies, and how much is the Department spending on these studies in FY 91?

Mr. Kolb: The Department has identified eight functions that are considered commercial activities under OMB Circular A-76. In accordance with Executive Order 12615, we are required to and are conducting cost comparison studies of these functions.

For 1991 we are requesting $200,000 to conduct studies of accounts management and debt collection, training, and ADP activities.

Mr. Hoyer: How has the level of funding for A-76 studies changed over the last several years, and can you tell me the concrete results of any actions taken as a result of these studies over the past three years?

Mr. Kolb: The Department initiated its first A-76 cost comparison in 1989 and spent $80,407 for contractor support to conduct the study of the Education Research Library. In 1990 no funds have been earmarked for A-76 studies. In 1991 we estimate that we will need about $200,000 for contractor support to provide the technical expertise necessary to study accounts management and debt collection, training, and ADP activities.

We have not completed any A-76 studies. Completion of the Library study is on hold pending the results of a Comptroller General study directed by H.R. 2724. As a consequence, we have no concrete results to report.

IRS DEBT COLLECTION

Mr. Hoyer: The IRS offset of tax refunds garnered $197 million in FY 89 for a total of $637 million offset from 1.1 million individuals averaging $550 each. Are these figures consistent with your earlier projections for this program, and what are your estimates of future collections?

Mr. Kolb: The following table shows projected and actual IRS offset figures.

(in millions of dollars)

Fiscal Year		Projected Amount	Actual Collections
1986		---	$126
1987		---	141
1988		---	173
1989		$145	197
1990		227	---
1991		263	---
	Total	635	637

The cumulative total debt collected by IRS offsets through FY 1989 was $637 million, $2 million more than projected. During the first three weeks of 1990 another $19.7 million was collected.

Mr. Hoyer: The Federal employee salary offset yielded $20 million in FY 89 for a total of $454 million since the program's inception in 1982. What proportion of Federal employees have not yet been contacted, and what accounts for the large proportion of collections in FY 1989?

Mr. Kolb: At this point, all debtors from a June 1989 match of Federal employees and persons in default on educationally related financial obligations have been contacted either by the Department of Education or Guaranty Agencies regarding their guaranteed student loans.

Since the start of the program in FY 1986, $54 million has actually been collected. The large portion of collections in 1989 resulted from the effect of the mandatory assignment of guaranteed student loans to the Department for salary offset. Previously, the salaries were offset only for debtor employees in programs for which the Government is the direct guarantor.

UCLA - HARVARD DISCRIMINATION AGAINST ASIAN AMERICANS

Mr. Weber: The Secretary of Education has said that he was "deeply concerned with recent reports that the civil rights of Asian Americans may be denied through the imposition of admissions quotas by universities across the county." He added that "discrimination against students, merely because they are Asian American is illegal and unacceptable." I applaud that position. However, I am greatly concerned at the amount of time it has taken your Department to conclude the on-site investigations taking place at UCLA and Harvard. They have dragged on for over 2 years. Can you give us a specific date that these reviews will be completed?

Mr. Smith: As you stated, the Office for Civil Rights (OCR) currently is conducting compliance reviews at the University of California at Los Angeles (UCLA) and Harvard University. OCR conducted a second on-site visit at Harvard University in January 1990 to obtain data to resolve the few remaining issues in that case. OCR anticipates completing the review at Harvard by the early spring.

OCR completed a second on-site visit at UCLA in late February 1990. The purpose of the visit was to address questions that had been raised by a review of graduate admissions files. OCR expects to release results of the review at UCLA this spring.

These compliance reviews have been very demanding of OCR's resources at a time when OCR is experiencing a dramatic increase in its complaint workload. Both reviews involve considerably complex issues, extending over a period of several years and encompassing a voluminous number of admissions applications. A great deal of data has been generated that needs to be analyzed. The review of UCLA has been particularly demanding for a number of reasons: the size of the institution, the inclusion of both the graduate and undergraduate programs in the compliance review, and the decentralization of the admissions process.

BOALT HALL'S ADMISSIONS POLICY

Mr. Weber: Reports in the newspapers have indicated that Boalt Hall, the Law School at the University of California at Berkeley, has separate waiting lists for students of different races. Do you support the use of such a policy?

Mr. Smith: Currently, OCR is obtaining information from Boalt Hall regarding its admissions policies and procedures. Until complete information from Boalt Hall is obtained, reviewed, and analyzed, it would be inappropriate for me to comment on what the admissions process is at Boalt Hall or on whether that process is legally permissible.

In investigating the admissions procedures and policies at any postsecondary institution under Title VI, OCR is guided by the Title VI regulations and the Supreme Court's 1978 decision in Regents of the University of California v. Bakke. In that case, the Supreme Court ruled that a medical school may not set aside a certain number of seats in its first year class only for members of certain racial groups. The Court also held that a school may consider race as a factor, among other factors, in its admissions process.

Mr. Weber: Congressman Rohrabacker has reported that Boalt Hall also has an admission policy in which 23 percent of the places in the entering class are reserved for applicants of certain races. All other applicants must compete for the remaining 77 percent of the places in the entering class. Does this sound like a violation of the Supreme Court's Bakke standard? Will your Department begin an investigation of Boalt Hall's admission policy?

Mr. Smith: The Department cannot comment on the nature or validity of a school's admissions process without obtaining and reviewing complete information regarding that process. Thus, I cannot give you an answer regarding whether Boalt Hall's admission process violates legal standards established in the Bakke decision.

At this time, I cannot speculate about whether OCR will conduct a compliance review of admissions at Boalt Hall. That decision awaits completion of the review of information we are now obtaining. Of course, if OCR were to receive a complaint alleging discrimination in admission to the Law School, OCR would conduct a complete investigation of that complaint.

COMPLIANCE REVIEWS

Mr. Weber: Will your Department begin any new compliance reviews during the upcoming year? Would you support efforts to earmark funds to ensure that the old reviews as well as new ones are completed?

Mr. Smith: OCR does indeed contemplate conducting new compliance reviews during the next fiscal year. However, rather than having funds earmarked for compliance reviews, OCR needs adequate funds to support the full range of activities that are needed for effectively carrying out a comprehensive compliance and enforcement program, including the completion of both old and new compliance reviews.

Compliance reviews vary in terms of the complexity of the issues covered. Because the degree of complexity affects the amount of time and the resources required for completion, the total funding requirements for compliance reviews are subject to change during the course of a fiscal year. It is essential for OCR to have the managerial flexibility to make appropriate adjustments in the level of resources devoted to compliance reviews and to other compliance and enforcement activities. The earmarking of funds would restrict this flexibility.

DISCRIMINATION AGAINST ASIAN AMERICANS

Mr. Weber: Your Department recently received from the Department of Justice formal complaints from a number of Asian students who were denied admission to some of America's most prestigious universities. What is the status of these complaints and will you act on them?

Mr. Smith: The Justice Department referred to OCR correspondence discussing discrimination against Asian-Americans in college admissions. OCR staff contacted or attempted to contact all of the individuals who had written letters that had not previously been received by OCR. Some of the individuals could not be reached. None of the individuals who could be reached wanted OCR to initiate investigations. Therefore no investigations were conducted. However, the regional offices were instructed to keep the data for use in possible future compliance reviews. OCR is determined to do everything in its power to end racial and ethnic discrimination in college admissions. Secretary Cavazos has stressed that ending racial and ethnic discrimination and harassment on America's campuses is a major priority for the Department of Education.

COMPLIANCE REVIEWS IN 1990

Mr. Weber: At a hearing last year, Secretary Cavazos said the Office for Civil Rights would do additional compliance reviews on this issue. I am told that even though it is four months into FY 1990, your Civil Rights Department has not started a single new compliance review nor completed the two that were over a year old when you last testified. What will be done with the extra $3 million OCR received in FY 90?

Mr. Smith: OCR's 1990 appropriation is $44.6 million, an increase of $3.0 million above the 1989 appropriation level. Increased built-in costs such as rent and absorption of the 1990 pay raise used up much of this increase. Most of the remaining budget increase was for hiring additional personnel required to handle the increased complaint workload as well as to complete the current compliance reviews.

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report	
The Committee directed OCR to complete expeditiously two Title VI compliance reviews now being conducted on alleged discrimination in college admissions of Asian-American students, and to initiate as many additional reviews on this issue as is practicable given current resources.	OCR is currently conducting compliance reviews of Harvard Univeristy and UCLA concerning alleged discrimination in college admissions of Asian-American students. Expected completion dates are early 1990 for both reviews. Additional reviews will be undertaken if resources are available. However, under current budget conditions, OCR will likely be required to reduce staff due to the Gramm-Rudman-Hollings sequester and absorption of the 3.6 percent January pay raise, thus possibly preventing OCR from initiating additional reviews during FY 1990.

Purpose and Method of Operation

The Office for Civil Rights (OCR) is responsible for the enforcement of laws that prohibit discrimination on the basis of race, color, national origin, sex, handicap, and age in all programs and institutions that receive funds from the Department. Specifically, these laws are:

- Title VI of the Civil Rights Act of 1964 (prohibiting race, color, and national origin discrimination),
- Title IX of the Education Amendments of 1972 (prohibiting sex discrimination),
- Section 504 of the Rehabilitation Act of 1973 (prohibiting handicap discrimination), and
- the Age Discrimination Act of 1975 (prohibiting age discrimination)

These civil rights laws extend to a wide range of Federal recipients and beneficiaries, including 50 State educational agencies, nearly 16,000 local educational agencies, about 12,000 postsecondary institutions, including proprietary schools and community colleges, 50 State rehabilitation agencies and their subrecipients, as well as other institutions that receive Federal funds, such as libraries. In addition, OCR helps implement civil rights provisions in Title III of the Elementary and Secondary Education Act (the Magnet Schools Assistance program) and provides technical assistance to award recipients, beneficiaries, the public, and other organizations in an attempt to obtain voluntary compliance with civil rights laws. OCR also provides information to the public on its activities including assistance on how to file complaints.

For more than a decade, a series of orders issued by the U.S. District Court for the District of Columbia in *Adams v. Bennett* governed many of OCR's enforcement activities. In December 1987, the District Court determined that the *Adams* plaintiffs lacked standing to continue their litigation and dismissed the case. Although the *Adams* case has been dismissed, OCR has elected to follow the procedures and timeframes mandated by the *Adams* order. The District Court decision dismissing the case is presently before the U.S. Court of Appeals for the District of Columbia Circuit; oral argument is scheduled for April 1990.

Purpose and Method of Operation -- continued

In March 1988, Congress passed the Civil Rights Restoration Act of 1987 which expanded OCR's jurisdiction over programs or activities that receive Federal financial assistance. With the passage of the Civil Rights Restoration Act, OCR has experienced an increase in the number of complaints that have been filed.

OCR's compliance and enforcement responsibilities are divided into four general categories: complaint investigations, compliance reviews, enforcement litigation, and monitoring activities. In addition, OCR provides technical assistance to recipients of Education Department program funds, beneficiaries, the public, and organizations in an attempt to obtain voluntary compliance with civil rights laws and to inform beneficiaries of their rights. Operations are carried out by staff in headquarters and in the 10 regional offices. The majority (approximately 77 percent) of OCR's staff are assigned to the regional offices where they conduct compliance reviews and complaint investigations.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

COMPLIANCE AND ENFORCEMENT ACTIVITIES

Complaint Investigations

OCR's primary responsibility is to investigate and resolve complaints alleging civil rights discrimination by recipients of Federal funds against individuals served. During 1989, OCR received 2,827 complaints and closed 3,209 (some of which had been filed before the beginning of the fiscal year). Of the complaints received, 62 were the result of one individual's complaints primarily about sex discrimination in the coverage of school health insurance plans. Overall, 76 percent of the cases pending during the year were closed. OCR had 1,028 pending complaints as of September 30, 1989.

Complaints were received on the basis of discrimination against handicapped persons in 56 percent of the cases filed, followed in descending order by race (13 percent), multiple bases (13 percent), sex (7 percent), age (4 percent), and national origin (3 percent). Complaints citing other bases accounted for 4 percent.

The complaints received involving elementary and secondary institutions comprised 64 percent of the 1989 complaints. Twenty-seven percent of the complaints received involved postsecondary institutions, 2 percent involved vocational rehabilitation institutions, and 7 percent involved other institutions. During 1989, 78 percent of the complaints received involved issues of service delivery to students, while most of the remainder alleged employment discrimination.

Accomplishments — continued

Compliance Reviews

For compliance reviews, unlike complaint investigations, OCR selects sites, based on survey data and other indicators, where there are potential problems of compliance with civil rights laws. In 1989, OCR initiated 138 compliance reviews and closed 178 reviews, some of which were initiated in previous years. OCR had 22 compliance reviews open as of September 30, 1989.

Sixty-one percent of the compliance reviews initiated in 1989 involved programs or activities at the elementary and secondary education level. Reviews conducted at the elementary and secondary education level covered the issues of free appropriate public education, within-school discrimination, vocational education, special purpose schools, segregated schools, and employment. Three compliance reviews were initiated at vocational rehabilitation institutions. The remaining compliance reviews initiated in 1989 were conducted at postsecondary education institutions and covered such issues as admissions, vocational education, student services, program accessibility for the handicapped, intercollegiate athletics, and employment.

ENFORCEMENT LITIGATION

When OCR finds that a recipient of Federal funds has violated one of the civil rights laws and is unable to obtain voluntary compliance, it proceeds in one of two ways: initiates an administrative enforcement proceeding seeking to terminate Federal financial assistance, or refers the matter to the Department of Justice to seek injunctive relief in Federal court. In 1989, OCR initiated five administrative proceedings and continued processing 15 others already in progress. A significant settlement was concluded in the administrative proceeding against the Chicago Board of Education. Chicago agreed to eliminate its existing and projected backlog of handicapped students awaiting evaluations and placements, pursuant to Section 504 of the Rehabilitation Act of 1973. OCR had obtained a ruling by an Administrative Law Judge that Chicago violated Section 504 of the Rehabilitation Act of 1973 in this respect. No cases were referred to the Department of Justice in 1989.

ROUTINE AND ENFORCEMENT MONITORING

In 1989, OCR issued 888 letters of findings which state the outcome of each of the 773 complaint investigations and 115 compliance reviews in which civil rights violations were identified. In several cases, remedial action was planned before the cases were closed. Of the 3,387 cases closed in 1989, 638 complaint investigations, 112 compliance reviews, and 10 monitoring reviews will require follow-up monitoring of remedial plans.

OCR has advised States of the corrective action necessary to resolve identified deficiencies and the actions OCR intends to take to ensure that States comply with their Vocational Education Methods of Administration under the Vocational Education Guidelines. Each State must submit a report

Accomplishments -- continued

annually that details its methods for administering its civil rights responsibilities, which include program monitoring and compliance reviews. Based on these reports, 11 States were monitored. OCR also required five States (Georgia, Tennessee, Minnesota, Texas and Utah) to submit corrective action plans to address major or minor deficiencies in their Vocational Education Methods of Administration.

OCR continued to work with States on their higher education desegregation plans in ensuring compliance with Title VI of the Civil Rights Act of 1964. Based on information received from Georgia, Oklahoma and Missouri, OCR notified these States on March 17, 1989, that their systems of public higher education were in compliance with Title VI and no further actions were required.

Other States were still not in full compliance, but were moving towards it. On October 30, 1989, OCR notified Delaware that it was in compliance with Title VI, subject to the completion of one construction project. Florida was notified that it had completed all required measures except for renovation of four buildings at an historically black institution. Virginia has been notified that an on-site visit to an historically black institution will be undertaken in the near future in order to collect additional information needed to complete an assessment of Virginia's activities pursuant to the Plan. OCR is also in the process of evaluating the final compliance of Texas, Kentucky, and Pennsylvania.

During 1990, OCR will issue its final determination regarding Kentucky's compliance with its Plan and will prepare comprehensive status reports summarizing the higher education desegregation activities of Maryland, Pennsylvania, and Texas.

TECHNICAL ASSISTANCE

OCR's technical assistance consists of the provision of information and other services designed to inform beneficiaries of their rights and/or to facilitate voluntary compliance with civil rights laws. Technical assistance may be provided in the context of a complaint investigation or a compliance review to assist recipients in achieving voluntary compliance. Technical assistance also may be provided in situations not involving an investigation or a compliance review. OCR provides technical assistance primarily in response to requests from Department of Education award recipients and beneficiaries, usually through training, workshops, meetings, on-site consultations, and telephone consultations. OCR also initiates outreach efforts with recipients and beneficiaries to address recurring compliance problems and unique regional needs.

Accomplishments -- continued

In 1989, OCR received 2,140 requests for technical assistance, initiated 586 outreach efforts, and conducted 3,176 technical assistance activities. Most requests for technical assistance from ED recipients and beneficiaries addressed handicap concerns, while OCR's outreach activities addressed all civil rights laws enforced by OCR. More than 300,000 copies of OCR publications were distributed through direct mailings to recipients and beneficiaries, attendance at meetings, on-site distribution to recipients, and information booths at civil rights conventions.

OCR regional offices developed systematic approaches for analyzing a variety of information sources (e.g., complaint data, technical assistance data, vocational education methods of administration reports, regional experience, contacts with key educational entities and community organizations) to identify recurring and emerging civil rights issues. The regional offices also conducted roundtable meetings with Chief State School Officers and chief administrators of postsecondary education institutions designed to address significant civil rights issues identified by OCR and to develop cooperative technical assistance activities. In addition, they sponsored conferences for development of cooperative technical assistance activities and for State educational agencies, local educational agencies, and postsecondary institutions to address a variety of civil rights issues (e.g., sexual harassment, employment, and free appropriate public education). OCR's regional offices also participated in beneficiary organization- sponsored conferences representing historically underserved populations throughout the regions, and disseminated newsletters and issued bulletins to local education agencies and postsecondary education institutions on recurring and emerging civil rights issues.

To expand the presence of OCR headquarters in the conduct of technical assistance activities, headquarters staff participated in several major national events and conferences in the Washington, D.C., metropolitan area (e.g., the award Ceremony of the National Elementary and Secondary School Recognition Program; the Handicapped Awareness Week at the American University; the American College Health Association Conference; the National Capital Area Disabled Student Services Coalition Conference; and the National Association for Equal Opportunity in Higher Education Conference). At these events, OCR made presentations, disseminated information and responded to questions about its activities.

OCR negotiated 11 formal Memoranda of Understanding (MOU) with State education and human rights agencies during FY 1989, bringing the total number of formal MOUs in place to 79 as of September 30, 1989. An MOU is an agreement initiated to facilitate meeting the mutual civil rights compliance objectives of States and human rights agencies. In addition to the formal MOUs, OCR has a number of informal agreements with State and local human rights agencies. Pursuant to these agreements, OCR regional offices conducted a number of activities with State educational and human rights agencies, including: exchange of complaint/compliance review and technical

Accomplishments -- continued

assistance information; identification of technical assistance and training needs; provision of access to statistical and financial information; and conduct of joint technical assistance activities, complaint investigations, and compliance reviews. OCR is negotiating changes to 7 existing MOUs and negotiating new MOU~~s with 27~~ agencies.

1991 Budget Proposal

The 1991 budget request for the Office for Civil Rights is $49,900,000 and 820 FTE, an increase of $5,328,000 and 18 FTE from the 1990 level.

The request for personnel compensation and benefits of $39,328,000 is an increase of $2,892,000 from 1990 as a result of the additional 18 FTE, annualization of the 1990 3.6 percent pay increase, the proposed 1991 3.5 percent pay increase, an increase of approximately 22 percent for Executive Level and SES employees, the additional paid day in 1991, estimated increases in health benefits and retirement costs, and overtime to meet compliance review deadlines.

The additional FTE will enable OCR to provide resources to several areas that have been noted as concerns by both House and Senate Appropriations Committees, including:

1) Expanded compliance reviews--both the number conducted and the complexity--to strengthen civil rights enforcement. With the additional staff resources, OCR will be able to conduct compliance reviews of systemic discrimination, such as school admission standards, that will have broad impact. These will include reviews embracing multiple issues and areas in civil rights law that have not been addressed recently by compliance reviews. Inital plans provide for a substantial increase in the number of Title VI (race, color, and national origin) reviews to be undertaken.

2) Increased technical assistance to grant recipients.

3) Follow-up monitoring of compliance reviews and complaint investigations to determine whether resolutions are being adhered to. Additional staff will enable OCR to review monitoring reports from recipients whose cases are closed based on a remedial action plan, and to conduct on-site monitoring when needed to verify that agreed upon actions have taken place.

These activities had been curtailed in previous years due to funding levels that restrained hiring and travel. OCR had instead focused its resources primarily on conducting complaint investigations. The increased

1991 Budget Proposals -- continued

enforcement efforts will address several of the concerns made by the majority staff of the House Committee on Education and Labor in its report issued in December 1988.

In addition to the increase in personnel compensation and benefits, other major increases include:

- $513,000 for travel in order to 1) provide more technical assistance to the education organizations and other interested parties on enforcement and compliance of civil rights laws; 2) conduct a greater number of, and more complex compliance reviews; and 3) increase the number of monitoring visits following the close-out of compliance reviews and complaint investigations to ensure compliance with findings. These travel activities had been reduced in recent years due to budget constraints.
- $75,000 in non-GSA telecommunications for acquisition of telecommunications systems and installation of telecommunications lines to provide needed communication links between regional offices and headquarters for OCR information technology systems.
- $155,000 for printing, primarily for technical assistance materials in order to supplement outreach efforts and to print letterhead paper for regional offices, some of which was deferred from 1989 and 1990 due to budget constraints.
- $168,000 for training costs, including training of new employees, supervisory training in regional offices, and training for investigators on the conduct of complaint investigations and compliance reviews. Due to budget constraints, training has been kept to minimal levels since 1988.
- $132,000 for non-ADP contracts primarily to cover a $100,000 increase in litigation support services and small increases for other contracts, including the costs of interpreters, publication storage, and moving services.
- $153,000 for supplies, including office automation software and supplies. Due to budget constraints in 1989 and 1990, the purchase of supplies was kept to a minimum level.
- $605,000 for ADP equipment. The increase includes $525,000 for personal computers and related equipment for approximately 92 work stations to replace broken, out-dated equipment so that OCR can conduct its operations efficiently. In addition, $145,000 is for OCR's share of the Department's installation of a Local Area Network which will connect the technology systems of the regional offices and headquarters.

1991 Budget proposal — continued

- $734,000 for ADP services, some of which were deferred from 1990 because of a lack of sufficient funds. Major projects which will be supported in 1991 include: Elementary and Secondary Civil Rights Survey ($495,000), which will provide data for OCR regional offices to use in making preliminary targeting determinations for compliance review sites; Automated Information Management System ($100,000), which will collect and record all case-related data; and General Education Provisions Act Report ($120,000), which is a congressionally mandated report on recipients of Departmental funds.

o Compliance Reviews			287	220	273	196	278	284	178		

*incomplete; OCR cannot project the volume of complaints or compliance reviews at this time.

** Complaints refiled as a result of OCR's expanded jurisdiction under the Civil Rights Restoration Act.

NOTE: Complaints closed in prior years and reopened during the current year are not counted as receipts but are included in the number of complaints on hand at the end of the fiscal year (EOY). Also, some cases on hand at the beginning of the year (prior complaints) had formal enforcement proceedings initiated. These cases are not counted as closures nor are they included in the number of complaints on hand, EOY. Therefore, the difference between total complaints on hand and complaints closed is not necessarily equal to the complaints on hand, EOY.

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 Senate Report	
The Committee has provided funding so that the Inspector General can enhance and expedite investigations into systemic vulnerabilities in student aid programs involving postsecondary institutions, especially proprietary schools. Specifically, the Inspector General is to complete investigations and publish findings regarding whether the Secretary of Education is doing an adequate job of evaluating and certifying accrediting bodies.	The report on the Department's accrediting process should be completed around February 1, 1990.

Purpose and Method of Operation

The Office of the Inspector General (OIG) has authority to inquire into all program and administrative activities of the Department and related activities of all parties performing under contracts, grants, or other agreements with the Department. These inquiries, made by staff both in headquarters and the regional offices, or by contracted auditors, may be through audits, investigations, or other appropriate measures.

Audits of Department programs and operations are conducted to determine compliance with applicable laws and regulations, economy and efficiency of operations, and/or effectiveness in achieving proper results. Investigations are made of allegations of fraud on the part of recipients of Department program funds and of employee misconduct involving the Department's programs and operations. The OIG does not administer any programs directly.

OIG's first priority is to identify and investigate fraud and abuse by recipients of the Department's funds. OIG has assessed the student financial assistance (SFA) area as the most vulnerable to fraud and abuse. OIG, therefore, is concentrating a substantial amount of its audit and investigative efforts to identifying causes of SFA problems and potential solutions, as well as to auditing and investigating those alleged to be misusing the SFA programs.

OIG audit and investigative activities have identified significant problems with the administration of student financial aid funds by recipient institutions, in particular by proprietary (i.e., operated for profit), schools. Many of these audits and investigations have resulted from allegations made by students or former students who complain of false and misleading recruitment practices, including deceptive statements regarding the type and quality of training they would receive and job placement possibilities. In these cases, the student, who the program is designed to serve, is often left untrained or ill-trained, is unable to obtain a job in the occupation area, is further in debt as a result of the student loan and, in the likely event of a default, is unable to get another loan to obtain meaningful training.

Purpose and Method of Operation -- Continued

OIG has determined that problems, especially with proprietary schools, are occurring in the following areas:

- Accreditation, eligibility, and certification--In order to participate in Federal student financial assistance programs, a school must be accredited by an accrediting body that has been recognized by the Secretary of Education. It must also pass other eligibility and certification requirements. The Department must rely on the work of the accrediting bodies, since the Department does not visit an institution to ensure that accreditation should have been granted or to validate what the institution reports about its program, such as course length, before granting certification. For example, in its civil case against Continental Training Services, Inc./Superior Training Services, Inc., the Department alleges that false documents were submitted by the institution to an accrediting agency, resulting in an accreditation which should not have been granted. The Department relied on the institution's accreditation, with the result that eligibility was granted and the institution's program certified when it should not have been. The Department contends that the institution, therefore, never was qualified to participate in the SFA programs, and that any SFA funds received by Continental/Superior should therefore be returned.

- Loan collections (due diligence requirements)--The Stafford Loan program regulations require that lenders and guarantee agencies perform minimum loan servicing activities. In some cases, these minimal activities have not been performed (e.g., UES/Bank of America).

- Branch campuses--In some cases, students at otherwise ineligible campuses obtain Federal aid through arrangements with eligible schools (e.g., North American Education Center).

- Ability to benefit--Students without a high school diploma or its equivalent may be enrolled in an institution under an "ability to benefit" criteria (as determined by a test or counseling) and be eligible for Federal student aid. Some institutions have falsified "ability to benefit" test results, or supplied false documentation for high school degrees (e.g., Hausman Computer School).

- Course length/course stretching--Program regulations specify that in order for programs to be considered eligible for student financial assistance, they must be of a certain length. In some cases, programs have been developed with a lot of "filler" to stretch the time required to meet the minimum number of course hours for program eligibility (e.g., security guard training).

Purpose and Method of Operation -- Continued

OIG's second priority is to provide an adequate level of audit coverage for Chapter 1, Impact Aid, and Vocational and Adult Education, and other elementary, secondary, and special education program areas, as well as adequate audit coverage for the Department's contracts, financial accounting, and ADP systems.

The third priority is oversight of audits performed by non-Federal auditors. OIG reviews these audits to assure that work performed by non-Federal auditors is done in accordance with the appropriate standards. Oversight activities include providing technical assistance to program offices, performing desk reviews of audit reports, performing quality control reviews of auditors' workpapers on a sample basis, and providing assistance to program offices in handling and resolving issues noted in the non-Federal audit reports. The Department relies on these non-Federal audits as a significant part of its program monitoring effort, especially for student financial assistance programs.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Many programs require that grantees submit to the Department of Education audit reports prepared by independent public accountants. In 1989, the OIG issued or processed 5,519 audit reports prepared by non-Departmental auditors on Department operations, grantees, contractors, or other participants in Department programs. OIG also issued or processed 135 audits prepared by OIG auditors. The audit reports questioned costs of $408 million. Recoveries of funds questioned in 1989 and prior years were $43 million in 1989. The OIG estimates that if recommendations for improving management and program procedures included in the audit reports are implemented, the result would be a more effective or efficient use of approximately $274 million in program and administrative funds.

In 1989, 864 investigations and inquiries were completed. The investigations that substantiated criminal wrongdoing resulted in referral of 326 cases to prosecutors. Of the 326 cases referred, 203 were accepted and 123 were declined. OIG investigations led to 214 indictments and 203 convictions and pleas, and to 3 civil filings in 1989. In addition, 17 individuals or entities were debarred from doing business with any Government agency, and 10 were suspended. The dollar impact derived from investigative activities in 1989 includes: fines ordered of $56,040, restitutions ordered of over $4.7 million, restitution payments collected of $361,326, civil judgments of more than $82,000, civil settlements of more than $159,000, better use of

Accomplishments -- Continued

funds totalling $264,792, an administrative fine of $1.5 million, and actual recoveries of $652,000.

In 1989, OIG closed 109 complaints received on the OIG Hotline. These complaints alleged fraud, waste, or mismanagement of Federal funds by school officials, students, or Department employees. Of the number of complaints closed, 24 were substantiated and resulted in corrective action by the Department. Reports of suspected abuses within any of the Department's programs such as student loan abuses, including defaults, can be reported on the toll-free number: 1-800-MIS-USED. Anonymity of the caller is assured.

1991 Budget Proposal

The 1991 request is for $25,800,000, an increase of $2,690,000 above the 1990 appropriation of $23,110,000. The proposed staffing for OIG in 1991 is 360 FTE, 30 above the 1990 estimated usage level of 330 FTE.

OIG's first priority is to identify and investigate fraud and abuse by recipients of the Department's funds. OIG, therefore, is concentrating 75 percent of its audit and investigative staff time (approximately 202 FTE) that remains after meeting its mandated activities (approximately 90 FTE) to identifying causes of SFA problems and potential solutions, as well as to auditing and investigating those alleged to be misusing the SFA programs.

Sixteen of the additional 30 FTE in 1991 would be assigned to perform audits, with 15 of the FTE assigned to regional offices and 1 assigned to headquarters. With this staffing level, 5,800 non-Federal audit reports would be reviewed and processed by OIG (100 more than in 1990), including 3,000 audits (the same number as in 1990) prepared under the Single Audit Act, which allows one audit to cover all the Federal funds administered by an entity, 141 program audits would be completed (8 more than in 1990), and 14 internal audits would be completed (2 more than in 1990). In addition, 300 quality control reviews of non-Federal auditors' workpapers would be performed to assure that audits of postsecondary institutions prepared by independent public accountants are done properly and in accordance with the appropriate standards. This is necessary since past reviews by OIG have shown that the work done by many non-Federal auditors is inadequate.

Eleven additional FTE would be assigned to regional offices to perform investigations. Although the staff level for investigations would increase in 1991, the number of investigations completed would decrease from 1990. In 1990, OIG is concentrating on a larger number of smaller investigations than in 1991. These smaller investigations require less staff time per

1991 Budget Proposal -- Continued

investigation. In 1991, OIG would have sufficient staff to concentrate on large-scale investigations, such as those involving national chains of proprietary schools, which require more staff time per investigation.

The rest of the FTE increase, 3 FTE, would provide such staff support as the typing of audit reports, training time, and increased coverage for Hotline calls. The number of calls is expected to increase as a result of the Default Initiative and publicity about the toll-free number.

The major costs for 1991 are:

o A total of $18.6 million for personnel compensation and benefits. This is an increase of $2.2 million over 1990. Of the increase, $1.5 million is for 30 additional FTE, and $627,000 is for annualization of the 1990 3.6 percent pay raise, a proposed 1991 pay raise of 3.5 percent, the Senior Executive Service and Executive level pay raises, merit pay increases, and increases in the average benefits rate for health insurance, retirement, and other benefits costs.

o $1.6 million in travel, an increase of $59,000 over 1990, for audits and investigations, particularly at proprietary schools, by both new and current staff. This level of funding provides 50 days of travel per field auditor and 60 days of travel per field investigator in 1991. This is the same rate as in 1990; however, the number of field auditors and investigators will increase by 26 in 1991.

o A total of $1.5 million in contracts including:

-- $350,000 to initiate a contract for work by certified public accountants to conduct a pilot project for the mandated non-Federal audits of participating schools' student financial aid funds. Currently, a participating school hires auditors to perform an audit for the school, then sends that audit to the Department where it is reviewed by OIG and by the Office of Postsecondary Education. Because of this arrangement, the auditor is directly accountable to the school, not to the Department. Under the new contract, OIG would hire the auditors, resulting in direct accountability of the auditors to OIG rather than to the institution of higher education. This pilot project would enable the Department to determine whether the non-Federal audits give an objective view of a participating institution's financial situation and compliance with student financial assistance regulations. Also, this contract would require independent public accountants to perform specific audit procedures at institutions and agencies that make Stafford loans to assure proper use of these funds. These procedures will focus on examinations of the financial reports, compliance with laws and regulations, and the adequacy of internal control systems.

-- $500,000 to continue the policy begun in 1990 to contract with independent public accountants to perform closeout audits on contracts. Although OIG is required by the Federal Acquisition Regulations and the Competition in Contracting Act of 1984 to do closeout audits of all cost-type contracts over $250,000, prior to 1990 OIG was able to perform closeout audits only on contracts exceeding $1 million, with the Grants and Contracts Service performing desk reviews on contracts in the $250,000 to $1 million range. This contract will enable OIG to continue to cover closeout audits of all contracts in the $250,000 to $1 million range. The Department has about 200 to 300 contracts annually that fall within this range.

-- $400,000 to continue to contract with independent public accountants to perform audits of State education and vocational rehabilitation agencies, particularly the methods by which these agencies allocate their indirect (overhead) costs against grants made by the Department. The Single Audit Act does not require that audits address the indirect cost allocation issue. However, where audits reviewed by OIG have addressed indirect cost allocation, they indicated major problems with State procedures. These audits will provide data needed by the Grants and Contracts Service to negotiate indirect cost allocation rates with the State agencies.

-- $50,000 to continue to contract for an ADP consultant to perform activities such as reviews of data base management, telecommunications, and computer applications.

-- $50,000 to increase the usage of an expert statistician, to ensure that any statistical sampling used in auditing is methodologically correct.

o $96,000 increase in training, to $284,000, will provide training funds for the additional staff, as well additional training for current staff. This will enable OIG to meet the 40 hours per year training standard for auditors established by the General Accounting Office.

o $1.3 million for ADP equipment maintenance and services, including programming for the Data General system and microcomputers, and ADP equipment purchases, including OIG's share of the Department's installation of a Local Area Network (LAN) and microcomputer purchases.

PROGRAM ADMINISTRATION

For carrying out, to the extent not otherwise provided, the Department of Education Organization Act, including rental of conference rooms in the District of Columbia and hire of three passenger motor vehicles, [$274,946,000] $331,000,000: Provided, That no funds appropriated under this heading shall be used for the purposes of carrying out section 483(f) of the Higher Education Act, as amended.1/ (Department of Education Appropriations Act, 1990.)

Explanation of Language Change

1/ This language is proposed to override the statutory requirement that the Department provide to institutions a standard form similar in color to checks issued by the Treasury Department and require the institutions to use the form for notifying recipients of Federal student aid.

Program Administration

1990	282,446,000	269,946,000	280,646,000	276,946,000
1990 Sequester				-3,643,000
1991	331,000,000			

1/ Reflects enacted supplementals and rescissions in amounts appropriated prior to fiscal year 1985.

2/ Reflected a proposal to merge the Office for Civil Rights and Office of the Inspector General, and Program Administration accounts into the Salaries and Expenses account.

3/ Included $5,533,000 for the National Student Loan Data System, contingent upon enactment of proposed legislation to amend section 485B of the Higher Education Act.

Program Administration

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 Senate Report	
Waiting Period for Grant and Contract Applicants	
The Committee directed the Secretary to submit a report to them detailing the usual waiting period for grant and contract applicants from the date of submission to the notification back to the applicants by the Department. The Committee was concerned about reports by applicants of extremely long waiting periods in the application process.	The Department is preparing a report to be submitted by February 20, 1990, 90 days following the passage of the Department's 1990 appropriations bill.
National Student Loan Data System	
The Committee believed that the National Student Loan Data System should be developed as soon as possible and included $3,000,000 above the pending request so that the Department could begin implementation of a phased approach for this project in 1990.	The final appropriation did not include the additional funds for the System. However, because the Omnibus Reconciliation Act amended many of the restrictions in the Systems's use, the Department is allocating $200,000 for the initial development work for the System. Further development work is planned for 1991.

Program Administration

	1990 Appropriation	1991 Request	Increase or Decrease
1. Postsecondary education...	$95,703,000	$124,578,000	+$28,875,000
2. Other education programs..	69,087,000	77,105,000	+8,018,000
3. Executive direction.......	108,513,000	129,317,000	+20,804,000
Total................	273,303,000	331,000,000	+57,697,000
FTE employees (workyears)....	3,437	3,495	+58

Purpose and Method of Operation

Program Administration provides the funding and staff for the administration of the Department's more than 200 programs and activities and consists of three activities covering the following program and staff offices:

- Postsecondary education (OPE)
- Other education programs:
  - Office of Elementary and Secondary Education (OESE)
  - Office of Bilingual Education and Minority Languages Affairs (OBEMLA)
  - Office of Special Education and Rehabilitative Services (OSERS)
  - Office of Vocational and Adult Education (OVAE)
  - Office of Educational Research and Improvement (OERI)
- Executive direction:
  - Office of the Secretary (OS)
  - Office of the Under Secretary (OUS)
  - Office of the General Counsel (OGC)
  - Office of Intergovernmental and Interagency Affairs (OIIA)
  - Office of Legislation (OL)
  - Office of Management (OM)
  - Common Support Expenses (CSE)
  - Office of Planning, Budget and Evaluation (OPBE)
  - Advisory Councils (AC)

The funds in this account provide for personnel compensation and benefits as well as travel, rent, telephones, utilities, printing, automatic data processing (ADP), contractual services, equipment, supplies, and other Departmental services.

This is a current-funded program for which funds are available from October 1 to September 30.

Program Administration

Accomplishments

Student Financial Aid

In September 1989, the Department completed the award of an expanded and enhanced Pell Grant delivery system. Contracts for five multiple data entry (MDE) processors were awarded, as well as contracts for a central processing system, general electronic support of the Pell and campus-based programs, and Student Aid public inquiry, which provides the toll-free information line required by law. Beginning in 1991, the Federal portion of Pell MDE forms will be made available to students free of charge--reducing costs to disadvantaged students who need Federal funds the most.

In 1989, the Department conducted 275 training sessions for 23,721 individuals who administer student aid programs, including fiscal officers, lenders and financial aid administrators--a 60 percent increase from 1988. These sessions offered instruction on requirements for fiscal officers, the pre-certification process required for new schools participating in the Title IV programs, a Federal update of program requirements and operations, and recent legislative and regulatory changes, general information on Title IV aid, refund and repayment procedures for the Guaranteed Student Loan program, the default reduction initiative, and the new Pell Grant delivery system changes.

Several publications, including the Federal Student Aid Handbook, the Student Guide, the Pell Grant Formula 1989-90, and the Congressional Methodology 1989-90 were revised in 1989. The Student Guide 1989-90 was enhanced to include more comprehensive, detailed information. This guide received an award from the National Association of Student Financial Aid Administrators for excellence in disseminating financial aid information to the general public. In addition, the Loan Default Brochure, which stresses the necessity of repaying student loans and the consequences of defaulting, was reprinted to further support default reduction efforts. In 1990, the Department plans to print a poster publicizing the toll-free telephone number for Student Aid information: 1-800-333-INFO.

Debt Collection Activities

The Department continued implementing the Government-wide credit management program with notable successes. The IRS offset of tax refunds garnered $197 million during FY 1989, for a total of $637 million offset from 1,159,000 persons. The average amount offset was $550.

The Federal Employee Salary Offset program yielded $20 million during FY 1989, for a total of $54 million offset since the program was authorized in 1982. More than 60,000 employees have been notified to pay off their defaulted debts or have their salaries offset. Last year the U.S. Senate and House staff were included in the program, providing legislative as well as executive branch participation in this effort.

Accomplishments--cont'd

Debt Collection Activities--cont'd

Collections from Guaranty Agencies for loan advances amounted to $16 million and $125.6 million from excess reserves. Another $35 million in excess reserves will be collected during FY 1990.

The Department continued to refer cases of delinquent debt to the Department of Justice for litigation. During FY 1989, $11 million was collected for a cumulative total of $41 million.

Default Reduction Initiative

During 1989, the Department implemented several phases of the Default Reduction Initiative. One phase was to publish default rate data from the 1988 cohort database in order to determine the default rates for the more than 8,000 schools in the GSL program. Slightly more than 1,800 schools were found to have default rates over 20 percent. Schools with default rates between 20 and 40 percent must submit default management plans; those over 40 percent must implement Appendix D of the default initiative regulations published June 6, 1989, which sets forth specific procedures and requires a 5 percent reduction in the school's default rate each year. By the end of November 1989, almost 1,400 schools had submitted default management plans which are currently being reviewed. Staff has also responded to more than 4,000 telephone and written inquiries regarding the initiative. In 1990, 12 additional FTE will be hired in the Office of Student Financial Assistance to handle the workload.

The Department is planning to publish an Annual Default Report that would list default rates for individual schools. Also planned for consumer information is the compilation and dissemination of a list of Vocational Training programs showing graduation rates, job placement rates, and State licensing exam pass rates, where applicable.

To sharpen institutional and lender responses to the default reduction initiative, the Department increased its lender and institutional reviews of the Student Financial Assistance programs through the hiring of 90 program review staff. During 1989, institutional reviews increased 14 percent to 768 reviews, lender reviews increased 71 percent to 482, and guaranty agency reviews increased 80 percent to 18. Liabilities of almost $23 million were assessed during the 1989 review cycle. With the 90 additional staff hired in 1989 and $5,138,000 in funds provided by Congress, OPE was able to double the level of reviews accomplished in 1987.

Accomplishments--cont'd

Management Activities

During 1989, the Department also made the following significant management improvements:

- Installed a new Primary Accounting System that incorporates the Government-wide Standard General Ledger, as required by OMB and GAO, and developed an automated property management information system.
- Initiated a series of five training courses for the Department's 300 Contracting Officers' Technical Representatives to improve their ability to draft Statements of Work and thus improve the overall productivity of the procurement process.
- Published the first Consolidated Application Closing Date Notice in the *Federal Register*, which provided potential applicants with a single source of information on most FY 1990 discretionary grant competitions. This will allow prospective grantees more lead time to develop proposals, while reducing the cost required to develop and print separate notices for each program.
- Developed requirements for a Common Audit Resolution System to track resolution of audits and corrective actions and provide data for development of the annual management report to Congress.
- Reduced the overall average processing time for formal Equal Employment Opportunity (EEO) complaints from 1,502 days in FY 1988 to 641 days in FY 1989, and increased the rate of pre-formal EEO complaint resolution from 45 percent in FY 1988 to 69 percent in FY 1989.
- Instituted a new computerized system that automatically generates notification letters to provide Members of Congress with information about grant awards in their States and districts.
- Implemented a Secretarial Development Program to upgrade the skills of clerk-typists and secretaries and to improve the Department's ability to recruit secretarial talent.
- Installed 375 systems furniture workstations in six Departmental components to improve the workplace for employees, to utilize better limited space, and to reduce the number of headquarters-occupied buildings from five to four, thus releasing 51,270 square feet of space at a cost avoidance of $1,162,804.

Program Administration

1991 Budget Proposal

The 1991 budget request for Program Administration is $331,000,000 and 3,495 FTE, an increase of $57,697,000 and 58 FTE from the 1990 level. Several factors have contributed to this increase: the continued growth in the number and complexity of programs requiring additional staff; the default reduction initiative; the costs of providing and processing Pell Grant applications and administering other Student Aid programs; increased accountability of grant recipients through additional program reviews and program monitoring; and systems improvements for better accountability of Departmental resources.

The major increases are in personnel compensation and benefits ($13.3 million), ADP services contracts ($29.3 million), other contracts ($4.4 million), printing ($2.9 million), and travel ($1.6 million). An estimated 21 percent of the increase in personnel compensation is attributable to the 58 additional FTE requested, while built-in salary increases for the pay raises and the additional paid day in 1991 account for another 60 percent. Approximately 56 percent of the increase in other object classes is associated with administering Student Aid programs. A large part of the increase is needed for program monitoring and effective systematic accounting controls and reports. These costs, plus those for providing and processing student aid applications, were postponed or curtailed in the past.

The following are significant changes proposed in major cost items.

Personnel Compensation and Benefits/FTE

Approximately 54 percent of the funds requested in this account, or $178,863,000, is for the salaries and benefits for 3,495 FTE. The overall increase of $13,294,000 provides funds for: the annualization of the 1990 3.6 percent pay raise; the proposed 1991 3.5 percent pay raise for GS and GM employees, as well as a proposed pay raise of approximately 22 percent for Executive Level and Senior Executive Service employees; an increase of 58 additional FTE above the 1990 level of 3,437 FTE; the extra paid day in 1991; and employee awards. The increase also covers contributions to both the Federal Employees' Retirement System and the Civil Service Retirement System, as well as the employer's share of costs for health insurance, life insurance, social security and medicare costs.

The increase in FTE reflects the continued growth in the number and complexity of Department programs. Congress has passed legislation establishing dozens of new programs in recent years, and the Student Aid programs award much more money, serve more students and involve more schools, lenders, and institutions than in previous years. As evident in recent comments from the General Accounting Office, the Inspector General, congressional committees and oversight officials, these activities require more Federal staff to administer and monitor.

The distribution of the increase of 58 FTE among offices is shown below:

Personnel Compensation and Benefits/FTE--cont'd

Office	1990	1991	Increase or Decrease
Postsecondary Education	1,090	1,120	+30
Elementary & Secondary Education	216	224	+8
Bilingual Ed. & Minority Languages	49	50	+1
Special Ed. & Rehab Services	410	416	+6
Vocational & Adult Education	110	111	+1
Ed. Research & Improvement	433	443	+10
Secretary	61	61	---
Under Secretary	27	27	---
General Counsel	105	105	---
Intergovernmental/Interagency	113	113	---
Legislation	25	25	---
Management	614	614	---
Planning, Budget and Evaluation	169	169	---
Advisory Councils	15	17	+2
Total	3,437	3,495	+58

The 1990 and 1991 totals exclude FTE reimbursed from program accounts as follows: 1990 - 16 FTE (10 FTE in OERI for the National Assessment Governing Board, and 6 FTE in Advisory Councils for the National Commission on Drug-Free Schools); 1991 - 10 FTE in OERI for the National Assessment Governing Board.

The additional FTE are required to handle increased workload as follows:

- In the Office of Postsecondary Education (OPE), the total increase of 30 FTE is primarily for the Office of Student Financial Assistance (OSFA) to provide increased support of the Secretary's default reduction initiatives and additional program reviews. Of the 30 additional FTE, 20 FTE assigned to OSFA will provide support for increased litigation and appeals workload associated with proposed limitation, suspension and termination provisions for schools with default rates exceeding 60 percent. In addition, they will train institutional, lender and guaranty agency staff concerning compliance with default reduction requirements. The additional staff also will monitor and coordinate the expanded Title IV processing contractors, and will help to increase the number of estimated program reviews by 279 over the 1990 level (164 additional lender and guaranty agency reviews and 115 additional institutional reviews).

- The remaining increase of 10 FTE in OPE will be assigned to other areas and will provide increased technical support in administering aid to historically black colleges and universities, monitoring and technical assistance activities associated with the Drug-Free Schools program, the Higher Education programs (particularly the Special

Personnel Compensation and Benefits/FTE--cont'd

Programs for Disadvantaged Students and the Title III Aid for Institutional Development), and the expanded debt collection contracts. The additional staff also will assist in managing the increased Student Aid loan portfolio volume and will handle the additional workload resulting from the default reduction initiatives.

- In the Office of Elementary and Secondary Education, an increase of 8 FTE is proposed. Five FTE will monitor the expanded Drug-Free Schools programs and the new programs in the Educational Excellence Act, which is expected to be enacted in 1990. Three FTE will enable the staff to review annually all State recipients of Chapter 1 program aid, will carry out audit resolution activities, and will provide technical assistance to school districts affected by military base closings in 1991.

- A total of 8 FTE (6 in the Office of Special Education and Rehabilitative Services and 1 each in the Office of Vocational and Adult Education and the Office of Bilingual Education and Minority Languages Affairs) will provide increased monitoring and technical assistance to grantees in an effort to increase program accountability.

- In the Office of Educational Research and Improvement, the increase of 10 FTE is necessary to meet the expanding responsibilities and new initiatives included in the request for the Research, Statistics, and Improvement of Practice (RSIP) account, which is proposed to increase by nearly 84 percent in 1991. The large increase in funding proposed for the RSIP account is in response to recent demands for the collection and dissemination of good information on the condition of education and the testing of new ideas. The additional 10 FTE will help to enhance our efforts in these areas. In particular, additional attention will be directed to measuring changes that will occur throughout the Nation as States begin to work toward meeting the national goals identified by the governors at the Education Summit. Activities that will require additional FTE include:

    - the expansion of the National Assessment of Education Progress (NAEP),
    - the National Cooperative Education Statistics program,
    - the Library Statistics program,and
    - the Postsecondary Longitudinal Study.

  The proposed FTE level for 1991 does not include 10 FTE for the National Assessment Governing Board, which will continue to be financed from the RSIP account as it was in 1990.

- For Advisory Councils, the FTE level for 1991 will increase by 2 FTE primarily because of changes in the workload of the Advisory Committee on Student Financial Assistance, which is shifting some tasks from consultant services contracts to new staff.

Travel

The travel increase of $1,580,000 will provide for additional program monitoring and technical assistance to Department grantees and contractors and will help to ensure quality and accountability in Department programs.

The estimated travel costs, by office, follow:

Office	1990	1991	Increase or Decrease
Postsecondary Education	$2,459,000	$3,062,000	+$603,000
Elementary & Secondary Ed.	460,000	669,000	+209,000
Bilingual Ed. & Minority Langs	50,000	75,000	+25,000
Special Ed. & Rehab Service	313,000	575,000	+262,000
Vocational & Adult Ed.	140,000	200,000	+60,000
Ed. Research & Improvement	298,000	490,000	+192,000
Secretary	135,000	135,000	—
Under Secretary	48,000	65,000	+17,000
General Counsel	38,000	63,000	+25,000
Intergovernmental/Interagency	176,000	244,000	+68,000
Legislation	4,000	6,000	+2,000
Management	120,000	204,000	+84,000
Common Support	25,000	25,000	—
Planning, Budget & Evaluation	62,000	87,000	+25,000
Advisory Councils	249,000	257,000	+8,000
Total	4,577,000	6,157,000	+1,580,000

Major increases in travel funds include:

- Office of Postsecondary Education--$603,000 primarily to provide on-site program reviews of lenders, guaranty agencies, and schools participating in the student financial assistance programs. Also included are monitoring and technical assistance travel for Higher Education and Drug-Free Schools programs.
- The Office of Special Education and Rehabilitative Services--$262,000 primarily reflects the President's accountability initiative to increase program monitoring and technical assistance to State grantees and to maintain a three-year cycle for State reviews. Also, increased travel funds will be used to cover mandated monitoring of State Handicapped programs under Chapter 1 of the Elementary and Secondary Education Act and mandated on-site compliance reviews for 15 Projects with Industry and 20 Centers for Independent Living programs. Increases in travel funds will address the needs identified in the General Accounting office's report on OSERS' management, and Inspector General and congressional criticsm of OSERS' project evaluation and monitoring procedures, which were poor because of shortages in travel funds.

Travel -- Continued

- o An estimated $486,000 of the total increase will be used by OESE, OBEMLA, OVAE, and OERI to provide additonal monitoring and technical services to grantees and contractors in order to ensure quality and accountability of projects administered in those offices.
- o An additional $202,000 will be used by staff offices to provide support services and technical assistance. For example, additional travel funds are required in the Office of General Counsel for activities associated with the Student Aid caseload and legal requirements resulting from new audit appeal procedures; and in the Office of Planning, Budget and Evaluation for increased monitoring of new and ongoing program studies. Also, in the Office of Management, additional travel funds will be used to implement the National Finance Center/Regional Office Automation project and to cover trips by the Financial Management Service to conduct training sessions for grant recipients on grantee reporting requirements, to resolve financial recordkeeping and internal control problems in the regional offices. In the Office of Intergovernmental and Interagency Affairs, additional funds will be used by staff of the Office of Hearings and Appeals for travel required to resolve cases filed against the Department resulting from implementation of the default reduction initiative where services of an administrative law judge are required.

Non-GSA Telecommunications

The Department's request of $2,195,000 is an increase of $379,000 to establish better communication links between headquarters and regions. A portion of the increase ($283,000) is to install voice and data communications wiring into each new systems furniture workstation in the regional offices. All systems furniture placed in the 10 regional offices will be connected to a data line with the potential to be linked to the headquarters local area network (LAN). The LAN gives users the capacity of rapid and direct access to the systems on the minicomputers, the central computer facility, and personal computers.

Another $75,000 is requested for the telecommunications portion of an initiative, totalling $235,000, to connect all regional offices with headquarters, which in turn will be linked to the National Finance Center (NFC). The Department currently sends hard copy data of regional financial activities by mail to the Department's administrative payment processing office at NFC for data entry. Delays in posting transactions and sometimes lost information have resulted from mail delivery of financial data.

GSA Telecommunications

The request of $2,851,000 is a net decrease of $854,000 resulting from the implementation of the Federal Telecommunications System "FTS 2000" in 1990 and 1991. Basic long distance voice communication services are expected to cost less under the new system.

Postage

The increase of $1,937,000 over the 1990 budget of $5,418,000 is for an increase in volume associated with the default reduction initiative and student aid information mailing; for an estimated increase in assessed postage costs resulting from the implementation of more accurate identification procedures (ZIP + 4) in 1990; and for an increase in Department-wide estimated annual usage. The 1991 request reflects a more accurate estimate of annual usage than in past years where the usage had been significantly underestimated, as revealed by recent U.S. postal audits.

Printing

Approximately 82 percent ($7,375,000) of the Department's printing request of $9,022,000 supports applications and publications required for the administration of postsecondary education programs, including the Application for Federal Student Aid, the Student Guide (a brochure on Student Aid programs), and supplies for contractors supporting the Pell Grant and Guaranteed Student Loan programs.

The increase of $2,935,000 from FY 1990 is largely for printing needs associated with the default reduction initiative and publishing the Student Guide. Because of budget constraints in FY 1990, both the content and the number of copies of the Student Guide were reduced. With an increase of $1,368,000 in FY 1991, the Department plans to restore the Student Guide to its 1989 quality, which contained more comprehensive information about Student Aid for use by students, parents, and other interested persons.

For the default reduction initiative, the increase of $650,000 will help to fund the publication of an annual default report, dissemination of debt management information to high school students, the dissemination of consumer information about schools, and the printing of posters publicizing a toll-free number (1-800-333-INFO) for student aid information.

Another $697,000 increase is for increased volume and costs of the Application for Federal Student Aid, contractor supplies, and training materials.

Funds are also requested to print appropriate Department materials in Spanish.

We are continuing to seek repeal of the statutory requirement that the Department provide to eligible institutions a standard form "Federal Notice of Student Aid Receipt" (FSAR) on which they are to record the amount of Federal assistance received by each student. The statute also requires that the form be the same or similar in color to Treasury Department checks and that it be embossed with the Great Seal of the United States.

No FY 1991 funds are requested for printing the FSAR; however, if the requirement is not repealed, the FSAR would cost the Department approximately $500,000. The total cost for schools to establish new manual or computer procedures for completing the report would be at least as much. In response to a 1988 Federal Register notice, 576 postsecondary institutions, (99 percent of those commenting) objected to the use of the FSAR. In addition, the Treasury Department is concerned that implementation of this requirement might lead to counterfeit Federal checks because of their similarity to the FSAR.

Interagency Agreements

The request of $5,051,000 is an increase of $631,000 over the 1990 level of $4,420,000 for interagency agreements with other Federal agencies from which the Department receives numerous services. Some examples are payroll operations, health care units, security investigations, administrative payments, guard service and computer support. An increase of $125,000 is requested for these types of administrative services.

An increase of $506,000 is for non-Federal training activities associated with administering Student Aid programs, such as Basic Student Financial Aid Training, Fiscal Officer Training, Due Diligence & Debt Counseling, and Training of Puerto Rican Financial Aid Administrators in the use of Puerto Rican tax returns. Many of these training activities were severely curtailed in 1990 because of budget constraints.

Also included in the increase is an additional $75,000 for the IRS Address Retrieval System, which provides taxpayers' addresses to lenders and guaranty agencies for collection purposes in the GSL and Perkins programs.

Building Alterations

Funds requested for building alterations increase by a total of $594,000 to $1,100,000. The increase is requested to complete regional space alterations and space reduction projects, to install systems furniture, and to perform several architectural and engineering surveys postponed from 1990. The Department recently had surveys conducted in FOB-6 to examine the condition of heating, air conditioning and ventilation systems posing health risks. Additional studies are proposed for the Switzer and ROB-3 buildings. Studies will then be undertaken to discover ways to resolve problems with building temperatures, air circulation, and work environment in conjunction with the overall recommendations submitted by consultants who will have analyzed the Department's space consolidation and renovation needs. Complete interior renovations or a move to a new building are two possibilities.

Contracts

The request of $14,461,000 for non-ADP contracts is a net increase of $4,421,000, reflecting several changes from 1990 as follows:

Office	1990	1991	Increase or Decrease
Postsecondary Education	$3,509,000	$5,956,000	+$2,447,000
Intergovernmental/Interagency	127,000	405,000	+278,000
Management	338,000	605,000	+267,000
Common Support Expenses	1,928,000	2,042,000	+114,000
Planning, Budget & Evaluation	2,821,000	4,215,000	+1,394,000
Vocational & Adult Education	91,000	15,000	-76,000
Other Offices	1,226,000	1,223,000	-3,000
Total	10,040,000	14,461,000	+4,421,000

Contracts--cont'd

Approximately half of the increase ($2.4 million) is in the Office of Postsecondary Education (OPE). The public inquiry contract, which provides a required toll-free information line as well as other information services, will increase by $852,000--from $2.6 million in 1990 to $3.4 million in 1991. The requested increase also includes two new contracts designed to assess and enhance the administration of the Title IV programs: 1) a cost-benefit analysis of the Pell Grant multiple data entry (MDE) contracts ($150,000), and 2) support of a conference for the Technical Committee on Forms Design ($133,000), a function previously provided in the MDE contracts under the ADP Services object class.

In addition, in order to improve the efficiency of postsecondary debt collection efforts, we are requesting $650,000 to maintain the regional loans collections filing system (postponed from 1990); $125,000 to establish total quality management practices at all levels of the Debt Collection and Management Assistance Service; and $300,000 to enable OPE to access electronically other Government information databases, in addition to the IRS "skiptrace," in its effort to contact debtors who have moved and left no forwarding address. As part of the Department's default reduction efforts, we are also requesting an increase of $128,000 for the Perkins Loans closed-school servicing contract to reduce a backlog of accounts. A net increase of $109,000 is requested for all other OPE contracts largely reflecting a need for special services and additional contractor support for materials storage and mailing services.

We are requesting an increase of $1,394,000 in the Office of Planning, Budget and Evaluation for evaluations and studies focused primarily on postsecondary education, including issues associated with the accountability and default reduction initiatives. The areas to be studied in 1991 include:

- evaluation of implementation of the default reduction initiative, which will study the early effectiveness of the initiative through an analysis of the implementation process;
- continued study and surveys of the demonstration project on Income-Contingent Loans;
- additional analysis of National Postsecondary Student Aid Survey data, which will assess how students pay for their education, loan defaults, characteristics of minority students, student employment, college costs, and comparison of students at community colleges and proprietary institutions;
- international comparisons of postsecondary education, which will examine course work, access, retention, and financing mechanisms for postsecondary education in several countries;

Contracts—cont'd

- a graduate education study that will examine factors influencing the choice of graduate study, shortages in particular fields, enrollment of foreign students in certain fields, and financial aid for graduate students; and

- an examination of the status and use of outcomes assessment in determining the quality of postsecondary education.

The funds will also be used to provide data processing, data base maintenance, and technical analyses for studies and evaluations affecting all education levels. Examples of these include the development of the annual State Education Performance Chart ("Wall Chart") that presents comparative information on State-by-State educational performance, and the report on the distribution of Federal funds under elementary and secondary education programs.

Most of the requested increase of $278,000 for the Office of Intergovernmental and Interagency Affairs is for increases in contracts for Presidential appearances ($200,000) and for a contract to produce public service announcements for the President's Academic Fitness Awards ($60,000). The contracts for Presidential appearances are largely for security enhancements as well as staging, backdrops, lighting and other similar expenses at locations where the President is making an appearance at an education-related function.

The increase of $267,000 in the Office of Management is needed primarily to procure contractor assistance for three A-76 studies that will focus on accounts management and debt collection activities, training, and ADP functions.

The increase of $114,000 in Common Support Expenses will cover expected cost increases for furniture and equipment movers, mailroom services, materials storage and mailing services, and copy centers, all of which are subject to contract recompetition.

The decrease of $76,000 in the Office of Vocational and Adult Education (OVAE) represents the elimination of the FY 1990 one-time contract which will provide support services to assist OVAE in coordinating and convening several regional meetings and one headquarters meeting prior to the issuance of proposed regulations. The requirement for these meetings is contained in the negotiated rulemaking provisions of the Vocational Education reauthorization bill, which is expected to be enacted in 1990.

Field Readers

The $3,048,000 request for field readers in 1991 is an increase in Program Administration funds of $308,000. There is an additional increase of $70,000 in program funds for field reader costs in two offices as shown below. As authorized, field readers for most Education for the Handicapped,

Field Readers--cont'd

Rehabilitation Services and Handicapped Research, and Bilingual Education programs are paid almost totally from program account funds. The complete request for field reader funds is shown in the following table.

Office	1990	1991	Increase or Decrease
Postsecondary Education	$800,000	$866,000	$+66,000
Elementary & Secondary	150,000	150,000	---
Vocational & Adult Education	87,000	268,000	+181,000
Ed. Research & Improvement	228,000	289,000	+61,000
Bilingual Ed. & Minority Languages	[233,000] 1/	[276,000] 1/	[+43,000] 1/
Special Ed. & Rehab Services			
Program Admin	12,000	12,000	---
Program account funds	[1,160,000] 1/	[1,187,000] 1/	[+27,000] 1/
Total, Program Admin.	1,277,000	1,585,000	+308,000
Total, program account funds	1,393,000	1,463,000	+70,000
Total	2,670,000	3,048,000	+378,000

1/ Funds from program accounts.

The $308,000 increase is largely attributable to an anticipated increase in the number of applications due to both new and ongoing programs. The funds will be used to pay, as appropriate, honoraria, per diem and travel expenses for both Federal and non-Federal readers.

Field reader increases are required by the following program offices:

- The Office of Postsecondary Education increase ($66,000) will pay for increased travel costs and will cover an increase in honoraria payments to approximately $100 per day, bringing them more in line with other program offices within the Department.

- The Office of Vocational and Adult Education (OVAE) increase ($181,000) is required to cover the costs of additional readers to handle an anticipated increase in the number of program applications, and the costs of two additional non-Federal readers for each rating panel (bringing the ratio of non-Federal/Federal readers to 3:2). OVAE program managers believe that having a greater proportion of non-Federal readers will increase the overall quality of the reviews because of the likelihood of obtaining reviewers with the requisite experience, time, and knowledge possessed by the non-Federal readers.

- The Office Educational Research and Improvement (OERI) increase ($61,000) is needed to cover travel and per diem expenses associated with the additional field readers needed because of the anticipated increased volume of applications and the decreased use of mail-out reviews. OERI program managers believe that the reading process for some of its programs is less effective if done solely by mail.

ADP Services

The request for $76,274,000 in ADP Services is an increase of $29,304,000 over 1990. The significant increases by office are as follows:

Office	1990	1991	Increase or Decrease
Postsecondary Education	$36,152,000	$53,936,000	+$17,784,000
Common Support Services	7,995,000	17,910,000	+9,915,000
Other Offices:			
- Secretary	173,000	248,000	+75,000
- General Counsel	271,000	476,000	+205,000
- Intergovernmental/Interagency	146,000	201,000	+55,000
- Planning, Budget & Evaluation	510,000	685,000	+175,000
- Elementary and Secondary Education	494,000	923,000	+429,000
- Bilingual Ed. & Minority Languages	64,000	150,000	+86,000
- Special Ed. & Rehabilitative Services	448,000	774,000	+326,000
- Vocational & Adult Education	95,000	131,000	+36,000
- Ed. Research & Improvement	579,000	773,000	+194,000
- Under Secretary	1,000	1,000	---
- Legislation	41,000	65,000	+24,000
- Advisory Councils	1,000	1,000	---
	2,823,000	4,428,000	+1,605,000
Total	46,970,000	76,274,000	+29,304,000

About 60 percent of the increase ($17.8 million) is in the Office of Postsecondary Education. Major increases are addressed below.

- In late 1989, the Department awarded replacement contracts supporting processing of Pell Grants. These new, improved contracts emphasize fiscal accountability and communication among the contractors. The net increase of $10,967,000 in 1991 in these Pell contracts reflects expansion of the number of and types of work performed by the Pell Grant multiple data entry (MDE) processors (CSX Commerical Services, Pennsylvania Higher Education Assistance Agency, United Student Aid Funds, American College Testing, and the College Scholarships Services). It also covers the cost of additional requirements, such as the mandated Selective Service and the Immigration and Naturalization Service tape matches. In 1990, $4.3 million of the $24.1 million total cost for these contracts was paid from program funds; however, in 1991, the full cost of the contracts will be paid from the Program Administration account. A large portion ($7 million) of the increase reflects the Department's decision to provide the Federal aid portion of MDE forms free to students beginning in 1991.

ADP Services--cont'd

Many functions previously provided under the former Pell central processor contract are now provided by either the MDEs, the General Electronic Support contract or the SFA Information Center--a non-ADP contract. As a result of this transfer of functions, a related increase of $870,000 occurs in the General Electronic Support contract, which handles electronic data exchange of Pell Grant and campus-based program information between the Department, its contractors, and schools with electronic systems. To further improve administration of the Pell programs, an additional increase of $200,000 is requested for improvements in modeling and analysis of Pell Grant program data which will enhance out-year estimates of Pell Grant program needs.

- An increase of $2,315,000 is required in the GSL/Perkins contract largely resulting from increased processing and development costs associated with the need to track more data on loans in support of the Secretary's default reduction initiatives, as well as expected increases in systems requirements associated with HEA reauthorization.

- For quality control (QC) contract costs, a net increase of $1,507,000 is requested for a new QC project in the Guaranteed Student Loans program ($1,648,000) which measures billing and payment errors at guaranty agencies, and for design of a guaranty agency QC pilot ($150,000). The total increase is partially offset by the completion of the final phase of a QC project begun in 1987.

- An increase of $742,000 is required for systems that support administration of other postsecondary programs. Included is an increase of $396,000 to support development of a new accounting subsystem for the campus-based programs to enhance internal control, as recommended by the Office of the Inspector General, and automation of paper transactions. Also, an increase of $346,000 is for enhancement and maintenance of several systems that support the field reader process and provide analyses and other statistics on Higher Education programs.

- To enhance the Department's default reduction and debt collection efforts, we are requesting an increase of $528,000: $170,000 for the school monitoring/institutional data system, which supports further improvements in processing reports and tracking and monitoring activities; and $358,000 for the electronic archival of Eligibility and Certification records from hard copy to a document management system. This system will provide better management control and improved productivity and will reduce the office space currently required to store the documents.

- An increase of $300,000 is requested for the National Student Loan Data System to assist the Department in developing a request for procurement so that a contract can be awarded in 1992. Also, an increase of $339,000 is required for central facility computer support, reflecting OPE's share of cost increases in the Department's central ADP Services.

ADP Services--cont'd

For Common Support Services in the Office of Management (OM), an increase of $9,915,000 is requested. While the Department allocates central ADP Services costs for activities such as personal computer maintenance, electronic mail, local area network (LAN) operation, minicomputer upgrade, maintenance and operation, and technical assistance among all of the Department's offices based upon inventory and usage, a large portion of the these costs are centrally funded in the Office of Management.

Major increases are addressed below.

- Of the increase for 1991, $5,034,000 is requested to cover central ADP service costs--largely to fund a minicomputer upgrade project. The 1991 cost of the project totals $6 million, a portion of which is distributed to other offices Department-wide. The minicomputers support many Department-wide systems including the Primary Accounting System, the Grants and Contracts Management System, the Budget Allotment and Planning System, and other important systems that are part of the Department's basic operations. The results of a study conducted in 1989 indicate that replacement of existing hardware and software is necessary. The minicomputers are now operating at full capacity and are unable to keep up with the workload. The Department had serious minicomputer operational problems at the end of FY 1989 that can only be addressed on a short-term basis in 1990 as a result of funding constraints.

- An additional $1,950,000 is required for the Financial Feeder Systems Project. The Financial Management Service, with the support of the Office of the Inspector General, has started work on improving the reliability of financial information received by the Primary Accounting System from the Department's various feeder systems. Initial work costing $850,000 will be started in 1990 on all 23 feeder systems. The increase in 1991 will support software program changes as necessary to bring each system into compliance with Department, OMB, and GAO directives and as required by the Federal Manager's Financial Integrity Act of 1982.

- An increase totaling $2,253,000 for the Department's Payment Management System (PMS) includes $1,803,000 to replace the current database management system which is more than 10 years old and will be obsolete in a few years, and $450,000 to maintain the PMS system at the National Institutes of Health while the Department implements its new system.

- Other increases include $200,000 to establish and maintain an Information Technology Support Center which will provide a centralized depository for approximately $75 million in systems documentation, and $95,000 to fund the Information Technologies Strategy Project. This project will provide technical assistance and expert analysis on use of the latest technologies to meet Department standards associated with major information management improvement efforts.

ADP Services--cont'd

- An increase of $100,000 will be used to install LAN equipment at individual OM workstations and to support the LAN initiative to connect regional offices and headquarters. An increase of $283,000 is requested for other OM information technology projects, such as ADP security reviews, studies and data information sharing projects.

An increase of $1,605,000 is requested for all other offices, primarily for assessed increases in central ADP services ($1,479,000), as well as increases for the improvement of the Impact Aid system ($87,000) in OESE which calculates eligibility, entitlements and payment amounts for applicants of Impact Aid funds, and for improvement of information systems in OERI ($39,000).

Supplies

The increase of $350,000 from $1,490,000 in 1990 will cover the increased cost of supplies, purchases postponed from 1990, increased needs for the additional 58 FTE, and the additional demand for and cost of copy paper, photo and graphic supplies, identification cards, and microcomputer software supplies.

Non-ADP Equipment

The request of $1,842,000 is an increase of $1,254,000 over 1990. These additional funds are mostly for systems furniture in regional and headquarters offices that have undergone significant space reductions but still possess standard furniture that is unsuited for the redesigned space and also hinders handicapped access. Additional systems furniture is required to achieve a greater reduction in the space utilization rate, thereby creating some rent savings, and to provide a cleaner and more efficient workplace.

ADP Equipment

The $1,869,000 request for ADP equipment in 1991 is an increase of $1,547,000 from 1990. These additional funds are requested primarily for personal computer office automation acquisition as part of the Department's plan to replace obsolete equipment over several years and to improve the overall efficiency in program administration. Included in the requested increase is $135,000 to purchase the National Finance Center/Regional Office Interface equipment discussed in the non-GSA telecommunications section.

Program Administration

Full-time Equivalent Employment (Staff Years)

	1989 Actual	1990 Estimate	1991 Request	Change from 1990

a/ Excludes funds and FTE for the National Assessment Governing Board (NAGB), which is not an advisory council. NAGB is funded under the Research, Statistics, and Improvement of Practice account and FTE for NAGB are included under OERI.

b/ Assumes operation for 1/2 year, then abolishment.

c/ Funded from program funds.

d/ Staff is OERI, negligible FTE usage by members.

Department of Education

Advisory and Assistance Services

1989 Actual	1990 Estimate	1991 Estimate	Increase or Decrease
$21,995,554	$30,137,000	$33,711,000	+$3,574,000

Note—Excludes amounts for Indian Education services.

Advisory and Assistance Services Definition

Fiscal year 1989 represents the first full budget year under the definition and guidelines for advisory and assistance services included in the revised OMB Circular A-120, "Guidance on the Use of Advisory and Assistance Services," issued on January 4, 1988. One effect of the revised circular was to expand its coverage through a broad definition of "Advisory and Assistance Services" as compared with "Consulting Services" defined in earlier circulars. However, some of the activities in the Research, Statistics and Improvement of Practice account, which were earlier thought to be advisory and assistance services under the new circular, have since been determined to be excluded from its coverage.

As defined in Circular A-120, advisory and assistance services are:

> "...those services acquired from non-governmental sources by contract or by personnel appointment to support or improve agency policy development, decision-making, management, and administration, or to support or improve the operation of management systems. Such services may take the form of information, advice, opinions, alternatives, conclusions, recommendations, training, and direct assistance."

Such outside services are utilized by the Department of Education only when required by Federal legislation or when the use of such services is cost effective. Increases and decreases in the use of these services are reflective of changes in appropriation levels.

Forms of Advisory and Assistance Services

Advisory and Assistance Services may be provided by personnel appointment, procurement contracts and by advisory committee membership. The Department of Education utilizes these services in each of these forms. The costs for appointed consultants are generally funded from the three Departmental Management accounts. However, field reader and advisory committee costs may be, and are, funded from a combination of Departmental Management and program accounts. Advisory and Assistance Services provided by contract may also be funded from any account that has contracting authority included in its authorizing legislation.

Personnel Appointments

Experts and Consultants

Appointive consultants are used when there is a need for the advice of experts for limited and intermittent periods of time. They currently include building architects/engineers to assist GSA with the planned renovation of FOB-6 and experts who serve as members of review boards and panels. The costs for appointive consultants in 1989 were $835,000, and are estimated to be $697,000 in 1990. In 1991, $562,000 of the amount requested in Departmental Management accounts is for such appointive consultants. The only consultants paid out of program funds are the members of the National Assessment Governing Board who are paid out of the Research, Statistics, and Improvement of Practice account: $38,000 in 1989, $37,000 in 1990, and $61,000 in 1991.

Field Readers

Advisory and Assistance Services also include the costs of field readers who evaluate and rate program applications submitted to the Department for funding. The costs for field reader services are covered by the Program Administration account as well as three program accounts. The Education of the Handicapped Act, the Rehabilitation Services Act, and Title VII of the Elementary and Secondary Education Act authorize the use of program funds for non-Federal experts to review grant and contract applications. The total cost for field readers in 1989 was $2,399,000. Of this total, $1,222,000 was paid from the Program Administration account, $159,000 was paid from the Bilingual and Immigrant Education account, $742,000 was paid from the Education for the Handicapped account; and $276,000 was paid from the Rehabilitation Services and Handicapped Research account.

In 1990, field reader costs are estimated to be $2,670,000, of which $1,277,000 will be paid from Program Administration and $1,393,000 will be paid from program funds in the Education for the Handicapped ($849,000), the Rehabilitation Services and Handicapped Research ($311,000), and the Bilingual and Immigrant Education ($233,000) accounts.

Our total request for field readers in 1991 is $3,048,000, of which $1,585,000 will be from Program Administration and $1,463,000 will be from program funds: Education for the Handicapped ($782,000), Rehabilitation Services and Handicapped Research ($405,000), and Bilingual and Immigrant Education ($276,000). The increase is due primarily to the need for increased numbers of field readers to handle the anticipated increase in the number of applications for both new and ongoing programs.

The Department's current policy allows program offices to pay honoraria to non-Federal reviewers. It also encourages reviews at the lowest cost (even if that means paying travel expenses to Washington) and allows an appropriate mixture of non-Federal reviewers and Federal employees for panels. Whenever practical, the Department uses review by mail and by readers who serve without compensation. The procedures provide flexibility in the use of field readers in order to choose reviewers who are both qualified and available to produce high quality reviews. In response to congressional concern, the use of Federal and uncompensated readers has been curtailed since 1989. In addition, offices are trying to establish, within budget limits, greater comparability in the honoraria paid to field readers.

Advisory Committees

This category of Advisory and Assistance Services includes the members of the Department's advisory committees and councils, who are appointed by the President or by the Secretary. (These committees and councils are listed in the fact sheet on Advisory Councils.) The members receive an honorarium in addition to travel and per diem expenses. The costs of compensation and benefits for advisory committee members in 1989 were $137,000 and are estimated to be $486,000 in 1990. In 1991, $272,000 is requested, a decrease of $214,000 due to the completion of work of the Drug Commission in 1990. The $300,000 the Commission required in 1990 was funded from the School Improvement Programs account. All 1991 advisory committee costs are funded in the Program Administration account.

Contracts

Advisory and Assistance Services contracts are let when the Department requires a product or a service that cannot be provided by Federal staff. Such products or services are necessary to the administration of the Department and its programs. Many contracts are for studies in the various program areas and for program evaluation. These contracts are also let to provide advice on data processing systems, training programs for Department employees, and the sale of college housing and higher education facilities loans. However, most ADP and telecommunications functions and related services are excluded from the definition of Advisory and Assistance services in accordance with 41 CFR 201.

The Department's estimate for Advisory and Assistance Services contracts in 1991 is $29,829,000, an increase of $3,545,000 over the 1990 level of $26,284,000. The 1991 estimate reflects increases for several new evaluations and studies, including $1 million for a dropout prevention demonstration evaluation and $3 million for a research and statistical evaluation of education reform. Both of these evaluations are funded in the School Improvement Programs account. Also planned for 1991, is a pilot project for mandated non-Federal audits of participating schools' student financial aid funds, to be funded in the Office of the Inspector General account.

These increases are partially offset by decreases in several areas where current evaluations will be completed in 1990.

1991 Budget Proposal for Advisory and Assistance Services

For 1991, the total increase in costs for these services is $3,574,000 or 11.9 percent. The major increase in 1991 is for contracts ($3,545,000) to provide necessary services and products that cannot be provided by Department staff. This increase is reflective of appropriated levels for activities required by legislation in a variety of program accounts. The use of experts and consultants will decrease in 1991 while the use of field readers will increase, resulting in a net cost increase of $243,000. Also, there will be a decrease of $214,000 in the cost of compensation and benefits for advisory committee members resulting from the termination of the National Commission on Drug-Free Schools.

Limitation and Reports on Advisory and Assistance Services

Section 514 of the General Provisions of the FY 1990 Labor-HHS-Education Appropriations Act provides a limit on Advisory and Assistance Services procurements and requires quarterly reporting. At current budget levels, the Department foresees no problem in achieving the limitation but continues to monitor closely the situation to ensure compliance with the Act.

Evaluation and Report on Advisory and Assistance Services

Section 307 of Public Law 96-304, the Supplemental Appropriations and Rescission Act of 1980 (31 U.S.C. 1114), requires that the Inspector General evaluate and report on the Department's efforts to comply with OMB criteria in the managing and reporting of Advisory and Assistance Services contracts. The universe of contracts addressed in the Inspector General's reports normally differs somewhat from that used in this report, often covering only new awards, and excluding obligations for modifications of contracts made in previous years. These obligations are, however, reflected in the totals shown in the summary table below. The 1990 report of the Inspector General's findings will be forwarded to the Congress when the justifications are transmitted.

Department of Education

Advisory and Assistance Services 1/

Appropriation Account	1989 Actual	1990 Estimate	1991 Estimate
Compensatory Education for the Disadvantaged	$5,925,488	$5,794,000	$9,300,000
